The principal vegetable production in Virginia, as in Maryland, is tobacco. The culture of this plant, which in its excellent quality ſurpaſſes that of all other countries, ſo engroſſes the attention of the inhabitants, that they only rear corn ſufficient for their own uſe. The next object of their attention, is hemp and flax, great quantites of which are exported from this country; rice is likewiſe cultivated, but very ſparingly. The foreſts yield oaks, poplars, pines, cedars, cypreſſes, ſweet myrtles, cheſnuts, hickery, walnut, dog-wood, elder, hazel, chinkapines, locuſt-trees, ſaſſafras, elm, aſh, and beech. A great variety of ſweet gums and incenſe diſtil from ſeveral of theſe trees, and others produce pitch, tar, roſin, turpentine, plank-timber, maſts, and yards. The trees in general are much loftier than ours, and no underwood or buſhes grow beneath, ſo that travellers may croſs the foreſts on horſeback, and always find a comfortable ſhelter from the intenſe heat of the climate in the middle of ſummer. Beſides excellent paſture, many places produce a ſpecies of graſs, called ſilk graſs, the fibres of which are as fine as flax, and much ſtronger than hemp. The plains and vallies are adorned with an almoſt perpetual ſucceſſion of flowers, among which are the fineſt crown imperial in the world, the cardinal flower, and the tulip-bearing laurel-tree.

The principal rivers in this country are James River, York River, Rappahannock, and Potomack, all of which riſe in the Apalachian mountains, and, running along the borders of this province from the north-weſt to the ſouth-eaſt, fall into the bay of Cheſapeak, which is near 300 miles in length, 18 in breadth in ſome places, and ſeven in others; in moſt places the water is nine fathoms deep. James River is uſually about two miles in breadth, and navigable at leaſt 27 leagues. York and Rappahannock rivers are not ſo large; but Potomack is navigable for 200 miles.

Here are quarries of ſtones, mines of coals and lead, and vaſt quantities of iron ore.

The Virginians, before the late war, carried on a great trade with the Weſt-Indies in lumber, pitch, tar, corn, and proviſions; and with Great-Britain in flax, hemp, iron, pipe-ſtaves, and planks; but its principal article of export, and chief manufacture, was tobacco; and it is computed that this province, together with that of Maryland, exported, of tobacco alone, to the annual value of 768,000l. into Great-Britain, which, at 8l. per hogſhead, makes the number of hogſheads amount to 96,000. Of theſe it is ſuppoſed about 13,500 hogſheads are conſumed at home, the duty on which, at 26l. 1s. per hogſhead, amounts to 351,675l. The remaining 82,500 hogſheads are exported by our merchants to other parts of Europe, and their value returned to Great-Britain. This, however, was not the only advantage we reaped from ſo extenſive a branch of commerce: in the proſecution of it no leſs than 330 ſail of ſhips, and 7,960 ſeamen were employed; ſo that not only our wealth, but the very ſinews of our national ſtrength were braced by it. The whole of our imports from Maryland and Virginia were ſaid to amount to 1,040,000l. annually; while our exports to thoſe places, which conſiſted in the ſame articles with which we furniſhed our other colonies, came to 865,000l.

The number of white people in Virginia are ſaid to be 100,000, and the negroes nearly twice that number. The better ſort of people among them are cheerful, hoſpitable, and genteel; but they have, with too much juſtice, acquired the character of being at once vain and oſtentatious.

The American Indians on the frontiers of Virginia are of a middling ſtature, ſtraight and well proportioned, with the fineſt limbs in the world; nor is there a dwarf or miſhapen perſon among them. Their colour is that of copper, rendered darker by greaſing themſelves, and being expoſed to the weather. They have black eyes, and their hair is coal-black, which the men cut into ſeveral ſhapes, and both men and women greaſe ſo that it ſhines. The better ſort wear a kind of coronet four or five inches broad, and open at the top, compoſed of a ſort of beads, and ſome a wreath of dyed furs; they have alſo bracelets on their necks and arms; but the common people go bare-headed, only they ſtick large ſhining feathers in their hair. Their clothes are a large mantle, careleſsly wrapped round their bodies, and ſometimes girt cloſely with a girdle. The common ſort only paſs a piece of cloth or ſtring round their middle, and put a piece of cloth or ſkin between their thighs, which turns over the ſtring at each end. Their ſhoes, when they wear any, are made of an entire piece of buckſkin. The dreſs of the women differs little from that of the men, only the better ſort

have more beads and bracelets. They commonly go naked as far as the navel downwards, and upwards to the middle of the thigh; their breaſts are round and ſmall, and never hang down as thoſe of the black women on the coaſt of Guinea. Inſtead of keeping their children warm, they dip them over head and ears in cold water as ſoon as born, and then tie them to a board with ſomething ſoft, in which poſture they remain till their limbs begin to acquire ſome ſtrength, when they are ſet at liberty, and ſuffered to crawl about in the beſt manner they can.

The chief part of the inhabitants of Virginia are members of the church of England, and the reſt are Quakers and Preſbyterians. In each pariſh there is a church built with brick, ſtone, or timber, and decently furniſhed with all things neceſſary for the celebration of divine ſervice. When the pariſhes are large there is a chapel of eaſe, and ſometimes two, for the conveniency of the pariſhioners. The annual income of the miniſters is ſettled at 16,000lb. of tobacco each, beſides perquiſites, which they are allowed to make. Formerly, the clergy and churches were under the immediate inſpection of a commiſſary, appointed by the biſhop of London; but the power of induction, upon the preſentation of miniſters, was lodged in the hands of the governor.

Virginia is adorned by ſeveral magnificent public buildings, but the only towns worthy the leaſt notice are Williamſburg and James-Town. The former was the ſeat of the government, aſſembly, and chief courts. It contains a college, called William and Mary College, having been founded by Willam III. who gave 2,000l. towards it, and 20,000 acres of land, with power to purchaſe and hold lands to the value of 2,000l. a year, and a duty of one penny per pound on all tobacco exported to the other plantations. It conſiſts of a preſident, ſix maſters or profeſſors, and other officers, who are named by the governors or viſitors. The Hon. Mr. Boyle made a very large donation to this college for the education of Indian children. Beſides this college, there are ſome other handſome edifices in Williamſburg, as the town-houſe, the church, a magazine for arms and ammunition, a public priſon, a fort, and a play-houſe.

James-Town is ſituated about 26 miles above the mouth of the river of that name; it was once the capital, and the ſeat of government, but is now dwindled into an inconſiderable village.

This was the firſt colony planted in America by the Engliſh. It has been already obſerved that Sebaſtian Cabot, in the year 1497, diſcovered the northern continent of the New World; but nothing was done towards ſettling a colony till the rign of Queen Elizabeth. Sir Walter Raleigh, one of the moſt extraordinary geniuſes of his own, or perhaps any other times, was the firſt Engliſhman that attempted a ſettlement in America. He was the only perſon who had any idea of the nature of foreign trade, or was capable of forming a right conception of the advantage of ſettlements in a diſtant country. Animated with the idea of future greatneſs, and deſirous of increaſing the power and commerce of his native country, he applied to the queen for a patent; and having got together a company compoſed of ſeveral perſons of diſtinction, and many eminent merchants, they agreed to ſettle a colony, and open a trade in that part of the world, which, in honour of Queen Elizabeth, he called Virginia.

Towards the cloſe of the 16th century, ſeveral attempts were made for ſettling this colony, but without ſucceſs. The three firſt companies who ſailed into Virginia, periſhed through hunger and diſeaſes, or were cut off by the Indians. The fourth was reduced to almoſt the ſame ſituation; and being dwindled to a ſmall remnant, had ſet ſail for England, in deſpair of living in ſuch an uncultivated country, inhabited by fierce and warlike ſavages. But in the mouth of Cheſapeak Bay, they were met by Lord Delawar, with a ſquadron loaded with proviſions, and with every thing neceſſary for their ſupport and defence. At his perſuaſion they returned; and by his wiſe management and engaging behaviour, the government of the colony was ſettled within itſelf, and began to appear formidable to its enemies. This nobleman, who had accepted the government of this unpromiſing colony from the beſt motives, was obliged, by the decline of his health, to return to England. However, he left behind him his ſon, as deputy, with Sir Thomas Gates, Sir George Summers, the Hon. George Piercy, and Mr. Newport, for his council. They erected James-Town, the firſt place built by the Engliſh in the New World; they cleared large tracts of land, and raiſed a ſufficient quantity of corn and vegetables for their ſupport. The value of this colony now began to be known in England; and great numbers of people tranſported themſelves to Virginia, which was conſidered as one of the genuine ſources of wealth. During the dreadful troubles in the reign of Charles I. many of the royal party fled to Virginia, and under the conduct of Sir William Berkley held out for the crown, till the parliament, rather by ſtratagem than force, found means to reduce them.

After the Reſtoration, the hiſtory of this colony has very few intereſting events: a kind of rebellion, indeed, broke out in Virginia, on account of the miſmanagement of the government, and ſome reſtrictions laid upon trade. The inſurgents were headed by one Bacon, a young gentleman bred to the law; but the unexpected death of their leader reſtored the peace of the colony, and prevented the dreadful conſequences of a civil war.

At the firſt eſtabliſhment of this colony, the government was adapted to the principles of the Engliſh conſtitution, and to the enjoyment of that liberty which every Engliſhman conſiders as his birth-right. It was directed by a governor and council appointed by the crown; but, as the inhabitants increaſed, the inconveniency of this government became more conſpicuous: the people complained, and it was found neceſſary to give them a ſhare in the government. Accordingly a new branch was added to the legiſlature: the people were allowed to elect their own repreſentatives for each county into which the colony is divided, with privileges reſembling thoſe of the commons of England: and thus two houſes, called the upper and lower houſe of aſſembly, were formed. The upper houſe, which was before called the council, continued on its former footing; the members were appointed by the crown; they held their poſts during pleaſure; were ſtiled honourable, and anſwered, in ſome meaſure, to the Britiſh houſe of peers. The lower houſe was the guardian of the liberties of the people; and the governor repreſented the king. Thus the government of Virginia bore a ſtriking reſemblance to the Britiſh. When any bill had paſſed the two houſes of aſſembly, it was ſent up to the governor, who gave his aſſent or negative as he thought proper; but it did not acquire the force of a law, till it had been tranſmitted to England, and received his majeſty's approbation. The upper houſe of aſſembly, beſides making a part of the legiſlature, formed alſo a privy-council to the governor, who, without their conſent, could do nothing of moment: it ſometimes acted alſo as a court of chancery.

With regard to the preſent government of Virginia, the convention at Williamſburg, in July 1776, agreed, that the legiſlative, executive, and judiciary departments ſhould be ſeparate and diſtinct. The houſe of delegates are to be choſen annually by the freeholders, two for each county, and for the diſtrict of Weſt Auguſta, and one repreſentative for the city of Williamſburg and town of Norfolk. The ſenate conſiſts of 24 members, choſen by the freeholders of the ſtate, and divided into 20 diſtricts. The executive government is a governor and privy council of eight members,

chofen annually by the joint ballot of the general aſſembly of the ſtate, who alſo elect the delegates to congreſs, the judges, preſident, treaſurer, ſecretary, juſtices, ſheriffs, coroners, &c.

A Deſcription of the City of Waſhington, in the Diſtrict of Columbia, in North-America, now building for the Metropolis of the United States.

THE city of Waſhington, in the diſtrict of Columbia, now building for the permanent ſeat of the government of the United States of America, ſtands at the junction of the rivers Potomack and the Eaſtern Branch, extending about four miles up each, including a tract of territory ſcarcely to be exceeded, in point of convenience, ſalubrity, and beauty, by any in the world: for although the land is apparently level, yet, by gentle and gradual ſwellings, a variety of elegant proſpects are produced. This territory lies partly in the ſtate of Virginia, and partly in that of Maryland, and was ceded by thoſe two ſtates to the United States of America, and by them eſtabliſhed to be the ſeat of government, after the year 1800.

Within the limits of the city are twenty-five never-failing ſprings of excellent water; and, by digging wells, water of the beſt quality is readily had: beſides, the never-failing ſtreams that now run through that territory, are alſo to be collected for the uſe of the city.

The Eaſtern Branch is one of the ſafeſt and moſt commodious harbours in America, being ſufficiently deep for the largeſt ſhips, for about four miles above its mouth; while the channel lies cloſe along the edge of the city, and is abundantly capacious. This river contains thirty and thirty-five feet to near the upper end of the city, where it is eighteen and twenty feet deep.

The city being ſituated upon the great poſt road, exactly equidiſtant from the northern and ſouthern extremities of the Union, and nearly ſo from the Atlantic Ocean to the River Ohio, upon the beſt navigation, and in the midſt of the richeſt commercial territory in America, commanding the moſt extenſive internal reſources, is by far the moſt eligible ſituation for the reſidence of Congreſs; and it is now preſſing forward, by the public-ſpirited enterpriſe, not only of the people of the United States, but alſo of foreigners.

The inland navigation of the Potomack is ſo far advanced, that craft loaded with produce now come down that river and its ſeveral branches, from upwards of 180 miles to the great falls, which are within fourteen miles of the new city. The canals at the great and little falls are nearly completed, and the locks in ſuch forwardneſs, that, in the courſe of a ſhort time, the navigation will be entirely opened between tide water and the head branches of the Potomack, which will produce a communication by water between the city of Waſhington and the interior parts of Virginia and Maryland, by means of the Potomack, the Shannandoah, the South Branch, Opecan, Cape Capon, Paterſon's Creek, Conoochegue, and Monocaſy, for upwards of 200 miles, through one of the moſt healthy, pleaſant, and fertile regions in America, producing, in vaſt abundance, tobacco of ſuperior quality, hemp, Indian corn, wheat, and other ſmall grain, with fruit and vegetables peculiar to America, in vaſt abundance.

The lands upon the Potomack above the city of Waſhington, all around it, and for ſixty miles below, are high and dry, abounding with innumerable ſprings of excellent water, and are well covered with large timber of various kinds. A few miles below the city, upon the banks of the Potomack, are inexhauſtible mountains of excellent freeſtone, of the white and red Portland kinds, of which the public edifices in the city are now building. Above the city alſo, upon the banks of the river, are immenſe quantities of excellent coal, limeſtone, and marble, with blue ſlate of the beſt quality.

The founding of this city, in ſuch an eligible ſituation, upon ſuch a liberal and elegant plan, will by future generations be conſidered as a high proof of the judgment and wiſdom of the late preſident of the United States, while its name will keep freſh in mind, to the end of time, the obligations they are under to that illuſtrious character.

The plan of this city, agreeable to the directions of the preſident of the United States, was deſigned by Major L'Enfant, and is an inconceivable improvement upon all other cities, combining not only convenience, regularity, elegance of proſpect, and a free circulation of air, but every thing grand and beautiful that can be introduced into a city.

The city is divided into ſquares or grand diviſions, by the ſtreets running due north and ſouth, and eaſt and weſt, which form the ground-work of the plan. However, from the capitol, the preſident's houſe, and ſome of the important areas in the city, run tranſverſe avenues or diagonal ſtreets, from one material object to another, which not only produce a variety of charming proſpects, but remove that inſipid ſameneſs that renders ſome other great cities unpleaſing. They were deviſed to connect the ſeparate and moſt diſtant objects with the principal, and to preſerve through the whole a reciprocity of ſight. The great leading ſtreets are all 160 feet wide, including a pavement of ten feet, and a gravel walk of thirty feet planted with trees on each ſide, which will leave eighty feet of paved ſtreet for carriages. The reſt of the ſtreets are, in general, 110 feet wide, with a few only ninety feet, except North, South, and Eaſt Capitol Streets, which are 160 feet. The diagonal ſtreets are named after the reſpective ſtates compoſing the Union, while thoſe running north and ſouth are, from the capitol eaſtward, named, Eaſt Firſt Street, Eaſt Second Street, &c. and thoſe weſt of it are in the ſame manner called Weſt Firſt Street, Weſt Second Street, &c. thoſe running eaſt and weſt, are from the capitol northward, named, North A Street, North B Street, &c. and thoſe ſouth of it are called South A Street, South B Street, &c.

The ſquares, or diviſions of the city, amount to 1150. The rectangular ſquares generally contain from three to ſix acres, and are divided into lots of from forty to eighty feet in front, and their depth, from about 113 to 300 feet, according to the ſize of the ſquare.

The irregular diviſions produced by the diagonal ſtreets are ſome of them ſmall, but generally in valuable ſituations. Their acute points are all to be cut off at forty feet, ſo that no houſe in the city will have an acute corner. The lots in theſe irregular ſquares will all turn at a right angle with the reſpective ſtreets, although the backs of the houſes upon them will not ſtand parallel to one another, which is a matter of no conſequence.

By the rules declared and publiſhed by the preſident of the United States, for regulating the buildings within the city, all houſes muſt be of ſtone or brick: their walls muſt be parallel to the ſtreets, and either placed immediately upon them, or withdrawn therefrom at pleaſure. The walls of all houſes upon ſtreets 160 feet wide muſt be at leaſt thirty feet high.

The area for the capitol (or houſe for the legiſlative bodies) is ſituated upon the moſt beautiful eminence in the city, about a mile from the Eaſtern Branch, and not much more from the Potomack, commanding a full view of every part of the city, as well as a conſiderable extent of the country around. The preſident's houſe will ſtand upon a riſing ground, not far from the banks of the Potomack, poſſeſſing a delightful water proſpect, with a commanding view

of

of the capitol, and ſome other material parts of the city.

Due ſouth from the preſident's houſe, and due weſt from the capitol, run two great pleaſure parks or malls, which interſect and terminate upon the banks of the Potomack, and are to be ornamented at the ſides by a variety of elegant buildings, houſes for foreign miniſters, &c.

Interſperſed through the city, where the moſt material ſtreets croſs each other, are a variety of open areas, formed in various regular figures, which in great cities are extremely uſeful and ornamental.

Fifteen of the beſt of theſe areas are to be appropriated to the different ſtates compoſing the Union; not only to bear their reſpective names, but as proper places for them to erect ſtatues, obeliſks, or columns, to the memory of their favourite eminent men. Upon the ſmall eminence, where a line due weſt from the capitol, and due ſouth from the preſident's houſe, would interſect, is to be erected an equeſtrian ſtatue of General Waſhington, late preſident of the United States.—The building where Maſſachuſſets and Georgia ſtreets meet, is intended for a marine hoſpital, with its gardens.

The area at the ſouth end of Eaſt Eight ſtreet is for the general exchange, its public walks, &c.

The area, at the junction of the rivers, is for a fort, magazines, and arſenals.

At the eaſt end of Eaſt Capitol Street is to be a bridge, and the preſent ferry is at the lower end of Kentucky-Street, where the great road now croſſes the Eaſtern Branch.—The Tyber, which is the principal ſtream that paſſes through the city, is to be collected in a grand reſervoir beſide the capitol, whence it will be carried in pipes to different parts of the city; while its ſurplus water will fall down in beautiful caſcades, through the public gardens weſt of the capitol, into the canal.—In various parts of the city places are allotted for market-houſes, churches, colleges, theatres, &c.

The preſident of the United States, in locating the ſeat of the city, prevailed upon the proprietors of the ſoil to cede a certain portion of the lots in every ſituation, to be ſold by his direction, and the proceeds to be ſolely applied to the public buildings, and other works of public utility within the city. This grant will produce about 15000 lots, and will be ſufficient, not only to erect the public buildings, but to dig the canal, conduct water through the city, and to pave and light the ſtreets, which will ſave a heavy tax that ariſes in other cities, and conſequently render the lots conſiderably more valuable.

In January 1793, moſt of the ſtreets were run, and the ſquares divided into lots. The canal was partly dug, and the greateſt part of the materials provided for the public buildings, which are to be entirely of freeſtone poliſhed, and are now carrying on with all poſſible expedition.—Laſt ſummer ſeveral private houſes were erected, and a great many proprietors of lots were then preparing to build the enſuing ſummer.

CHAP. XII.

KENTUCKY.

Extent, Diviſions, Rivers, Soil, Produce, Climate, Chief Towns, &c.

THE fine flouriſhing country of Kentucky having riſen into importance but very lately, we are happy to preſent our readers with the following account from an excellent work, entitled, "The American Geography, by Jedidiah Morſe;" to which we have added ſome judicious extracts from the topographical accounts of this weſtern territory by Captain George Imlay, and Mr. John Filſon.

§

This new ſtate belongs at preſent to the province of Virginia. It is ſituated between 36 deg. 30 min. and 39 deg. 30 min. north lat. and 8 deg. 15 min. weſt long. is 250 miles in length, and 200 in breadth; being bounded north-weſt, by the river Ohio; weſt, by Cumberland River; ſouth, by North-Carolina; eaſt, by Sandy River, and a line drawn due ſouth from its ſource, till it ſtrikes the northern boundary of North Carolina.

Kentucky was originally divided into two counties, Lincoln and Jefferſon. It has ſince been ſubdivided into ſeven, which follow:

Jefferſon; chief town, Louiſville: Fayette; chief town, Lexington: Bourbon: Mercer, chief town, Harrodſtown: Nelſon; chief town, Bardſtown: Maddiſon: Lincoln.

As moſt of theſe counties are very large, it is probable that ſubdiviſions will continue to be made, as population increaſes.

The river Ohio waſhes the north-weſtern ſide of Kentucky, in its whole extent. Its principal branches which water this fertile tract of country, are Sandy, Licking, Kentucky, Salt, Green, and Cumberland rivers. Theſe again branch, in various directions, into rivulets of different magnitudes, fertilizing the country in all its parts. At the bottoms of theſe watercourſes the lime-ſtone rock, which is common to this country, appears of a greyiſh colour; and where it lies expoſed to the air, in its natural ſtate, it looks like brown free-ſtone. On the banks of theſe rivers aud rivulets, this ſtone has the appearance of fine marble, being of the ſame texture, and is found in the greateſt plenty.

Sandy, Licking, and Kentucky rivers riſe near each other, in the Cumberland mountains. Of theſe, Sandy River only breaks through the mountain. This river conſtitutes a part of the eaſtern boundary of Kentucky. Licking River runs in a north-weſt direction, upwards of 100 miles, and is about 100 yards broad at its mouth. Kentucky is a very crooked river, and, after running a courſe of more than 200 miles, emties into the Ohio by a mouth of 150 yards broad.

Salt River riſes at four different places near each other. The windings of this river are curious. The four branches, after a circuitous courſe around a fine tract of land, unite; and after running about fifty miles, empty into the Ohio, twenty miles below the Falls. Its general courſe is weſtward—its length about ninety miles—and its mouth is eighty yards wide.

Green River purſues a weſtern courſe upwards of 150 miles, and, by a mouth eighty yards wide, falls into the Ohio, 120 miles below the Rapids.

Cumberland River interlocks with the northern branch of Kentucky, and rolling round the other arms of Kentucky, among the mountains, in a ſouthern courſe, 100 miles—then in a ſouth-weſtern courſe for above 200 more—then in a ſouthern and ſouth-weſtern courſe for about 250 more, finds the Ohio, 413 miles below the Falls. At Naſhville, this river is 200 yards broad, and at its mouth 300. The river, in about half its courſe, paſſes through North Carolina.

Theſe rivers are navigable for boats almoſt to their ſources, without rapids, for the greateſt part of the year. The little rivulets which chequer the country, begin to leſſen in June, and quite diſappear in the months of Auguſt, September, and October. The autumnal rains, however, in November, repleniſh them again. The method of getting a ſupply of water in the dry ſeaſon is by ſinking wells, which are eaſily dug, and afford excellent water. The want of water in autumn, is the great complaint. Mills that may be ſupplied with water, eight months in a year, may be erected in a thouſand different places. Wind-mills and horſe-mills may ſupply the other four months. The banks of the rivers are generally high and com-

poſed

poſed of lime-ſtone. After heavy rains the water in the rivers riſes from ten to thirty feet.

There are five noted ſalt ſprings or licks in this country; viz. The higher and lower Blue Springs on Licking river, from ſome of which, it is ſaid, iſſue ſtreams of briniſh water—the Big Bone lick, Dernnon's lick's, and Bullet's lick, at Saltſburgh. The laſt of theſe licks, though in low order, has ſupplied this country and Cumberland with ſalt at twenty ſhillings the buſhel, Virginia currency; and ſome is exported to the Illinois country. The method of procuring water from theſe licks, is by ſinking wells from thirty to forty feet deep. The water drawn from theſe wells is more ſtrongly impregnated with ſalt than the water from the ſea. A ſtraight road, forty feet wide, has been cut from Saltſburgh to Louiſville, twenty-four miles.

As far as has yet been diſcovered, this whole country lies upon a bed of lime-ſtone, which in general lies about ſix feet below the ſurface, except in the vallies, where the ſoil is much thinner. A tract of about twenty miles wide, along the banks of the Ohio, is hilly, broken land, interſperſed with many fertile ſpots. The reſt of the country is agreeably uneven, gently aſcending and deſcending at no great diſtances. The angles of aſcent are from eight to twenty-four degrees, and ſometimes more. The vallies are, for the moſt part, very narrow, and the ſoil in them is very thin, and of an inferior quality: and that along the aſcending ground is frequently not much better; for where you ſee a tree blown up, you find the roots clinging to the upper parts of the rock. The ſoil, on theſe agreeable aſcents (for they cannot be called hills) is ſufficiently deep, as is evident from the ſize of the trees. The ſoil is either black or tinged with a lighter or deeper vermilion, or is of the colour of dark aſhes. In many places there are appearances of potters clay, and coal in abundance. The country promiſes to be well ſupplied with wholeſome, well-taſted water. In Nelſon county, north-weſt of Rolling-fork, a branch of Salt river, is a tract of about forty miles ſquare, moſtly barren, interſperſed with plains and ſtrips of good land, which are advantageous ſituations for raiſing cattle, as the neighbouring barrens are covered with graſs, and afford good paſturage. The lands eaſt of Nolin creek, a branch of Green river, are in general of an inferior quality; but the banks of Green river afford many deſirable ſituations.

Towards the head waters of Kentucky river, which interlock with the waters of Cumberland and Sandy Rivers, and the whole country eaſtward and ſouth-eaſtward, as far as the Holſtein river, is broken mountainous, and almoſt impenetrable; and from the deſcription, it is much doubted whether it will ever be practicable to make a paſſable road from Kentucky acroſs to Wincheſter, in Virginia, on the eaſt ſide of the mountains, which, on a ſtreight line, is not perhaps more than 400 miles and the way now travelled is 600.

No country will admit of being thicker ſettled with farmers, who confine themſelves to agriculture, than this. But large ſtocks of cattle, except in the neighbourhood of barrens, cannot be raiſed.

The river Elkhorn, a branch of the Kentucky, from the ſouth-eaſt, waters an exceeding fine country. Indeed, the country eaſt and ſouth of this, including the head waters of Licking river, Hickman's and Jeſſamine creeks, and the remarkable bend in Kentucky River, may be called an extenſive garden. The ſoil is deep and black, and the natural growth, large walnuts, honey and black locuſt, poplar, elm, oak, hickory, ſugar-tree, &c. Grape vines, running to the tops of the trees; and the ſurface covered with clover, blue glaſs, and wild rye. On this fertile tract, and on the Licking River, and the head waters of Salt River, are the bulk of the ſettlements in this country. The ſoil within a mile or two of Kentucky River is generally of the third and fourth rates; and as you advance towards the Ohio, the land is poor and hilly. Dick's river runs through a great body of firſt rate land, abounding with cane, and affords many excellent mill ſeats. Salt River has good lands on its head waters, except that they are low and unhealthy; but for twenty-five miles before it empties into the Ohio, the land on each ſide is level and poor, and abounds with ponds. Cumberland River, ſo much of it as paſſes through Kentucky, traverſes, ſome few parts excepted, a hilly poor country. Green River overflows it banks a conſiderable way up, at the ſeaſon when the Ohio ſwells, which is in April. This ſwell in Green River occaſions ſeveral of its large branches to overflow, and cover the low grounds with water, leaves, and vegetable ſubſtances, which in ſummer become noxious and unhealthy. Its banks are fine and fertile. There is a great body of good land near the falls or rapids in the Ohio, called Bare Graſs; but the climate is rendered unhealthy by ponds of ſtagnant water, which may be eaſily drained.

This country in general is well timbered. Of the natural growth which is peculiar to this country, we may reckon the ſugar, the coffee, the papaw, and the cucumber tree. The two laſt are a ſoft wood, and bear a fruit of the ſhape and ſize of a cucumber. The coffee tree reſembles the black oak, and bears a pod, which encloſes good coffee. Beſides theſe, there is the honey locuſt, black mulberry, wild cherry, of a large ſize, buck eye, an exceedingly ſoft wood—the magnolia, which bears a beautiful bloſſom of a rich and exquiſite fragrance. Such is the variety and beauty of the flowering ſhrubs and plants which grow ſpontaneouſly in this country, that in the proper ſeaſon the wilderneſs appears in bloſſom.

The accounts of the fertility of the ſoil in this country have, in ſome inſtances, exceeded belief; and probably have been exaggerated. That ſome parts of Kentucky, particularly the high grounds, are remarkably good, all accounts agree. The lands of the firſt rate are too rich for wheat, and will produce fifty and ſixty, and in ſome inſtances, it is affirmed, 100 buſhels of good corn, an acre. In common, the land will produce thirty buſhels of wheat or rye an acre. Barley, oats, cotton, flax, hemp, and vegetables of all kinds common in this climate, yield abundantly. The old Virginia planters ſay, that if the climate does not prove too moiſt, few ſoils known will yield more and better tobacco.

In the rivers are plenty of buffalo and catfiſh of uncommon ſize, ſalmon, mullet, rock, perch, garfiſh, eel, ſuckers, ſunfiſh, &c.—Trout, ſhad, and herrings have not been caught in the weſtern waters.

The land fowls are turkeys, which are very frequent, pheaſants, and partridges. The parroquet, is a bird every way reſembling a parrot, but much ſmaller. The ivory-bill woodcock, of a whitiſh colour, with a white plume, flies ſcreaming exceedingly ſharp. It is aſſerted, that the bill of this bird is pure ivory, a circumſtance very ſingular in the plumy tribe. The great owl reſembles its ſpecies in other parts, but is remarkably different in its vociferation, ſometimes making a ſtrange, ſurpriſing noiſe, like a man in the moſt extreme danger and difficulty.

There are few ſwamps in Kentucky; and of courſe the reptiles which they produce, ſuch as ſnakes, frogs, &c. are not numerous. The honey-bee may be called a domeſtic inſect, as it is not found but in civilized countries. This is confirmed by a ſaying which is ſaid to be common among the Indians, when they ſee a ſwarm of bees in the woods, "Well, brothers, it is time for us to decamp, for the white people are coming." The quadrupeds, except the buffalo, are the ſame as in Virginia and the Carolinas.

The climate is healthy and delightful, excepting ſome few places in the neighbourhood of ponds and low grounds. The inhabitants do not experience the extremes of heat and cold. Snow ſeldom falls deep, or lies long. The winter, which begins about Chriſtmas,

mas, is never longer than three months, and is commonly but two, and is ſo mild as that cattle can ſubſiſt without fodder.

Lexington, which ſtands on the head waters of Elkhorn river, is reckoned the capital of Kentucky. Here the courts are held, and buſineſs regularly conducted. In 1786, it contained about 100 houſes, and ſeveral ſtores, with a good aſſortment of dry goods. It muſt have greatly increaſed ſince.

Leeſtown is weſt of Lexington, on the eaſtern bank of Kentucky river. It is regularly laid out, and is flouriſhing. The banks of Kentucky river are remarkably high, in ſome places 3 and 400 feet, compoſed generally of ſtupendous perpendicular rock; the conſequence, is, there are few croſſing places. The beſt is at Leeſtown, which is a circumſtance that muſt contribute much to its increaſe.

Louiſville ſtands on the Kentucky ſide of the Ohio, oppoſite Clarkſville, at the Falls, in a fertile country, and promiſes to be a place of great trade. Its unhealthineſs, owing to ſtagnated waters back of the town, has conſiderably retarded its growth. Beſides theſe there is Bardſtown, in Nelſon county, and Harrodſberg, in Mercy county, both on the head waters of Salt River; Danville, Boonſborough, and Granville are alſo increaſing towns.

It is impoſſible to aſcertain with any degree of accuracy, the preſent number of inhabitants; owing to the numerous acceſſions which are made almoſt every month. In 1783, in the county of Lincoln only (now divided) there were, on the militia rolls, 3570 men, chiefly emigrants from the lower parts of Virginia. In 1784, the number of inhabitants were reckoned at upwards of 30,000. From the accounts of their aſtoniſhing increaſe ſince, we may now ſafely eſtimate them at 100,000. It is aſſerted that at leaſt 20,000 migrated here in the year 1787. Theſe people, collected from different ſtates, of different manners, cuſtoms, religions, and political ſentiments, have not been long enough together to form an uniform and diſtinguiſhing character. Among the ſettlers there are many gentlemen of abilities, and many genteel families, from ſeveral of the ſtates, who give dignity and reſpectability to the ſettlement. They are, in general, more orderly, perhaps, than any people who have ſettled a new country.

The moſt numerous religious ſect in Kentucky are the Baptiſts. In 1787 they had ſixteen churches eſtabliſhed, beſides ſeveral congregations where churches were not conſtituted. Theſe were ſupplied with upwards of thirty miniſters or teachers. There are ſeveral large congregations of Preſbyterians, and ſome few of other denominations.

The government here is the ſame as in Virginia. But they expect to be admitted into the union as an independent ſtate, in a convenient time after the new government is put in operation. The inconveniences to which they are neceſſarily ſubjected, from their connection with Virginia, are great. Theſe the legiſlature of Virginia have conſidered; and, in the ſeſſion of 1786, paſſed an act, providing, on their part, for the erection of the diſtrict of Kentucky into an independent ſtate. In no part of the United Sates is juſtice adminiſtered with more propriety and diſpatch.

For promoting literature and improvements, the legiſlature of Virginia have made proviſion for a college in Kentucky, and have endowed it with very conſiderable landed funds. The Rev. John Todd has given a very handſome library for its uſe. Schools are eſtabliſhed in the ſeveral towns, and, in general, regularly and handſomely ſupported. They have a printing-office, and publiſh a weekly Gazette. They have erected a paper-mill, an oil-mill, fulling-mills, ſaw-mills, and a great number of valuable griſt mills. Their ſalt works are more than ſufficient to ſupply all the inhabitants, at a low price. They make conſiderable quantities of ſugar from the ſugar trees.

Caves have been diſcovered in this country, of ſeveral miles in length, under a fine lime-ſtone rock, ſupported by curious arches and pillars. Springs that emit ſulphurous matter have been found in ſeveral parts of the country. One is near a ſalt ſpring, in the neighbourhood of Boonſborough. There are three ſprings or ponds of bitumen near Green River, which do not form a ſtream, but empty themſelves into a common reſervoir, and when uſed in lamps, anſwer all the purpoſes of the beſt oil. Copperas and alum are among the minerals of Kentucky. Near Lexington are found curious ſepulchres full of human ſkeletons. We have been told that a man, in or near Lexington, having dug five or ſix feet below the ſurface of the ground, came to a large flat ſtone, under which was a well of common depth, regularly and artificially lined with ſtone.

Among the natural curioſities of this country, the winding banks, or rather precipices of Kentucky and Dick's Rivers, deſerve the firſt place. The aſtoniſhed eye there beholds almoſt every where three or four hundred feet of a ſolid perpendicular lime-ſtone rock; in ſome parts a fine white marble, either curiouſly arched, pillared, or blocked up into fine building ſtones. Theſe precipices are like the ſides of a deep trench, or canal; the land above being level, except where creeks ſet in, and crowned with fine groves of red cedar. It is only at particular places that theſe rivers can be croſſed, one of which is worthy of admiration; a great road, large enough for waggons, made by the buffalo, ſloping with an eaſy deſcent from the top to the bottom of a very large ſteep hill, at or near the river above Lees-Town.

HISTORY OF KENTUCKY.

THE firſt white man we have certain accounts of who diſcovered this province, was one James M'Bride, who in company with ſome others, in the year 1754, paſſing down the Ohio in canoes, landed at the mouth of Kentucky river, and there marked a tree with the firſt letters of his name, and the date, which remain to this day. Theſe men reconnoitred the country, and returned home with the pleaſing news of their diſcovery of the beſt tract of land in North America, and probably in the world. From this period it remained concealed till about the year 1767, when one John Finley and ſome others, trading with the Indians, fortunately travelled over the fertile region, now called Kentucky, then but known to the Indians by the name of the Dark and Bloody Grounds, and ſometimes the Middle Ground.

This country greatly engaged Mr. Finley's attention. Some time after diſputes ariſing between the Indians and traders, he was obliged to decamp; and returned to his place of reſidence in North Carolina, where he communicated his diſcovery to Col. Daniel Boon, and a few more, who, conceiving it to be an intereſting object, agreed in the year 1769 to undertake a journey in order to explore it. After a long fatiguing march, over a mountainous wilderneſs, in a weſtward direction, they at length arrived upon its borders; and from the top of an eminence, with joy and wonder, deſcried the beautiful landſcape of Kentucky. Here they encamped, and ſome went to hunt proviſions, which were readily procured, there being plenty of game, while Col. Boon and John Finley made a tour through the country, which they found far exceeding their expectations; and returning to camp, informed their companions of their diſcoveries. But in ſpite of this promiſing beginning, this company, meeting with nothing but hardſhips and adverſity, grew exceedingly diſheartened, and were plundered, diſperſed, and killed by the Indians, except Col. Boon, who continued an inhabitant of the wilderneſs until the year 1771, when he returned home.

Kentucky had, about this time, drawn the attention of ſeveral gentlemen. Doctor Walker, of Virginia, with a number more, made a tour weſtard for diſcoveries, endeavouring to find the Ohio river; and afterwards he and General Lewis, at Fort Stanwix, purchaſed from the five nations of Indians the lands lying on the north ſide of Kentucky. Col. Donaldſon, of Virginia, being employed by the ſtate to run a line from ſix miles above the Long Iſland, on Holſtein, to the mouth of the Great Kanhaway, and finding thereby that an extenſive tract of excellent country would be cut off to the Indians, was ſolicited, by the inhabitants of Clench and Holſtein, to purchaſe the lands lying on the north ſide of Kentucky river from the Five Nations. This purchaſe he completed for five hundred pounds, ſpecie. It was then agreed, to fix a boundary line, running from the Long Iſland on Holſtein to the head of Kentucky river; thence down the ſame to the mouth; thence up the Ohio to the mouth of Great Kanhaway; but this valuable purchaſe the ſtate refuſed to confirm.

Colonel Henderſon, of North Carolina, being informed of this country by Colonel Boon, he, and ſome other gentlemen, held a treaty with the Cherokee Indians at Wataga, in March 1775, and then purchaſed from them the lands lying on the ſouth ſide of Kentucky River for goods, at valuable rates, to the amount of 6000l. ſpecie.

Soon after this purchaſe, the ſtate of Virginia took the alarm, agreed to pay the money Colonel Donaldſon had contracted for, and then diſputed Colonel Henderſon's right of purchaſe, as a private gentleman of another ſtate, in behalf of himſelf: however, for his eminent ſervices to this country, and for having been inſtrumental in making ſo valuable an acquiſition to Virginia, that ſtate was pleaſed to reward him with a tract of land, at the mouth of Green River, to the amount of 200,000 acres; and the ſtate of North Carolina gave him the like quantity in Powel's Valley. This region was formerly claimed by various tribes of Indians; whoſe title, if they had any, originated in ſuch a manner, as to render it doubtful which ought to poſſeſs it: hence this fertile ſpot became an object of contention, a theatre of war, from which it was properly denominated the Bloody Grounds. Their contentions not being likely to decide the right to any particular tribe, as ſoon as Mr. Henderſon and his friends propoſed to purchaſe, the Indians agreed to ſell; but notwithſtanding the valuable conſideration they received, have continued ever ſince troubleſome neighbours to the new ſettlers.

In ſhort, the progreſs in improvements and cultivation which have been made in this country to the preſent time, almoſt exceeds belief.—Sixteen years ago Kentucky lay in foreſt, almoſt uninhabited but by wild beaſts. Now, notwithſtanding the united oppoſition of all the Weſtern Indians, ſhe exhibits an extenſive ſettlement, divided into ſeven large and populous counties, in which are a number of flouriſhing little towns, containing more inhabitants than are in Georgia, Delaware, or Rhode-Iſland ſtates, and nearly or quite as many as in New Hampſhire. Mr. Imlay, in his deſcription of this Weſtern Territory, ſays, he has known upwards of 10,000 emigrants to arrive in the ſingle ſtate of Kentucky within one year, and from 4 to 10,000 in ſeveral other years. An inſtance of the like kind, where a ſettlement has had ſo large and ſo rapid a growth, can ſcarcely be produced from the page of hiſtory.

Mr. Filſon concludes his account of Kentucky with the following obſervations on the happy circumſtances, that the inhabitants of Kentucky will probably enjoy, from the poſſeſſion of a country ſo extenſive and fertile.

"There are four natural qualities neceſſary to promote the happineſs of a country, viz. A good ſoil, air, water, and trade. Theſe taken collectively, excepting the latter, Kentucky poſſeſſes in a ſuperior degree: and, agreeable to our deſcription of the weſtern trade, we conclude, that it will be nearly equal to any other on the continent of America, and the diſadvantages it is ſubject to, be fully compenſated by the fertility of the ſoil.

"This fertile region, abounding with all the luxuries of nature, ſtored with all the principal materials for art and induſtry, inhabited by virtuous and ingenious citizens, muſt univerſally attract the attention of mankind, being ſituated in the central part of the extenſive American empire, where agriculture, induſtry, laws, arts, and ſciences, flouriſh; where afflicted humanity raiſes her drooping head; where ſprings a harveſt for the poor; where conſcience ceaſes to be a ſlave, and laws are no more than the ſecurity of happineſs; where nature makes reparation for having created man; and government, ſo long proſtituted to the moſt criminal purpoſes, eſtabliſhes an aſylum in the wilderneſs for the diſtreſſed of mankind.

"The recital of your happineſs will call to your country all the unfortunate of the earth, who, having experienced oppreſſion, political or religious, will there find a deliverance from their chains. To you innumerable multitudes will emigrate from the hateful regions of deſpotiſm and tyranny; and you will ſurely welcome them as friends, as brothers; you will welcome them to partake with you of your happineſs.—Let the memory of Lycurgus, the Spartan legiſlator, who baniſhed covetouſneſs, and the love of gold from his country; the excellent Locke, who firſt taught the doctrine of toleration; the venerable Penn, the firſt who founded a city of brethren; and Waſhington, the defender and protector of perſecuted liberty, be ever the illuſtrious examples of your political conduct. Avail yourſelves of the benefits of nature, and of the fruitful country you inhabit.

"Let the iron of your mines, the wool of your flocks, your flax and hemp, the ſkins of the ſavage animals that wander in your woods, be faſhioned into manufactures, and take an extraordinary value from your hands. Then will you rival the ſuperfluities of Europe, and know that happineſs may be found, without the commerce ſo univerſally deſired by mankind.

"In your country, like the land of promiſe, flowing with milk and honey, a land of brooks of water, of fountains and depths, that ſpring out of valleys and hills, a land of wheat and barley, and all kinds of fruits, you ſhall eat bread without ſcarceneſs, and not lack any thing in it; where you are neither chilled with the cold of Capricorn, nor ſcorched with the burning heat of Cancer; the mildneſs of your air ſo great, that you neither feel the effects of infectious fogs, nor peſtilential vapours. Thus your country, favoured with the ſmiles of heaven, will probably be inhabited by the firſt people the world ever knew."

CHAP. XIII.

NORTH AND SOUTH CAROLINA, WITH GEORGIA.

Boundaries, Diviſions, Climate, Rivers, Soil, Productions, Animals principal Towns, Inhabitants, and Government.

THESE countries are bounded, on the north, by Virginia; on the weſt, by the Miſſiſſippi; on the eaſt, by the Atlantic Ocean; and on the ſouth, by the river St. John, which ſeparates Georgia from Florida. They are compoſed of three diviſions, the north, the middle, and the ſouth; in the following manner:

DIVISIONS.

Divisions.	Counties.	Towns.
In North Carolina are the counties of	Albemarle	Newburn.
	Bath, & Clarendon in part	Edenton.
		Wilmington.
In South Carolina, being the middle division, are the counties of	Clarendon in part.	St. James.
	Craven	Chriſt-Church.
	Berkeley.	
	Colleton	Charleſton.
	Granville	Port-Royal.
Georgia, being the ſouth diviſion, contains	Richmond	Savannah.
	Effingham.	
	Chatham.	
	Cambden.	
	Wilkes	Sunbury.
	Glynn	Frederica.
	Burke	Puriſburgh.
	Liberty.	

The climate of theſe countries is nearly alike, and agrees, in general, with that of Virginia. The air in the Carolinas and Georgia is, for the moſt part, clear, ſerene, and pleaſant. Sometimes violent rains fall both in winter and ſummer, attended by high winds; but theſe hurricanes ſeldom do any miſchief. The heat in ſummer is indeed very intenſe, but the winters are moderate, and extremely ſhort. Like that of Virginia, &c. the climate is ſubject to ſudden tranſitions from heat to cold; a north-weſt wind, even in ſummer, blows exceedingly ſharp, and the hotteſt day will often be ſucceeded by a very cold evening; againſt the effects of which, the inhabitants find it neceſſary to guard as much as poſſible. Many tender plants, which do not ſtand the winter of Virginia, flouriſh in Carolina.

The chief rivers are, the Albemarle, or Roanoke; Pentague, Pamticos Neus; Cape Fear, or Clarendon river; Pedee, Santee, Savannah, Alatamaha, or George river; and St. Mary's, which divides Georgia from Florida; all which riſe in the Apalachian mountains, and, running eaſt, fall into the Atlantic Ocean. The back parts are watered by the Cherokees, Yaſſous, Mobile, Apalachicola, the Pearl river, and ſeveral others, which fall into the Gulf of Mexico, or the Miſſiſſippi.

The Atlantic Ocean is the only ſea bordering on this country, and is very ſhallow near the coaſt. The beſt harbours are thoſe of Roanoke, at the mouth of Albemarle river, Pamtico, and Cape Fear. There are, in South Carolina, the harbours of Charleſton, Winyaw or George-Town, and Port-Royal. The mouths of the Savannah and Alatamaha form good harbours in Georgia. Cape Hattera, in 35 deg. north lat. Cape Fear to the ſouth of it, and Cape Carteret ſtill farther ſouth, are the moſt remarkable promontories.

The two Carolinas, in the fertility of nature, have the advantage of Virginia; but the ſoil of Georgia is not ſo good as that of the other provinces. The vegetation of every kind of plant is incredibly quick in Carolina; for the ſoil, even when left to itſelf, yields flowers and flowering ſhrubs; and all the European plants arrive at a degree of perfection here, far exceeding what they attained in their native ſoil. The productions of the Carolinas are vines, ſome wheat, Indian corn, barley, oats, peas, beans, hemp, flax, cotton, ſarſaparilla, tobacco, and indigo; olive, orange, lemon, citron, cypreſs, oak, walnut, caſſia, and pine trees, from which the inhabitants make great quantities of turpentine, tar, and pitch. There are alſo ſeveral trees that yield gums; one, from which diſtils an oil of extraordinary virtue for curing wounds, and another that produces a balm ſuppoſed to be little inferior to that of Mecca. White mulberry-trees for feeding ſilk-worms flouriſh here exceedingly; ſo that with proper care and encouragement, ſilk, wine, and oil might be exported from hence: but the whole attention of the Carolinians ſeems turned to the culture of indigo and rice; and though cochineal is ſaid to be found there, they make no advantage of it. The trees in this and every other part of America grow to an amazing ſize, their trunks being often from 50 to 70 feet high, without a branch or limb, and frequently upwards of 36 feet in circumference. The Indians and people of Charleſton hollow theſe into canoes, which ſerve to tranſport proviſions and other goods from place to place; ſome of them, conſiſting of one entire piece of timber, are ſo large, that they will carry from 30 to 40 barrels of pitch each: curious pleaſure-boats are likewiſe made of them. The whole country is in a manner one foreſt, where the planters have not cleared it, and the trees are almoſt the ſame in every reſpect with thoſe produced in Virginia. The land in Carolina is eaſily cleared, as there is little or no underwood, and the foreſts chiefly conſiſt of tall trees at a conſiderable diſtance from each other. Wheat grows extremely well in the back parts, and yields a prodigious increaſe. It is a moſt fortunate circumſtance for this province, that the low and flooded part of its land is favourable to a ſpecies of the moſt valuable of all its products, namely, one of its kinds of indigo; and the low, rich, and ſwampy grounds bear their great ſtaple rice. Prodigious quantities of excellent honey are produced in the Carolinas, from which the inhabitants make a fine ſpirit, and mead equal to Malaga ſack; but they make very little wine, though they have plenty of grapes.

The animals here are nearly the ſame as thoſe in Virginia. The European black cattle have multiplied amazingly; it is no uncommon thing for one perſon to be owner of 300 cows, and many have upwards of 1000. Theſe are turned out in the morning, and range the foreſts for food; but their calves being ſeparated from them in fenced paſtures, the cows always return to them in the evening. The hogs and horſes are equally numerous. Many of the cattle would in all probability have been deſtroyed by the wolves, tygers, and panthers, which certainly range the foreſts in great numbers, were it not that the beaſts of prey here are leſs ravenous than thoſe of Africa and Aſia.

Charleſton, the capital of South Carolina, is the only town in either of theſe provinces that deſerves attention. It is ſituated at the confluence of the two navigable rivers Aſhley and Cowper, and for ſize, beauty, and traffic, is one of the firſt in North America. The harbour is an exceeding good one, being attended by no other inconvenience than that of a bar, which prevents veſſels of more than two hundred tons burden from entering it. The town is regularly built, and pretty ſtrongly fortified both by nature and art. The ſtreets, which are wide and ſtraight, interſect each other at right angles, and thoſe running eaſt and weſt extend about a mile from one river to the other. It contains about a thouſand houſes, ſome of which are of brick and others of wood, but all of them very handſome, and let at amazing high rents. The church is a ſpacious building, and executed in an elegant taſte: there are alſo ſeveral meeting-houſes belonging to different ſects of Diſſenters, ſome of which are extremely neat. Charleſton, being the reſidence of the governor, and the place where the aſſembly meets, is always lively and gay; ſeveral handſome equipages are kept there; and the planters and merchants are rich, well-bred, and both ſhewy and expenſive in their dreſs and manner of living.

The moſt effectual attempt to ſettle the province of Carolina was made in the year 1663, when ſeveral Engliſh noblemen, and others of great diſtinction, obtained a charter from the crown, inveſting them with the property and juriſdiction of that country. They parcelled out their lands to ſuch as were willing to go over to this ſettlement, and to ſubmit to a ſyſtem of laws drawn up by the celebrated Mr. Locke.

On the arrival of the colony in Carolina, they began their firſt ſettlement on a point of land near the ſouthern limits of their diſtrict, between two navigable rivers, where they laid the foundation of a city, called Charleſton, which was deſigned to be, what it now really is, the capital of the province. But in proceſs of time the diſputes between the church of England people and the Diſſenters cauſed a total confuſion in the colony, which was rendered ſtill more intolerable by the incurſions of the Indians, whom they had irritated by their inſolence and injuſtice. In order to prevent the fatal effects of theſe inteſtine diviſions and foreign wars, an act of parliament was paſſed, which put this colony under the immediate protection of the crown. The lords proprietors accepted the ſum of 24,000l. for both the property and juriſdiction; but Earl Granville thought fit to retain his ſeventh ſhare. Carolina was, in 1728, divided into two diſtricts, and two ſeparate governments, and from that time peace was reſtored in the internal government, alſo with the Cherokees and other Indian tribes, and trade began to flouriſh.

Edenton is the capital of North Carolina, but is little more than a trifling village: a town further ſouth, which would be more centrical, has been lately projected.

The exports of South Carolina to Great-Britain, of native commodities, on an average of three years, amounted to more than 395,000l. annual value; and its imports to 365,000l. The exports of North Carolina were computed at about 70,000l. and its imports 18,000l. The trade of Georgia being in its infancy, the exports amounted to little more than 74,000l. and the imports to 49,000l. The trade between Carolina and the Weſt-Indies was very large; their trade with the Indians was in a thriving condition; and they formerly carried Engliſh goods on pack-horſes 5 or 600 miles into the country weſt of Charleſton.

No thoughts were entertained of ſettling Georgia till the year 1732, when a ſcheme was formed for enabling poor and indigent families to ſettle in that province. A patent was accordingly obtained, large ſums were ſubſcribed, and a conſiderable number of ſettlers embarked for Georgia, under the care of Mr. Oglethorpe, who generouſly undertook the troubleſome taſk, without any reward, for the advancement of the ſettlement. But it ſoon appeared that the regulations, which had been drawn up with the greateſt care, were not adapted to advance the proſperity of the colony. The ſettlers complained, that they were on a worſe footing than any other colony in America. Some of their grievances were removed, but a ſufficient number remained to give the inhabitants a diſlike to the country; many of them fled, and diſperſed themſelves into the other ſettlements; ſo that of above 2000 people, who had tranſported themſelves from Europe, not more than five or ſix hundred were to be found in Georgia. The miſchief every day increaſed till 1752, when the government found it neceſſary to revoke the charter. The province now became the property of the crown, all the particular regulations were annulled, and Georgia was placed exactly on the ſame footing with Carolina. This interpoſition of the legiſlative power ſaved the colony from deſtruction. The ſettlement has, for a conſiderable time, been emerging out of the difficulties that attended its firſt eſtabliſhment; and it is not to be doubted but that, when the internal diviſions are entirely compoſed, the remaining errors in the government corrected, and the people ſufficiently multiplied, Georgia will become a rich and flouriſhing province.

Savannah and Auguſta are the principal towns in Georgia. Savannah, the capital, is ſituated ten miles up the river of the ſame name, where it forms a half moon, and where ſhips that draw ten or twelve feet water may ride for a mile in length within ten yards of the bank. From the quay may be ſeen the whole courſe of the river towards the ſea one way, and on the other for about ſixty miles up the country. This river is navigable for large boats, from the capital to Auguſta, which are two hundred miles diſtant from each other. Auguſta is ſituated in one of the moſt fertile parts of the province, and carries on a conſiderable trade with the Creek and Cherokee Indians. The late Rev. Mr. George Whitfield founded an orphan-houſe at Savannah, which was converted into a college for the education of young men, chiefly deſigned for the miniſtry; and, through his pious care and fervent zeal, that gentleman had the pleaſure of ſeeing this religious ſeminary in a flouriſhing condition before his death; but ſince that period, we are told it has been converted to a very different uſe.

By a late eſtimation, the number of inhabitants in North Carolina amounted to 200,000; thoſe in South Carolina to 170,000; and thoſe in Georgia to 25,000.

The legiſlature of North Carolina now conſiſts of two ſeparate bodies, namely, the ſenate and houſe of commons. The executive power is lodged in a governor and ſeven counſellors, annually choſen by and out of the general aſſembly, who alſo appoint the judges, field-officers, ſecretary, treaſurer, &c. The juſtices and ſheriffs are recommended by the people; and the delegates to congreſs are elected annually by ballot out of the general aſſembly. This form of government was ſettled in convention at Hallifax, Dec. 18, 1776.—The conſtitution eſtabliſhed for South Carolina, by the council and aſſembly in March 1778, veſts the legiſlative authority in the general aſſembly, conſiſting of the ſenate and houſe of repreſentatives. The executive power is compoſed of a governor, lieutenant-governor, and eight privy-counſellors. The aſſembly is to nominate juſtices of the peace, ſheriffs, and other officers. By the conſtitution agreed to in Feb. 1777, for Georgia, the legiſlative, executive, and judiciary departments are to be diſtinct and ſeparate bodies; the legiſlative to conſiſt of repreſentatives elected by the freeholders in each county, annually, by ballot. Seventy-two repreſentatives conſtitute the houſe of aſſembly, out of whom are choſen, by ballot, the governor and executive council, and alſo the delegates to congreſs, annually. The reſpective bodies, and the ſeveral courts they depend on, appoint the ſubordinate officers.

The United States of America have lately ſtruck a halfpenny, on one ſide of which, encircled within a wreath of laurel, exceedingly well executed, are the letters US in a cypher, ſurrounded with an inſcription, LIBERTAS ET JUSTITIA, dated 1785. On the reverſe, in the centre, is a conſtellation, from which iſſue thirteen illuminated rays, and between each ray is a ſmall ſtar, expreſſive of the Thirteen United States; around theſe rays, and the ſtars, is the following inſcription, NOVA CONSTELLATIO.—The new American halfpenny is in weight as three to two of the Engliſh coin.

THE WESTERN TERRITORY.

ALL that part of the United States which lies north-weſt of the Ohio, is compriſed under this name. It is bounded, on the weſt, by the Miſſiſſippi river: on the north, by the Lakes; on the eaſt, by Pennſylvania; and on the ſouth-eaſt and ſouth, by the Ohio river: containing, according to Mr. Hutchins, 411,000 ſquare miles, equal to 263,040,000 acres—from which, if we deduct 43,040,000 acres for water, there will remain 220,000,000 of acres, belonging to the federal government, to be ſold for the diſcharge of the national debt; except a narrow ſtrip of land, bordering on the ſouth of Lake Eri, and ſtretching 120 miles weſt of the weſtern limit of Pennſylvania, which belongs to Connecticut.

Only a ſmall proportion of theſe lands is yet purchaſed of the natives, and to be diſpoſed of by Congreſs. Beginning on the meridian line, which forms the weſtern boundary of Pennſylvania, ſeven ranges of townſhips have been ſurveyed and laid off by order of Congreſs. As a north and ſouth line ſtrikes the Ohio in an oblique direction, the termination of the 7th range falls upon that river, 9 miles above the Muſkingum, which is the firſt large river that falls into the Ohio. It forms this junction 172 miles below Fort Pitt, including the windings of the Ohio, though in a direct line it is but 90 miles.

The lands in which the Indian title is extinguiſhed, and which are now purchaſing under the United States, are bounded by Pennſylvania on the eaſt, by the Great Miami on the weſt, by the Ohio on the ſouth, and extend nearly to the head waters of the Muſkingum and Sioto on the north. On theſe lands two ſettlements are commencing, one at Marietta, at the mouth of Muſkingum, under the direction of the Ohio company. This ſettlement conſiſts, at preſent, of about 220 ſouls, and is almoſt daily increaſing. The other between the Miami rivers, under the direction of Colonel Symmes, which, though very ſmall at preſent, is in proſpect of a rapid enlargement. There are ſeveral other tracts, which have been granted by Congreſs to particular companies, and other tracts for particular uſes, which remain without any Engliſh ſettlements.—It is, in general, a fine, fertile, and well-watered country.

CHAP. XIV.

VERMONT.

Situation, Extent, Boundaries, Diviſions, Counties, Towns, Rivers, Mountains, Soil and Produce, Climate, Militia, Population, Character, Curioſities. Conſtitution, firſt Diſcovery and Settlement, &c.

THIS independant ſtate is ſituated between 42 deg. 50 min. and 45 deg. of north latitude, and between 1 deg. 30 min. and 3 deg. of eaſt longitude. It is bounded, on the north, by Canada: on the eaſt, by Connecticut river, which divides it from New Hampſhire; on the ſouth, by Maſſachuſets; and on the weſt, by New York.

Vermont is divided into the ſeven following counties: Bennington, Rutland, Addiſon, Windham, Chittendon, Orange, and Windſor.

Theſe counties are ſubdivided into townſhips, which are generally ſix miles ſquare. In every townſhip is a reſerve of two rights of land, of 350 acres each; one to be appropriated for the ſupport of public ſchools, the other to be given in fee to the firſt miniſter who ſettles in the townſhip. A part of the townſhips were granted by the governor of New Hampſhire, and the other part by that of Vermont. In thoſe townſhips granted by the former, a right of land is reſerved for the ſupport of the goſpel in foreign parts; in thoſe granted by the latter, a college right, and a right for the ſupport of county grammar ſchools, are reſerved. In theſe reſervations, liberal proviſion is made for the ſupport of the goſpel, and for the promotion of common and collegiate education.

This ſtate, on the eaſt ſide of the mountain, is watered by the following rivers; viz. Paupanhooſak, Quechy, Welds, White, Black, and Weſt rivers, which run from weſt to eaſt into Connecticut river; and weſt of the mountains, by the river Lamoil, over which is a natural ſtone bridge, ſeven or eight rods in length, by Onion river and Otter Creek, which empty by one mouth into Lake Champlain, 20 or 30 miles ſouth of St. John's. Otter Creek is navigable for boats 50 miles. The lands adjacent are of an excellent quality, and are annually enriched by the overflowing of the water, occaſioned by the melting of the ſnow on the Green Mountains.

A chain of high mountains, running north and ſouth, divides this ſtate nearly in the centre between Connecticut river and Lake Champlain. The height of land is generally from 20 to 30 miles from the river, and about the ſame diſtance from the New York line. The natural growth upon this mountain is hemlock, pine, ſpruce, and other evergreens; hence it has always a green appearance, and on this account has obtained the deſcriptive name of *Ver Mons, Green Mountain*. On ſome high parts of this mountain, ſnow lies till May, and ſometimes till June.

The country is generally hilly, but not rocky. It is finely watered, and affords the beſt of paſturage for cattle. On the banks of the lakes, rivers, and rivulets, are many fine tracts of rich interval land. The heavy growth of timber, which is common throughout the ſtate, evince the ſtrength and fertility of the ſoil. Elm, black birch, maple, aſh, and baſs-wood, grow in the moiſt low ground; and the banks of the rivers are timbered principally with white pine, intermingled with vales of beech, elm, and white oak. The inhabitants cultivate wheat, 25 and 80 buſhels of which grow on an acre; rye, barley, oats, Indian corn, &c. The corn, however, is frequently cut off by the early froſts, eſpecially on the mountains and hills. That which grows on the banks of the rivers is not ſo frequently injured. Flax is raiſed in conſiderable quantities, and the ſoil is good for hemp. Potatoes, pumpkins, and garden roots and vegetables, grow here in great plenty. Large quantities of ſugar, of a good quality and flavour, are made from the ſugar maple.

With reſpect to the climate, no country in the world is more healthy. Snow begins to fall commonly in the beginning of November, and is generally gone by the middle of April. During this ſeaſon, the inhabitants generally enjoy a ſerene ſky, and a keen cold air. The ground is ſeldom frozen to any great depth, being covered with a great body of ſnow, before the ſevere froſts begin. In the ſpring, the ſnow, in common, is gradually diſſolved by the warm influences of the ſun. In this way the earth is enriched and moiſtened, and ſpring advances with ſurpriſing quickneſs.

There are upwards of 17,000 men upon the militia rolls of this ſtate. Theſe conſiſt of two diviſions, one on the weſt, the other on the eaſt ſide of the mountain. In theſe two diviſions are 7 brigades, which are made up of 21 regiments. From the number of militia, reckoning 5 for one, we may eſtimate the number of inhabitants in the ſtate at 85,000. Others, who reckon 6 for one, eſtimate them at 100,000. The bulk of the inhabitants are emigrants from Connecticut and Maſſachuſets, and their deſcendents. There is one ſettlement of Scotch people, which are almoſt the only foreigners in the ſtate. As to the character, the manners, the cuſtoms, the laws, the policy, and the religion of the people in Vermont, it is ſufficient to ſay they are New Englandmen.

In the townſhip of Tinmouth, on the ſide of a ſmall hill, is a very curious cave. The chaſm, at its entrance, is about four feet in circumference. Entering this you deſcend 104 feet, and then opens a ſpacious room 20 feet in breadth and 100 feet in length. The angle of deſcent is about 45 degrees. The roof of this cavern is of rock, through which the water is continually percolating. The ſtalactites which hang from the roof appear like icicles on the eves of houſes, and are continually increaſing in number and magnitude. The bottom and ſides are daily incruſting with ſpar and other mineral ſubſtances. On the ſides of this ſubterraneous hall, are tables, chairs,

chairs, benches, &c. which appear to have been artificially carved. This richly ornamented room, when illuminated with the candles of the guides, has an enchanting effect upon the eye of the ſpectator. If we might be indulged in aſſigning the general cauſe of theſe aſtoniſhing appearances, we ſhould conclude from the various circumſtances accompanying them, that they ariſe from water filtrating ſlowly through the incumbent STRATA; and taking up in its paſſage a variety of mineral ſubſtances, and becoming thus ſaturated with metallic particles, gradually exuding on the ſurface of the caverns and fiſſures, in a quieſcent ſtate, the aqueous particles evaporate, and leave the mineral ſubſtances to unite according to their affinities. At the end of this cave is a circular hole, 15 feet deep, apparently hewn out, in a conical form, enlarging gradually as you deſcend, in the form of a ſugar loaf. At the bottom is a ſpring of freſh water, in continual motion, like the boiling of a pot. Its depth has never been ſounded.

On the 25th of December 1777, the inhabitants of Vermont, by their repreſentatives in convention, at Windſor, declared that the territory called Vermont was, and of right ought to be a free and independent ſtate; and for the purpoſe of maintaining a regular government in the ſame, they made a ſolemn declaration of their rights, and ratified a conſtitution, of which the following is an abſtract.—This declaration, which makes part of their conſtitution, aſſerts, that all men are born equally free—with equal rights, and ought to enjoy liberty of conſcience—freedom of the preſs—trial by jury—power to form new ſtates in vacant countries, and to regulate their own internal police—that all elections ought to be free—that all power is originally in the people—that government ought to be inſtituted for the common benefit of the community—and that the community have a right to reform or aboliſh government—that every member of ſociety hath a right to protection of life, liberty, and property—and in return is bound to contribute his proportion of the expence of that protection, and yield his perſonal ſervice when neceſſary—that he ſhall not be obliged to give evidence againſt himſelf—that the people have a right to bear arms—but no ſtanding armies ſhall be maintained in time of peace—that the people have a right to hold themſelves, their houſes, papers, and poſſeſſions free from ſearch or ſeizure—and therefore warrants without oaths firſt made, affording ſufficient foundation for them, are contrary to that right, and ought not to be granted—that no perſon ſhall be liable to be tranſported out of this ſtate for trial for any offence committed within this ſtate, &c.

By the frame of government, the ſupreme legiſlative power is veſted in a houſe of repreſentatives of the freemen of the ſtate of Vermont, to be choſen annually by the freemen on the firſt Tueſday in September, and to meet the ſecond Thurſday of the ſucceeding October—this body is veſted with all the powers neceſſary for the legiſlature of a free ſtate—two thirds of the whole number of repreſentatives elected, make a quorum.——Each inhabited town throughout the ſtate has a right to ſend one repreſentative to the aſſembly.—The ſupreme executive power is veſted in a governor, lieutenant-governor, and twelve counſellors to be choſen annually in the ſame manner, and veſted with the ſame powers as in Connecticut.—Every perſon of the age of 21 years, who has reſided in the ſtate one whole year next before the election of repreſentatives, and is of a quiet, peaceable behaviour, and will bind himſelf by his oath, to do what he ſhall in conſcience judge to be moſt conducive to the beſt good of the ſtate, ſhall be entitled to all the pivileges of a freeman of this ſtate.—Each member of the houſe of repreſentatives, before he takes his ſeat, muſt declare his belief in one God—in future rewards and puniſhments, and in the divinity of the ſcriptures of the Old and New Teſtament, and muſt profeſs the proteſtant religion.

Courts of juſtice are to be eſtabliſhed in every county throughout the ſtate.—The ſupreme court, and the ſeveral courts of common pleas of this ſtate, beſides the powers uſually exerciſed by ſuch courts, have the powers of a court of chancery, ſo far as relates to perpetuating teſtimony, obtaining evidence from places not within the ſtate, and the care of the perſons and eſtates of thoſe who are *non compotes mentis*, &c. All proſecutions are to be commenced in the name, and by the authority of the freemen of the ſtate of Vermont. The legiſlature are to regulate entails, ſo as to prevent perpetuities.

All field and ſtaff officers, and commiſſioned officers of the army, and all general officers of the militia, ſhall be choſen by the general aſſembly, and be commiſſioned by the governor.

Every ſeventh year, beginning with the year 1785, thirteen perſons (none of whom are to be of the council or aſſembly) ſhall be choſen by the freemen, and be called "the council of cenſors," whoſe duty it ſhall be to inquire whether the conſtitution has been preſerved inviolate in every part—whether the legiſlative and executive powers have been properly exerciſed—taxes juſtly laid and collected—the public monies rightly diſpoſed of—and the laws duly executed.—For theſe purpoſes, they ſhall have power to ſend for perſons, papers, &c.—to paſs public cenſures—to order impeachments, and to recommend the repeal of all laws enacted contrary to the principles of the conſtitution. They are to be veſted with theſe powers for one year only, after the day of their election.

The council of cenſors, when neceſſary, may call a convention, to meet within two years after their ſitting—to alter the conſtitution—the propoſed alterations to be publiſhed at leaſt ſix months before the election of delegates to ſuch convention.

Bennington is the principal town in Vermont. It is ſituated in the ſouth-weſt corner of the ſtate, near the foot of the Green Mountain. Its public buildings are a church for Congregationaliſts, a court-houſe and gaol. It has a number of elegant houſes, and is a flouriſhing town. Near the centre of the town is Mount Anthony, which riſes very high in the form of a ſugar-loaf. The aſſembly commonly hold their ſeſſions at Windſor.

Origin, Riſe, and Name of this State, deſcribed.

IT was formed by emigrations from New Hampſhire and New York. The emigrants having ſettled on lands to the weſtward, neither claimed or cultivated by the people of the provinces before mentioned, ſoon grew numerous, and ſpread themſelves to a conſiderable extent. The inhabitants of thoſe provinces had long been jealous of the riſing greatneſs of the colony of Vermont, and deſirous of cruſhing it, but never could effect their deſign, while the colonies were under the juriſdiction of the mother country. When the late diſſenſions began, they repreſented the Vermonteſe to Congreſs as a diſaffected and encroaching people.

The Vermonteſe, on their part, profeſſed their attachment to the general American cauſe, and requeſted repreſentation in Congreſs, in common with the other ſtates. Congreſs, far from complying with the requeſt of the Vermonteſe, decided in favour of the colonies of New Hampſhire and New York, and contracted the boundaries of that of Vermont. In proceſs of time, however, Congreſs relaxed in their ſeverity, and tranſmitted a favourable propoſal to the Vermonteſe, which being acceded to, matters were adjuſted in April 1782.

ETHAN ALLEN, famous for the expedition he undertook againſt Ticonderago in 1775, without any other aid than that of a body of volunteers who followed

lowed his fortunes, made himſelf chief of this country. This enterpriſing genius formed there an aſſembly of repreſentatives. The inhabitants were known, for a conſiderable time, by the name of "Green Mountain Boys;" but thinking that an ignominious appellation, they frenchified Green Mountain which made Verd Mont, and, by corruption, Vermont. Hence the origin of the name of this ſtate.

Dr. Franklin has favoured us with the following accurate account of the internal ſtate of America:

"There is (ſays this judicious writer) a tradition, that in the planting of New England, the firſt ſettlers met with many difficulties and hardſhips, as is generally the caſe when a civilized people attempt eſtabliſhing themſelves in a wilderneſs country. Being piouſly diſpoſed, they ſought relief from heaven, by laying their wants and diſtreſſes before the Lord in frequent ſet days of faſting and prayer. Conſtant meditation and diſcourſe on theſe ſubjects kept their minds gloomy and diſcontented; and, like the children of Iſrael, there were many diſpoſed to return to that Egypt which perſecution had induced them to abandon. At length, when it was propoſed in the aſſembly to proclaim another faſt, a farmer of plain ſenſe roſe, and remarked, that the inconveniences they ſuffered, and concerning which they had ſo often wearied heaven with their complaints, were found not ſo great as they might have expected, and were diminiſhing every day as the colony ſtrengthened; that the earth began to reward their labour, and to furniſh liberally for their ſubſiſtence; that the ſeas and rivers were found full of fiſh, the air ſweet, the climate healthy; and, above all, that they were there in the full enjoyment of liberty, civil and religious: he therefore thought, that reflecting and converſing on theſe ſubjects would be more comfortable, as tending more to make them contented with their ſituation; and that it would be more becoming the gratitude they owed to the Divine Being, if, inſtead of a faſt, they ſhould proclaim a thankſgiving. His advice was taken; and from that day to this they have, in every year, obſerved circumſtances of public felicity ſufficient to furniſh employment for a thankſgiving-day, which is therefore conſtantly ordered and religiouſly obſerved.

"I ſee in the public news-papers of different ſtates frequent complaints of *hard times*, *deadneſs of trade*, *ſcarcity of money*, &c. &c. It is not my intention to aſſert or maintain that theſe complaints are entirely without foundation. There can be no country or nation exiſting, in which there will not be ſome people ſo circumſtanced as to find it hard to gain a livelihood; people who are not in the way of any profitable trade, and with whom money is ſcarce, becauſe they have nothing to give in exchange for it; and it is always in the power of a ſmall number to make a great clamour. But let us take a cool view of the general ſtate of our affairs, and perhaps the proſpect will appear leſs gloomy than has been imagined.

"The great buſineſs of the continent is agriculture. For one artiſan, or merchant, I ſuppoſe we have at leaſt 100 farmers, by far the greateſt part cultivators of their own fertile lands, from whence many of them draw not only food neceſſary for their ſubſiſtence, but the materials of their clothing, ſo as to need very few foreign ſupplies; while they have a ſurplus of productions to diſpoſe of, whereby wealth is gradually accumulated. Such has been the goodneſs of Divine Providence to theſe regions, and ſo favourable the climate, that ſince the three or four years of hardſhip in the firſt ſettlement of our fathers here, a famine or ſcarcity has never been heard of amongſt us; on the contrary, though ſome years may have been more, and others leſs plentiful, there has always been proviſion enough for ourſelves, and a quantity to ſpare for exportation. And although the crops of late years were generally good, never was the farmer better paid for the part he can ſpare commerce, as the publiſhed price currents abundantly teſtify. The lands he poſſeſſes are alſo continually riſing in value with the increaſe of population; and, on the whole, he is enabled to give ſuch good wages to thoſe who work for him, that all who are acquainted with the old world muſt agree, that in no part of it are the labouring poor ſo generally well fed, well clothed, well lodged, and well paid, as in ths United States of America.

"If we enter the cities, we find that, ſince the Revolution, the owners of houſes and lots of ground have had their intereſt vaſtly augmented in value; rents have riſen to an aſtoniſhing height, and thence encouragement to increaſe building, which gives employment to an abundance of workmen, as does alſo the increaſed luxury and ſplendor of living of the inhabitants thus made richer. Theſe workmen all demand and obtain much higher wages than any other part of the world would afford them, and are paid in ready money. This rank of people therefore do not, or ought not, to complain of hard times; and they make a very conſiderable part of the city inhabitants.

"At the diſtance I live from our American fiſheries, I cannot ſpeak of them with any degree of certainty; but I have not heard that the labour of the valuable race of men employed in them is worſe paid, or that they meet with leſs ſucceſs, than before the Revolution. The whalemen indeed have been deprived of one market for their oil; but another, I hear, is opening for them, which it is hoped may be equally advantageous; and the demand is conſtantly increaſing for their ſpermaceti candles, which therefore bear a much higher price than formerly.

"There remain the merchants and ſhopkeepers. Of theſe, though they make but a ſmall part of the whole nation, the number is conſiderable, too great indeed for the buſineſs they are employed in; for the conſumption of goods in every country has its limits; the faculties of the people, that is, their ability to buy and pay, is equal only to a certain quantitity of merchandize. If merchants calculate amiſs on this proportion, and import too much, they will of courſe find the ſale dull for the overplus, and ſome of them will ſay that trade languiſhes. They ſhould, and doubtleſs will, grow wiſer by experience, and import leſs. If too many artificers in town, and farmers from the country, flattering themſelves with the idea of leading eaſier lives, turn ſhopkeepers, the whole natural quantity of that buſineſs divided among them all, may afford too ſmall a ſhare for each, and occaſion complaints that trading is dead; theſe may alſo ſuppoſe that it is owing to ſcarcity of money, while, in fact, it is not ſo much from the fewneſs of buyers, as from the exceſſive number of ſellers, that the miſchief ariſes; and, if every ſhopkeeping farmer and mechanic would return to the uſe of his plough and working tools, there would remain of widows, and other women, ſhopkeepers ſufficient for the buſineſs, which might then afford them a comfortable maintenance.

"Whoever has travelled through the various parts of Europe, and obſerved how ſmall is the proportion of people in affluence or eaſy circumſtances there, compared with thoſe in poverty and miſery; the few rich and haughty landlords, the multitude of poor, abject, rack-rented, tythe-paying tenants, and half-paid and half-ſtarved ragged labourers; and views here the happy mediocrity that ſo generally prevails throughout theſe ſtates, where the cultivator works for himſelf, and ſupports his family in decent plenty; will, methinks, ſee abundant reaſon to bleſs Divine Providence for the evident and great difference in our favour, and be convinced that no nation known to us enjoys a greater ſhare of human felicity.

"It is true, that in ſome of the ſtates there are parties and diſcords; but let us look back, and aſk if we were ever without them? Such will exiſt wherever there is liberty; and perhaps they help to preſerve it. By the colliſion of different ſentiments, ſparks of truth are ſtruck out, and political light is obtained. The different factions, which at preſent divide us, aim all at the public good; the differences are only about the various modes of promoting it. Things, actions, meaſures, and objects of all kinds, preſent themſelves to the minds of men in ſuch a variety of lights, that it is not poſſible we ſhould all think alike at the ſame time on every ſubject, when hardly the ſame man retains at all times the ſame ideas of it. Parties are therefore the common lot of humanity; and ours are by no means more miſchievous or leſs beneficial than thoſe of other countries, nations, and ages, enjoying in the ſame degree the great bleſſing of political liberty.

"Some indeed among us are not ſo much grieved for the preſent ſtate of our affairs, as apprehenſive for the future. The growth of luxury alarms them, and they think we are from that alone in the high road to ruin. They obſerve, that no revenue is ſufficient without œconomy, and that the moſt plentiful income of a whole people from the natural productions of their country may be diſſipated in vain and needleſs expences, and poverty be introduced in the place of affluence.—This may be poſſible. It however rarely happens: for there ſeems to be in every nation a greater proportion of induſtry and frugality, which tend to enrich, than of idleneſs and prodigality, which occaſion poverty, ſo that upon the whole there is a continual accumulation. Reflect what Spain, Gaul, Germany, and Britain were in the time of the Romans, inhabited by people little richer than our ſavages, and conſider the wealth they at preſent poſſeſs, in numerous well-built cities, improved farms, rich moveables, magazines ſtocked with valuable manufactures, to ſay nothing of plate, jewels, and coined money; and all this, notwithſtanding their bad, waſteful, plundering governments, and their mad deſtructive wars; and yet luxury and extravagant living has never ſuffered much reſtraint in thoſe countries. Then conſider the great proportion of induſtrious frugal farmers inhabiting the interior parts of theſe American ſtates, and of whom the body of our nation conſiſts, and judge whether it is poſſible that the luxury of our ſea-ports can be ſufficient to ruin ſuch a country. If the importation of foreign luxuries could ruin a people, we ſhould probably have been ruined long ago: for the Britiſh nation claimed a right, and practiſed it, of importing among us, not only the ſuperfluities of their own production, but thoſe of every nation under heaven; we bought and conſumed them, and yet we flouriſhed and grew rich. At preſent our independent governments may do what we could not then do, diſcourage by heavy duties, or prevent by heavy prohibitions, ſuch importations, and thereby grow richer;—if, indeed, which may admit of diſpute, the deſire of adorning ourſelves with fine clothes, poſſeſſing fine furniture, with elegant houſes, &c. is not, by ſtrongly inciting to labour and induſtry, the occaſion of producing a greater value than is conſumed in the gratification of that deſire.

"The agriculture and fiſheries of the United States are the great ſources of our increaſing wealth. He that puts a ſeed into the earth is recompenſed, perhaps, by receiving forty out of it; and he who draws a fiſh out of our water, draws up a piece of ſilver. Let us (and there is no doubt but we ſhall) be attentive to theſe, and then the power of rivals, with all their reſtraining and prohibiting acts, cannot much hurt us. We are ſons of the earth and ſeas, and, like Antæus in the fable, if in wreſtling with a Hercules we now and then receive a fall, the touch of our parents will communicate to us freſh ſtrength and vigour to renew the conteſt."

Before we take leave of this continent, we ſhall preſent our readers with ſome obſervations on the peopling of America; and likewiſe an intereſting account of the cuſtoms and manners of the Indians, eaſtward of the Miſſiſſippi:

An accurate writer obſerves, that there are twenty-eight different nations of Indians eaſtward of the Miſſiſſippi; the principal of which are the Cherokees, the Chicaſaws, the Choctaws, the Creeks, the Delawares, the Six Nations, the Shawaneſe, the Hurons, the Illinois, &c. Allowing about 700 to a nation or tribe, they will contain, in all, 20,000 ſouls, and, conſequently, may furniſh between four and five thouſand warriors.

Many ſyſtems, no leſs idle than curious, have been formed to account for the population of this immenſe continent. There is ſcarce a people in the old world which has not had its advocates; and there have not been wanting ſome, who, deſpairing to looſen, have cut the knot, by ſuppoſing that the power which furniſhed America with plants, has, in the ſame manner, ſupplied it with men; or at leaſt, that a remnant in this continent was ſaved from the univerſal deluge, as well as in the other. As this ſubject is rather curious than uſeful, and, in its very nature, does not admit of certainty, every thing that paſſed in America before the arrival of the Europeans being plunged in Chimerian darkneſs, except thoſe little traditional records which diffuſe a glimmering light on the two empires of Mexico and Peru, for about two hundred years, at moſt, before that period, we ſhall only ſlightly touch on that ſubject; chiefly for the ſake of taking notice of ſome modern diſcoveries which ſeem to ſtrengthen the probability of ſome former theories.

The great ſimiliarity, or rather identity, of the perſons and manners of the Americans, and thoſe of the Tartars of the north eaſtern parts of Aſia, together with a preſumption, which has long poſſeſſed the learned, that Aſia and America were united, or at leaſt ſeparated only by a narrow ſea, has inclined the more reflecting part of mankind to the opinion, that the true origin of the Indians is from this quarter. The immenſe ſeas, which ſeparate the two continents on every other ſide, render it highly improbable that any colonies could ever have been ſent acroſs them before the diſcovery of the magnetical compaſs.

The ingenious M. Buffon has remarked, and the obſervation appears to be juſt, that there are no animals inhabiting in common the two continents, but ſuch as can bear the colds of the north. Thus there are no elephants, no lions, no tigers, no camels in America; but bears, wolves, deer, and elks in abundance, abſolutely the ſame in both hemiſpheres. This hypotheſis, which has been gaining ground ever ſince its firſt appearance in the world, is now reduced almoſt to a certainty by the diſcoveries of Captain Cook. That illuſtrious, but unfortunate navigator, in his his laſt voyage, penetrated for a conſiderable diſtance into the ſtreight which divides Aſia from America, which is only ſix leagues wide at its mouth; and therefore eaſily practicable for canoes.

We may now therefore conclude, that no further inquiry will be made into the general origin of the American tribes: yet, after all, it is far from being improbable that various nations, by ſhipwreck, or otherwiſe, may have contributed, in ſome degree, to the population of this continent. The Carthaginians, who had many ſettlements on the coaſt of Africa, beyond the ſtreights of Gibraltar, and puſhed their diſcoveries as far as where the two continents in that quarter approach each other the neareſt, may probably have been thrown by tempeſts on the American coaſt, and the companies of the veſſels finding it impracticable to return, may have incorporated with the for-

mer inhabitants, or have formed new ſettlements, which, from want of the neceſſary inſtruments to exerciſe the arts they were acquainted with, would naturally degenerate into barbarity. There are, indeed, ſome ancient writers, who give us reaſon to ſuppoſe, that there were colonies regularly formed by that nation in America, and that the communication, after having continued for ſome time, was ſtopped by order of the ſtate. But it is difficult to conceive that any people, eſtabliſhed with all thoſe neceſſaries proper for their ſituation, ſhould ever degenerate, from ſo high a degree of cultivation as the Carthaginians poſſeſſed, to a total ignorance even of the moſt neceſſary arts: and therefore it ſeems probable, that if that nation ever had ſuch colonies, they muſt have been cut off by the natives, and every veſtige of them deſtroyed.

The Danes, about the ninth and tenth centuries, were the greateſt navigators in the univerſe. They diſcovered and ſettled Iceland; and from thence, in 964, planted a colony in Greenland. The ancient Icelandic chronicles, as reported by M. Mallet, contain an account of ſome Icelanders, who, in the cloſe of an unſucceſsful war, fled to Greenland, and from thence weſtward, to a country covered with vines, which from thence they called Vinland. The adventurers returned home, and conducted a colony to their new diſcovery; but diſturbances ariſing in Denmark, all communication with Greenland, as well as Vinland, ceaſed; and thoſe countries remained unknown to the reſt of the world for ſeveral ages. The remains of this colony are probably to be found on the coaſt of Labrador, in the nation of the Eſquimaux. The colour of their ſkins, their hairy bodies, and buſhy beards, not to mention the difference of manners, mark an origin totally diſtinct from that of the other Indians.

About the year 1170, Madoc, ſon of Owen Gwynnedh, prince of Wales, diſſatisfied with the ſituation of affairs at home, left his country, as related by the Welſh hiſtorians in queſt of new ſettlements, and, leaving Ireland to the north, proceeded weſt till he diſcovered a fertile country; where, leaving a colony, he returned, and perſuading many of his countrymen to join him, put to ſea with ten ſhips, and was never more heard of. This account has indeed at ſeveral times drawn the attention of the world; but as no veſtiges of them had then been found, it was concluded, perhaps too raſhly, to be a fable, or at leaſt, that no remains of the colony exiſted. Of late years, however, the weſtern ſettlers have received frequent accounts of a nation, inhabiting at a great diſtance up the Miſſouri, in manners and appearance reſembling the other Indians, but ſpeaking Welſh, and retaining ſome ceremonies of the Chriſtian worſhip; and, at length, this is univerſally believed there to be a fact.

In Kentucky there are ſeveral ancient remains, which ſeem to prove, that this country was formerly inhabited by a nation further advanced in the arts of life than the Indians. Theſe are there uſually attributed to the Welſh, who are ſuppoſed to have formerly inhabited here; but having been expelled by the natives, were forced to take refuge near the ſources of the Miſſouri. It is well known, that no Indian nation has ever practiſed the method of defending themſelves by entrenchments; and ſuch a work would be no eaſy one, while theſe nations were unacquainted with the uſe of iron.

Near Lexington, the remains of two ancient fortifications are to be ſeen, furniſhed with ditches and baſtions. One of theſe contains about ſix acres of land, and the other nearly three. They are now overgrown with trees, which, by the number of circles in the wood, appear to be not leſs than one hundred and ſixty years old. Pieces of earthen veſſels have alſo been plowed up near Lexington, a manufacture with which the Indians were never acquainted.

The ſepulchres already mentioned, form another ſtrong argument that this country was formerly inhabited by a people different from the preſent Indians. Although they do not diſcover any marks of extraordinary art in their ſtructure, yet, as many nations are particularly tenacious of their ancient cuſtoms, it may perhaps be worthy of inquiry, whether theſe repoſitories of the dead do not bear a conſiderable reſemblance to the ancient Britiſh remains. Some buildings, attributed to the Picts, are mentioned by the Scottiſh antiquaries, which, if the author miſtakes not, are formed nearly in the ſame manner. Let it be enough for him to point out the road, and hazard ſome uncertain conjectures. They day is not far diſtant, when the furtheſt receſſes of this continent will be explored, and the accounts of the Welſh eſtabliſhed beyond the poſſibility of a doubt, or conſigned to that oblivion which has already received ſo many ſuppoſitions founded on arguments as plauſible as theſe.

It is well known that the Indians are not born white; and that they take a great deal of pains to darken their complexion, by anointing themſelves with greaſe, and lying in the ſun. They alſo paint their faces, breaſts, and ſhoulders, of various colours, but generally red; and their features are well formed, eſpecially thoſe of the women. They are of a middle ſtature, their limbs clean and ſtraight, and ſcarcely any crooked or deformed perſon is to be found among them. In many parts of their bodies they prick in gun-powder in very pretty figures. They ſhave, or pluck the hair off their heads, except a patch about the crown, which is ornamented with beautiful feathers, beads, wampum, and ſuch like baubles. Their ears are pared, and ſtretched in a thong down to their ſhoulders, They are wound round with wire to expand them, and adorned with ſilver pendants, rings, and bells, which they likewiſe wear in their noſes. Some of them will have a large feather through the cartilage of the noſe; and thoſe who can afford it, wear a collar of wampum, a ſilver breaſt-plate, and bracelets on the arms and wriſts. A bit of cloth about the middle, a ſhirt of the Engliſh make, on which they beſtow innumerable broaches to adorn it, a ſort of cloth boots and mockaſons, which are ſhoes of a make peculiar to the Indians, ornamented with porcupine quills, with a blanket or match-coat thrown over all, completes their dreſs at home; but when they go to war, they leave their trinkets behind, and mere neceſſaries ſerve them. There is little difference between the dreſs of the men and women, excepting that a ſhort petticoat, and the hair, which is exceeding black, and long, clubbed behind, diſtinguiſh ſome of the latter. Except the head and eye-brows, they pluck the hair, with great diligence. from all parts of the body, eſpecially the looſer part of the ſex.

Their weapons of war are guns, bows and arrows, darts, ſcalping-knives, and tomahawks. This latter is one of their moſt uſeful pieces of field-furniture, ſerving all the offices of the hatchet, pike, and ſword. They are exceeding expert in throwing it, and will kill at a conſiderable diſtance. The world has no better marks-men, with any weapon. They will kill birds flying, fiſhes ſwimming, and wild beaſts running.

The North American Indians are not ſo ignorant as ſome ſuppoſe them, but are a very underſtanding people, quick of apprehenſion, ſudden in execution, ſubtle in buſineſs, exquiſite in invention, and induſtrious in action. They are of a very gentle and amiable diſpoſition to thoſe they think their friends, but as implacable in their enmity; their revenge being only completed in the entire deſtruction of their enemies. They are very hardy, bearing heat, cold, hunger, and thirſt, in a ſurpriſing manner, and yet no people are more addicted to exceſs in eating and drinking

drinking, when it is conveniently in their power. The follies, nay miſchief, they commit when inebriated, are entirely laid to the liquor; and no one will revenge any injury (murder excepted) received from one who is no more himſelf.

Among the Indians all men are equal, perſonal qualities being moſt eſteemed. No diſtinction of birth, no rank, renders any man capable of doing prejudice to the rights of private perſons; and there is no pre-eminence from merit, which begets pride, and which makes others too ſenſible of their own inferiority. Though there is perhaps leſs delicacy of ſentiment in the Indians than among us; there is, however, abundantly more probity, with infinitely leſs ceremony, or equivocal compliments. Their public conferences ſhew them to be men of genius; and they have, in a high degree, the talent of natural eloquence.

They generally live diſperſed in ſmall villages, either in the woods, or on the banks of rivers, where they have little plantations of Indian corn, and roots, not enough to ſupply their families half the year, and ſubſiſting the remainder of it by hunting, fiſhing and fowling, and the fruits of the earth, which grow ſpontaneouſly in great plenty. Their huts are generally built of ſmall logs, and covered with bark, each one having a chimney, and a door, on which they place a padlock. Old Chelicothe is built in form of a Kentucky ſtation, that is, a parallelogram, or long ſquare; and ſome of their houſes are ſhingled. A long council-houſe extends the whole length of the town, where the king and chiefs of the nation frequently meet, and conſult of all matters of importance, whether of a civil or military nature. Some Indian huts are built by ſetting up a frame on forks, and placing bark againſt it; others of reeds, and ſurrounded with clay. The fire is in the middle of the wigwam, and the ſmoke paſſes through a little hole. They join reeds together by cords run through them, which ſerve them for tables and beds. They moſtly lie upon ſkins of wild beaſts, and ſit on the ground. They have braſs kettles and pots to boil their food; gourds or calabaſhes, cut aſunder, ſerve them for pails, cups, and diſhes.

Travellers give various accounts concerning their religion; and although it cannot be abſolutely affirmed that they have none, yet it muſt be confeſſed very difficult to define what it is. All agree that they acknowledge one Supreme God, but do not adore him. They have not ſeen him, they do not know him, believing him to be too far exalted above them, and too happy in himſelf to be concerned about the trifling affairs of poor mortals. They ſeem alſo to believe in a future ſtate, and that after death they ſhall be removed to their friends, who have gone before them, to an elyſium, or paradiſe.

Near Detroit, the Wyandotts, and ſome others, have the Roman Catholic religion introduced among them by miſſionaries. Theſe have a church, a miniſter, and a regular burying-ground. Many of them appear zealous, and ſay prayers in their families. Theſe, by acquaintance with white people, are a little civilized, which muſt of neceſſity precede Chriſtianity. The Shawaneſe, Cherokees, Chickaſaws, and ſome others, are little concerned about ſuperſtition, or religion. Others continue their former ſuperſtitious worſhip of the objects of their love and fear, and eſpecially thoſe beings who they moſt dread, and whom therefore we generally denominate devils; though, at the ſame time, it is allowed they pray to the ſun, and other inferior benevolent deities, for ſucceſs in their undertakings, for plenty of food, and other neceſſaries in life.

The Indians have their feſtivals, and other rejoicing-days, on which they ſing and dance in a ring, taking hands, having ſo painted and diſguiſed themſelves, that it is difficult to know any of them; and, after enjoying this diverſion for a while, they retire to the place where they have prepared a feaſt of fiſh, fleſh, fowls, and fruits; to which all are invited, and entertained with their country ſongs. They believe that there is great virtue in feaſts for the ſick. For this purpoſe a young buck muſt be killed, and boiled; the friends and near neighbours of the patient invited, and having firſt thrown tobacco on the fire, and covered it up cloſe, they all ſit down in a ring, and raiſe a lamentable cry. They then uncover the fire, and kindle it up; and the head of the buck is firſt ſent about, every one taking a bit, and giving a loud croak, in imitation of crows. They afterward proceed to eat all the buck, making a moſt harmonious, melancholy ſong; in which ſtrain their muſic is particularly excellent. As they approach their towns, when ſome of their people are loſt in war, they make great lamentations for their dead, and bear them long after in remembrance.

Some of theſe nations abhor adultery, do not approve of a plurality of wives, and are not guilty of theft, but there are other tribes that are not ſo ſcrupulous in theſe matters. Among the Chickaſaws a huſband may cut off the noſe of his wife, if guilty of adultery; but men are allowed greater liberty. This nation deſpiſes a thief. Among the Cherokees they cut off the noſe and ears of an adultereſs; afterward her huſband gives her a diſcharge; and from this time ſhe is not permitted to refuſe any one who preſents himſelf. Fornication is unnoticed; for they allow perſons in a ſingle ſtate unbounded freedom.

With reſpect to marriage, their form is ſhort—the man, before witneſſes, gives the bride a deer's foot, and ſhe, in return, preſents him with an ear of corn, as emblems of their ſeveral duties. The women are very ſlaves to the men; which is a common caſe in rude, unpoliſhed nations, throughout the world. They are charged with being revengeful; but this revenge is only doing themſelves juſtice on thoſe who injure them, and is ſeldom executed but in caſes of murder and adultery.

No power is lodged in their king to put any one to death by his own authority; but the murderer is generally delivered up to the friends of the deceaſed, to do as they pleaſe. When one kills another, his friend kills him, and ſo they continue until much blood is ſhed; and at laſt the quarrel is ended by mutual preſents. Their kings are hereditary, but their authority extremely limited. No people are a more ſtriking evidence of the miſeries of mankind in the want of government than they. Every chief, when offended, breaks off with a party, ſettles at ſome diſtance, and then commences hoſtilities againſt his own people. They are generally at war with each other. Theſe are common circumſtances among the Indians.

To their captives taken in war, they are exceedingly cruel, treating the unhappy priſoners in ſuch a manner, that death would be preferable to life. They afterwards give them plenty of food, load them with burdens, and when they arrive at their towns, they muſt run the gauntlet. In this, the ſavages exerciſe ſo much cruelty, that one would think it impoſſible they ſhould ſurvive their ſufferings. Many are killed; but if one outlives this trial, he is adopted into a family as a ſon, and treated with paternal kindneſs; and if he avoids their ſuſpicions of going away, is allowed the ſame privileges as their own people enjoy.

CHAP.

CHAP. XV.

WEST-INDIES.

Particular Deſcription of the Weſt-India Iſlands.

IN our general account of America, we took notice, that in the large gulf between the two continents, are a great number of iſlands, called the Weſt-Indies: thoſe among them which are worth cultivation, belong to the following European nations, namely, Great-Britain, Spain, France, Holland, and Denmark.

The climate is nearly alike in all the Weſt-India iſlands, except what ariſes from the various ſituations and qualities of the lands themſelves. They all lie within the tropics, conſequently the ſun is vertical twice in the year, and is never at a great diſtance; ſo that they are ſubject to a degree of heat, which would be intolerable, did not the trade wind, which increaſes gradually as the ſun approaches the meridian, blow in upon them from the ſea, and refreſh the air, ſo as to enable the inhabitants to attend their labour when the ſun is over their heads. Nor is the night deſtitute of a cooling breeze; for as ſoon as day-light begins to diſappear, a refreſhing gale blows ſmartly from the land towards the ſea: it ſeems to iſſue from the middle of each iſland as from a centre, and blows directly from the land in every part of it. Such alſo is the wiſdom of Providence in this particular, that when the ſun is far advanced towards the tropic of Cancer, and becomes almoſt vertical, he draws after him ſuch a vaſt body of clouds, that they intercept his direct rays, and, diſſolving into rain, cool the air, and refreſh the country, parched with a long drought which frequently continues from the beginning of January to the latter end of May.

An European, who has ſeen no other part of the world, can form very little idea of what are called rains in the Weſt-Indies. The moſt violent that fall in our northern climates are little more than dews, when compared to thoſe of the torrid zone. They are rather floods of water poured from the clouds with an amazing impetuoſity. In a moment the rivers ſwell above their banks, new ones are formed, and all the low country preſently exhibits the appearance of a deluge. The ancients imagined that the lands in the burning zone were ſcorched up with one continued fervent heat, and therefore the whole country uninhabitable: but their opinion was ſo far from being true, that the greateſt rivers in the world have their ſource in the torrid zone; and the greateſt inconveniencies many places in that climate ſuffer, ariſe from the moiſture of the air.

The ſeaſons in the Weſt-Indies have no other diſtinction than the rains; the trees are always clothed with leaves: froſts and ſnows are unknown, and even hail extremely rare. Indeed, when ſtorms of hail happen, they are dreadfully violent, and the hailſtones prodigiouſly large. But the conſequences of theſe ſtorms are nothing when compared to the hurricanes to which this part of the world is very ſubject. Theſe generally happen in the rainy ſeaſon, and are often dreadful beyond conception. The elements ſeem to have united for the deſtruction of the world. The labours of many years are deſtroyed in a moment, and all the hopes of the planter, even when he thinks himſelf almoſt beyond the reach of danger, wreſted from his hand. This dreadful ſcourge of heaven is a ſudden and violent ſtorm of wind, rain, thunder, and lightning, attended with the ſwelling of the ſea, and ſometimes an earthquake; in ſhort, with every terrible and deſtructive circumſtance the elements can aſſemble. The firſt objects of the approaching devaſtation that generally ſtrike the eyes of the planter, are whole fields of ſugar-canes whirled into the air, and ſcattered over the whole face of the country. The ſtouteſt and firmeſt rooted trees of the foreſt are torn up and whirled about like ſtubble; the windmills are ſwept away in a moment; even the works of the planter, the copper boilers, and ſtills of many hundred weight, which ſeem to bid defiance to the ſtorm, are hurried and battered to pieces: the houſes are no protection, the firſt blaſt tears away the roof; while the rain, which in leſs than an hour riſes near five feet, ruſhes in upon the wretched inhabitants with a force altogether irreſiſtible.

The Indians, who inhabited theſe iſlands many ages before they were diſcovered by Columbus, have taught the Europeans to know the ſigns that indicate an approaching hurricane, which always happens either at the quarters, or at the full and change of the moon. Theſe ſigns appear about a fortnight before the hurricane. Thus, if at the change of the moon the ſky appears very turbulent; the ſun redder than at other times; a dead calm ſucceeds, inſtead of the uſual breezes; the hills are clear of thoſe clouds and miſts which uſually hover about them: if a hollow rumbling ſound, like the ruſhing of a violent wind, is heard in the wells and clefts of the earth; the ſtars at night appear larger than uſual, and ſurrounded with a ſort of burs; the ſky in the north-weſt has a black and menacing appearance; the ſea emits a ſtrong ſmell, and riſes into vaſt waves, often without any wind; the wind itſelf forſakes its ſteady ſtream from the eaſt, and ſhifts to the weſt, blowing violently and irregularly at intermiſſions: theſe ſigns predict that a hurricane will happen at the ſucceeding full. Nearly the ſame ſigns happen at the full, before a hurricane comes on at the change; and by theſe indications the planters often ſecure ſome of their effects, together with the lives of themſelves, and thoſe of their families.

Sugar is the grand ſtaple commodity of the Weſt-Indies; this uſeful article was not at all known to the Greeks and Romans, though it was made in China in very early times, and from that country the firſt knowledge of it was obtained by the Europeans. The Portugueſe were the firſt who cultivated the ſugar-cane, and brought it into requeſt: their firſt plantations were in the Madeira iſlands, but afterwards removed to Braſil. They for ſome time ſupplied all the markets of Europe; and though much greater quantites are now made by the Engliſh and French, yet the Portugueſe ſugar is ſtill eſteemed the beſt in Europe. The juice within the ſugar-cane is the moſt lively, elegant, and leaſt cloying ſweet in nature; and, when ſucked raw, has proved extremely wholeſome and nutritive.

Rum is diſtilled from the molaſſes, and from the ſcummings of the ſugar a meaner ſpirit is procured. Great quantities of rum are carried to North America for ſale, where it is conſumed by the inhabitants, or employed in the African trade, or diſtributed from thence to the Newfoundland fiſhery, or other parts; beſides what Great-Britain and Ireland import. A great quantity of molaſſes is taken off raw, and carried to New England, where it is diſtilled. No part of the ſugar-cane is without its uſe: the tops, and the leaves which grow upon the joints, make very good provender for their cattle; and the refuſe of the cane, after grinding, ſerves for fuel.

It has been computed, that the rum and molaſſes, when all the proceſſes are rightly managed, pay the charges of the plantation, and that the ſugars are clear gain to the planters: but by the moſt credible accounts it appears, that the expences of a plantation in the Weſt-Indies are very great, and the profits at the firſt view precarious; for the chargeable articles of the windmill, the boiling, cooling, and diſtilling houſes, together with the buying and maintaining a proper number of ſlaves and cattle, beſides the purchaſe of the land, will not permit a perſon to begin a ſugar plantation of any conſequence, under a capital of at leaſt 5000l. Moreover, the life of a planter, who wiſhes to acquire a fortune, is far from being a life

of idleneſs and luxury; he muſt always keep a watchful eye upon his overſeers, and muſt himſelf overſee occaſionally. And at the boiling ſeaſon, if he is properly attentive to his affairs, no way of life can be more laborious, and more dangerous to the health, from a conſtant attendance day and night, in the extreme united heats of the climate, and ſo many fierce furnaces; add to this, the loſſes by hurricanes, earthquakes, and bad ſeaſons; and then conſider when the ſugars are in the caſks, that he quits the hazard of a planter, to engage in the hazards of a merchant, and ſhips his produce at his own riſk. Theſe conſiderations might make one believe that it could never anſwer to engage in this buſineſs; but notwithſtanding all this, there are no parts in the world, in which great eſtates are made in ſo ſhort a time, from the produce of the earth, as in the Weſt-Indies. The produce of a few good ſeaſons generally provide againſt the ill effects of the worſt, as the planter is ſure of a ſpeedy and profitable market for his produce, which has a readier ſale than perhaps any other commodity in the world.

Large plantations are generally under the care of a manager, or chief overſeer, who has commonly a ſalary of 150l. a year, with overſeers under him in proportion to the greatneſs of the plantation, one to about thirty negroes, and at the rate of about 40l. Such plantations too have a ſurgeon at a fixed ſalary, employed to take care of the negroes which belong to it. But the courſe which is the leaſt troubleſome to the owner of the eſtate is, to let the lands with all the works, and the ſtock of cattle and ſlaves, to a tenant, who gives ſecurity for the payment of the rent, and the keeping up repairs and ſtock. The eſtate is generally eſtimated to ſuch a tenant at half the neat produce of the beſt years; ſuch tenants, if induſtrious and frugal men, ſoon make good eſtates for themſelves.

The negroes in the plantations are kept at a very eaſy rate. This is generally by allotting to each family of them a ſmall portion of land, and allowing them two days in the week, Saturday and Sunday, to cultivate it: ſome are kept in this manner, but others find their negroes with a certain portion of Guinea and Indian corn, and to ſome a ſalt herring, or a ſmall portion of bacon or ſalt pork a day. All the reſt of the charge conſiſts in a cap, a ſhirt, a pair of breeches, ſtockings, and ſhoes; the whole not exceeding 40s. a year, and the profit of their labour yields 10 or 12l. The price of men negroes upon their firſt arrival is from 33 to 36l. women and grown boys about 50s. leſs; but ſuch negro families as are acquainted with the buſineſs of the iſlands generally bring about 40l. upon an average one with another, and there are inſtances of a ſingle negro man expert in buſineſs bringing 150 guineas, and the wealth of a planter is generally computed from the number of ſlaves he poſſeſſes.

Traders there make a very large profit upon all they ſell, but from the numerous ſhipping conſtantly arriving from Europe, and a continual ſucceſſion of new adventurers, each of whom carrying out more or leſs as venture, the Weſt-India market is frequently overſtocked; money muſt be raiſed, and goods are ſometimes ſold at prime coſt or under. But thoſe who can afford to ſtore their goods, and wait for a better market, acquire fortunes equal to any of the planters. All kinds of handicraftmen, eſpecially carpenters, bricklayers, braſiers, and coopers, get very great encouragement. But it is the misfortune of the Weſt-Indies, that phyſicians and ſurgeons even outdo the planter and merchant, in accumulating riches.

Before the laſt war but one, the number of negro ſlaves were at leaſt 230,000 whereas the whites do not amount to 90,000 ſouls. This diſproportion ſufficiently ſhews how much the colonies are endangered; they are at once expoſed to the aſſaults of a foreign enemy, and to the inſurrection of their own ſlaves.

The diſpoſition to induſtry has a variety of characters, and is by no means conſtantly of the ſame colour. Some acquieſce in a moderate labour through the whole of their lives, attended with no riſk either to their perſons or their gains; people of ſuch qualifications, who form the beſt citizens in general, are properly adapted to ſtay at home. Others, full as remote from an indolent diſpoſition, are of a quite different character. Theſe are fiery, reſtleſs tempers, willing to undertake the ſevereſt labour, provided it promiſes but a ſhort continuance, who love riſk and hazard, whoſe ſchemes are always vaſt, and who place no medium between being great and being undone. Characters of this ſort, eſpecially when they happen in low and middling life, are often dangerous members in a regular and ſettled community; but the Weſt-Indies open a fair and ample field to encourage perſons of ſuch a diſpoſition; and it may be reckoned one very great benefit to our poſſeſſions in that part of the world, that beſides the vaſt quantities of our fabrics which they conſume, our ſeamen whom they employ, and our revenues which they ſupport, they are a vent to carry off ſuch perſons, whom they keep occupied greatly to the advantage of the public. Our dominions are ſo circumſtanced, and afford ſuch a variety, that all diſpoſitions to buſineſs, of what kind ſoever, may have exerciſe without preſſing upon one another.

Our ſeamen diſtinguiſh the Weſt-India iſlands into the Windward and Leeward Iſlands, merely with regard to their ſituation either to eaſt or weſt. For as the wind is always eaſterly, thoſe that lie in the eaſtern part are called the Windward, and thoſe in the weſtern, the Leward Iſlands. Some geographers diſtinguiſh them into the Great and Little Antilles, while others call them all by the name of the Caribbees, from their firſt inhabitants. But by whatever name they are diſtinguiſhed, they lie in a bow, or ſemi-circular form, ſtretching almoſt from the coaſt of Florida to the main continent of South America, near the river Oroonoko.

CHAP. XVI.

WEST-INDIA ISLANDS.

JAMAICA.

Situation and Extent, Soil, Climate, Vegetable Productions, Rivers, Inhabitants, Towns, &c.

THIS iſland, which is the moſt important of thoſe belonging to England, is ſituated between the 75th and 79th deg. of weſt long. from London, and between the 17th and 18th of north lat. and lies near 4,500 miles ſouth weſt of England. It is about 140 miles in length, from eaſt to weſt, and about 60 in breadth in the centre, for it is of an oval form, and conſequently grows gradually narrower towards each end.

As to the ſoil and face of the iſland, there is a ridge of hills, called the Blue Mountains, that run through it from eaſt to weſt; the tops of which are covered with different kinds of trees, particularly cedar, lignum-vitæ, and mahogany, which render them equally pleaſant and profitable to the inhabitants. Several fine rivers, well ſtored with fiſh, and navigable by canoes, take their riſe from theſe mountains. A lower ridge runs parallel to the greater, and the vallies, or ſavannahs, are exceeding level, without ſtones, fit for paſture, and fruitful, when cleared of wood, eſpecially on the ſouth ſide of the iſland. After the rains, or ſeaſons, as they are called, the

ſavannahs are very pleaſant, and produce ſuch quantities of graſs that the inhabitants are ſometimes forced to burn it; but, after long droughts they are quite parched and burnt up.

The air of this iſland is in moſt places exceſſively hot, and unfriendly to European conſtitutions; but the cool breezes, which conſtantly ſet in at ten o'clock in the morning, render the heat more tolerable; and the air upon the high grounds is temperate, pure, and cooling. A night ſeldom paſſes here without lightning, but it is not always attended by thunder, which in this iſland roars with uncommon violence, and is dreadful to the aſtoniſhed hearer, particularly as at theſe times the lightning does great damage. In February or March, the inhabitants always expect earthquakes, which have been productive of the moſt fatal effects in theſe parts.

The chief vegetable production of this iſland is the ſugar-cane, which deſervedly employs the principal attention of the inhabitants, it being the ſtaple commodity of their trade. It is propagated by planting cuttings of it in the ground, in furrows dug parallel for that purpoſe; they are laid level and even, and covered up with earth, from whence they ſoon ſhoot out new plants from their knots or joints, and grow ſo quick, that in eight, ten, or twelve months at fartheſt, they are fit to cut for making of ſugar.

No ſort of European grain grows in Jamaica; they have only Indian corn, Guinea corn, peas of various kinds, but none reſembling thoſe produced in England, with a variety of roots, among which are the yams and caſſava. The fruits found there are oranges, lemons, limes, citrons, dates, pomegranates, ſhaddocks, mamies, papas, ſour-ſops, pine-apples, cuſtard-apples, ſtar-apples, prickly pears, alicada pears, plantains, melons, and guavas, beſides ſeveral kinds of berries. It alſo produces cotton, coffee, pimento, ſome cacao, and indigo, guaiacum, China-root, ſarſaparilla, caſſiſiſtula, tamarinds, venellas, and a courſe kind of tobacco. Woods for dying, as fuſtic, redwood, log-wood, and mangrove, and olive-bark for the tanners. The moſt remarkable trees are, the manchineel, whoſe fruit appears exceeding beautiful to the eye, but is of a poiſonous quality; the cabbage-tree, the wood of which is ſo hard that it ſcarcely yields to any kind of tool, and when dry is incorruptible; the mahogany, ſo much uſed by our Cabinet-Makers; the wild cinnamon-tree, the bark of which is uſeful in medicine; and the ſoap-tree, whoſe berries anſwer all the purpoſes of ſoap.

Horſes, aſſes, mules, goats, hogs, and ſheep, are very numerous in Jamaica; black cattle were alſo formerly very plentiful, but through the inattention of the inhabitants to grazing, there are very few, ſo that they are at preſent ſupplied with beef from Carolina and other American ſettlements on the continent. There are plenty of racoons and rabbits, but no hares or deer. Of wild fowl there is a great variety, as ducks, teal, wigeons, geeſe, turkies, pigeons, Guiney-hens; plovers, flamingos, and ſnipes; various kinds of parots, and paroquets, and that beautiful little animal the humming-bird. The bays and rivers of Jamaica abound with excellent fiſh of almoſt all the European and American kinds, particularly tortoiſes, or turtles, ſea-cows, and aligators. The mountains breed adders and other noxious animals, as the fens and marſhes do the guana and gallewaſp, but theſe laſt are not venomous. Among the inſects which infeſt this iſland, is the nigua, ciror, or chegæ, which eats into the nervous and membraneous parts of the fleſh of the negroes, and frequently of the white people. Theſe inſects get into any part of the body, but chiefly the legs and feet, where they breed in great numbers, and ſhut themſelves up in a bag. As ſoon as the perſon feels them, which is not perhaps till a week after they have been in the body, they pick them out with a needle, or the ſharp point of a knife, taking care to deſtroy the bag entirely, that none of the breed, which are like nits, many remain behind. They ſometimes get into the toes, and eat the fleſh away to the bone.

A great number of ſmall rivers have their ſource among the rocks called the Blue Mountains, and fall down their ſides in cataracts at once ſtupendous and dreadful. The waters of theſe rivers taſte of copper, and are very unwholeſome. There are ſome fine ſprings in the iſland; but, upon the whole, this uſeful element is in many places very ſcarce; in others, it is ſo mixed with ſand, and earthy particles, that it is not drinkable till it has ſettled for ſome days; and, in ſome years, ſeveral of the cattle have periſhed for want of water. Many ſalt ſprings are found in the plains; and in the mountains, at a little diſtance from Spaniſh Town, is a hot-ſpring, which the inhabitants reſort to as a bath, and attribute ſeveral medicinal virtues to the water.

The number of inhabitants in Jamaica does not exceed twenty-five thouſand whites, and ninety thouſand negroes: but about the beginning of this century, the former amounted to ſixty thouſand, and the latter to an hundred and twenty thouſand: this decline is attributed to earthquakes and epidemical diſeaſes. The inhabitants are either Engliſh, or of Engliſh extraction born upon the iſland; Indians, Negroes, and Mulattoes, or the deſcendents of them.

There is no country in the world where luxury is carried to a higher pitch than in this iſland: equipages, clothes, furniture, tables, all bear the marks of the greateſt wealth, affluence, and profuſion; and to this may be imputed the ſhort ſtay which all the treaſure they receive makes among them; the whole not being more than ſufficient to anſwer their neceſſitous and luxurious calls on Europe and North-America. The common drink of the better ſort of people is Madeira wine mixed with water; but thoſe of inferior rank uſually drink rum punch, which they term Kill-Devil; becauſe being frequently drunk to exceſs, it heats the blood, and brings on fevers that in a few hours ſend them to the grave, eſpecially ſtrangers, which is the reaſon that ſo many die there upon their firſt arrival.

On Sundays, and particular occaſions, gentlemen wear wigs, and appear very gay in ſilk coats and veſts trimmed with ſilver; but at other times their uſual dreſs is thread ſtockings, linen drawers, a veſt, a handkerchief tied round the head, and a hat. The morning habits of the ladies conſiſt of a looſe gown wrapped careleſsly round them; but againſt noon they always dreſs in a rich and moſt becoming taſte. Men ſervants wear a coarſe linen frock, with buttons at the neck and hands, and long trowſers of the ſame. The negroes of both ſexes go naked, except thoſe who are immediately employed in the houſe.

Beſides the ordinary proviſions, rats are ſold here by the dozen, and when they have bred among the ſugar canes, are thought, by ſome people, very delicious food. Snakes and ſerpents, and coſſi, a ſort of worms, are eaten by the Indians and Negroes.

There is great reaſon to believe that there were formerly a great many more perſons of property in Jamaica then there are now, though their fortunes were not very large. The inhabitants were undoubtedly very numerous, till reduced by earthquakes and by terrible epidemical diſeaſes, which immediately ſucceeding former calamities, ſwept away vaſt multitudes. The decreaſe of the inhabitants, as well as the decline of their commerce, ariſe from the difficulties to which their trade is expoſed, of which they do not fail to complain to the court of Great-Britain; particularly, that they are of late deprived of the moſt beneficial part of their trade, the carrying of negroes and dry goods to the Spaniſh coaſt; the low value of their produce, which they aſcribe to the great improvements the French make in their ſugar colonies, ſo that they are enabled to underſell them by the lowneſs of their duties; and alſo on account of the

the trade carried on from Ireland and the northern colonies of the French and Dutch iſlands, where they pay no duties, and are ſupplied with goods at an eaſier rate. Some of theſe complaints, which equally affect the other iſlands, have been heard, and others ſtill remain unredreſſed. Both the logwood-trade, and that carried on by our iſlands with the continent of New Spain and Terra Firma, have often been the ſubjects of great contention, and even cauſed a war between the crowns of Great-Britain and Spain. The former we always avowed, and claimed as our right; and it was accordingly, by a late peace, confirmed to us: the latter, we permitted, from a natural ſuppoſition, that if the Spaniards found themſelves aggrieved by any contraband trade, it lay upon them, and not upon us, to put a ſtop to it; eſpecially as they have guarda coſtas cruizing in thoſe ſeas, purpoſely to ſeize and confiſcate ſuch veſſels and cargoes as are found carrying on an illicit trade. Theſe arguments were thought ſufficient till the concluſion of the peace of 1763, when the Britiſh miniſtry, in compliance with the court of Spain, thought proper to ſend Engliſh cruizers to the American coaſt, effectually to cruſh that lucrative trade: a proceeding which has occaſioned the complaints of the whole body of Britiſh ſubjects in America, as a ſtop was thereby put to the principal channel which had enabled them to remit ſuch prodigious ſums to Great-Britain.

They import from England linen, ſilk, and woollen clothing of all kinds; wrought iron, braſs, and copper; all ſorts of hard ware, toys, houſehold-furniture, and great quantities of flour.

Sugar, rum, molaſſes, and cotton, are the chief product of the iſland. In 1753, they exported 20,315 hogſheads of ſugar, ſome of them very great, which were worth in England 424,725l. Of rum, they export about 4,000 puncheons. In molaſſes, they made a great part of their returns for New England, where there are vaſt diſtilleries. The other commodity is cotton, of which they ſend out 2000 bags. They alſo carry on a conſiderable trade with the Spaniſh continent of New Spain and Terra Firma; in the former they cut great quantities of logwood, and in both they carry on an extenſive and advantageous trade in negroes, and all kinds of European goods.

Kingſton, the new capital of this iſland, is ſituated on the bay of Port Royal. The harbour is one of the moſt commodious in America, being about three leagues broad in moſt places; ſo deep that a ſhip of 700 tons may lay cloſe to the ſhore; and ſo capacious, that a thouſand ſail may ride in ſafety. The enterance is defended by Fort Charles, one of the ſtrongeſt fortifications on the Engliſh iſlands, a battery of 60 pieces of cannon, and a garriſon of regulars maintained by the crown. The town, which ſtands commodiouſly for freſh water, and every other convenience of life, is about a mile long, and half a mile broad. The ſtreets are handſome, regular, and contain upwards of 1000 houſes, moſt of which are well, and ſome elegantly built, according to the taſte of theſe iſlands, which is only one ſtory high, with porticos. Its inhabitants are eſtimated at 17,000, among whom are about 5000 whites and 12,000 free negroes or mulattoes.

Port-Royal, the old capital, ſtood upon the point of a narrow neck of land, which, towards the ſea, formed part of the border of the above-mentioned harbour, the excellency of which induced the inhabitants to build their chief city on this ſpot, though it was hot dry ſand, and produced none of the neceſſaries of life. It ſoon, however, became a place of great conſequence, and the reſort of thoſe famous pirates called Buccaneers, a people who made continual depredations on the Spaniſh coaſt, and fought with an inconſiderate bravery to obtain a fortune, which they ſpent with as inconſiderate diſſipation in this town. This, together with the trade of the iſland, had ſo good an effect, that about the beginning of the year 1692, the place exceeded every thing of its ſize, for wealth, and an entire corruption of manners. But this proſperity was of no long continuance: in the month of June, the ſame year, an earthquake ſhook the whole iſland to its foundation, and totally overwhelmed this city; the earth opened and ſwallowed up nine-tenths of the houſes, and two thouſand of the inhabitants. The water guſhed out from the openings of the earth, and tumbled the people in heaps; ſome of them, however, had the good fortune to catch hold of beams and rafters of houſes, and were afterwards ſaved by boats. Several ſhips were caſt away in the harbour, and the Swan frigate, which lay in the dock, was carried over the tops of ſinking houſes; but, fortunately, ſhe did not overſet, and afforded a retreat to ſome hundreds of people, who by that means ſaved their lives. An officer, who happened to be on the ſpot, obſerves, that the earth opened and ſhut very quick in ſome places, and he ſaw ſeveral people ſink down to the middle, while others appeared with their heads juſt above the ground, and were preſſed to death. At Savannah, above a thouſand acres were ſunk, with the houſes and people, the place appearing for ſome time like a lake. The waters afterwards dried away; but not the leaſt veſtige of the houſes remained. Some of the mountains were ſplit aſunder; at one place, a plantation was removed to the diſtance of a mile, and the moſt ſtupendous rocks were whirled from their eminences. After the conſternation, occaſioned by this ſhocking ſcene of horror and deſolation, had ſome time ſubſided, the town was rebuilt, but, about ten years after, it was again deſtroyed by fire. The extraordinary convenience of the harbour, however, induced the inhabitants to raiſe it a third time; and a third time it was laid in rubbiſh by a hurricane, the moſt terrible on record. This happened ſo lately as the year 1722, and almoſt ruined the iſland. Such repeated cataſtrophes occaſioned them to abandon the place, and accordingly they built Kingſton, on the oppoſite ſide of the bay: of late years, however, Port-Royal has been in ſome meaſure rebuilt; its commodious ſituation having tempted many to ſettle on this ſeemingly devoted ſpot, and run all hazards.

On October 3, 1780, there was a dreadful hurricane, which almoſt overturned the little ſea-port town of Savannah-la-Mer; in this iſland, and part of the adjacent country, very few houſes were left ſtanding, and a great number of people were killed. In other parts of Jamaica much damage was alſo done, and many lives loſt,

St. Jago de la Vega, commonly called Spaniſh-Town, in Middleſex, is a ſmall city, pleaſantly ſituated on the river Cabre. It contains a number of good houſes, and is the reſidence of the governor, of the courts of juſtice, and the place where the aſſembly is held. The greater part of the inhabitants are perſons of fortune or rank, which gives it an air of ſplendor and magnificence. The principal building is the governor's houſe, which is one of the moſt elegant in America. Here are alſo a handſome church, a chapel, and a Jewiſh ſynagogue.

Between this town and that of Kingſton, is Fort-Paſſage, a village of but few houſes, and ſo called, becauſe they who go from one town to the other land or embark there.

The miſery and hardſhips of the negroes, in general, are great; and though the utmoſt care is taken to make them propagate, the ill treatment they receive ſo ſhortens their lives, that, inſtead of increaſing by the courſe of nature, many thouſands are annually imported, to ſupply the place of thoſe who pine and die by the hardſhips they receive. They are, indeed ſtubborn and untractable for the moſt part, and they muſt be ruled with a rod of iron; but they ought not

not to be cruſhed with it, or to be thought a ſort of beaſts, without ſouls, as many of their overſeers think them at preſent, though ſome of theſe tyrants are themſelves the dregs of England, and the refuſe of the jails of Europe. Many of the negroes, however, who fall into the hands of gentlemen of humanity, find their ſituations eaſy and comfortable; and it has been obſerved, that in North America, where in general theſe poor wretches are better uſed, there is a leſs waſte of negroes, they live longer, and propagate better.

The ſlaves, on their firſt arrival from the coaſt of Guinea, are expoſed naked to ſale; they are then generally very ſimple and innocent creatures; but they ſoon become roguiſh; and when they come to be puniſhed for their faults, excuſe themſelves by the examples of the whites. They believe every negro returns to his native country after death. This thought is ſo agreeable, that it cheers their ſpirits, and renders the burthen of life eaſy, which would otherwiſe to many be quite intollerable. They look on death as a bleſſing; and it is ſurpriſing to ſee with what courage and intrepidity ſome of them meet it: they are quite tranſported to think their ſlavery is near at an end, that they ſhall reviſit their native ſhores, and ſee their old friends and acquaintance. When a negro is about to expire, his fellow ſlaves kiſs him, wiſh him a good journey, and ſend their hearty good wiſhes to their relations in Guinea. They make no lamentations; but with a great deal of joy inter his body, believing he is gone home, and enjoys perfect happineſs.

Engliſh money is ſeldom ſeen here, the current coin being entirely Spaniſh. There is hardly any place where ſilver is more plentiful, or has a quicker circulation. Notwithſtanding proviſions are in general tolerably reaſonable, yet a perſon cannot dine decently for leſs than a piece of eight, and the common rate of boarding is three pounds per week.

Learning is here at a very low ebb: there are, indeed, ſome gentlemen, well verſed in literature, and who ſend their children to Great-Britain, where they have the advantage of a polite and liberal education; but the bulk of the people take little care to improve their minds, being generally engaged in trade or riotous diſſipation.

The eſtabliſhed religion here, as well as in all the Britiſh iſlands, is that of the church of England; but there are yet no biſhops: the biſhop of London's commiſſary is the principal eccleſiaſtic in theſe iſlands.

The government of Jamaica is the ſame with that of Virginia, and indeed all other royal governments. It is, next to that of Ireland, the beſt in the king's gift. The ſtanding ſalary is 2,500l. a year, the aſſembly vote the governor as much more, and this, with the other great profits of his office, make it little leſs than 10,000l. a year.

Jamaica was conquered by the Engliſh forces ſent out by Cromwell on an expedition againſt Hiſpaniola. That attempt failing, they laid ſiege to this iſland with an army of 10,000 men; and the place being in no poſture of defence, the Spaniards ſurrendered it up to the beſiegers. They made no attempt afterwards to retake it; and after the Reſtoration it was ceded to Great-Britain by treaty. Some of the troops employed in its reduction were ſettled in the iſland by Cromwell; and many of the royaliſts, uneaſy at home, ſought an aſylum there, while the amazing fertility of the ſoil, and other advantages which it offered, induced many of the planters in Barbadoes to quit their abode, and ſettle in Jamaica. The latter taught the former ſettlers the manner of raiſing the ſugar-canes and making ſugar; for, before their arrival, they followed the cuſtoms of the Spaniards, and applied themſelves entirely to the raiſing of cocoa. They alſo introduced the culture of indigo; and from that period, ſugar and indigo became the principal ſtaple commodities of the iſland.

To the north-weſt of Jamaica are three ſmall iſlands dependent on this, and known by the name of the Caymans. The moſt ſoutherly is diſtinguiſhed by the name of Great Cayman: the other two, which are diſtant from it about 20 leagues, are called Little Cayman and Cayman Brack. Great Cayman is the only one that is conſtantly inhabited: it is very low, and covered with high trees. It has not any harbour for ſhips of burthen, only a tolerable anchoring place on the ſouth-weſt. The inhabitants, who amount to about 200, are deſcended from the old Buccaneers. They have given themſelves a ſet of laws, and chooſe a chief to ſee them executed, in conjunction with the juſtices of peace appointed by commiſſion from the governor of Jamaica. As they have no clergyman among them, they go to Jamaica to be married. This colony is undoubtedly the moſt happy in the Weſt-Indies; the climate and the kind of food, which are of a ſingular ſalubrity, rendering the people healthy and vigorous, and making them live to a very advanced age. Their little iſland produces plenty of corn and vegetables, hogs, and poultry, much beyond what is required for their own conſumption. They have, beſides, ſugar canes, and ſome ſprings of pretty good water. Being quite hardened to the ſea, they are excellent pilots for the neighbouring coaſts; and their iſland, as well as their activity and humanity, have been many times a relief to ſhips which were diſtreſſed in this part of the ſea. Their principal employment is fiſhing for turtle. Inſtinct every year leads a prodigious number of turtles to theſe iſlands to lay their eggs, the greater part of which come from the Bay of Hunduras. The low and ſandy ſhores of theſe iſlands, particularly of the Great, are perfectly commodious to receive and cover their eggs. A female lays ſome hundreds. When they have done laying, the turtles retire towards the Iſle of Cuba, and the other large iſlands, where they recover themſelves in the ſubmarine paſtures, and, in about a month's time, acquire that fatneſs which makes them ſo much eſteemed on the tables of the great. The inhabitants of Great Cayman ſhut them up, as ſoon as they are caught, in encloſures, which they call *cralls*, made with ſtakes, in a ſmooth water, between the ſhore and a reef of rocks on the north-eaſt coaſt. Theſe turtles ſerve for all the traffic which they carry on with Port-Royal. It is an article of food which is very wholeſome; and the ſhell of the hawk's-bill kind is a commodity which has a place among the exportations to Great-Britain.

BARBADOES.

Situation and Extent, Climate, Soil, Produce, Inhabitants, Chief Towns, Religion, &c.

THIS is the moſt eaſterly of all the Caribbee iſlands, being ſituated in the 59th deg of weſt long. and the 13th of north lat. It is 21 miles in length, and 14 in breadth. When the Engliſh, ſometime after the year 1625, firſt landed here, they found the place the moſt wild and deſtitute that can be imagined. It did not exhibit the leaſt appearance of having been ever peopled, even by ſavages. There was no kind of beaſt of paſture or of prey; no fruit, no herb, no root, fit for ſupporting human life. Yet, as the climate was good, and the ſoil fertile, ſome gentlemen of ſmall fortunes in England reſolved to become adventurers in cultivating it. Theſe planters had not only the deſolate nature of the place, and the extreme want of proviſions to ſtruggle with, but the trees were ſo large, and the wood ſo hard and ſtubborn, that they met with great difficulty in clearing as much ground as yielded them a ſubſiſtence. But by degrees things grew better; ſome of the wood yielded fuſtic, a wood wanted by the dyers; cotton and indigo agreed well with the ſoil, and tobacco, then becoming faſhionable in England, yielded tole-

rably

rably. Theſe good appearances, with the ſtorm which ſome time after began to gather in England, encouraged many to go over; and ſo great was the increaſe of people in Barbadoes, that in 1650, after having been ſettled only 25 years, it contained 50,000 whites, and a much greater number of negro and Indian ſlaves; the latter they baſely ſeized in the neighbouring iſlands, and carried into ſlavery; which diſhonourable conduct has rendered the Caribbee Indians irreconcileable to us ever ſince. Their cultivation of ſugar ſoon rendered them extremely wealthy. The number of ſlaves ſtill increaſed; and it is ſuppoſed that in 1676 they amounted to 100,000, which, together with 50,000 whites, make 150,000 ſouls on this ſmall ſpot, a degree of population unknown in Holland, or even the beſt inhabited parts of China.

The trade of Barbadoes with Great-Britain, &c. employs 400 veſſels of all burthens. The principal articles of exportation are aloes, cotton, ginger, ſugar, rum, and molaſſes. In 1770 this exportation amounted to 331,000l. to Great-Britain; 120,000l. to North America; and 11,000l. to the other iſlands; and their circulating caſh at home was 200,000l. But this iſland has lately been much on the decline, which is attributed partly to the growth of the French ſugar-colonies, and partly to our own eſtabliſhments in the neighbouring iſles. Their numbers are now computed at 20,000 whites, and 100,000 ſlaves. Their capital is Bridge Town, ſituated in Carliſle Bay; here the governor reſides, and has a ſalary of 5000l. per annum. Here is a college founded and well endowed by Col. Codington, a native of this iſland. Barbadoes has ſuffered much by peſtilence, hurricanes, and fires. On October 10, 1780, a dreadful hurricane cauſed great devaſtation in this iſland, great numbers of the houſes were deſtroyed, many damaged, a great number of perſons were buried in the ruins of the buildings, and others driven into the ſea, and periſhed there. The church of England is the eſtabliſhed religion here; the Diſſenters are very few. Here is, in general, a greater appearance of order and decency, and of a ſettled people, than in any other of the Weſt-India iſlands.

St. CHRISTOPHER's.

THIS iſland, ſometimes, for brevity's ſake, called St. Kitt's, is ſituated in 62 deg. weſt long. and 17 deg. north lat. It is about twenty miles long, ſeven broad, and ſeventy-five in circumference. It owes its name to Chriſtopher Columbus, who firſt diſcovered it for the Spaniards, who, not finding it to abound in the precious metal, abandoned it; and, in 1626, it was ſettled by the French and Engliſh conjointly, but entirely ceded to England by the treaty of Utrecht. It contains about 7000 whites, and 36,000 negroes. Beſides cotton, ginger, and the tropical fruits, it generally produces as much ſugar as Barbadoes.

Baſſeterre is the moſt conſiderable town upon this iſland, and was formerly the capital of the French part: the other is called Sandy Point, and always belonged to the Engliſh. There is no harbour; on the contrary, the ſurf is continually beating on the ſandy ſhore at the few places fit to land, which not only prevents the building any quay or wharf, but renders the landing or ſhipping of goods always inconvenient, and very often dangerous. They have been, therefore, obliged to adopt a particular method to embark, or put the heavy goods, ſuch as hogſheads of ſugar or rum, on board. For this purpoſe, they uſe a ſmall boat of a peculiar conſtruction, called a *moſes*; this boat ſets off from the ſhip with ſome very active and expert rowers; when they ſee what they call a *lull*, that is, an abatement in the violence of the ſurge, they puſh to land, and lay the ſides of the moſes on the ſtrand, the hogſhead is rolled into it, and the ſame precautions are uſed to carry it to the ſhip. It is in this inconvenient and very hazardous manner that the ſugars are conveyed on board by ſingle hogſheads. Rum, cotton, and other goods that will bear the water, are generally floated to the ſhip both in going and coming.

The public affairs at St. Chriſtopher's are adminiſtered by a governor, a council, and an aſſembly choſen from the nine pariſhes into which the iſland is divided, and which have each a large handſome church.

The iſland of St. Chriſtopher ſuſtained great damage by a violent hurricane, which happened in the month of October 1780. All the goods in the warehouſes and cellars near the beach were totally deſtroyed, and upwards of 100 veſſels were driven out to ſea, many of which were loſt, and the crews periſhed.

The French took this iſland in February 1782, but it was reſtored by the peace with England in 1783.

ANTIGUA.

THIS iſland was diſcoved by Chriſtopher Columbus, but not ſettled upon till the year 1632, when the Engliſh took poſſeſſion of it. It is ſituated in 61 deg. weſt log. and 17 deg. north lat. and is of a circular form, about twenty miles each way, and near ſixty in circumference. It is more noted for good harbours than all the Engliſh iſlands in theſe ſeas, yet ſo encompaſſed with rocks, that it is of dangerous acceſs in many parts, eſpecially to thoſe that are not well acquainted with the coaſt.

Here the climate is hotter than in Barbadoes, and very ſubject to hurricanes. The ſoil is ſandy, and much of it overgrown with wood. There are but few ſprings, and not ſo much as a brook in the whole iſland; ſo that the principal dependance of the inhabitants ariſes from the water ſupplied by caſual rains, which they ſave in ciſterns.

St. John is the capital of Antigua; it is a regular built town on the weſtern ſhore, with a good harbour of the ſame name, whoſe entrance is defended by Fort James. It is the reſidence of the governor-general of the Caribbee Leeward-Iſlands, the place where the aſſembly for this iſland is held, and the port where the greateſt trade is carried on. It was a very flouriſhing town before the fire in 1769. The number of inhabitants are computed at 7000 whites, and 30,000 ſlaves. The beſt port in the iſland is Engliſh Harbour, on the ſouth ſide. At much trouble and expence it has been made fit to receive the greateſt ſhips of war. There are alſo a dock-yard with ſtores, and all the materials and conveniences neceſſary to repair and careen. Engliſh Harbour is at a ſmall diſtance from the town and harbour of Falmouth. There are, beſides, Willoughby Bay, to the windward of Engliſh Harbour; Nonſuch Harbour, on the eaſt point; and the town and harbour of Parham, on the north ſide; alſo a great number of creeks and ſmaller bays; but, in general, the ſhore being rocky, wherever the landing would be practicable, it is defended by forts and batteries; and there is commonly one regiment of regular troops quartered there for the defence of the iſland. When the governor-general thinks proper, he calls a general aſſembly of the other iſlands.

Antigua has, beſides, a lieutenant-governor, a council, and its own aſſembly, compoſed of twenty-four members. It is divided into ſix pariſhes and eleven diſtricts, of which ten ſend each two repreſentatives, and that of St. John four.

A gentleman reſiding at St. John's in Antigua, has favoured us with the following pleaſing account: he writes, that at the end of the year 1792, in conſequence of a plan ſet on foot by ſome benevolent perſons for inſtructing the negroes on that iſland, the congregation he belongs to amounted then to 5495 negroes, who are remarkably punctual and devout in their attendance on divine worſhip, and that their ſinging is particularly pleaſing: that, ſince May 1793, there have been baptized about 244 adults, or grown

negroes, beſides very many children; and a great number of adults and children have been baptized on their ſick beds. He adds, that Antigua is a very pleaſant iſland, and produces large quantities of ſugar, oranges, limes, pine-apples, and ſeveral other kinds of delicious fruits; but other ſorts of proviſion are very dear, cheeſe being 14d. per pound Engliſh money, and porter 1s. a bottle, &c. He obſerves further, that ſome of the ſlaves are, for the ſmalleſt offence, treated very unmercifully; and in hoeing, are whipped before their driver like ſo many beaſts.

GRENADA AND THE GRENADINES.

GRENADA is ſituated in 12 deg. north lat. and in 61 deg. 40 min. weſt long. near thirty leagues ſouth-weſt of Barbadoes, being about thirty miles long, and fifteen broad. The ſoil of this iſland is exceeding proper for the culture of ſugar, tobacco, and indigo. In a mountain, about the centre of the iſland, is a lake that ſupplies it plentifully with ſtreams of freſh water, which adorn and fertilize it. The bays and harbours of this iſland are very convenient for ſhipping, and it is not ſubject to hurricanes. In the harbour of St. George's Bay 100 veſſels may be ſafely moored. The French firſt eſtabliſhed a colony here, between whom and the natives there was a long and bloody war, in which the latter, though few in number, defended themſelves againſt their invaders with the moſt reſolute bravery. When Grenada was attacked by the Engliſh in the laſt war but one, the French inhabitants were ſo amazed at the reduction of Martinico and Guadalupe, that they ſurrendered without oppoſition; and the property of this iſland, together with that of the Grenadines, lying on the north of it, were ceeded to the Engliſh by the treaty of Paris in 1763; but, in July 1779, the French again made themſelves maſters of Grenada, though, by the treaty of peace in 1783 it was reſtored to Great-Britain.

DOMINICA.

THIS iſland is ſituated in 16 deg. north lat. and 62 weſt long. and lies about half way between Guadalupe and Martinico. It is about twenty-eight miles in length, and thirteen in breadth; and received its name from being diſcovered by Columbus on a Sunday. The ſoil of this iſland is thin, and better adapted to the rearing of coffee than ſugar; but the ſides of the hills bear the fineſt trees in the Weſt-Indies, and the whole iſland is well ſupplied with rivulets of fine water. Here, as in ſome other of the Caribbees, is a ſulphur mountain, and hot ſpring, equal in ſalubrity to thoſe of Bath in England; and the fine fruits, particularly the pine-apples, are ſuperior to any that grow on the French iſlands. At the north-weſt end of the iſland, is a deep, ſpacious, ſandy bay, called Prince Ruport's, which is well ſecured from the winds by mountains on all ſides. The moſt diſtinguiſhed place in this iſland is the town of Roſeau, ſituated on a ſpacious harbour. The houſes are low and irregularly placed, and the town is ſheltered by the circumjacent mountains, ſome of which riſe to a conſiderable height. The moſt advantageous view of the town is from the bay, or harbour, where ſhips of conſiderable ſize ride at anchor with the greateſt ſafety. This iſland, on account of its ſituation between the principal French ſettlements here, and the commodiouſneſs of its harbour, has been formed into a government of itſelf, and declared a free port. It was taken by the French in 1778; but by the enſuing peace, was reſtored to Great-Britain.

St. VINCENT.

THIS iſland is about twenty-four miles in length, and eighteen in breadth, lying about fifty miles north-weſt of Barbadoes. It is generally allowed to be one of the beſt of all the Antilles. Out of the ridge of mountains, which croſſes it from north to ſouth, riſe a great number of rivers well ſtored with fiſh. Theſe mountains are in general of an eaſy aſcent; and the vallies and plains, ſome of them of a large extent, are exceeding fertile, producing moſt of the neceſſaries of life, particularly ſugar, coffee, cocoa, and annatta. When this iſland was ceded to Great-Britain, by the treaty of Verſailles, in 1763, there was a great number of a mixed breed of Caribbees, and of ſhipwrecked or runaway negroes; but theſe have been all long ſince exterminated. The moſt remarkable place in St. Vincent's is Kingſtown, ſituated on a bay of the ſame name at the ſouth-weſt end of the iſland. It is the reſidence of the governor, and the place where the aſſembly meet. About three miles from Kingſtown, towards the ſouth-eaſt, is the town of Calliagua, whoſe harbour is the moſt conſiderable in the whole iſland. Many of the inhabitants are Caribbeans, and many here are alſo fugitives from Barbadoes and the other Iſlands. The Caribbeans were treated with ſo much injuſtice and barbarity, after this iſland came into poſſeſſion of the Engliſh, to whom it was ceded by the peace in 1763, that they greatly contributed towards enabling the French to get poſſeſſion of it again in 1779; but, by the treaty of peace, it was reſtored to Great-Britain.

NEVIS.

THIS is no more than a vaſt mountain riſing to a very conſiderable height. It is ſituated about four miles to the ſouth of St. Chriſtopher's. The ſoil is fruitful, and the ſtaple commodity ſugar, which ſerves all the purpoſes of money. Here are ſometimes violent rains and hurricanes, as in the other iſlands, and the air is even hotter than that of Barbadoes.

Here are many remarkable inſects and reptiles, particularly the flying-tyger, the horn-fly, and a kind of ſnail called the ſoldier. The ſea abounds with a variety of excellent fiſh, as groopers, rock-fiſh, old wives, cavallies, welſhmen, mud-fiſh, wilks, cockles, lobſters, &c. Land-crabs are very common here; they are ſmaller than ſea-crabs, and make little burrows, like rabbits, in the woods, towards the tops of the mountains. The only venemous creatures are ſcorpions and centipedes.

On this iſland there is plenty of aſparagus; they have alſo a tree called diddle-doo, which bears a lovely bloſſom of the fineſt yellow and ſcarlet colours, and is eſteemed a ſovereign remedy in ſome diſorders. The liquorice buſh runs wild along the ſtone walls of common fields, like the vine. The butter here is not good, and their new cheeſe far worſe. The ſheep have neither horns or wool, but are cloathed with ſmooth hair, and generally full of ſmall red or black ſpots, reſembling thoſe of a fine ſpaniel. They breed twice a year, if not oftener, and generally bring two, three, or four lambs at a time, and, what is more extraordinary, ſuckle them all. The rams are of a pale red colour, with a thick row of long, ſtraight, red hair, hanging down from the lower jaw to the breaſt, as far as the fore legs. The hogs being fed with Indian corn, Spaniſh potatoes, and ſugar-cane juice, are exceeding ſweet food, white, and fat; as are the fowls and turkies, which are fed with the ſame diet. The ground doves here are about the ſize of a lark, of a chocolate colour, ſpotted with a dark blue, their heads like that of a robin-red-breaſt, and their eyes and legs of a moſt pure red. They have excellent game cocks and fierce bull-dogs, beſides large cur-dogs, but no hounds or ſpaniels.

Nevis was formerly much more flouriſhing than at preſent, and, before the Revolution, contained 30,000 inhabitants. The invaſion of the French about that time, and ſome epidemical diſorders, have ſtrangely diminiſhed the number to what they then

then were. Here are three tolerable roads or bays, on which are as many little towns, viz. Newcaſtle, Littleborough on Moreton-Bay, and Charles-Town the capital, with a fort called Great Fort, that defends the anchoring-place, where the governor, council, and aſſembly, meet; the laſt is compoſed of five members for each of the three pariſhes into which the iſland is divided. Here, as in ſome of the other Caribbees, if a white man kills a black, he cannot be tried for his life for the murder; and all that he ſuffers is a fine of 30l. currency to the maſter for the loſs of his ſlave. If a negro ſtrikes a white man he is puniſhed with the loſs of his hand; and, if he ſhould draw blood, with death. A negro cannot be evidence againſt a white man.

The inhabitants of this place have three public annual faſts, to implore the divine protection againſt hurricanes; and, if none happen in July, Auguſt, or September, they appoint a public thankſgiving in October. The trade of Nevis conſiſts in molaſſes, rum, and a prodigious quantity of lemons.

This iſland, as well as the following, was taken by the French in the year 1782, but reſtored at the peace in 1783.

MONTSERRAT.

THIS ſmall iſland was diſcovered by Columbus in 1493. It lies in 16 deg. 37 min. north lat. and 62 deg. 13 min. weſt long. It is twenty-five miles almoſt ſouth ſouth-eaſt from Nevis; twenty weſt ſouth-weſt from Antigua; forty north-weſt from Guadalupe; and 240 from Barbadoes. It is of an oval figure; about three leagues in length, the ſame in breadth, and eighteen in compaſs. The Spaniards gave it the name of Montſerrat from a fancied reſemblance it bore to a mountain of that name near Barcelona in Old Spain. It was ſettled in 1632 by Sir Thomas Warner, and taken in the beginning of the reign of Charles II. by the French, who reſtored it to England at the peace of Breda. The firſt ſettlers were Iriſhmen, and the preſent inhabitants are principally compoſed either of their deſcendants, or of natives of Ireland.

With reſpect to climate, ſoil, and produce, they are much the ſame as thoſe of the other Engliſh Caribbee Iſlands. The mountains yield cedars, the cypreſs-tree, the iron-tree, with other woods, and ſome odoriferous ſhrubs. It is well-watered and fruitful; and the planters formerly raiſed a great deal of indigo. The ſurrounding ſeas produce ſome hideous monſters, particularly two, which, from their remarkable uglineſs, as well as the poiſonous quality of their fleſh, are called ſea-devils. The lamanture, by ſome called the ſea-cow, is found in this iſland, and generally at the enterance of freſh water rivers. According to the accounts we have of it, it is an amphibious animal, and lives moſtly on herbage. Its fleſh is reckoned very wholeſome food, when ſalted; and they are ſo large, that two or three of them load a canoe.

Montſerrat is governed by a lieutenant-governor, a council, and an aſſembly of eight repreſentatives, two for each of the four diſtricts which divide the iſland.

There is not any harbour belonging to this iſland, only three roads, namely, at Plymouth, which is the chief town in the iſland, Old Harbour, and Ker's Bay, where the ſhipping and landing of goods is attended with the ſame inconveniences as in the iſland of St. Chriſtopher.

This iſland, as well as the former, was taken by the French in the year 1782, but reſtored at the peace in 1783.

BARBUDA.

THIS iſland is ſituated in 18 deg. 6 min. north lat. and 61 deg. 35 min. weſt long. It is about twenty miles in length, and twelve in breadth. The air of Barbuda is not unſalutary; and the ſoil is fertile enough to yield all the vegetable productions of the other Weſt-India Iſlands; but the inhabitants apply themſelves almoſt wholly to the breeding of cattle, and raiſing proviſions for the neighbouring iſles. On the weſt ſide of the iſland is a good well-ſheltered road, clear from rocks and ſands. This iſland is the property of the Codrington family, and contains about 1500 inhabitants.

To the north of Barbuda are ſeveral ſmall uninhabited iſlands. The moſt remarkable of them lies at ſix leagues diſtance, and is about a league long. It conſiſts of an eminence, to which the Spaniſh diſcoverers, finding ſome reſemblance to a hat, gave it the name of Sombrero, which it has always preſerved.

To the weſt of Barbuda and Sombrero, after having croſſed a channel of eight leagues, being the VIRGIN ISLANDS. Theſe take up a ſpace, from eaſt to weſt, of about twenty-four leagues long, quite to the eaſtern coaſt of Porto Rico, with a breadth of about ſixteen leagues. They are compoſed of a great number of iſles, whoſe coaſts, rent throughout and ſprinkled with rocks, every where dangerous to navigators, are famous for ſhipwrecks, and particularly of ſeveral galleons. Happily for the trade and navigation of theſe iſlands, nature has placed in the middle of them a large baſon of three or four leagues broad, and ſix or ſeven long, the fineſt that can be imagined, and in which ſhips may anchor landlocked, and ſheltered from all winds. The Buccaneers called it the Virgins' Gangway; but its true name is the Bay of Sir Francis Drake, who firſt entered it in 1580, when he made his expedition againſt St. Domingo.

One of theſe iſlands is called the Tropic Keys, from the aſtoniſhing quantity of Tropic birds which breed there. Theſe birds are about the ſize of a pigeon, but round and plump like a partridge, and very good to eat. Their plumage is quite white, except two or three feathers in each wing, which are of a clear grey. Their beaks are ſhort, thick, and of a pale yellow. They have a long feather, or rather quill, about ſeven inches long, which comes out of their rump, and is all the tail they have. They obtained their name from not having been ever ſeen but between the Tropics.

The Virgin Iſlands are all of them ſmall, and the greateſt part uninhabited.

ANGUILLA.

THIS iſland is ſituated in 18 deg. 15 min. of north lat. and in 62 deg. 57 min. of weſt long. It is about thirty miles long, and ten broad. Anguilla is capable of great improvement; and the inhabitants formerly planted ſugar, which they ſtill continue to do in ſmall quantities; but, like thoſe of Barbuda, they chiefly apply themſelves to the breeding and feeding of cattle, planting of Indian corn, and other parts of huſbandry.

Within a few years, induſtry, and the indefatigable labours of the planters of Anguilla, have convinced them that their iſland not only produces all the neceſſaries of life, but, beſides, many proviſions which they ſell to their neighbours, as well as ſugar and cotton. The climate is very healthy, and the inhabitants ſtrong and vigorous. Their exportations are ſugar, rum, and cotton.

Beſides the Britiſh Weſt-India iſlands above deſcribed, Great-Britain is alſo poſſeſſed of ſeveral others in the ocean, which are ſituated at the diſtance of ſome thouſand miles from each other. Our ſurvey of theſe ſhall begin at the northern extremity, and the firſt that will engage our attention, is

NEWFOUNDLAND.

THIS iſland is ſituated to the eaſt of the gulf of St. Laurence, between 46 and 52 deg. north lat. and between 53 and 59 deg. weſt long. of a triangular form,

form, and nearly as large as Ireland; being ſeparated from Labrador, or New-Britain, by the ſtreights of Belleiſle; and from Canada, by the bay of St. Laurence. The principal towns are Placentia, Bonaviſta, and St. John.

The air on the coaſt is thick and foggy, and there are frequent ſtorms of ſnow and ſleet. The winter is long, and often intenſely cold; the ſummer is very hot, but of ſhort continuance, and, as the ſoil in moſt parts is rocky and barren, the vegetable productions are but few. It is, however, watered by ſeveral good rivers, and hath ſome noble and capacious bays. The beſt produce of this iſland conſiſts in a great variety of excellent timber, which will afford an ample ſupply for maſts, yards, and all ſorts of timber, when thoſe commodities begin to grow ſcarce in our colonies.

But Newfoundland is chiefly valuable for the noble cod fiſhery on its coaſts and the neighbouring banks. Great-Britain and North America, at the loweſt computation, annually employ three thouſand ſail of ſmall ſhips in this fiſhery; on board of which, and on ſhore, to cure and pack the fiſh, are upwards of 10,000 hands; ſo that this fiſhery is not only a valuable branch of trade to the merchant, but a ſource of livelihood to many thouſands of poor people, and a moſt excellent nurſery of ſeamen for the royal navy: at the ſame time, it is computed that this fiſhery increaſes the national ſtock 300,000l. annually, in gold and ſilver, remitted to us for the cod we ſell in the northern kingdoms, in Spain, Portugal, Italy, and the Levant. The plenty of cod, both on the great bank and the leſſer ones, which lie to the eaſt and ſouth-eaſt of this iſland, is inconceivable; and not only cod, but ſeveral other ſpecies of fiſh, are caught there in great abundance; all of which are nearly in an equal plenty along the ſhores of Newfoundland, Nova Scotia, New England, and the iſle of Cape Breton; and very profitable fiſheries are carried on upon all their coaſts, which makes ample amends for the barrenneſs of the ſoil, &c. The main fiſhery is on the Great Bank, and the other banks about this iſland, as alſo along the coaſt.

The Great Bank is a vaſt mountain under water, extending, in length, according to the moſt accurate ſea-charts, from the 41ſt deg. of north lat. to 49 deg. 25 min. and, in breadth, from 42 deg. 30 min. to 51 deg. 30 min. of weſt long. Its depth of water is from five to ſixty fathoms. This bank is covered with a vaſt quantity of ſhells, and ſeveral kinds of fiſh of all ſizes, moſt of which ſerve for food to the cod-fiſh, whoſe number is immenſe. Great numbers of veſſels have loaded here annually for two centuries, yet this vaſt conſumption has produced no very apparent dimunition of their numbers.

The Great Bank is about 120 miles long, and about fifty over where broadeſt. It lies off the ſouth-coaſt of Newfoundland. There are ſeveral other banks, but they are not conſiderable enough to deſerve particular notice.

The Great Strand, or drying place for fiſh, which is about a league in extent, lies between two ſteep hills, one of which is ſeparated from the Strand by a ſmall rivulet, which forms a kind of lake, called the Little Bay, abounding with ſalmon. The Great Strand may contain at once wherewithal to load ſixty ſhips. There is another leſſer Strand for the uſe of the inhabitants, who fiſh all along the coaſt. The fiſhing ſeaſon is from Spring to September. All the train oil that comes from Newfoundland is drawn chiefly from the livers of the cod.

The proceſs in catching the fiſh, preparing them, &c. is as follows: the cod is caught with a harpoon, the beſt bait being a little fiſh called capelau; but, for want of this, they ſometimes make uſe of the inteſtines of the cod itſelf. As ſoon as the fiſherman has caught a fiſh with his line, he pulls out its tongue, and gives the fiſh to another man, whom they call the beheader. This man, with a two-edged knife, like a lancet, ſlits the fiſh from the vent to the throat, which he cuts acroſs to the bones of the neck: he then lays down his knife, and pulls out the liver, which he drops into a kind of tray, through a little hole made on purpoſe in the ſcaffold he works upon; he then guts it, and cuts off the head. This done, he delivers the fiſh to the next man, who ſtands over-againſt him. This man, who is called the ſlicer, takes hold of it by the left gill, and reſts its back againſt a board, a foot long, and two inches high; he pricks it with the ſlicing knife on the left ſide of the vent, which makes it turn out the left gill; then he cuts the ribs, or great bones all along the vertebræ, about half way down from the neck to the vent; he likewiſe does the ſame on the right ſide; then cuts aſlant three joints of the vertebæ through to the ſpiral marrow; laſtly, he cuts all along the vertebræ and ſpinal marrow, dividing them into two: and thus ends his operation. A third helper then takes this fiſh, and, with a kind of wooden ſpatula, ſcrapes all the blood that has remained along the vertebræ that were not cut. When the cod is thus thoroughly cleanſed (ſometimes waſhed) he drops it into the hold, through a hole made for that purpoſe, and the ſalter is there ready to receive it. This aſſiſtant crams as much ſalt as he can into the inner part of the fiſh, lays it down, the tail end loweſt, rubs the ſkin all over with ſalt, and even covers it with more ſalt; then goes through the ſame proceſs with the reſt of the cod, which he heaps up one upon another till the whole is laid up. The fiſh, thus ſalted and piled up in the hold, is never meddled with any more till it is brought home and unloaded for ſale. The cod intended for drying is caught and beheaded in the ſame manner; but the operation of ſalting varies in ſome few particulars.

The Indians, or natives, of this iſland, are ſaid to be a gentle, mild, tractable people, eaſily gained by civility and good uſage. They paint their bodies, and, in winter, are clad in ſkins and furs.

Diſputes were frequent for many years between France and England: at laſt the whole iſland was formally ceded to the Engliſh by the treaty of Utrecht, in 1713; but the French were left at liberty to dry their nets and cure their fiſh on the northern coaſts of the iſland; and, by the treaty of 1763, they obtained liberty to fiſh in the gulf of St. Laurence, but with this limitation, that they ſhould not approach within three miles of any of the ſhores belonging to the Engliſh. The ſmall iſlands of St. Pierre and Miquelon, ſituated to the ſouthward of Newfoundland, were alſo ceded to the French for curing their fiſh; but they engaged to erect no fortifications on theſe iſlands, and to keep only fifty ſoldiers to enforce the police. In 1793, they were again taken by the Engliſh, during the war with the French republic.

The French, by the late treaty, were to enjoy the fiſheries on the north and weſt coaſts of the iſland, and the Americans were allowed the ſame privileges in fiſhing as before their independence. Placentia, Bonaviſta, and St. John, are the chief towns in Newfoundland; but, in the winter, not above 1000 families remain here. A ſmall ſquadron of men of war are ſent out every ſpring, to protect the fiſheries and inhabitants of this iſland: the naval commander on this ſtation is the governor.

CAPE BRETON.

THIS iſland is ſituated between 45 and 57 deg. north lat. and between 61 and 62 deg. weſt long. being 100 miles long, and eighty broad. It is ſituated about 20 leagues ſouth-weſt from Newfoundland, and is ſeparated by the ſtreight of Cauſo from Nova Scotia. The north coaſt is high, and almoſt inacceſſible; but the ſouth coaſt contains ſeveral excellent harbours, more particularly that of Louiſburg, one of the

the fineſt in America. The air is nearly the ſame with that of Newfoundland; the heat and cold alſo is very little different; the ſoil in many places barren, but, in ſome, deep and rich, though it has never been properly cultivated. Horſes, black cattle, ſheep, goats, hogs, and poultry, are found in plenty on the iſland, but game is ſcarce. The partridges are almoſt as large as pheaſants, and not unlike them in the colour of their feathers. The quantity of cod and other fiſh in the adjacent ſea is almoſt incredible; whales, ſeals, porpoiſes, &c. are frequently ſeen near the coaſt. The vegetable productions are apples, pulſe, wheat and other corn, flax and hemp. Oaks of a prodigious ſize, pines, aſh, maple, plane and aſpin trees abound here. Coals and lime-ſtone are found in almoſt every part of the iſland.

This iſland was ſuffered for many years to remain uninhabited: at laſt the French took poſſeſſion of it in 1714, built Louiſburg, and fortified it in the ſtrongeſt manner. It was taken by the Engliſh in the year 1745, but reſtored to the French by the treaty of Aix-la-Chapelle. It was again taken during the laſt war but one, and the fortifications of Louiſburg totally demoliſhed. By the treaty of peace in 1763 it was ceded to the Engliſh, ſo that the French have now no port or ſhelter for the relief of their trading ſhips either to or from the Weſt-Indies. There are ſeveral ſmall iſlands lying round Cape Breton, particularly thoſe of St. Peter and Madame, or Maurepas.

St. JOHN's

THIS iſland lies very near Cape Breton and Nova Scotia, but has greatly the advantage of both in pleaſantneſs and fertility of ſoil. It is 60 miles long, and near 40 broad, and has many fine rivers. On the reduction of Cape Breton, the inhabitants of this iſland, amounting to 4000, ſubmitted quietly to the Britiſh arms; and to the ſcandal of the French governor, in his houſe ſeveral Engliſh ſcalps were found, brought thither to market by the ſavages of Nova Scotia; this being the place where they were encouraged to carry on that inhuman trade. When this iſland was in the poſſeſſion of the French, they ſo much improved it, that it furniſhed great quantities of beef and pork, and alſo plenty of corn, ſo that it was ſtyled the granary of Canada.

BERMUDAS, or the SUMMER ISLANDS.

THESE iſlands, which received their firſt name from John Bermudas, a Spaniard, who diſcovered them; and their ſecond from Sir George Sommers, who was ſhipwrecked on the rocks in his vovage to Virginia in 1609, are ſituated in the Atlantic ocean, in 32 deg. 25 min. north lat. and 66 deg. 58 min. weſt long. Theſe iſlands, which are ſaid to be 400 in number, are very ſmall, not containing in all more than 20,000 acres. They are very difficult of acceſs, being, as Waller (who reſided there for ſome time) expreſſes it, walled in with rocks. There are however, ſeveral open channels between them; but a pilot well acquainted with the coaſt is neceſſary.

The air of theſe iſlands is clear and healthy, the climate temperate and delightful, the ſoil prodigiouſly rich, and the vegetable productions, both of trees, fruits, and flowers, very numerous, and of various kinds. The number of white inhabitants is about 10,000, and the negroes 1,500. Their chief trade conſiſts in building and navigating light ſloops and brigantines, which they employ for the moſt part in the trade between North America and the Weſt-Indies. Theſe veſſels are remarkably ſwift ſailers; and the cedar, of which they are principally built, is valued for its hard and durable quality.

The capital, called the town of St. George, is ſituated at the bottom of a harbour, on an iſland of the ſame name, and is defended by ſeven or eight forts mounted with 70 pieces of cannon. It contains about 1000 houſes, and is decorated with a handſome church, and other elegant public buildings.

CHAP. XVII.

The LUCAYS, BAHAMA, and other ISLANDS.

THESE iſlands are ſituated to the ſouth of Carolina, between 22 and 27 deg. north lat. and 73 and 81 deg. weſt long. They extend along the eaſtern coaſt of Florida quite down to the iſle of Cuba, and are ſaid to be 500 in number; many of them, however, are only barren rocks; but twelve are large and fertile, though only one of them is properly inhabited, namely, Providence, which is 200 miles eaſt of the Floridas. The air and ſoil are nearly the ſame with thoſe of South Carolina; they are well watered every where with ſprings and rivers. Limes, ſour oranges, and ſea-turtle abound in theſe iſlands.

The Lucays, or Bahamas, were the firſt land Columbus diſcovered in America; but, being deſtitute of gold mines, they were never ſettled by the Spaniards; nor were they known to the Engliſh till the year 1667, when Captain Seyle, being driven among them in a voyage to Carolina, examined them carefully, particularly that which is now called Providence. On his return, he reported the diſcovery he had made, and the benefit theſe iſlands might be to the ſtate. Grants were in conſequence made out to proprietors, but the government was reſerved for the crown. The proprietors granted a leaſe of theſe iſlands to a number of merchants, called the Bahama Company; but the deſign proved abortive: and the proprietors taking no care to prevent pirates ſheltering themſelves in theſe iſlands, the government reſumed the grant. In the year 1718 Captain Woodes Rogers was ſent with a fleet to diſlodge the pirates, and make a ſettlement. He executed his commiſſion, erected a fort, and was made governor of the Bahama iſlands, where he died in 1733. From that time they have been improving, though not in any rapid manner; and perhaps they will never be of any great conſequence, except as preventive ſettlements, and affording ſhelter to ſhips and privateers in time of war, when the people gain conſiderably by the prizes condemned there; and at all times, by the wrecks, which are frequent in this labyrinth of rocks and ſhelves. Between theſe iſlands and the continent of Florida, is the gulf of Bahama, or Florida, through which the Spaniſh galleons ſail in their paſſage to Europe. The Spaniards and Americans captured theſe iſlands during the laſt war; but on April 13, 1783, they were retaken by a Britiſh detachment from St. Auguſtine.

FALKLAND ISLANDS.

THESE iſlands are ſituated between 51 deg. 30 min. and 52 deg. 15 min. ſouth lat. and between 55 deg. 40 min. and 56 deg. 47. min. weſt long. being about 50 miles in length from north to ſouth, and 38 in breadth from eaſt to weſt; they lie near the ſtreights of Magellan, the extremity of the continent of South America. Theſe iſlands were firſt diſcovered by Sir Richard Hawkins in 1594; the principal of which he named Hawkins Maidenland, in honour of Queen Elizabeth. The preſent Engliſh name Falkland was probably given them by Captain Strong, in 1639, and being adopted by Halley, it has from that time been received into our maps.

King Charles II. having conſidered the diſcovery of this coaſt of great conſequence, ſent Sir John Narborough to ſurvey the ſtreights of Magellan, the neighbouring coaſt of Patagonia, and the Spaniſh

ports in that frontier; with directions, if poſſible, to procure ſome intercourſe with the Indians of Chili, who are generally at war, or at leaſt on ill terms with the Spaniards; and to eſtabliſh a commerce and laſting correſpondence with them. Though Sir John, through accidental cauſes, failed in this attempt, which, in appearance, promiſed ſo many advantages to this nation, his tranſactions upon that coaſt, beſides the many valuable improvements he furniſhed to geography and navigation, ſhould be rather incentives for further trials of this kind, than any objection againſt them. The precautions and fears of the Spaniards plainly indicated that they were fully convinced of the practicability of the ſcheme he was ſent to execute, and extremely alarmed with the apprehenſion of its conſequences. The Britiſh monarch, however, is ſaid to have been ſo far convinced of the advantages which might accrue to the nation from this expedition, that having intelligence of Sir John Narborough's paſſing through the Downs, on his his return, he had not patience to attend his arrival at court, but went himſelf in his barge to meet him at Graveſend.

In the year, 1764, the late Lord Egmont, then firſt lord of the admiralty, revived the ſcheme of a ſettlement in the South Seas, and Commodore Byron was ſent to take poſſeſſion of Falkland Iſlands in the name of his Britannic majeſty, and in his journal repreſents them as a valuable acquiſition. On the other hand, they are repreſented by Captain M'Bride, who in 1766 ſucceeded that gentleman, as the outcaſts of nature. "We found, ſays he, a maſs of iſlands and broken lands, of which the ſoil was nothing but a bog, with no better proſpect than that of barren mountains, beaten by ſtorms almoſt perpetual. Yet this is ſummer; and if the winds of winter hold their natural proportion, thoſe who lie but two cables length from the ſhore, muſt paſs weeks without having any communication with it." The plants and vegetables which were planted by Mr. Byron's people, and the fir-tree, a native of ruggid and cold climates, had withered away; but goats, ſheep, and hogs, that were carried thither, were found to thrive and increaſe as in other places. Geeſe, of a fiſhy taſte, ſnipes, foxes, ſea-lions, penguins, plenty of good water, and, in the ſummer months, wild celery, and ſorrel, are the natural luxuries of theſe iſlands.

But notwithſtanding the dangerous navigation through theſe tempeſtuous ſeas, and the barrenneſs of the ſoil, an Engliſh ſettlement was at length made here, of which we were diſpoſſeſſed by the Spaniards in 1770. That violence was, however, diſavowed by the Spaniſh ambaſſador, and ſome conceſſions made to the court of Great-Britain; in order, therefore, to avoid giving umbrage to the court of Spain, the Britiſh miniſtry, in 1774, gave directions that the ſettlement ſhould be finally abandoned.

SPANISH DOMINIONS
In NORTH AMERICA.

CHAP XVIII.

EAST and WEST FLORIDA.

Situation, Extent, Boundaries, Produce, Mountains, Rivers, Inhabitants, Chief Towns, &c.

THIS country is ſituated between 80 and 91 deg. weſt long. and between 25 and 32 north lat. being 500 miles in length, and 440 in breadth, and contains 100,000 ſquare miles. It is bounded, on the north, by Georgia; on the weſt, by the Miſſiſſippi; on the ſouth, by the gulf of Mexico; and, on the eaſt, by the Bahama ſtreights. The Floridas include a part of Louiſiana, and were, by the late treaty of peace, ceded by Great-Britain to Spain.

The accounts which have been given concerning the climate, air, and ſoil of Florida, have ſo amazingly varied, that to give credit to one, we muſt entirely diſbelieve the other. There is no doubt but in ſo extenſive a tract theſe particulars muſt be very different in ſome parts from what they are in others; and it was natural for authors, who wrote either for or againſt this country to give a deſcription of ſuch parts only as ſuited their purpoſe; obſerving a profound ſilence with regard to the reſt. Thus we find ſome have repreſented it as a terreſtrial paradiſe; while others have pronounced it the tomb of all ſtrangers who are unhappy enough to go thither, affirming as a truth, that upon the landing of our troops to take poſſeſſion of it, after the peace in 1763, the Spaniards aſked them, "What crimes have you been guilty of at home?" The people, however, who obtained grants of lands in Florida, when belonging to England, and were deſirous to ſettle or ſell them, repreſented the climate as a very agreeable medium betwixt the ſcorching heat of the tropics, and the pinching cold of the north latitude; that there is indeed a change of the ſeaſons, but it is a moderate one. In November and December many trees loſe their leaves, vegetation goes on ſlowly, and the winter is perceived, but ſo mild, that ſnow is never ſeen there; and the tendereſt plants of the Weſt Indies, ſuch as the plantain, the alligator pear-tree, the banana, the pine-apple, the ſugar-cane, &c. remain unhurt during the winter in the gardens of St. Auguſtine; that the fogs and dark gloomy weather, ſo common in England, are unknown in this country; and though at the equinoxes, the autumnal particularly, the rains fall very heavy every day for three weeks together, yet, when the ſhower is over, the ſky clears up immediately, and all is calm and ſerene. The air is pure and wholeſome, which appears from the ſize, vigour, and longevity of the Floridian Indians, who in theſe reſpects far exceed their more ſouthern neighbours, the Mexicans; and when the Spaniards quitted St. Auguſtine, many of them were very old, ſome upwards of 90. The ſoil near the ſea-coaſt, and 40 miles back, eſpecially in Eaſt Florida, is flat and ſandy, but in other parts it is rich and fertile.

The vegetables produced in the Floridas are Indian corn, pulſe, roots, herbs, hemp, flax, vines, prunes, and in ſome parts limes, oranges, and lemons. There is likewiſe a fruit called tura, ſo exquiſite and wholeſome, that the Europeans have given it the appellation of the cordial julip; oaks, pines, laurels, palms, cedars, cypreſſes, cheſnuts, ſaſſafras, cotton trees, and various others, are found here; as is ſilk-graſs, the root mendihoca, of which the caſſava flour and bread are made; alſo a ſpecies of grain reſembling our oats; and even the country round St. Auguſtine yields two crops of Indian corn a year. But the moſt ſingular production in the vegetable ſyſtem in this, or in any other country, is the cabbage-tree, called by ſome naturaliſts the palmello royal. The trunk bulges out a little near the ground, which gives it the becoming appearance of a ſubſtantial baſis to ſupport its towering weight. It is ſtreight as an arrow, riſes above an hundred feet in height, and the trunk near the earth is about ſix or ſeven feet in circumference, the whole body growing tapring to the top. The inſide texture of the leaves appears as thread-like filaments, which being ſpun are uſed in making cordage of every kind, as well as fiſhing-nets. What is called the cabbage lies in many thin, white, brittle flakes, which, when raw, have ſomething of the taſte of almonds, and when boiled ſomething of that of cabbage, but ſweeter and more agreeable.

A writer of reſpectable credit obſerves, that there is not, in the whole continent of America, any place better qualified by nature to afford not only all the neceſſaries

neceſſaries of life, but alſo all the pleaſures of habitation than that part of this country which lies upon the banks of the Miſſiſſippi.

Indigo is found in the greateſt plenty; and it is ſaid that great quantities of cochineal are to be met with here; alſo amethyſts, turquoiſes, lapis lazuli, and other precious ſtones; copper, quickſilver, pit-coal, and iron ore. The wild animals are the ſame as in the Carolinas and Georgia; black cattle and ſheep are found in vaſt plenty; and horſes are ſo numerous, that a good ſaddle-horſe may be purchaſed in exchange for goods of 5s. value prime coſt, and ſometimes for much leſs. The trade for furs, and various other branches, as likewiſe the fiſheries, might be rendered very profitable.

The Apulchian mountains, ſo often mentioned, are the moſt conſiderable; theſe give riſe to many of the noble rivers that run through the Floridas; the principal of which are the Miſſiſſippi, the Ohio, the Coza or Couſſa, and the river St. John. The Miſſiſſippi, which the French call St. Louis, is one of the fineſt rivers in the world, and ſuppoſed to run a courſe of 3000 miles, free from ſhoals and cataracts, and navigable within ſixty leagues of its ſource. Its numerous mouths, however, are in a manner choaked up by ſands, which deny acceſs to veſſels of any conſiderable burthen; and even the principal enterance is ſaid to have no more than twelve feet water on the bar, but within it is 100 fathom deep. The channel is every-where free from ſhallows, and the current gentle, except at a certain ſeaſon of the year, when, like the Nile, it becomes extremely rapid, and overflows its banks. The principal bays are, St. Barnard's, Aſcenſion, Mobille, Penſacola, Dauphin, Joſeph, Apalaxy, Spiritu Sancto, and Charles Bay. The chief capes are, Cape Blanco, Sambles, Anclore, St. Auguſtine, and Cape Florida, at the extremity of the peninſula. Pearls, it is ſaid, are found upon the coaſts.

The moſt conſiderable Indian tribes here are the Creeks, Cherokees, Choctaws, Chickeſaws, and Natches. Their hair is long and black. Both ſexes go naked, except a deer-ſkin round their waiſt. The men have robuſt bodies, and finely proportioned limbs. The women are handſome and well ſhaped; and ſo remarkably active, that they will ſwim acroſs broad rivers with their children on their backs, and and climb with ſurpriſing agility to the tops of the higheſt trees. In religion, they are bigotted idolaters; and the cruelty of the Spaniards has rendered Chriſtianity odious to them.

Penſacola is the chief town in Weſt-Florida, and is ſituated in 30 deg. 22 min. north lat. and 87 deg. 20 min. weſt long. within the bay of the ſame name, on a ſandy ſhore, acceſſible only by ſmall veſſels; but in the road, which is one of the beſt in all the gulf of Mexico, ſhips may lie ſecure againſt every kind of wind, being ſurrounded on all ſides by land. This place ſent in ſkins, logwood, dyeing ſtuff, and ſilver in dollars, to the yearly amount of 63,000l. and, at an average of three years, received to the value of 97,000l. of our manufactures.

The capital of Eaſt Florida is St. Auguſtine, in 29 deg. 45 min. north lat. and 81 deg. 12 min. weſt long. The town runs along the ſhore, is of an oblong form, divided by four regular ſtreets croſſing each other at right angles; it is fortified with baſtions, encloſed with a ditch, and defended by a caſtle called Fort St. John; and the whole is well furniſhed with cannon. At the enterance into the harbour are the north and ſouth breakers, which form two channels, whoſe bars have eight feet water at low tides.

It was natural to expect, from the luxuriancy of the ſoil, the ſalubrity of the air, the cheapneſs and plenty of proviſions, and the encouragement given by the Britiſh government for perſons to ſettle here, that the number of Engliſh inhabitants would have been much more conſiderable; but this defect is by ſome aſcribed to the injudicious management of the colony. However this may be, the reduction of Penſacola in 1781, by the arms of the king of Spain, and his poſſeſſion of this country at preſent, have deprived us of thoſe flattering proſpects of great advantages to England, which were expected to have been derived from our property in the Floridas.

There being many particulars reſpecting perſon, dreſs, manners, and cuſtoms, which are peculiar to the original Indians of Florida, we ſhall preſent them to the reader. They ſtain their ſkin with the juice of plants, and have long black hair, which they have a method of twiſting and binding upon the head, ſo as to render it rather becoming. The women, in general, have good features, and are well made. The men, being ſtout and well proportioned, make uſe of bows and arrows with great dexterity. The ſtrings of their bows are made of the ſinews of ſtags; and they point the ends of their arrows with ſharp ſtones, or the teeth of fiſhes.

In the management and diſtribution of their corn, which is accounted the common ſtock of the public, their œconomy is well worthy of notice. The crop, which is calculated to ſerve only half the year, is collected into granaries appointed for that purpoſe, and afterwards regularly delivered out to every family, in proportion to the number of perſons it contains. The ſoil is, indeed, capable of affording much more corn than they are able to conſume; but they chooſe to ſow no more than will ſerve them for that term, retiring, for the remainder of the year, into the receſſes of the foreſts, where they build huts of palm trees, and live upon roots, wild fowl, and fiſh. They are very fond of the fleſh of aligators, which has a ſtong muſky ſmell. Their meat is deſſed in the ſmoke upon a gridiron made of ſticks, and water ſerves for their common drink.

The people are, in general, ſatisfied with one wife, but the chiefs are indulged with more, though the children of only one of them ſucceed to the father's dignity.

The government of the original Floridas is in the hands of many chiefs, who are called Caciques. They are frequently at war with each other. In their warlike expeditions they carry with them honey and maize, and ſometimes fiſh dried in the ſun. The chief marches at the head, carries a bow in one hand, and a bow and arrows in the other; his quiver hangs at his back; and the reſt follow tumultuouſly with the ſame arms. In their warlike deliberations, if the matter be of great moment, their prieſts, who are alſo a kind of phyſicians, are called in, and their opinions particularly aſked. Then the cacique carries round a kind of liquor like our tea, made by the infuſion of the leaves of a certain tree.

They celebrate the funeral of a deceaſed cacique with great ſolemnity. They place upon his tomb the bowl out of which he was accuſtomed to drink, and ſtick great numbers of arrows in the earth around him, bewailing his death for three days with faſting and loud lamentations. The generality of them cut off their hair as a ſingular teſtimony of their ſorrow. Their chieftains alſo ſet fire to, and conſume, all the houſehold furniture, together with the hut that belonged to the deceaſed, after which ſome old women are deputed, who every day, during the ſpace of half a year, at morning, noon, and evening, bewail him with dreadful howlings, according to the practice of ſome more civilized nations, and particularly the ancient Romans, who frequently hired women at the funerals of their relations and friends.

CHAP.

CHAP. XIX.

NEW MEXICO, including CALIFORNIA.

Situation, Boundaries, Diviſions, Climate, Vegetable Produce, Mines, Inhabitants, and Chief Towns.

NEW MEXICO is ſituated between 23 and 43 deg. of north lat. and between 94 and 126 deg. of weſt long. being about 2000 miles in length, and 1600 in breadth. It is bounded on the north by unknown lands, on the ſouth by Old Mexico and the Pacific Ocean, on the eaſt by Louiſiana, and on the weſt by the South Sea, and contans 600,000 ſquare miles. The diviſions, &c. are the following.

Divisions.	Subdivisons.	Ch. Towns.
North-eaſt diviſion	New Mexico proper	Santa Fé
South-eaſt diviſion	Aphaiera	St. Antonio.
South diviſion	Sonora	Tuape.
Weſt diviſion	California, a Peninſula	St. Juan.

The air of this extenſive country is in general clear and healthy, and the climate very pleaſant; the ſummers, though very warm, are neither ſultry nor unwholeſome, and the winters, though pretty ſharp, far from being inſupportable.

This country is beautifully diverſified with plains enamelled with flowers, gentle eminences clothed with beautiful trees of various kinds, ſome producing excellent fruit, and interſected with rivers and ſtreams of water. The ſoil in many places is exuberantly rich, and the provinces might be rendered one of the moſt delightful countries in America, or any other part of the world. A great variety both of wild and tame animals are found in this kingdom. Their vegetable productions conſiſt of piſtachios, figs of different colours, pompions, and water-melons of a prodigious ſize, grapes, &c. They have alſo a ſpecies of manna, being a juice which exudes from a particular ſpecies of roſe-tree, and has all the ſweetneſs of refined ſugar, though without its whiteneſs.

In New Mexico are rich mines of gold and ſilver, but their value cannot be aſcertained; turquoiſes, emeralds, and other precious ſtones are alſo found here. The multitude and variety of fiſh with which the rivers are ſupplied, is incredible: ſalmon, turbot, barbel, ſkate, mackerel, &c. alſo oyſters, cray-fiſh, lobſters, and other exquiſite ſhell-fiſh, abound in the gulf of California, which affords one of the richeſt pearl-fiſheries in the world; excellent turtle are alſo caught in the utmoſt plenty on the coaſt of the South-Sea; and in the heart of the country there are plains of ſalt quite firm, which, if the country ſhould ever be inhabited by an induſtrious trading people, would be of the utmoſt ſervice in curing the fiſh that are found on the coaſts.

Santa Fé, the capital of New Mexico, in W. long. 104. N. lat. 36. ſtands near the Riodel Norte, and about 130 leagues from the gulf. It is ſaid to be a handſome, well built, rich town, and the ſeat of a biſhop, ſuffragan of Mexico, as well as of the governor of the province, who is ſubordinate to the viceroy of Old Mexico.

California was firſt diſcovered by Hernando Cortez, the great conqueror of Mexico; but Sir Francis Drake, our famous navigator, landed there in 1578, and took poſſeſſion of it, which was confirmed to him by the chief king of the peninſula, who formally inveſted him with his principality. Since that time, however, the Engliſh have never made any pretenſions to it, though their right is undoubtedly preferable to that of the Spaniards. The inhabitants and government here do not materially differ from thoſe of Old Mexico. Though the Spaniſh ſettlements here are at preſent comparatively weak, yet they are increaſing every day, in proportion as new mines are diſcovered. The inhabitants are chiefly Indians, whom the Spaniſh miſſionaries have in many places brought over to Chriſtianity, to a civilized life, and to raiſe corn and wine, which they now export pretty largely to New Spain.

The original Indians who inhabit California are, in geneal, well formed and robuſt, of a healthy countenance, but ſwarthy complexion. Their habitations are wretched huts, built near the few ſtreams, wells, and ponds found in the country. As they are under the neceſſity of frequent migrations in ſearch of food, they eaſily ſhift their reſidence, it requiring only the labour of a few hours to build a little habitation fitted for all their purpoſes; and it is uſual with them, in the ſeverity of winter, to live in ſubterraneous caverns. Their furniture and property conſiſts of implements for fiſhing, hunting, and war, in which moſt of their time is ſpent. Their boats are only rafts; and their arms are bows, arrows, and jagged clubs.

The dreſs of the men is little more than a girdle round the waiſt, with a few ornaments about their hair. The women wear their hair looſe. They have alſo a kind of cloak and petticoat, made of palm leaves; ſome wear fillets of neat net-work. Their arms are likewiſe frequently adorned with net-work, or ſtrings of pearls in the form of bracelets. The love of ornament prevails among the women more than among the men. Their greateſt ingenuity appears in their fiſhing nets, which are made with admirable ſkill, of various colours, and ſuch diverſity of texture and workmanſhip, as cannot be deſcribed.

At the gathering in of the fruits of the earth, they have a high feſtival, when they indulge themſelves in feaſting, dancing, and mirth.

CHAP XX.

OLD MEXICO, or NEW SPAIN.

Situation, Extent, Boundaries, Diviſions, Climates, Soil, Vegetable Productions, Rich Mines, Inhabitants, Trade.

THIS country is ſituated between the 83d and 110th deg. of weſt long. and the 8th and 30th deg. of north lat. being 2,000 miles in length, and 600 in breadth, and contains 318,000 ſquare miles. It is bound by New Mexico, or Granada, on the north: by the gulf of Mexico, on the north-eaſt; by Terra Firma, on the ſouth-eaſt; by the Pacific Ocean, on the ſouth-weſt, and is divided into the three following audiences, viz.

Audiences.	Provinces.	Ch. Towns.
I. GALICIA	Guadalajarra	Guadalajarra
	Zacatecas	Zacatecas.
	New Biſcay	St. Barbara.
	Cinoloa	Cinoloa.
	Culiacan	Culiacan.
	Charmetlan	Charmetlan.
	Xaliſco	Xaliſco.
II. MEXICO	Mexico	Mexico.
		Acapulco.
	Mechoacan	Mechoacan.
	Panuco	Tampice.
	Tlaſcala	Tlaſcala.
		Vera Cruz.
	Guaxaca	Guaxaca.
	Tobaſco	Tobaſco.
	Jucatan	Campeachy.
	Chiapa	Chiapa.
	Soconuſco	Soconuſco.
III. GUATIMALA	Verapaz	Verapaz.
	Guatimala	Guatimala.
	Honduras	Valladolid.
	Nicaragua	Nicaragua
	Coſta Rica	Nicoya.
	Veragua	Santa Fé.

The

The gulfs or bays of Mexico, Campeachy, Vera Cruz, and Honduras, are on the north ſea; and the bays Micoya and Amapalla, Acapulco and Salinas, are in the Pacific Ocean. The capes in the North-Sea are, Cape Sardo, St. Martin, Corunduceda, Caroche, Honduras, Camereon, Graiſas Dios; and thoſe in the South-Sea are, Cape Marques, Spirito Sancto, Corientes, Gallero, Blanco, Burica, Pruereos, and Mala.

Moſt part of Mexico being ſituated within the torrid zone, the climate is very hot; but this heat is in a great meaſure allayed by the land and ſea breezes, which blow alternately. The greateſt heats are during the months of February, March, and April, when the ſun is ſeldom ſhaded by a cloud, and in many places the waters are entirely dried up. Towards the latter end of April the rainy ſeaſon comes on, and continues till the month of September, being always preceded by the moſt dreadful tempeſts of thunder, lightning, and winds, which the Spaniards term tornadoes. At this time, all along the eaſtern coaſt, where the land is low and marſhy, it is flooded, and always extremely unwholeſome; but on the weſtern ſide, which lies higher, and in the inland parts, the air is more temperate and ſalutary. About the full and change of the moon, the winds in the gulf of Mexico, and the adjacent ſeas, blow ſtrongly from the north. Trade-winds prevail every where at a diſtance from land within the tropic; and near the coaſt in the South-Sea, they have the monſoons, or periodical winds.

The ſoil is various, but in moſt places rich, fertile, and proper for culture, and were the inhabitants induſtrious, all ſorts of grain might be produced here.

No country under heaven has a greater variety of vegetable productions than Mexico. Beridel-maize, its native grain, pine-apples, oranges, lemons, citrons, figs, and cocoa-nuts, grow here in the greateſt plenty and perfection. This country alſo produces a great quantity of ſugar, eſpecially towards the gulf of Mexico, and the provinces of Guaxaca and Guatimala. The Maho-tree alſo flouriſhes here, and furniſhes the natives with thread for linen and cordage. Copal, aninies, tacamahuca, carinica, liquid amber, guaiacum, china-root, ſarſaparilla, and lightwood-tree, are among the productions of New Spain. The bays of Campeachy and Hunduras afford cedar trees and logwood. But the prodigious mines of gold and ſilver with which this part of North America abounds, was the firſt inducement the Spaniards had to ſettle in it. Theſe valuable productions are generally found in the mountainous and barren parts of the country; the principal gold mines being in Veragua and New Granada, while thoſe of ſilver, which are much richer, as well as more numerous, are found in ſeveral parts, but in none ſo much as the province of Mexico.

Gold is diſcovered either in the ſand of rivers, native, and in ſmall grains, or it is dug out of the earth, in the ſame condition, in ſmall pieces, almoſt wholly metallic, and of a tolerable purity; or it is found, like the ore of other metals, in an aggregate opaque maſs, in a mixture of earth, ſtone, ſulphur, and other metals: in this ſtate it is of all colours, and makes very little ſhew of the riches it contains. But gold, however found, whether native, or in what is called the ore, is ſeldom or ever without a mixture of other metals, which are moſt commonly ſilver or copper. When the ore is dug out of the mine, the moſt uſual method is to break it to pieces in a mill; the gold is then ſeparated as much as poſſible from the impure maſs by repeated waſhings, and mixed with a quantity of quickſilver, which has, of all other bodies, the greateſt attraction to gold. This therefore immediately breaks the links whereby it was held to the former earth, and adheres cloſely to this congenial ſubſtance. It is then put into a trough, and a rapid ſtream of water ſuffered to run upon it, which ſcouring away, through a hole made on purpoſe, the lighter earth leaves the gold and mercury, precipitated by its weight, at the bottom. This amalgama, or paſte, is put put into a linen cloth, where it is ſqueezed ſo as to make part of the quickſilver ſeparate and run out; but to complete this ſeparation entirely, it is neceſſary to fuſe the metal, and then all the mercury flies off in fumes.

Silver, the ſecond metal in rank, is the firſt in conſequence to the Spaniards, as their mines yield a much greater quantity of it, than of gold. It is found in the earth under different forms; the manner of refining it does not eſſentially differ from the proceſs which is employed for gold, though the method of purifying it is much more difficult.

Old Mexico, with the other provinces of Spaniſh America, ſupply the whole world with ſilver; and it is ſaid that the revenues of Mexico, proceeding from gold and ſilver only, amount to 24,000,000l. ſterling annually. Cochineal and cocoa are the next important articles to gold and ſilver; the former is uſed in dyeing, and alſo in medicine as a ſudorific and cordial; of the latter chocolate is made. This country is alſo ſaid to produce ſilk and cotton in great abundance, and to contain precious ſtones, jaſper, porphyry, exquiſite marble, amber, and pearl.

The inhabitants of New Spain are compoſed of Whites, Indians, Negroes, and the ſeveral mixtures of theſe. Theſe mixtures form various gradations, which are carefully diſtinguiſhed from each other, becauſe every perſon expects to be regarded in proportion as a greater ſhare of Spaniſh blood runs in his veins. The firſt diſtinction ariſing from the intermarriage of the Whites with the Negroes, is that of the Mulattoes, which is well known. Next to theſe are the Tercerones, produced from a White and Mulatto: from the intermarriage with theſe and the Whites, ariſes the Quarterones, who though ſtill nearer the former, are diſgraced with a tint of Negro blood. The race deſcending from theſe and the Whites are the Quinterones, who are only to be diſtinguiſhed from the Spaniards by being of a fairer complexion. The ſame gradations are formed in a contrary order, by the intermixture of the Mulattoes and the Negroes; beſides which there are a thouſand others, ſome of which are ſcarcely known even by the natives themſelves. The whites are either born in Old Spain, or are Creoles. Thoſe who are native Spaniards are moſtly in offices or in trade. They poſſeſs the ſame character and manners with the Spaniards of Europe; the ſame gravity of behaviour; the ſame natural ſagacity and good ſenſe; the ſame indolence, and a yet greater ſhare of pride and ſtatelineſs. The Creoles, who are deſcendants of the native Spaniards, but born in the country, have little of that courage, firmneſs, and patience, which conſtitute one of the fineſt parts of the character of their anceſtors, but are univerſally weak and effeminate. Reſiding conſtantly in an enervating heat, ſurfeited with wealth, and giving up their whole time to loitering and inactive pleaſures, they have nothing bold or manly to fit them for making a figure in active life, and few of them have any taſte for the ſatisfactions of a learned retirement: luxurious without variety or elegance, and expenſive with parade and little convenience; their general character is no more than a grave and ſpecious inſignificance. They are temperate in eating and drinking, and their whole buſineſs ſeems to be amour and intrigue, which they carry on in the old Spaniſh taſte, by doing and ſaying extravagant things, by bad muſic, worſe poetry, and exceſſive expences. The ladies are not diſtinguiſhed by their great chaſtity, or domeſtic virtues. One fifth of the white people are prieſts, monks, and nuns, of all orders, who enjoy immenſe revenues: but in general the clergy there are too ignorant to be able inſtructors by their preaching, and too looſe and debauched in their own manners to inſtruct by their

 example;

example; ſo that the people, over whom they have great influence, are little the better for their numbers. The Indians, whatever they were formerly, are now humble, dejected, timorous, and docile. Their numbers are ſtill conſiderable, and they are treated by the Spaniards with the greateſt haughtineſs. The negroes who are imported from Africa, like thoſe of our colonies, are ſtubborn, hardy, of little underſtanding, and fitted for the groſs ſlavery they endure.

The civil government of Old Mexico is adminiſtered by tribunals, called audiences, conſiſting of a certain number of judges, divided into different chambers, which bear ſome reſemblance to the parliaments in France. At the head of the chief of theſe chambers the viceroy himſelf preſides when he thinks proper: his employment is one of the greateſt for truſt and power the King of Spain has in his gift, and is perhaps the greateſt government intruſted to any ſubject in the world; but neither the viceroy, nor any other officer, is ſuffered to hold his poſt longer than three years. In this reſpect, as in all others relative to the Indies, the ſpirit of jealouſy influences all the regulations of the court of Spain, and is attended with this very bad effect, that every officer, from the higheſt to the loweſt, has the avidity which a new lucrative poſt inſpires; ravenous, becauſe his time is ſhort, he oppreſſes the people and defrauds the crown; another ſucceeds him with the ſame diſpoſitions; and no man is ambitious to eſtabliſh any uſeful amendment in his office, knowing that his ſucceſſor will trample upon every regulation which is not ſubſervient to his own intereſts.

A council for the Indies is eſtabliſhed in Old Spain, which conſiſts of a governor, four ſecretaries, twenty-two counſellors, and other officers. The members are generally choſen from the viceroys, and others who have been employed in America, and their deciſion is final in matters relative to that country.

There are ſome troops kept in New Spain, and a good revenue appropriated for their maintenance, and for the ſupport of the fortifications: but the ſoldiers are few, ill clothed, ill paid, and worſe diſciplined.

Mexico, the capital city, ſtands in the midſt of a great lake of its own name, in lat. 19 deg. 40 min. about 170 miles weſt of the gulf of Mexico. The ſtreets are ſtraight, and ſo exactly diſpoſed, that, from any part of the town, the whole is viſible; the public edifices are magnificent, and the inhabitants are computed at 300,000. This city may be reckoned the centre of commerce in theſe parts; for here the principal merchants reſide, and the greateſt part of the buſineſs is negotiated. The Eaſt-India goods from Acapuclo, and the European from Vera Cruz, paſs through it. Hither all the gold and ſilver come to be coined, here the king's fifth is depoſited, and here are wrought all thoſe utenſils and ornaments in plate which are every year ſent into Europe. Acapulco ſtands in 17 deg. north lat. on a large and commodious bay of the South-Sea, about 110 miles ſouth-eaſt from Mexico. The town is large, but ill built; a part of it conſiſts of warehouſes. The above deſcribed are the moſt conſiderable places: we ſhall only add to this article, that, on the ſeventh of June 1773, the city of Guatimala was ſwallowed up by an earthquake, when 8000 families inſtantly periſhed. New Guatimala, which ſtands at ſome diſtance, is well inhabited.—

The whole of the trade between Old Spain and the Spaniſh American dominions, is by means of a fleet, called the flota, which is fitted out at Cadiz, and diſtined to La Vera Cruz. The ſhips are not permitted to break bulk, on any account, till they arrive there. When all the goods are landed and diſpoſed of at La Vera Cruz, the fleet takes in the plate, precious ſtones, cochineal, indigo, cocoa, tobacco, ſugar, and hides, which are the returns for Old Spain. From La Vera Cruz they ſail to the Havannah, which is the place of their rendezvous, where they meet the galleons. Theſe are another fleet, which carry on all the trade of Terra Firma, by Carthagena; and of Peru, by Panama and Porto-Bello; in the ſame manner as the flota ſerves for New Spain. When the flota arrives at the Havannah, and joins the galleons and regiſter ſhips, which aſſemble at the ſame port from all quarters, ſome of the cleaneſt and beſt ſailing veſſels are diſpatched to Old Spain, with advice of the contents of theſe ſeveral fleets, as well as with treaſure and goods of their own, that the court may judge what indulto or duty is proper to be laid on them, and what convoy is neceſſary for their ſafety.

Regiſter-ſhips are ſent out by merchants at Cadiz and Seville, when they judge that goods muſt be wanted at any particular ports in the Weſt-Indies. Their way is, to petition the council of the Indians for a licence to ſend a ſhip of 300 tons burthen, or under, to that port; they pay for this licence forty or fifty dollars, beſides preſents to the officers, in proportion to the connivance neceſſary to the deſign; for, though the licence runs only to 300 tons at moſt, the veſſel fitted out is ſeldom leſs than 600. This ſhip and cargo are regiſtered at the pretended burthen: it is required too, that a certificate be brought from the king's officer at the port to which ſhe is bound, that ſhe does not exceed the ſize at which ſhe is regiſtered; all this paſſes of courſe. Theſe are what they call regiſter-ſhips, and by theſe the trade of Spaniſh America has been carried on for many years paſt.

Though this trade is carried on entirely through the hands of the Spaniards, and in the very heart of their dominions, yet they are comparatively but ſmall gainers by it; for, as they allow the Dutch, the Engliſh, and other commercial ſtates, to furniſh the greater part of the cargo of the flota, ſo the Spaniſh inhabitants of the Philippines, tainted with the ſame indolence which ruined their European anceſtors, permit the Chineſe merchants to furniſh moſt of the cargo of the galleons. We are however told, that, notwithſtanding great quantities of gold and ſilver are run and concealed, no leſs than 2,000,000 of ſilver marks, weighing eight ounces each, are entered yearly, out of which they coin 700,000 marks into pieces of eight, quarter-pieces, rials, and half-pieces, the value of the latter being about three-pence ſterling.

The ſacrifices of the ancient Mexicans were various, and horrid beyond expreſſion. In general the victims ſuffered death by having their breaſts opened; ſometimes they were drowned in a lake; ſometimes they died with hunger ſhut up in caverns of the mountains; and ſometimes they fell in what was called the gladiatorian ſacrifice.

The place for the performance of the common ſacrifice was the temple, in the upper area of which ſtood the altar. The miniſters were the prieſts, the chief of whom, on ſuch occaſions, was cloathed in a red habit fringed with cotton. On his head he wore a crown of green and yellow feathers. The other miniſters, which were five in number, were dreſſed in habits of the ſame make, but embroidered with black, and their bodies were dyed all over with the ſame colour. Theſe barbarous miniſters carried the victim naked to the upper area of the temple, and having pointed out to the by-ſtanders the idol to whom the ſacrifice was made, extended him upon the altar. Four prieſts held his legs and arms, and another kept his head firm with a wooden inſtrument made in the form of a coiled ſerpent, and put about his neck. The body of the victim lay arched, the breaſt and belly being raiſed up and totally prevented from moving. The inhuman chief prieſt then approached, and with a cutting knife made of flint dexterouſly opened the breaſt, and tore out the heart, which, while yet palpitating, he offered to the ſun,

and

and afterwards threw it at the feet of the idol: he then took it up and burnt it, and the aſhes were preſerved as a precious relic. If the idol was of large ſize and hollow form, it was cuſtomary to introduce the heart of the victim into its mouth with a golden ſpoon. It was uſual alſo to anoint the lips of the idol, and the cornices of the door of the temple, with the blood of the victim. If the victim was a priſoner of war, they ſevered the head from the body, to prſerve the ſkull. The body was carried by the officer, or ſoldier, to whom the priſoner had belonged, to his houſe, to be boiled and dreſſed for the entertainment of his friends. If he was not a priſoner of war, but a ſlave purchaſed for ſacrifice, the proprietor carried off the body from the altar for the ſame purpoſe. They eat only the legs, thighs, and arms, burning the reſt, or preſerving it for food for wild beaſts and birds of prey. Some ſects among them having ſlain the victim, tore the body in pieces, which they ſold at market. Others ſacrificed men to their gods, women to their goddeſſes, and children to their inferior deities. This was the moſt common mode of ſacrifice: there were others leſs frequent; ſuch as putting the victims to death by fire, drowning children of both ſexes in the lake, ſhutting them up in a cavern, and ſuffering them to periſh with fear and hunger.

But the principal ſacrifice among the ancient Mexicans was that called by the Spaniards the Gladiatorian. This was an honourable death, and only priſoners diſtinguiſhed by their valour were permitted to die by it. The priſoner was placed on a ſtone in a conſpicuous part of the city, armed with a ſhield and a ſhort ſword, and tied by one foot. A Mexican officer, or ſoldier, better armed, mounted the ſtone to combat with him. If the priſoner was vanquiſhed, he was carried by a prieſt, dead or alive, to the altar of the common ſacrifices, where his breaſt was opened, and his heart taken out, while the victor was applauded and rewarded with ſome military honour. If the priſoner conquered ſix different combatants, who ſucceſſively engaged him, he had his life and liberty granted, and was diſmiſſed with honour to his native country.

HISTORY OF MEXICO,

AND CONQUEST OF IT BY THE SPANIARDS.

MEXICO was under the ſole government of its own monarchs, till the Spaniards, under the command of Fernando Cortez, invaded and conquered it. This expedition was undertaken with only 508 foot, ſixteen troopers, and 108 ſeamen. Cortez, with his forces, landed on the coaſt of the bay of Campeachy, and having diſperſed the natives with his artillery, marched to the city of Tobaſco, which he ſeized upon. The next day the Indians aſſembled an army of 40,000 men, with which they attacked the Spaniards; but Cortez, at the head of the horſe, attacking them in the flank, they retired. The day after the battle, the cacique, or prince, ſent a ſolemn embaſſy to Cortez, to implore peace, attended with a preſent of ſuch fruits and proviſions as his country afforded, together with jewels, plumes, and painted cotton linen, and whatever he thought moſt acceptable to the conquerors. The ambaſſadors approached Cortez as they uſed to do their gods, with golden pads or cenſers, in which they burnt aromatic gums, and other incenſe: the cacique afterwards came in perſon, and made his ſubmiſſion, bringing him twenty beautiful Indian virgins, which he made Cortez a preſent of. One of theſe, whom the general afterwards cauſed to be baptized by the name of Donna Marina, ſerved him, during the whole expedition, in the double capacity of concubine and interpreter; for ſhe was a native of Mexico, a female of ready wit, and underſtood the cuſtoms of the country, and the language perfectly well; and indeed to her merit and addreſs the Spaniards aſcribe the ſucceſs of their arms in a great meaſure. When the cacique of Tobaſco came to make his ſubmiſſion, Cortez let him know, that he came from a powerful prince; and that his principal view was to make them all happy in this world and the next, by making them ſubjects of the ſame ſovereign, and converting them to the true religion. To this the frighted cacique anſwered, that he and his people ſhould think themſelves happy in obeying a king, whoſe power and greatneſs appeared to ſuch advantage in the valour of his ſubjects: but as to the point of religion, he gave very little hopes of their converſion.

As Cortez was about to advance ſtill further with his fleet on the Mexican coaſt, he was under the greateſt concern that he muſt leave thoſe people before he had fully inſtructed them in the Catholic religion; and on Palm-Sunday, the day he appointed to embark his troops, he firſt cauſed an altar to be erected in the open field, where he celebrated high maſs in the preſence of the Indians, and all his troops marched in their ranks to the altar, with boughs or palms in their hands, to celebrate that feſtival: the proceſſion ſeemed to excite in the natives the utmoſt awe and reverence, inſomuch that ſome of them cried out, "This muſt be a great God, that ſuch brave men adore." Cortez ſailed to the port of St. John de Ulva, where he landed, and Donna Marina acted as interpreter.

When the general was informed that Montezuma, the Emperor of Mexico, had ſent to know the reaſon of the Spaniards invading his country, he anſwered ambiguouſly, but ſtill preſerved his deſign of penetrating into the country. Montezuma, in all his meſſages, tried to prevent the Spaniards from coming to Mexico, and Cortez as inflexibly perſiſted in that intent. He foreſaw that the Mexicans would not be able to prevent his approaching Mexico, eſpecially as he was joined, about this time, by a cacique, or prince of the country, named Zempoala, who offered to enter into an alliance with Cortez againſt Montezuma, whom he repreſented as a cruel tyrant and oppreſſor. The cacique furniſhed him with 400 men to carry his baggage, and others to draw his artillery, there not being any beaſts in this part of the country fit to draw carriages, but every thing of this kind was done by the ſtrength of men.

The Spaniſh commander continuing his march by the ſea-coaſt to Vera Cruz, was joined there by about thirty caciques from the mountains, who reinforced his troops with 100,000 men; and ſome parties of Europeans, hearing of the ſucceſs of Cortez, alſo voluntarily followed him thither, and joined his troops: whereupon he became ſo confident, that he burnt all his ſhips, and having fortified Vera Cruz, in which he left a ſmall garriſon, he began his march directly for the city of Mexico, being joined by the people of Tlaſcala, a country of great extent, who offered to become ſubjects of the King of Spain; at which Montezuma was ſo alarmed, that he offered to pay the Spaniards an annual tribute, amounting to one half of his revenues; and, when he found it in vain to oppoſe the general's march, he thought fit to give him an invitation to his capital; but Cortez, who was determined to have the plunder of the capital city, pretended that the Mexicans were not ſincere in their invitation, but had entered into a conſpiracy to ſurpriſe the Spaniards, when they had drawn them into an ambuſcade, and maſſacre them; and, therefore immediately began hoſtilities, and cut to pieces ſome thouſands of Montezuma's ſubjects.

The Spaniards, after this, continuing their march, were attended by ſeveral other caciques and lords of the country, who complained of the intolerable oppreſſions of Montezuma; telling Cortez, that they looked upon him as their deliverer, ſent from heaven to reſtrain and puniſh the injuſtice and cruelty of tyrants: to whom he promiſed his protection, and drawing

ing near to Mexico, in order to ſtrike the greater terror into the natives, he ordered his artillery and ſmall arms to be diſcharged; and cauſed ſeveral Indians to be ſhot, that approached too near his quarters, while he lay encamped at Amemeca, on the borders of the Mexican lake. Here Prince Cacumatzin, the the nephew of Montezuma, attended by the Mexican nobility, came to the general, and bid him welcome; aſſuring him, that he would meet with a very kind and honourable reception from the emperor; but intimated, that there having been lately a great ſcarcity of proviſions in the city of Mexico, occaſioned by unſeaſonable weather, they could not accommodate them as they deſired; and, therefore, entreated he would defer his entrance into that capital, if he did not think fit entirely to decline going thither. But Cortez appearing determined to advance, the prince ſeemed to acquieſce; and the preparations for the reception of the Spaniards were continued.

Arriving at Quitlavaca, a city ſituated on an iſland in the great lake, five or ſix leagues from Mexico, Cortez had ſome apprehenſions that the Mexicans would break down the cauſeway, and remove the bridges on it, which would have very much embarraſſed him, becauſe he could neither have advanced or retired in that caſe, eſpecially with his horſe and artillery. But the cacique of Quitlavaca, who appeared to be a friend of the Spaniards, very much encouraged the general, telling him, he had nothing to fear; that the prodigies in the heavens, the anſwers of the oracles, and the fame of the great actions and ſurpriſing arms of the Spaniards, had perfectly diſpirited their emperor, and diſpoſed him to ſubmit to whatever the general ſhould impoſe on him. Soon after, Cortez entered Mexico at the head of 450 Spaniards and 6000 Tlaſcalans; when they were met by Montezuma himſelf, who was brought in a chair of beaten gold, on the ſhoulders of his favourite courtiers. The conference between the emperor and the general was ſhort, their ſpeeches were ſuitable to the occaſion, and the emperor commanded one of the princes, his relation, to conduct the general to the palace aſſigned for his reſidence, and then returned to his own palace.

About noon, the Spaniards were brought to the royal houſe appointed for their reception, which was ſo ſpacious, as to contain all the Europeans and their auxiliaries: it had thick ſtone walls, flanked with towers: the roof of the palace was flat, and defended by battlements and breaſt work; inſomuch that, when the general had planted his arrtillery, and placed his guards, it had very much the appearance of a fortreſs. To this place Montezuma came the ſame evening, and was received by Cortez in the principal ſquare of the palace; and that monarch having entered the room of ſtate, and ſeated himſelf, ordered a chair for Cortez, and a ſignal was made for his courtiers to retire to the wall: whereupon the Spaniſh officers did the ſame; and Cortez being about to begin his ſpeech by his interpreters, Montezuma prevented him, by ſpeaking as follows;

"Illuſtrious and valiant ſtranger! Before you diſcloſe the important meſſage the great monarch you came from has given you in command, it is neceſſary ſome allowance be made for what fame has reported of us on either ſide. You may have been informed by ſome, that I am one of the immortal gods; that my wealth is immenſely great, and my palaces covered with gold: and on the other hand, you may have heard that I am tyrannical, proud and cruel. But both the one and the other have equally impoſed upon you: you ſee I am a mortal of the ſame ſpecies with other men; and though my riches are conſiderable, my vaſſals make them much more than they are; and you find that the walls of my palaces are nothing more than plain lime and ſtone. In like manner, no doubt, has the ſeverity of my government been magnified: but ſuſpend your judgment of the whole, till you have an opportunity of informing yourſelf concerning it; and you will find that what my rebellious ſubjects call oppreſſion, is nothing more than the neceſſary execution of juſtice.

"After the ſame manner have your actions been repreſented to us: ſome ſpeak of you as gods; affirming that the wild beaſts obey you; that you graſp the thunder in your hands, and command the elements: while others aſſure me, you are wicked, revengeful, proud, and tranſported with an inſatiable thirſt after the gold our country produces.

"I am now ſenſible ye are of the ſame compoſition and form of other men, and diſtinguiſhed from us only by accidents which the difference of countries occaſions.

"Theſe beaſts (horſes) that obey you are, probably, a large ſpecies of deer, that you have tamed and bred up in ſuch imperfect knowledge as may be attained by animals: your arms are made of a metal, indeed, unknown to us, and the fire you diſcharge from them, with ſuch an aſtoniſhing ſound, may be ſome ſecret taught by your magicians. As to your actions, my ambaſſadors and ſervants inform me, that you are pious, courteous, and governed by reaſon: that you bear hardſhips with patience and chearfulneſs, and are rather liberal than covetous; ſo that we muſt, on both ſides, lay aſide our prejudices and prepoſſeſſions, and rely only on what our eyes and experience teach us."

To this the general anſwered, "That it was true, various were the reports they had heard: ſome endeavoured to defame and aſperſe him, while others adored him. But the Spaniards, who were endowed with a penetrating ſpirit, eaſily ſaw through the different colours of diſcourſe, and the deceit of the heart; that they neither gave credit to his rebellious ſubjects, or thoſe that flattered him; but came in his preſence, aſſured that he was a great prince, and a friend to reaſon; but very well ſatisfied, however, that he was a mortal, as they themſelves were: that the beaſts which obeyed him were not deer, but fierce and generous animals, inclined to war, and ſeemed to aſpire after the ſame glory as their maſters. That their fire-arms were, indeed, the effect of human induſtry, and owed nothing to the ſkill of the magician, whoſe arts were abominated by the Spaniards."

Cortez, having thus given ſome anſwer to the emperor's ſpeech, proceeded to inform him, "That he came ambaſſador from the moſt potent monarch under the ſun, to deſire his friendſhip and alliance: that there might be a communication and intercourſe between their reſpective dominions: and by that means, the Chriſtians might have an opportunity of convincing them of their errors, and, inſtead of blocks of wood (the works of men's hands) inſtruct them to worſhip and adore the true God, the Creator of the whole univerſe. That this was the firſt and principal thing the king his maſter commanded him to inſiſt on as the moſt likely means of eſtabliſhing a laſting amity; that, being united in principles of religion, their alliance might become indiſſoluble."

The emperor replied, that, "he accepted the alliance propoſed by the King of Spain; but as to the overture concerning religion, he totally objected to it;" and making Cortez a rich preſent, returned to his palace.

For ſome time, Cortez continued very intimate with Montezuma, often viſiting the Mexican court; and that monarch frequently came to the Spaniſh quarters, making preſents to the general, and to his officers and ſoldiers, exhibiting ſhews and entertainments for their diverſion. The Mexicans ſtill treated the Spaniards with a reſpect that ſavoured of great humility and condeſcenſion. Montezuma ſpoke of their king with the greateſt veneration. His nobility paid a profound reſpect to the Spaniſh officers, and the people bowed the knee to the meaneſt Spaniſh ſoldier.

But

But an accident happened, which very much leſſened the eſteem, or rather dread, the Mexicans at firſt entertained of theſe foreigners. It was this: One of the emperor's generals, levying the annual tax impoſed on the vaſſal princes in that part of the country, which lay in the neighbourhood of the Spaniſh garriſon of Vera Cruz, theſe caciques, who had thrown off their ſubjection to the Mexican empire, and entered into alliance with the Spaniards, applied themſelves to John de Eſcalante, governor of Vera Cruz, for protection; who thereupon marched out of that fortreſs, with 40 Spaniards, and 3 or 4000 confederate Indians, to their aſſiſtance; and though he had the good fortune to defeat the Mexican general, yet one of the Spaniards was killed, and his head ſent up to the court; and the governor, with five or ſix more of his garriſon, were mortally wounded. This news being brought to Cortez, gave him great uneaſineſs; and the more, becauſe he was informed by the confederate Indians, that the Mexicans were conſulting how to drive him out of their territories, which they did not apprehend to be impracticable ſince the engagement near Vera Cruz. The Spaniſh general, therefore, finding it impoſſible to maintain his authority among the Indians any longer, without entering on ſome action that might give them freſh cauſe of aſtoniſhment, and recover that reputation they ſeemed to have loſt by that unfortunate accident, reſolved to ſeize the perſon of Montezuma, and bring him priſoner to his quarters; and accordingly, at an hour when the Spaniards were uſed to pay their court to that prince, Cortez, having given orders for his men to arm themſelves without noiſe, and poſſeſs themſelves of all the avenues leading to the palace, in ſmall parties, that no notice might be taken of it, went to the Mexican court, attended by ſeveral of his officers, and 30 ſoldiers, whoſe reſolution he could rely on, and being admitted to the emperor's preſence, he complained of the violation of the peace between them, by one of the Mexican generals falling upon his confederates, and afterwards killing a Spaniard he had taken in cool blood. To which Montezuma anſwered, "That if any thing of that nature had been done, it was without his orders; and he was ready to make ſatisfaction for any injury that might have been done undeſignedly, either to the Spaniards or their allies." But Cortez gave him to underſtand, that nothing would ſatisfy them but his ſurrendering himſelf into their hands, and reſiding with them in the palace aſſigned to the Spaniards for their quarters.

This inſolent demand at firſt aſtoniſhed Montezuma, who remained for ſome time ſilent; but recovering from his ſurpriſe, he ſaid, that princes of his rank were not accuſtomed to yield themſelves up to a priſon; nor would his ſubjects permit this, even if he ſhould forget his dignity ſo far. Cortez anſwered, "If he would go along with them voluntarily, they were not afraid of any oppoſition his ſubjects ſhould make; and they would treat him with all the regard due to his dignity: he might continue to exerciſe his authority as formerly, and no reſtraint ſhould be put on his actions; only, for their ſecurity, he inſiſted that the emperor ſhould reſide among them." Montezuma, ſtill refuſing to put himſelf into their hands, was given to underſtand, that if he would not, they would carry him off by force, or murder him if they were oppoſed; whereupon he ſubmitted to do what he found it was impoſſible to avoid; and gave orders to his officers to prepare for his removal to the Spaniſh quarters, whither he went in the uſual ſtate, and voluntarily, to all appearance, except that he was attended by a company of Spaniards, who ſurrounded his chair.

The Indian monarch, as muſt be eaſily ſuppoſed, was rendered very miſerable by this indignity; and his ſervants, lamenting their emperor's hard fate, threw themſelves at his feet, endeavouring to eaſe him of the weight of his fetters; and though, when he recovered from his firſt amazement, he began to expreſs ſome impatience, yet, correcting himſelf, he acquieſced in his misfortunes, and waited the event, not without apprehenſions that there was a deſign againſt his life: but Cortez having ſeen his plan performed, by which he found he had ſtruck ſuch a terror into the Mexicans, that little was to be feared from them, he returned to Montezuma's apartment, and ordered his fetters to be taken off; and, as ſome writers relate, he fell on his knees, and took them off with his own hands; for which favour the empeperor embraced and thanked him. But, what is ſtill more difficult to be believed, they aſſure us, that Cortez gave the emperor leave to return to his palace, and that he refuſed the offer, out of regard to the Spaniards; telling them, he knew very well that as ſoon as he was put out of their power, his ſubjects would preſs him to take up arms againſt them, to revenge the wrongs he had ſuffered: nay, the Spaniſh hiſtorians poſitively affirm, that, notwithſtanding all the injuries and indignities they had offered to Montezuma, he expreſſed a more than ordinary friendſhip and regard for them, preferring their intereſt to that of his own ſubjects.

The Spaniſh hiſtorian, De Solis, relates, that Cortez gave Montezuma leave to go whither he pleaſed, which he ſeems to contradict in a very few lines afterwards: for he tells us, when that prince only deſired to perform his devotions in one of his temples, it was granted upon certain conditions, namely, that he ſhould give his royal word to return to the Spaniſh quarters again, and from that day aboliſh human ſacrifices; and we make no doubt but they inſiſted on a third, viz. that he ſhould take a guard of Spaniards with him; for they acknowledge that a body of Spaniards actually attended him to the temple, which they could do with no other view than that of ſecuring their priſoner: though De Solis ſays, indeed, it was at the requeſt of Montezuma that they went with him: nor did he ever go abroad without a Spaniſh guard, or without aſking leave of Cortez; or ever lay one night out of their quarters, by their own confeſſion; which they would have us aſcribe purely to choice, and his affection to the Spaniards, who had put ſuch indignities upon him. They add, that Cortez was now become his prime miniſter; that all poſts of honour or profit were diſpoſed of by him and his principal officers, who were courted by the Mexican nobility, when they ſaw that no places or preferments could be had but by their intereſt: which poſſibly might be true; but ſurely it is much more probable that Montezuma was influenced more by his fears than his affection for the Spaniards. And we may obſerve from hence, that, with all theſe advantages, Cortez, and his Spaniards, might have eſtabliſhed their power upon ſuch a foundation, as could not eaſily have been overthrown, without ſuch a deluge of blood as they ſpilt afterwards, if Cortez had been as able a politician as he was a ſoldier; or if his benevolence and humanity had exceeded his cruelty and avarice.

Cortez ſeems to have left ſcarce any means untried for his ſecurity and eſtabliſhment but the principal, namely, gaining the affections of the Indians, and winning them over to his party, as well as to the Chriſtian religion, by acts of generoſity and beneficence. He was ſo careful of himſelf, that he cauſed ſome brigantines to be built on the lake of Mexico, whereby he entirely commanded the lake, and the cauſeways leading to the city; and at the ſame time he increaſed his reputation with the Mexicans by the artful management of thoſe veſſels; for the Indians were, at this time, ignorant of the uſe of ſails and rudders.

About this time, Don Diego Velaſques, governor of Cuba, being informed that Cortez had met with great ſucceſs in Mexico, and was endeavouring to render himſelf independent of him, declared him a

rebel, and ſent Pamphilio de Narvaez, with 800 men, to reduce him, and take upon him the command of the Spaniſh forces in Mexico. Whereupon Cortez leaving a garriſon in the city of Mexico, and confining Montezuma there, marched to meet Narvaez his rival, ſurprized him in the night-time, made him priſoner, and ſo corrupted the officers of the troops that came over with Narvaez, by the rich preſents he made them, that they agreed to join Cortez. Thus reinforced, he returned to the city of Mexico again; and now imagining himſelf powerful enough to ſubdue that empire by force, without courting Montezuma or his ſubjects, he treated that monarch with great contempt. But ſome of the Spaniſh hiſtorians obſerve, that in this he committed a very great error: for had the general, on his returning in triumph with ſuch an addition of forces, entered into a treaty with that emperor and his nobility, they would have yielded to almoſt any terms; and he might have gained the dominion of that empire, for the King of Spain, his maſter, without any bloodſhed. But he was too much elated with ſucceſs to think of pacific meaſures. On the contrary, he reſolved to give the Mexicans all manner of provocations, and even rendered them deſperate, that he might have a colour to deſtroy them, and ſeize all their poſſeſſions, whether lands or treaſure. He found a garriſon of 80 Spaniards able to repel the whole force of Mexico; and he did not doubt, now he ſaw himſelf at the head of 1100 Spaniſh horſe and foot, with a multitude of confederate Indians, he ſhould be able, by force, to reduce the Mexicans, and make ſlaves of them.

But Cortez was near paying very dear for his preſumption; for ſending out a detachment of 400 Spaniards and confederate Indians in ſearch of the enemy, who were retired to the furtheſt part of the city, they were ſurrounded, and in danger of having their retreat cut off; and he himſelf, with the reſt of his troops, narrowly eſcaped being ſtarved, or cut in pieces; for the Mexicans, rendered brave by their deſpair, were not afraid to attack Cortez in his quarters, though defended by a numerous garriſon, and a train of artillery; and when, at any time, he made a ſally, he found entrenchments in the ſtreets, and the bridges broken down, which rendered his cavalry, in a manner, uſeleſs; and though he uſually came off victorious, he found he had committed a very great error in ſhutting himſelf up in Mexico, from whence it was almoſt impoſſible to make his retreat, and where he found it impracticable to fetch in proviſions; the enemy being maſters of all the cauſeways that led to the town, and of all the boats upon the lake; ſo that if his people were not deſtroyed by the continual attacks of the enemy, they muſt certainly, in a ſhort time, be reduced by famine. In this diſtreſs, Cortez thought fit to endeavour a reconciliation with Montezuma, and make uſe of the authority he ſtill retained among his ſubjects, to induce them to lay down their arms, and permit the Spaniards to march out of Mexico, which, it was preſumed, they would readily have come into, that they might get rid of a people ſo much dreaded, as well as hated, by them.

Accordingly, a parley being propoſed and agreed to, Montezuma appeared on the battlements of the palace, and ſome of the Mexican nobility advancing to hear what overtures he would make them, the Spaniards tell us, their emperor made a ſpeech to his ſubjects, wherein he greatly reprimanded them for taking up arms without his leave, though it was with an intention to obtain the liberty of their prince, declaring that he was, in reality, under no manner of reſtraint, but remained with the Spaniards from choice; that he thought himſelf obliged to ſhew the Spaniards this favour, on account of the reſpect they had always paid him, and out of duty to the prince that had ſent them; that their embaſſy being diſpatched, he was about to diſmiſs theſe foreigners from his court, and deſired his ſubjects would lay down their arms, and not interrupt their march, and he would readily pardon their having taken up arms; or to that effect.

This ſpeech was but little regarded by the Mexicans, who knew that whatever their emperor's words were, they were put into his mouth by the Spaniards, whoſe priſoner he was, and tended only to procure them a ſafe retreat; and they were ſenſible, if they loſt the advantage they had, they muſt never expect ſuch another opportunity of getting rid of theſe unwelcome gueſts. They had them cooped up in this fortreſs, where no relief could be brought them, and from whence it was ſcarce poſſible for them to retreat, if the Mexicans broke down the bridges and cauſeways upon the lake, and made ſuch ditches and trenches in the ſtreets, as the Spaniards themſelves had taught them; but foreſaw, if ever their enemies got over the lake again, they might not only receive freſh reinforcements from Spain and their Indian allies, but they muſt engage them to great diſadvantage in their open country, having nothing to oppoſe their horſe and artillery. The Mexicans reſolved, therefore, not to conſent to a ceſſation of arms, but rejected the overture with diſdain, as being framed only to give their mortal enemies an opportunity of eſcaping out of their hands, and reinforcing themſelves to the deſtruction of their country; and they were ſo enraged at the overture, that they ſhot at their emperor for making it to them, and mortally wounded him.

The Spaniard, finding the Mexicans were not to be amuſed with inſidious propoſals, from what hand ſoever they came; that his proviſions were almoſt ſpent, and that it would be impracticable to make his retreat in the day-time; reſolved to attempt it in the dark night. Having divided the treaſure, therefore, amongſt his men, with which they were pretty well loaded, for it amounted to an immenſe ſum, he iſſued out of his quarters at midnight, the weather being extremely tempeſtuous, whereby his march was for ſome time concealed; but he had not advanced a mile upon the cauſeway before he found himſelf attacked on every ſide by the Mexicans, both by land and water, the lake being filled with their canoes or boats; and as they had broken down the bridges, and cut the cauſeways through in ſeveral places, the Spaniards were in great danger of being entirely cut off. Cortez, indeed, had foreſeen this, and provided a portable bridge to paſs the breaches in the cauſeway, which was of great uſe to him in ſeveral places: but the Indians found means to deſtroy this bridge before they were all paſſed over, and their rear-guard, conſiſting of 2 or 300 Spaniards, and 1000 confederate Indians, were cut in pieces. They alſo loſt their artillery, priſoners, baggage, and treaſure, with 46 Horſes. Cortez, however, with the beſt part of his force, broke through the Indians, and eſcaped to the other ſide of the lake. Some impute this loſs to the avarice of his ſoldiers, who were ſo loaded with gold and ſilver, that they could ſcarce make uſe of their arms; and poſſibly there may be ſome truth in it: but we believe every one who conſiders his circumſtances, muſt be of opinion, that he was very fortunate in eſcaping ſo well. Had the enemy provided a body of forces to oppoſe him on the further ſide of the lake, he muſt inevitably have periſhed; but they did not expect his ſallying out ſo ſuddenly, eſpecially in that tempeſtuous ſeaſon, and were not, therefore, provided to attack him.

The Spaniſh hiſtorian endeavours to give us a particular account of this action, admires the valour and conduct of Cortez and his officers, and informs us how every one diſtinguiſhed himſelf in this memorable retreat. He proceeds to inform us, that they arrived juſt as it was day-light on firm land, and thought themſelves very happy that there was no

army to oppoſe them there, and that they were purſued no further, till they had time to form and recover themſelves from their conſternation.

This good fortune, it ſeems, was owing to the compaſſion the Mexicans expreſſed for the two ſons of Montezuma, and ſeveral princes of the royal blood, whom they found ſlaughtered among the Spaniards, when the day-light appeared. The Mexicans relate that Montezuma himſelf was of that number; and that the Spaniards murdered both him and his ſons, when they found they could not carry them off. The Spaniards, on the other hand, ſay, that Montezuma was killed before by the arrows of the Mexicans; and that the princes, alſo, were accidentally killed in the engagement while it was dark, as they could not diſtinguiſh friends from foes. But however that was, it is agreed that the princes were found dead, pierced through with many wounds; and the Mexicans deferred the purſuit of the Spaniards, to ſolemnize the obſequies of thoſe two princes, or of Montezuma himſelf. To which piece of piety, Cortez and the Spaniards, who were left alive, in a great meaſure owed their ſafety.

The Spaniſh forces having halted ſome time to refreſh themſelves, and take care of their wounded men, continued their march towards Tlaſcala, the country of their faithful allies and confederates: but they had not advanced many leagues before they were again overtaken, and attacked by the Mexicans, at a time when they were ſo fatigued and haraſſed, that had not Cortez taken poſſeſſion of a temple, that very fortunately lay in his way, he would have found it difficult to have repulſed the enemy. But the Mexicans, finding they could make no impreſſion on the Spaniards, as they lay entrenched within thoſe walls, thought fit to ſound a retreat. However, Cortez apprehending he ſhould be diſtreſſed here for want of proviſions, began his march again at midnight, with great ſilence, in hopes to have got the ſtart of the enemy ſo far, that he ſhould have reached the Tlaſcalan territories before they could have overtaken him; but, to his great ſurpriſe, being arrived on the top of a very high mountain, he diſcovered the whole forces of the Mexicans, conſiſting of 200,000 men, drawn up in battalia in the valley of Otumba, through which it was neceſſary to paſs, in his way to Tlaſcala; whereupon Cortez made only this ſhort ſpeech to his officers, "We muſt either die or conquer;" and finding an uncommon ardour in his ſoldiers to engage, he immediately led them on.

The fight was, for ſome time, bloody and obſtinate; and Cortez, apprehending his men would be wearied out by the continual ſupplies of freſh forces, which the Indians poured in upon him, gave a ſurpriſing turn to the battle, by attacking the imperial ſtandard, carried by the Mexican general, who was ſurrounded by the nobility; for having routed them, killed the general, and taken the ſtandard, the reſt of their troops turned their backs and fled, and were purſued with incredible ſlaughter by the Spaniards and their Indian allies, who made themſelves ample amends with the ſpoils of the enemy, for the treaſure they loſt on retiring from the city of Mexico. Cortez now found it neceſſary to cultivate a good underſtanding with the caciques and princes of the country, and to take their troops into his ſervice; and made himſelf maſter of ſuch poſts as might be of moſt advantage to him in reducing the city of Mexico; and as he could not approach it by land, but on the cauſeways, he built 13 brigantines and ſloops, whereby he became maſter of the navigation of the lake, and then attacked the town by water as well as on the land ſide, having about 1000 Spaniards in his army, and 200,000 Indian allies. He took the city by ſtorm on the 13th of Auguſt 1521. One hundred thouſand Mexicans periſhed in the defence of the city; and this conqueſt was attended with the ſubmiſſion of moſt of the neighbouring provinces, who conſented to acknowledge themſelves the ſubjects to the king of Spain (the then emperor Charles V.)

The city of Mexico being thus reduced, Cortez diſtributed the plunder among his ſoldiers, reſerving only a fifth, with the moſt remarkable curioſities, for the king, which he ſent to Spain by ſome of his principal officers, together with an account of his conqueſt, and the ſtate of that country, deſiring his majeſty would confirm the magiſtrates he had appointed to govern it, with the grants of the conquered lands, and Indian ſlaves he had made, to his ſoldiers. Among the rich jewels Cortez ſent to the emperor, it is ſaid, there was a fine emerald, of a pyramidal form, as large as the palm of a man's hand at the biggeſt end; a noble ſet of gold and ſilver veſſels; ſeveral things caſt in gold and ſilver, viz. beaſts, birds, fiſhes, fruits, and flowers; bracelets, rings, pendants, and other ornamental pieces of plate and jewels: ſome of their idols, cotton veſtments of their prieſts, furs, and feathers of various colours.

The general requeſted his Imperial Majeſty to ſend over perſons qualified to ſurvey the country, that it might be improved to the beſt advantage, with the prieſts and miſſionaries for the converſion of the people; as alſo cattle, with ſeeds and plants to improve the lands: but, it is ſaid, he provided particularly againſt the ſending over phyſicians or lawyers. What could have been his reaſon againſt ſending phyſicians, is not eaſy to be conceived; but he had certainly all the reaſon in the world to deſire that neither laws or lawyers ſhould be admitted there, having determined to treat the natives as ſlaves, and ſeize both their perſons and poſſeſſions, and, indeed, to uſurp an arbitrary dominion over both Spaniards and Indians in the New World.

SPANISH DOMINIONS
IN SOUTH AMERICA.

CHAP. XXI.

TERRA FIRMA, OR CASTILLA DEL ORO.

Situation, Boundaries, Diviſions, Bays, Harbours, Capes, Climate, Soil, Vegetable Produce, Animals, Fiſh, Natives, Commerce, and Government.

THE province of Terra Firma is ſituated between the equator and 12 deg. north lat. and between 60 and 82 deg. of weſt long. being about 1400 miles in length, and 700 in breadth. It is bounded on the north by a part of the Atlantic Ocean, called the North Sea; on the South by Peru and the country of the Amazons; on the eaſt by Guiana; and on the weſt by Old Mexico and the Pacific Ocean. It is divided as in the following table:

Diviſions.	Subdiviſions.	Chief Towns.
North Diviſion	Terra Firma Proper, or Darien	Porto Bello, Panama.
	Carthagena	Carthagena.
	St. Martha	St. Martha.
	Rio de la Hache	Rio de la Hache.
	Venezuela	Venezuela.
	Comana	Comana.
	New Andaluſia, or Paria	St. Thomas.
South Diviſion	New Granada	Santa Féde Bagota.
	Popayan	Popayan.

The line which ſeparates Terra Firma from the kingdom of New Spain forms alſo the boundary between

tween North and South America. This boundary is drawn acroſs the iſthmus of Darien, a few leagues to the weſtward of Porto Bello and Panama. It croſſes the iſthmus in its narroweſt part, which is not here above ſixty miles in breadth.

The chief bays in Terra Firma are thoſe of Panama and St. Michael, both in the South Sea. In the North Sea are the bays of Porto Bello, Sino, Carthagena, Maracaiba, Guiara, and Curiaco, together with the gulfs of Darien, Venezula, Trieſto, and Paria.

The principal harbours are thoſe of Porto Bello and Carthagena.

The capes moſt worthy of notice are, Cape del Agua, de Vela, Conquibacao, Cabelo, Blanco, Galera, Three Points, Naſſau, Sambles Point, Point Canoa, and Swart Point.

The climate is neither pleaſant nor healthy; the inhabitants, one part of the year, being ſcorched by the moſt intenſe and burning heat, and the other almoſt drowned with perpetual floods of rain, pouring from the ſky with ſuch violence as if a general deluge was to enſue.

In ſo large a tract of country, the ſoil muſt neceſſarily vary. Accordingly, in ſome parts, it is a barren ſand, or drowned mangrove land, that will ſcarce produce any kind of grain; in others, it yields Indian corn, balms, gums, and drugs, almoſt all manner of fruits, as well of Old as of New Spain, ſugar, tobacco, Brazil wood, and ſeveral kind of dyeing woods; a variety of precious ſtones, particularly emeralds and ſapphires; veniſon, and other game. The plantations of cocoa, or chocolate nuts, in the diſtrict of Caraccas, are eſteemed the beſt in America. The trees, moſt remarkable for their dimenſions, are, the cedar, the maria, and balſam-tree. The manchineel tree is very remarkable: it bears a fruit reſembling an apple, but which, under this ſpecious appearance, contains the moſt ſubtle poiſon, againſt which, common oil is found to be the beſt antidote. Such is the malignity of this tree, that ſhould a perſon only ſleep under it, he would find his body all ſwelled, and racked with the ſevereſt tortures. The beaſts, from inſtinct alone, avoid it.

The mountains abound with tygers, and, according to ſome, with lions, and great numbers of other wild beaſts. Among the animals peculiar to this country, the moſt remarkable is the Sloth, or, as it is called by way of deriſion, the Swift Peter. It bears ſome reſemblance to an ordinary monkey in ſhape and ſize, but is of a moſt wretched appearance, with its bare hams and feet, and its ſkin all over corrugated. He ſtands in no need of either chain or hutch, never ſtirring, unleſs compelled by hunger, and is ſaid to be ſeveral minutes in moving one of his legs, and blows do not make him mend his pace. When he moves, every effort is attended with ſuch plaintive and diſagreeable cries, as excites at once pity and diſguſt. The whole defence of this wretched creature conſiſts in this cry; for on the firſt hoſtile approach he naturally puts himſelf in motion, which is always accompanied with diſguſtful howling, ſo that his purſuer flies much more ſpeedily in his turn, to be beyond the reach of the horrid noiſe he makes. This animal, when he finds no wild fruits on the ground, looks out with a great deal of pains for a tree well loaded, which he aſcends with a great deal of uneaſineſs, moving ſlowly, crying, and ſtopping by turns. Having at length mounted the tree, he plucks off all the fruit, and throws it on the ground, to ſave himſelf ſuch another troubleſome journey, and rather than undergo the fatiguing labour of coming down again, he wraps himſelf together in a bunch, and with a ſhriek drops to the ground. Other ſpecies of monkeys are very numerous in theſe countries; they keep together 20 or 30 in a herd, rambling over the woods, leaping from tree to tree, and if they meet with a ſingle perſon, he is in danger of being torn to pieces by them; if not, they chatter, and make a frightful noiſe, throwing things at him; they hang themſelves by the tail on the boughs, and ſeem to threaten him all the way he paſſes, but they uſualy ſcamper away, when they ſee two or three people together. Many of the animals of North-America, already deſcribed, are found in theſe ſouthern parts.

The rivers, ſeas, and lakes, teem with fiſh, and alſo with alligators; and the bowels of the earth were once furniſhed with the richeſt treaſures, now almoſt exhauſted. The ſame may be ſaid of pearl fiſheries on the coaſt, which are far from being ſo profitable now as formerly.

The natives of Terra Firma are bold and warlike, and as they have almoſt impregnable and inacceſſible fortreſſes, and bear an inveterate hatred to the Spaniards, they never have been, and it is probable never will be, entirely ſubdued. They have lank, coarſe, long black hair. Their natural complexion is a copper colour. The inhabitants are differently dreſſed, according to the Spaniſh faſhion. The men wear a caſſock without folds, deſcending to the knees, a large cape, and ſleeves open at both ſides; it has buttonholes, and two rows of buttons. The habits of the better ſort are made of embroidered ſtuffs. The handicrafts wear a blue ſtuff, of the manufacture of the country, but in make it differs not from the other. The Indians of diſtinction are ſingular, in wearing a kind of trowſers of white cotton, which deſcends from the waiſt to the middle of the leg. The ladies wear the *Faldelin*, a ſpecies of ſtays or rather jumps; a ſhift which deſcends only to the waiſt; a bay mantle encloſes the upper part of the body, conſiſting of an ell and a half of that ſtuff; and their whole dreſs is ornamented with rich laces. The dreſs of the labouring women is not diſtinguiſhable from that of the ladies, but by its inferior quality, the faſhion being the ſame. A mongrel, or Creole, is known by the ſuperiority of his habit and his ingenuity. The Indian peaſant wears a bay mantle; and the common native Indian, a piece of ſackcloth faſtened over the ſhoulders by two pins.

The commerce of this country is chiefly carried on from the ports of Panama, Carthagena, and Porto Bello, which are three of the moſt conſiderable cities in Spaniſh America, and each containing ſeveral thouſand inhabitants. Three annual fairs, for Indian, American, and European commodities are held here. Among the natural merchandiſe of Terra Firma, the pearls found on the coaſt, particularly in the bay of Panama, are not the leaſt conſiderable. An immenſe number of negro ſlaves are employed in fiſhing for theſe, and their dexterity in this occupation is very ſurpriſing. This kind of fiſhing is of great advantage to the inhabitants of all the iſlands in the bay, ſince every one of theſe negro-divers is obliged to deliver to his maſter daily a certain number of pearls. They are ſometimes, however, devoured by fiſh, particularly the ſharks, while they dive to the bottom, or are cruſhed againſt the ſhelves of the rocks.

The government of Terra Firma is on the ſame footing with that of Mexico. The governor of Porto Bello, who always belongs to the army, is ſubordinate to the preſident of Panama, which is the capital town, whither all the treaſures of gold and ſilver, with other rich merchandiſe from all parts of Peru and Chili, are brought, and lodged in ſtore-houſes, till they can be tranſported to Europe.

CHAP. XXII.

PERU.

Situation, Extent, Boundaries, Diviſions, Climate, Animals, Birds, Vegetable Productions, Inhabitants, Slaves, &c.

PERU is ſituated between the 60th and 70th deg. of weſt long. and between the equator and 25th deg. of ſouth lat. being 500 miles in breadth, and 2000 in length. It is bounded by Terra Firma on the north; by the Cordilleras on the eaſt; by Chili on the ſouth; and by the Pacific Ocean on the weſt.

DIVISIONS.	PROVINCES.	CHIEF TOWNS.
North diviſion...	Quito.....	Quito, Payta.
Middle diviſion..	Lima, or Los Reyes..	Lima, Cuſco, and Callao.
South diviſion...	Los Charcos.....	Potoſi, Porco.

The Pacific Ocean, or South Sea, borders on Peru. The principal bays and harbours are Payta, Malabrigo, Cuanchaio, Coſma, Vermeio, Guara, Ylo, Arica, and Callao, the port-town to Lima. The rivers are, Granada, or Cagdaleira, Oronoque, Amazon, and Plate, which riſe in the Andes, as do likewiſe many others, which fall into the Pacific Ocean, between the equator and eighth deg. ſouth lat. The water of one of the rivers is as red as blood; others, in their courſe, turn whatever they touch, or paſs over, into ſtone; and here are fountains of liquid matter, called Coppey, reſembling pitch and tar, and uſed for that purpoſe by the ſeamen.

Though this country is ſituated within the torrid zone, it is not ſo prodigiouſly hot as tropical countries in general are, and in ſome parts the cold is even painful. By the elevation of Peru above the ſurface of the ſea, or rather of the whole earth, the winds are more ſubtle, congelation more natural, and the heat moderated. The ſky too, which is almoſt conſtantly covered with clouds, ſhields them from the direct rays of the ſun; but what is remarkable, it ſcarely ever rains here, which defect is ſupplied by a ſoft, kindly dew that falls every night, and refreſhes the vegetable creation ſufficiently, ſo as to produce in many places the greateſt fertility; but near Quito they have ſometimes very heavy rains, attended by dreadful ſtorms of thunder and lightning; earthquakes are alſo frequent, and ſometimes very deſtructive in this country. The ſoil, in the inland parts of Peru, and by the banks of rivers, is uſually very fertile, but along the ſea coaſts it is a barren ſand.

Vaſt quantities of cattle were imported by the Spaniards into Peru, when they took poſſeſſion of that country; theſe are now ſo amazingly increaſed, that they run wild, and are hunted like game. There are few wild beaſts, and thoſe not very fierce or dangerous; but the moſt remarkable animals are the Peruvian ſheep, called lamas, and the vicunnas. The lama in ſeveral particulars reſembles the camel, as in the ſhape of its neck, head, and ſome other parts; but has no bunch, is much ſmaller, and cloven-footed. Its upper lip is cleft like that of a hare, through which, when enraged, it ſpits a kind of venomous juice, that inflames the part on which it falls. The wool with which it is covered, is of different colours, but uſually brown. Theſe animals are naturally docile, ſo that the Indians uſe them as beaſts of burden, and they will carry any load under a hundred weight. Formerly they uſed to eat their fleſh, and ſtill continue to make that uſe of ſuch as are paſt their labour, eſteeming it preferable to mutton. The vicunna reſembles the lama in ſhape, but is ſmaller, and its wool ſhorter and finer. It is brown all over the body except the belly, which is whitiſh. In this creature is found the bezoar-ſtone, eſteemed a ſpecific againſt poiſons.

The moſt remarkable birds found in Peru are the cendors, and zumbadors or hummers. The cendor is prodigiouſly large and ſtrong, and in colour and appearance reſembles the bird called galinazo, and, like that, is exceedingly carnivorous, frequently ſeizing the lambs as they are feeding upon the heath, and flying away with them. The ſtrength of this bird is ſo great, that it will ſometimes knock down with its wing the man who approaches to kill it: their wings alſo ſerve them as a ſhield, by which they ward off blows aimed at them. The zumbador, or hummer, is a bird peculiar to the mountainous deſerts of Peru. They are ſeldom ſeen, though frequently heard, both by their ſinging, and a ſtrange humming made in the air by the rapidity of their flight, which, when near, cauſes a noiſe equal to that of a rocket. The inſects found in Peru are muſquitoes in prodigious numbers, miguas, and ſeveral others equally venomous; alſo a variety of beautiful butterflies; and that valuable article in the commerce of this country, the cochineal, formerly ſuppoſed to be the fruit or ſeed of a plant, but is now proved to be an inſect; as hereafter deſcribed.

The vegetable productions are, plenty of European corn, maize, caſſava, and other roots; pine-apples, melons, grapes, from which the Peruvians make excellent wine and brandy, guavoes, patolas, bananas, tamarinds, olives, and figs; ſeveral ſorts of gums and drugs, as ſarſaparilla, dragons blood, balſam of Tolu and Peru, ſome rhubarb, ſtorax, and guaiacum. Among their foreſt-trees the moſt valuable is that which yields the quinquina, or Jeſuits bark. It is about the ſize of a common cherry tree; the leaves are round and indented, and it bears a long reddiſh flower, from whence ariſes a pod containing a kernel reſembling an almond; but neither the kernel nor the fruit have the ſame virtue as the bark, which is an efficacious medicine in intermitting fevers, and various other diſorders. In the plains of Truxillo there is a tree which bears twenty or thirty flowers, all of them different, and of divers colours, hanging together like a bunch of grapes. Another, called maguey, is of the utmoſt uſe to the inhabitants, as it ſupplies them with honey, vinegar, and drink. The ſtalks and leaves are not only good to eat, but may be wrought like hemp; and from them they make a thread called pica. The wood is fit for covering houſes; the prickles or thorns, with which it abounds, ſerve for needles, and the fruit has all the qualities of ſoap. Guinea or Cayenne pepper, is produced in the greateſt abundance in the vale of Arica, a diſtrict in the ſouthern parts, from whence they export it annually to the value of ſix hundred thouſand crowns.

That valuable article of the commerce of this country, cochineal, formerly ſuppoſed to be the fruit or ſeed of ſome particular plant, but now aſcertained to be an inſect; it is bred on a plant called Opuntia, or Prickly Pear, which conſiſts wholly of thick ſucculent oval leaves joined end to end, and ſpreading out on the ſides in various ramifications. The flower is large, and the fruit reſembles a fig; this is full of a crimſon juice, and to this juice the cochineal owes its colour. When the rainy ſeaſons come on, thoſe who cultivate this plant cut off the heads which abound moſt with ſuch inſects as are not arrived at their full growth, and preſerve them very carefully from the weather and all other injuries. Theſe branches, though ſeparated from their parent ſtock, preſerve their juices for a long time, and this enables the inſect not only to live till the rains are over, but to grow to its full ſize, and be in readineſs to bring forth its young as ſoon as the inclemency of the ſeaſon is paſt. When this time comes on, they are brought out, and placed upon the proper plants, diſpoſed in little neſts of ſome moſſy ſubſtance. By the enlivening influence of the freſh air, they bring forth in three or four days at furtheſt, when the young, ſcarce bigger than a mite, run about

with wonderful celerity, and the whole plantation is immediately filled. What is ſingular, this animal, ſo lively in its infancy, quickly loſes all its activity, and, attaching itſelf to the leaſt expoſed, and moſt ſucculent, part of the leaf, clings there without ever moving. It is alſo remarkable, that it does not at leaſt in any viſible manner, injure the plant, but extracts its nouriſhment by means of its proboſcis, through the fine teguments of the leaves. The males of this ſpecies of inſect, differ greatly from the females, than which they are ſmaller. The males, in fact, are of no value, the females only being gathered for uſe. The value of the drug chiefly conſiſts in the method of killing and drying the inſect. The firſt is, by dipping the baſket, into which they are gathered, into boiling water, and afterwards drying them in the ſun; the ſecond, by drying them in ovens; and the third, by drying them on cakes of maize, which are baked upon flat ſtones. The laſt is the worſt kind. One admirable quality of this drug is, that, though it belongs to the animal creation, it never decays. Without any other care than having been put into a box, ſome have been known to keep 60, and even an 100 years, and retain their quality. It is uſed in dyeing all the ſeveral kinds of the fineſt ſcarlet, crimſon, and purple.

In the northern parts, not far from Lima, there are many gold mines; and ſilver is produced in great abundance in various provinces; but the old mines are conſtantly decaying, and new ones daily opened. The towns ſhift with the mines. That of Potoſi, when firſt worked at an eaſy expence, contained 90,000 ſouls, Spaniards and Indians, of which the latter were ſix to one; but the miners having ſince dug very deep, the ſilver is not ſo eaſily brought up.

Lima, the capital of Peru, and of the whole Spaniſh empire, is ſituated in a fine valley, about two leagues from the ſea, in lat. 12 deg. 2 min. ſouth. It is large, magnificent, populous, contains many noble ſtructures, and is the reſidence of the viceroy. This city is well watered by the river Rimac; and for the ſplendor of its inhabitants, the grandeur of its public feſtivals, the extent of its commerce, and the delightfulneſs of its climate, is ſuperior to all other cities in South-America. Theſe eminent advantages are however conſiderably overbalanced by the dreadful earthquakes which frequently happen here, and which keep the inhabitants in perpetual apprehenſions of being buried in the ruins of their own houſes: it has more than once been laid in ruins by theſe tremendous convulſions of nature.

The laſt earthquake happened in the year 1747, when Callao, the ſea-port of Lima, was entirely ſwallowed up, and three-fourths of the capital itſelf levelled with the ground. The deſtruction of Callao was the moſt perfect and terrible that can be conceived, one only of all the inhabitants eſcaping, and he by a providence the moſt ſingular and extraordinary imaginable. This man was on the fort which overlooked the harbour, going to ſtrike the flag, when he perceived the ſea to retire to a conſiderale diſtance, and then ſwelling in a mountainous wave, returned with irreſiſtible violence. The inhabitants ran from their houſes in the utmoſt terror and confuſion; he heard a dreadful cry riſe from all parts of the town, and immediately all was ſilent; the ſea had utterly overwhelmed the place, and buried it for ever in its boſom; but the ſame wave which deſtroyed the town, drove a little boat by the place where the man ſtood, into which he threw himſelf, and was ſaved. The town, before this dreadful earthquake happened, contained about 3,000 inhabitants. But the calamity did not ſtop here; for the concuſſions continued, with ſhort intervals, for the ſpace of four months afterwards, in which time no leſs than 450 ſhocks had been felt, ſome of them no leſs violent than the firſt; ſo that it was computed 12,000 people periſhed, ſome being ſwallowed up in the earth, or buried in the ruins of their houſes and effects, and others drowned by the waves of the ſea, which laid great part of the neighbouring country under water.

This city, which extends two miles in length, and one and a quarter in breadth, contains about 60,000 inhabitants, of whom the whites make only a ſixth part. Its wealth will be ſufficiently demonſtrated by the following remarkable event: when the viceroy, the Duke de la Paladas made his entry into Lima in 1682, the inhabitants, to do him honour, cauſed the ſtreets to be paved with ingots of ſilver, amounting to ſeventeen millions ſterling. Travellers in general mention with aſtoniſhment the decorations of the churches with gold, ſilver, and precious ſtones, which load and ornament even the walls.

Cuſco, the capital of the empire of Peru before the arrival of the Spaniards, and the ancient ſeat of the Incas, ſtands above 326 miles from Lama towards the eaſt. It was then very large, magnificent, and populous. Here ſtood the famous Temple of the Sun, which was called Curiachanchi, and contained immenſe riches. The Incas reſided in a part of the citadel, the walls of which were incruſted with gold and ſilver, and the whole fortreſs was built of ſtones, ſo long that ſeveral oxen could hardly draw one of them. It is ſtill a conſiderable town, containing about 40,000 inhabitants, three parts Indians. The air is very pure and wholeſome, and the neighbouring country very pleaſant and fruitful. Here are ſome manufactures of bays and cotton cloth, and leather; and in the adjacent mountains are gold and ſilver mines.

Quito, the capital of the province of the ſame name, is ſeated in a pleaſant valley, between two chains of high mountains. It is about a mile in length, and three quarters of a mile in breadth, and is a biſhop's ſee. There are ſeveral religious communities, and two colleges, which are a ſort of univerſities, under the direction of the Jeſuits and Dominicans. It contains about 35,000 inhabitants, of which one third are original Spaniards. All ſorts of merchandiſes and commodities are exceeding dear, chiefly on account of the difficulty of bringing them hither. It is the ſeat of the treaſurer of the kingdom, as well as of the other officers.

A very extenſive commerce is carried on by the merchants of Lima, who are immenſely rich; they are ſaid to deal with all the quarters of the world, and that both on their own accounts, and as factors for others. Here all the products of the ſouthern provinces are conveyed, in order to be exchanged at the harbour of Lima for ſuch articles as the inhabitants of Peru have occaſion for; the fleet from Europe, and the Eaſt-Indies, land at the ſame harbour; where the commodities of Aſia, Europe, and America, are bartered for each other. The merchants of Lima purchaſe on their own accounts what there is not an immediate vent for, which they lay up in warehouſes, knowing that they muſt ſoon have an opportunity of ſelling them, from the great communication they have with almoſt every trading nation. There are in Cuſco ſeveral manufactures of cotton, wool, and flax, which ſupply all the kingdom of Peru with thoſe articles. Thoſe who trade in European commodities, reſort to Potoſi, as to a market, where they are ſure of converting their merchandiſe into ſilver. Another ſpecies of commerce, carried on by a ſet of people called Aviadores, conſiſts in exchanging coin, towards paying the neceſſary expences of the workmen, for ingots and pinnos. The article of ſilver is wholly engroſſed by the crown. At Lima, there is a treaſury court, for receiving a fifth of the produce of the mines, and certain taxes paid by the Indians, which belong to the King of Spain.

The inhabitants of Peru greatly reſemble thoſe of Mexico, only the former ſeem to be of a more liberal turn, and of greater ingenuity; but they are equally deſtitute

deſtitute of all cultivation, and poſſeſs a moſt unbounded ſhare of lazineſs and pride.

The ſlavery of the Indians is, if poſſible, more ſevere than in other parts of the Spaniſh Weſt-Indies. The magiſtrate and the prieſt devour their whole ſubſtance, and every Spaniard inſults them with impunity. The native Spaniard has alone all the lucrative offices, civil, eccleſiaſtical, and military. He deſpiſes the Creolian: the Creolian hates and envies the Spaniard: both contemn and maltreat the Indians, who, on their ſide, are not inſenſible of the indignities they ſuffer: even the blacks are encouraged to trample on the Indians, and to conſider their intereſts as altogether oppoſite; whilſt the Indians, in their nominal freedom, look with an envious diſdain upon the ſlavery of the Negroes, which makes them their maſters.

Peru is governed by a viceroy, who is abſolute; but it being impoſſible for him to ſuperintend the whole extent of his government, he delegates a part of his authority to the ſeveral audiences and courts, eſtabliſhed at different places throughout his territories.

HISTORY OF PERU.

THIS country was diſcovered by a Spaniard called Vaſco Numez de Balbao, and no deſign was entertained of conquering it, till the concluſion of the war in Mexico, when the expedition was undertaken by three private perſons, viz. Pizarro, Almagro, and De Luque; the two firſt being officers, and the laſt an eccleſiaſtic. It was ſtipulated, that Pizarro ſhould command the embarkation; that Almagro ſhould from time to time raiſe and ſend him recruits: and, that De Luque ſhould remain at Panama, and lay in ammunition and proviſions for the ſupport of the enterprize: and they agreed to ſhare the profits ariſing by the expedition equally, after the emperor's fifth ſhould be deducted.

Pizarro met with many difficulties, in his firſt attempt, from the croſs winds and currents; theſe, and the inceſſant rains that fell near the Equator, were ſuch diſcouragements, that all his men forſook him, and returned to Panama, except fourteen; but Almagro joining him with ſome recruits, theſe two heroes determined to continue their courſe to the ſouthward, and having croſſed the bay of Panama, went on ſhore, expecting to have found a paſſage to Peru by land; but the country being overflowed, or encumbered by rocks, woods, and mountains, they were obliged to return on board again, and ſetting ſail to the ſouthward, made ſo little way, that they were two years in advancing to the bay of Guiaquil. The firſt conſiderable town they viſited there was the city of Tumbez, to the cacique whereof Pizarro ſent one of his officers, to let him know they came as friends, and the cacique thereupon ſent them all manner of refreſhments.

Not having a ſufficient body of troops to undertake ſo important an expedition, he returned to Panama for reinforcements, taking with him ſome of the inhabitants, animals, and treaſures of Peru. Pizarro then went to Spain, procured the emperor's commiſſion, returned and took with him three of his brothers, and ſet ſail for Panama upon another expedition, A. D. 1530. He had now with him 125 ſoldiers, and 37 horſes, with which he landed and began his depradations. The Indians fled before him, but many of his people dying, he ſent his ſhips back laden with plunder, to bring more recruits. Almagro joining him with reinforcements, they advanced together, defeated a large body of Peruvians, took the town of Tumbez, with immenſe treaſures which were heaped up in the temple of the Sun and the inca's palace. They now erected a fortreſs near the ſea, and then purſued the inca or emperor Atabilipa.

Finding that the Peruvians were engaged in a civil war among themſelves, Pizarro took pains to foment their inteſtine diviſions, in order to prevent their uniting againſt him. The caſe was, that Atabilipa, a prince of illegitimate birth, had depoſed and confined the emperor Huaſcar, and oppreſſed his friends. Theſe latter applied to Pizarro for aſſiſtance to dethrone the uſurper. On the contrary Atabilipa made a ſimilar application to the Spaniards for their friendſhip and countenance. Atabilipa and Pizarro, having appointed an interview, the Spaniards traiteroufly attacked the Indians during the conference; and having ſlaughtered many, made the inca priſoner. Almagro, having raiſed a conſiderable body of forces at Panama, arrived at the camp of Pizarro ſoon after the ſlaughter of the Indians, and the impriſonment of their emperor Atabilipa.

Pizarro went out to meet Almagro, congratulated his arrival, received him with all the marks of affection and eſteem imaginable, and offered to divide the ſpoils with him, though it is evident they were, at that time, meditating each others deſtruction; and it is ſaid, Pizarro diſtributed as much gold and ſilver at this time among the Spaniſh ſoldiers as amounted to 15,000,000l. ſterling. The ſoldiers being poſſeſſed of this prodigious wealth, fell into all manner of exceſſes, raiſing the price of things to a very great rate, by offering any ſums to gratify their appetites or fancies. And now Pizarro thought it a proper time to ſend over the fifth part of the treaſure to the emperor, as he had ſtipulated, and with it his brother Ferdinando Pizarro, to ſolicit for ſuch reinforcements as might eſtabliſh the dominion of the Spaniards in Peru, and to petition that his government might be extended ſtill further to the ſouthward; Marſhal Almagro alſo employed his agents to repreſent to the court of Spain, with what expence and application he had ſent and carried reinforcements, and ſupplied the general with ammunition and proviſions from time to time, to enable him to make this conqueſt; and to deſire that all that part of South America which lay to the ſouthward of the lands granted to Pizarro, might be put under his government: and with theſe agents, ſent by the general and the marſhal, returned ſeveral adventurers, to the number of fifty or ſixty, who having obtained 30,000 or 40,000 ducats apiece for their reſpective ſhares of the ſpoils, were perfectly ſatisfied with it, and choſe to enjoy what they had got, the remainder of their lives, in their own country, rather than undergo more hazards and difficulties to increaſe their fortunes.

In the mean time, Atabilipa, the royal priſoner, having offered Pizarro a prodigious treaſure for his liberty, and actually paid great part of it, was ſtill detained, and at length being tried upon what were called Articles of Impeachment, was moſt unjuſtly put to death. Atauchi, the brother of this unfornate prince, having determined on revenge, ſurpriſed the Spaniards on their march to Cuſco, killed ſome, and took others, Sancho de Cellar, who had drawn up the proceſs againſt the late inca, being among the latter. With theſe they retired, ſtrangling Sancho at the very place where the emperor was put to death; but ſuch of the Spaniards, as had been againſt the cruel meaſure, they reſtored to liberty. The Peruvians were ſtill inclined to treat upon reaſonable terms; but the Spaniards inſiſted that they ſhould immediately renounce their religion, give up their country, and reſign their freedom. This broke off the treaty, when Pizarro marched forward to the capital city of Cuſco, where he arrived in the month of October 1532, the people having abandoned the city, and carried off the greateſt part of their treaſure; but ſtill the Spaniards found ſo much left behind, that they were amazed at the heaps of gold and ſilver they met with there: but the reigning inca, Manco Capac, being about to aſſemble the whole Peruvian nation againſt theſe invaders, Pizarro thought fit

fit to treat with the inca and the Peruvians. He even invited the emperor to return to his capital, and proclaimed him Inca. Theſe meaſures Pizarro found himſelf under the neceſſity of taking at this time, not only becauſe he ſaw all the ſouthern provinces of Peru aſſembling againſt them, under the inca Manco Capac, but becauſe Rumminavi, Quinquiz, and other Peruvian generals, had aſſembled a very great army in the northern provinces, and poſſeſſed themſelves of Quito, which obliged him to ſend a conſiderable detachment of his forces under the command of Sebaſtian Belalcazar, to reinforce the new colony to St. Michael's, and to make head againſt the Peruvian generals in Quito. Belalcazar, thereupon, marching into Quito, made himſelf maſter of the capital city, and was in a fair way of reducing the reſt, when advice was brought that Don Pedro de Alvarado was upon the coaſt of Peru with a conſiderable fleet, and landed 700 or 800 men, intending to take the government of Peru upon him, and expel Pizarro and Almagro from thence; at which news, theſe two adventurers were thunderſtruck, apprehending they ſhould be diſpoſſeſſed of all the ſpoils they had taken, and perhaps ſent priſoners to Spain, to give an account of their murdering the late inca Atabilipa, and maſſacring his people; they continued therefore to cultivate a good underſtanding with the Indians of the ſouthern provinces, and treated the inca and his ſubjects as their friends and allies, promiſing to perform punctually whatever they had agreed on; knowing how great an advantage it muſt be to have the country in their intereſt, if they were obliged to contend with Alvarado for the poſſeſſion of it. They, however, at length found means to bribe Alvarado from the country, and perſuade moſt of his followers to enter into their ſervice.

Theſe additional forces rendered the adventurers very formidable, when Almagro marched to Cuſco; and Pizarro founded the city of Lima, and other places on the coaſt. Pizarro now, according to the grant of the emperor, remained in poſſeſſion of Peru, and Almagro made an expedition into Chili. Almagro advanced as far as the province of Charcas, 200 leagues to the ſouthward of Cuſco, without meeting with any thing to obſtruct his deſigns, that country being all under the dominion of the inca, and ſupplying him with proviſions as he went; but finding Charcas a wretched barren country, and being ignorant of the rich mines it contained, he reſolved to proceed further to the kingdom of Chili; though, had he known the invaluable mines of Potoſi were ſituated in this barren country, he would certainly have ſet up his reſt here, for in this mountain was afterwards found more ſilver than any, or perhaps all the countries in the Old World produced at that time.

Almagro was now informed by the Indians, that there were two ways to approach the kingdom of Chili, both extremely difficult and hazardous. The firſt was over a branch of the mountains of the Andes, or Cordilleras, which, at this time (being winter) were covered deep in ſnow, and ſo cold that no Indian could live on the tops of them, though this was much the ſhorteſt paſſage, if it could be performed; the other was over a ſandy deſert by the ſea-ſide, in which they would be in danger of periſhing by exceſſive heat, and the ſcarcity of water; intimating that they were averſe to the journey either way, but moſt dreaded that over the mountains of the Andes: however, Almagro, reſolving to remove forward, took the way of the mountains, as being the ſhorteſt, and more agreeable to the conſtitutions of his Europeans, than the ſcorching ſands; and having gathered what proviſions the country afforded, and laid it on the ſhoulders of the Indian porters, he began to aſcend the hills; but had not advanced far before he found the ſnows ſo deep, that they were forced to dig their way through them, the Indians dying by hundreds with the intenſe cold: The Spaniards, alſo, were almoſt ſtarved, and many of them periſhed with their horſes on thoſe mountains, either by cold or want; and ſome of the men, who eſcaped with their lives, loſt their fingers and toes. However, Almagro himſelf, with between 300 or 400 Spaniards, the inca Paulla, the high-prieſt, and about 5000 Indians, reached the other ſide of the mountains, and came into a fine temperate and pleaſant country. The people of Chili preſented the Spaniards with many preſents; and Almagro penetrated into the country a conſiderable way: but being informed, by the arrival of ſome Spaniards from Europe, that the part allotted to him by the emperor, included Cuſco, he returned to Peru.

Having ſuffered ſo much in their march over the mountains, the Spaniards and Peruvians returned by the way of the deſert, where the hardſhips they underwent were but little inferior to the former. In the mean time the inca Manco Capac, obſerving that Pizarro only gave him the title of Inca, and that in reality he had very little command even in the capital city of Cuſco, where he reſided, put him in mind of his promiſe of reſtoring him to his empire, and performing the capitulations that had been agreed on between them; but Pizarro put him off from time to time, telling him he muſt wait with patience till he heard that thoſe capitulations were ratified by his ſovereign the emperor, which he expected to receive every day by his brother Ferdinando, and was going to Lima in hopes of meeting him there; deſiring that the inca, during his abſence, would reſide in the caſtle, and not ſtir from thence. The inca finding they would make him priſoner by force, if he did not voluntarily ſubmit to this confinement, diſguiſed his reſentment, and immediately went to the caſtle.

The Indians were far from taking this impriſonment of their emperor patiently, and only waited for a favourable conjuncture to obtain his liberty; for Ferdinando Pizarro returning from Spain with his brother's new commiſſion, and the patent for the title of marquis, brought ſome orders with him that were not acceptable to the marquis or his people; particularly he informed them, that the emperor expected they ſhould be accountable to him for all the treaſure they had received as the ranſom of Atabilipa, his imperial majeſty alone being entitled to it, or at leaſt that they ſhould raiſe him a good round ſum, to be ſent over to Spain in lieu of it; but the marquis and his officers replied, this was neither reaſonable or poſſible; as they had hazarded their lives, and made a conqueſt of the country at their own expence, without any charge to his imperial majeſty, they ought to reap the fruits of their labour; and beſides, that money had been long ſince ſpent in ſupporting the conqueſt, building towns, and planting colonies, to preſerve what they had gained, which would all redound to the honour and profit of his majeſty, who by that means was confirmed and eſtabliſhed in the ſovereignty of that rich country.

Ferdinando hereupon deſired his brother would confer on him the government of the capital city of Cuſco, and he did not doubt but he ſhould ſoon have it in his power to raiſe a ſum of money to gratify the court of Spain; which the marquis conſenting to, his brother Ferdinando immediately repaired to his government of Cuſco; where obſerving that ſeveral officers had been greatly enriched by preſents Manco Inca had made them, in order to be kindly uſed, he applied himſelf alſo to the inca, giving him to underſtand, that he would be reſtored to his dominions, and all his demands granted, if he could procure a conſiderable ſum for the court of Spain; and ſuffered the inca to come out of the caſtle to his palace in the city again, and to be treated with the honours of a ſovereign prince. Whereupon the inca ſent expreſſes to ſeveral parts of his dominions, directing them

them to bring their uſual tribute of gold and ſilver plate, as the moſt probable means of delivering him from the hands of the Spaniards. The treaſures were brought, but the Spaniards ſtill deceived him, when he delivered himſelf by the following ſtratagem.

He pretended, that in the valley of Yarico great riches were hid, particularly a ſtatue of ſolid gold as big as life, but that none but himſelf could find out the place. Ferdinando Pizarro was deluded by this pretence, and ſuffered the inca to go to the valley with only a guard of Spaniards, from whom (as they did not ſuſpect his deſign) he made his eſcape. Being at liberty, he raiſed three powerful armies, one being deſigned againſt Lima, the ſecond to attack Cuſco, and the third to cut off Almagro. The principal army, under the inca himſelf, attacked Cuſco with great fury, but were repulſed with terrible ſlaughter. After cutting off ſeveral detachments of Spaniards, the ſecond Peruvian army inveſted Lima, which not being able to take, they only blockaded; but the third army did not attack Almagro, who arriving before the walls of Cuſco, ſummoned Ferdinando Pizarro to ſurrender, who refuſed; but the place was betrayed to Almagro by ſome of the garriſon, when the governor and another of the marquis of Pizarro's brothers were made priſoners.

The marquis of Pizarro, not hearing from his brothers, ſent a ſtrong force to Cuſco under the command of Don Alonzo de Alvarado. Peter de Lerma was ordered alſo to march with this detachment as a private captain of a troop of horſe, though he was an older officer than Alvarado, and had done great ſervice in thoſe wars; which ſo diſguſted de Lerma, that he, from this time, meditated the ruin of the enterpriſe, as is ſuppoſed by the Spaniſh writers. Alonzo de Alvarado continuing his march with the utmoſt diligence, moſt of the Indians that were preſſed to carry his baggage, amounting to upwards of 5000, periſhed in the firſt part of the journey, either by the intolerable fatigue, being loaded and driven beyond their ſtrength, or ſtarved for want of food.

Almagro, having received intelligence that Alonzo was advancing to the city, ſent ſome Spaniards of quality to him, to repreſent that Cuſco belonged to his government, according to the diviſion the emperor made of Peru, between him and the marquis de Pizarro, and therefore adviſed him to retire to Lima again, till he and the marquis ſhould adjuſt the limits of their reſpective governments: but Alvarado was ſo far from entertaining any pacific thoughts, that he made all the gentlemen priſoners that were ſent to treat with him. Whereupon Almagro took the field, conſtituting Don Orgonnez his lieutenant-general; and having made a party of Alvarado's horſe priſoners, underſtood by them, that great part of his troops were better affected to him, than they were to the Pizarros; particularly, he underſtood that Peter de Lerma, with a great many of his friends, would deſert Alvarado the firſt opportunity. He advanced therefore as far as the bridge of Abancay, on the other ſide whereof Alvarado lay encamped, ſo that there was nothing but a ſmall river that parted their forces; they remained quiet, however, without attempting to attack each other all day; but in the night time, Orgonnez fording the river, at the head of Almagro's horſe, put Alvarado's forces into great confuſion; and giving Peter de Lerma, and the reſt of their friends, by this means, an opportunity to join them, Almagro gained an eaſy victory, with very little bloodſhed, making Don Alonzo de Alvarado his priſoner; with whom he returned in triumph to Cuſco.

After the battle, Almagro marched with 500 Spaniſh horſe and foot, and ſome thouſand Indians, towards the valley of Chinca on the ſea-coaſt, taking with him his priſoner Ferdinando Pizarro; but he left Alonzo Pizarro and Alonzo de Alvarado priſoners in the city of Cuſco.

The marquis de Pizarro, in the mean time, hearing no news from Alonzo, and imagining the Indians might have poſſeſſed themſelves of the paſſes in the mountains, and thereby cut off his communication with that general, marched in perſon at the head of 300 or 400 Spaniards, towards the mountains, to get intelligence; and after ſome days march, received advice, that the Indians had raiſed the ſiege of Cuſco: that Almagro was returned from Chili, had poſſeſſed himſelf of that capital, and made his brothers Ferdinando and Alonzo priſoners; and that his other brother John Pizarro was killed during the ſiege of Cuſco; and a day or two after he had news brought him of the defeat of Don Alonzo de Alvarado. Whereupon he thought fit to retire to Lima, and fortify himſelf there, till he ſhould receive a reinforcement of troops, which he expected every day; and to divert Almagro from taking the advantage of his preſent weakneſs, and putting his brother to death, he diſpatched ſeveral Spaniards of quality to attend him, and offer him any terms he ſhould inſiſt upon, to procure his brother's liberty: Almagro was willing to treat, and an interview with only twelve horſemen of a ſide was agreed, but with ſo much treachery on Pizarro's ſide, that Almagro with great difficulty eſcaped an ambuſcade laid for him.

At length Pizarro, by various artifices, obtained the liberty of his brothers, and then demanded not only Cuſco, but all the conqueſts in Peru. Almagro very naturally rejected this unreaſonable requiſition, when a war immediately commenced between thoſe rivals; Almagro was defeated and taken priſoner, and at the ſame time the city of Cuſco was loſt. The unfortunate Almagro was afterwards cruelly put to death by his rival Pizarro; but the latter did not long ſurvive him, being aſſaſſinated in his palace at Lima by a natural ſon of Almagro. Thus untimely fell the two conquerors of Peru, by means of their own reciprocal enmity, of whom it is only neceſſary to ſay, that both were equally poſſeſſed of courage, fortitude, and temperance; but both were equally ambitious and rapacious. Almagro was the moſt generous, Pizarro the moſt politic; the former poſſeſſed the moſt noble ſentiments, but the latter had the greateſt penetration.

CHAP. XXIII

CHILI.

Situation, Extent, Boundaries, Diviſions, Climate, Animals, Fowls, &c. Chief Cities, Commerce, and Exports.

THIS country is ſituated between 12 and 37 deg. ſouth lat. and 50 and 75 deg. weſt long. being about 1500 miles in length, and 1000 in breadth, and bounded by Peru, on the north; La Plata on the eaſt; Patagonia, on the ſouth; and the Pacific Ocean, on the weſt.

DIVISIONS.	PROVINCES.	CH. TOWNS.
On the weſt ſide of the Andes...	Chili Proper.....	St. Jago. Baldivia. Imperial.
On the eaſt ſide of the Andes...	Cuyo, or Cutio....	St. John de Frontiera.

The Pacific Ocean, on the weſt, is the only ſea that borders upon Chili. The moſt noted rivers are, the Salado, or Salt River, Gacaſco, Caquimbo, Bohio, and the Baldavia; theſe fall into the Pacific Ocean, and are ſcarcely navigable but at their mouths. The principal bays, or harbours, are, Caſtro, Brewer's-Haven, La Moucha, Copiapo, Baldivia, Coquimbo,

Jata, Govanadore, Volupariſo, Santa Maria, Conception.

The climate of Chili, conſidered in general, is one of the moſt delightful in the world, being a medium between the intenſe heats of the torrid, and the piercing colds of the frigid zone. Along the coaſt of the Pacific Ocean, they enjoy a fine temperate air, and a clear ſerene ſky moſt part of the year; but ſometimes the winds that blow from the mountains, in winter, are exceedingly ſharp. There are few places in this extenſive country where the ſoil is not exuberantly fertile, producing Indian and European corn, hemp, grapes, and other fruits, ſome medicinal plants, and the panqua uſed in tanning leather; and were its natural advantages ſeconded by the induſtry of the inhabitants, Chili would be the moſt opulent kingdom of any in America.

The animal productions of Chili reſemble thoſe of Peru, but the latter has the preference. Their horſes and mules, particularly the former, are in great eſteem: horſes and aſſes were originally carried hither from Spain, and are greatly improved. Here are prodigious numbers of fine oxen, goats, and ſheep. Turkies, geeſe, and all kinds of poultry and wild fowl, are alſo found in great numbers in this country. A very particular ſpecies of bird is found in Chili, called diſpertadore, or the awakener. It is about the ſize of a middling fowl; its plumage black and white, has a thick neck, the head rather large, erect, and beautifully adorned with a tuft of feathers; its eyes are large, ſharp, and lively; its bill well proportioned, ſtrong, and a little curved. On the fore-part of its wings are two ſpurs, about an inch in length, of a reddiſh tinct towards the root, but their points reſemble thoſe of a cock, being very hard and ſharp. Theſe are the weapons it makes uſe of againſt other birds, particularly thoſe of prey. It has obtained the appellation of the awakener, from the notice it gives to its companions on the leaſt appearance of danger. On hearing the noiſe of the approach of any creature, whether man or beaſt, it immediately riſes from the ground, and makes a loud chattering, not unlike that of a magpye, continuing the noiſe, and flying about in the air over the object which cauſed the alarm. This being underſtood by every bird near, they take wing, and by that means avoid the impending danger.

The original natives of Chili, or the free Indians, have hitherto eluded all attempts of the Spaniards to civilize and reduce them. However, about the year 1723, the miſſionaries had formed ſeveral villages, and flattered themſelves that they ſhould induce their converts to practiſe the precepts they had endeavoured to inculcate; but an inſurrection happening at that time, their innate ſavageneſs returned, they abandoned the prieſts, and joined their countrymen; and there have lately been ſome formidable inſurrections of the Chileſians againſt the Spaniards, which have greatly alarmed the Spaniſh court. The Spaniards amount to about 20,000; and the Indians, negroes, and mulattoes, are ſuppoſed not to be fewer than 60,000.

The chief cities are St. Jago, Conception, and Baldivia, or Valdivia.

St. Jago, the capital of Chili, is ſituated in 77 deg. weſt long. and 34 deg. ſouth lat. It ſtands at the weſt foot of the Cordilleras, on the little river Mapocho. The town is about a mile in length, and half a mile in breadth. The ſtreets are all ſpacious, paved, and ſtraight. The houſes are low, to prevent their being demoliſhed by the earthquakes, to which this place is ſubject. That in July 1730 laid the greateſt part of it in ruins, and was ſucceeded by an epidemical diſtemper, which ſwept away moſt of thoſe who had eſcaped the preceding calamity.

Conception ſtands on the ſouth-weſt ſhore of a beautiful bay, on a ſmall declivity, having a little river running through it. The houſes are all either of mud-walls or unburnt bricks, but covered with tiles. This city ſuffered, if poſſible, more than St. Jago, by the ſame earthquake, ſucceeded by a dreadful inundation from the ſea, which, being followed by other violent ſhocks, demoliſhed the whole city.

Baldivia, or Valdivia, is ſituated on a river to which it gives its name. This city is defended by four ſtrong caſtles, mounting above 100 pieces of fine braſs cannon; but they are never properly ſupplied either with men or ammunition. This is the chief port whereby the commerce is carried on between Chili and Peru, and 10 large ſhips are conſtantly employed in that trade.

The foreign commerce of Chili is entirely confined to Peru, Panama, and ſome parts of Mexico. Their articles of export to theſe places are gold, copper, cattle, ſalted proviſions, corn, tallow, graſſa, hides, dried fiſh, neats tongues, hemp, flax, cordage, cocoa-nuts, Bend leather tanned, Cordovan leather, wines, and fruits: in return for which, they receive iron, cloth, hats, bays, though not many of the latter, there being manufactures of the ſame kind in Chili; ſugar, cocoa, ſweetmeats, pickles, tobacco, oil, earthen-ware, and all kinds of European goods, which are brought to the port of Callao for ſale.

HISTORY OF CHILI.

IN the hiſtory of Peru, we have already obſerved, that Almagro, who fell a victim to the imperious cruelty of Pizarro, attempted the conqueſt of Chili, but was defeated in his deſign by the Indians laying ſiege to Cuſco, which rendered his preſence neceſſary in that country. The conqueſt of Chili was therefore ſuſpended till the year 1541, when Pedro de Valdivia was ſent to finiſh the war which Almagro had begun. He penetrated to the valley of Mapocho, where he founded the city of St. Jago, and built a caſtle for its defence. The Chileſians attacked this caſtle; but Valdivia, receiving reinforcements from the viceroy of Peru, did all he could to ſecure his conqueſts. But ſtill it appears that he was not ſtrong enough to make any great progreſs; and the Indians giving out that there were many very rich gold mines in a certain part of the country, not far from St. Jago, drew a detachment of his forces (who went in ſearch of them) into an ambuſcade, and cut off every man of them, except their commander and a negro, who eſcaped to St. Jago by the ſwiftneſs of their horſes; whereupon Valdivia ſent for another reinforcement of troops, to enable them to advance againſt the Chileſians, and build the town and caſtle of Coquimbo, or Serera, on a bay of the ſea, to ſecure his communication with Peru.

The civil wars between the Spaniards in Peru breaking out, Valdivia was recalled, but afterwards returned to Chili with a large body of veteran troops. The Spaniards now diſagreeing among themſelves, the Chileſians took advantage of their broils, and deſtroyed the garriſons of Copiapo, and Coquimbo, demoliſhing, at the ſame time, the towns and fortifications. Valdivia, however, recovered what he had loſt, rebuilt thoſe towns, proceeded further ſouthward, and erected the town of Conception. The fortifications here being finiſhed, though under conſiderable difficulties, Valdivia determined to continue his route ſtill further ſouthward, when he founded the city of Imperial, four leagues eaſt of the Pacific Ocean, and 40 ſouth of Conception. From hence he marched to the mountains of Andes, 16 leagues eaſt of Imperial, and built the city of Villa Rica.

The braveſt nation of the Chileſians, called Araucans, had oppoſed the Spaniards with the greateſt ſucceſs, but had been at laſt obliged to ſubmit; and this being one of the moſt deſirable countries in Chili,

Valdivia,

Valdivia, in the diſtribution of the lands, had reſerved this valley for himſelf; and being ſenſible that the natives were not to be kept under but by pure force, he erected three caſtles in this valley, and left garriſons in them, while he marched further ſouthward. He built the town of Valdivia, where finding ſtill richer mines, it is ſaid, he employed 50,000 Indians in working them, and ſpent ſo much time in amaſſing wealth, that the Araucans, taking advantage of his abſence, engaged the whole country in a conſpiracy againſt the Spaniards, and choſe the celebrated Caupolican for their general.

Intelligence being received by Valdivia of the intended inſurrection, he returned in ſome haſte to the valley of Arauca, where he found 13 or 14,000 of the natives aſſembled in arms, whom he carged with his horſe, and obliged them to retire into the woods and encloſures as often as they appeared, but was not in a condition to diſperſe them entirely. They frequently rallied and attacked his troops; and thus they continued to encounter him for ſeveral days in a ſort of running fight. The Chileſian general, obſerving that his engaging the Spaniards with ſuch numbers only occaſioned confuſion among the people, thoſe in the front frequently giving way to the Spaniſh cavalry, and diſordering the reſt of his forces, before ever they were engaged, divided his army into battalions of 1000 each, ordering them to charge the enemy by turns. He repreſented to them, that the Spaniards were but 150 horſe, and that 1000 of his brave countrymen might eaſily maintain their ground for ſome time againſt ſo ſmall a number, notwithſtanding the advantage the enemy had in their arms and horſes. However, he only deſired they would make their utmoſt effort. He had no expectation that the firſt battalion would gain the victory, but when they found themſelves obliged to retire, required them to take care, in their retreat, not to diſorder the other bodies, but rally themſelves, and draw up in the rear, that they might be ready for a ſecond charge; and the ſame commands he gave to the officers of the other battalions.

The firſt battalion, in purſuance of theſe orders, engaged the Spaniſh horſe with great reſolution, and having held them in play ſome time, leiſurely retired, being ſucceeded by the ſecond, and that by the third, and ſo on, till the Spaniards had continued the engagement for ſeven or eight hours without intermiſſion, and both men and horſes began to faint with the labours of the day, or for want of refreſhment; which Valdivia too late obſerving, made a precipitate retreat, ordering his troops to take poſſeſſion of a paſs about a mile from the field of battle, where he did not doubt he ſhould be able to defend himſelf againſt all the power of the enemy. But a Chileſian, who had been page to Valdivia, and baptized by the name of Philip, whoſe Indian name was Lautaro, hearing his maſter give orders for their retreat, deſerted at that inſtant to his countrymen, and directed them to take poſſeſſion of the paſs before the Spaniards could arrive there. He bid them make uſe of the advantages they had in their hands, recover their liberties, and reſcue their country from deſtruction, by cutting off theſe thieves and uſurpers who had invaded it; and, taking a ſpear, charged his late lord Valdivia at the head of a company of Chileſians, while another detachment of the Indians ſecured the paſs as he directed them.

As the Chileſians now perceived the Spaniards were unable to reſiſt their attacks any longer, they preſſed them on every ſide, without giving them a moment's time to breathe. They cut them all in pieces on the ſpot, except the general Valdivia; him they bound and carried before Caupolican, the Chileſian general, who ordered him to be tied to a tree, that he might be executed with more ceremony than thoſe that fell in the battle. Valdivia, it is ſaid, meanly begged his life of the conquerors, addreſſing himſelf chiefly to Lautaro, who was but a few hours before his ſlave. He promiſed, if they would ſpare him, to withdraw all the Spaniſh forces out of Chili, and never more diſturb their peace, ſwearing by all that was ſacred to perform his promiſe; but the unrelenting enemy was deaf to his entreaties: even Lautaro obſerved, that it was madneſs to truſt to the promiſes of a captive, who would infallibly change his note if he was ſet at liberty; whereupon the general pronounced his doom.

Authors differ about the manner of Valdivia's execution. Some affirm that they poured melted gold down his throat, bidding him to ſatisfy himſelf with that metal he ſo violently thirſted after. Others relate, that one of the Indian caciques, not bearing to hear it debated whether the deſtroyer of their country ſhould live or die, beat out his brains with a club, without aſking the general's leave: and all the Spaniſh writers agree, that they made trumpets and flutes of his bones, and preſerved his ſkull as a memorial of that important victory, which they celebrated by feaſting and dancing after their country manner; and inſtituted public ſports and exerciſes, ſuch as running, wreſtling, and leaping, to be obſerved annually in memory of it; and expecting the Spaniards would give them another viſit, they encamped in ſome of their moſt inacceſſible woods and mountains, and Caupolican conſtituted Lautaro his lieutenant-general, for the ſervices he had done in the late battle, finding him every way qualified for that poſt. The Spaniards, however, attempted to recover their loſſes; the war continued about 50 years, but the Chileſians were moſt generally ſucceſsful, and at length almoſt expelled them from their country.

The Dutch being informed of theſe particulars in 1642, ſent a ſquadron of men of war under the command of Captain Brewer, with ſome land forces on board, to make a ſettlement at Chili. This officer arrived on the coaſt of Chili on the 30th of April, 1643; and landing 50 ſoldiers on the 20th of May, they had a ſmart engagement with a Spaniſh party, whom they defeated, and ſome Chileſians came on board, who gave the Hollanders hopes of ſucceſs; but Brewer, the Dutch commodore, dying, who projected the enterprize, and the natives growing jealous of the deſigns of the Hollanders, and ſeeming ready to join the Spaniards againſt them, Herekerman, who ſucceeded Brewer in the command of the ſquadron, thought fit to return home without effecting any thing, having firſt demoliſhed a little fort they had erected on the harbour of Valdivia.

An old Spaniard, who reſided in the court of England, having repreſented to King Charles II. that the Spaniards had been beaten out of moſt of their ſettlements on the coaſt of Chili, and that it would be no difficult matter for the Engliſh to poſſeſs themſelves of them, Sir John Narborough was ſent, in 1669, with a man of war, called the Sweepſtakes, of 36 guns, to view the coaſt of Chili, and inquire into the feaſibleneſs of planting colonies there: he was accompanied thither by the old Spaniard, named Don Carlos. Sir John paſſed through the ſtreights of Magellan, and not round Cape-Horn, as Brewer had done; and arriving on the coaſt of Chili near Valdivia, Don Carlos was ſet on ſhore, and took the road to the fort of Valdivia, which the Spaniards had rebuilt, being then in poſſeſſion of the country, and Don Carlos was never heard of more. The Spaniards permitted the Engliſh to trade with their people for trifles at firſt, but would not ſuffer them to have a communication with the Indians, and, at length, made one of the lieutenants and three ſeamen priſoners, whom they refuſed to releaſe, and what became of them was never known. Sir John Narborough ſoon after returned home, having no authority to commit hoſtilities againſt the Spaniards. In Queen Anne's reign the deſign of making ſettlements here was reſumed, but proved abortive.

Thus

Thus the martial genius of the natives continually retarded the progreſs of foreigners, and has always been the cauſe why the Spaniſh ſettlements here are ſo diſproportionate to the extent, fertility, and riches of the country. The free Indians are much more numerous than the Spaniards, who are computed at no more than 20,000. All the inhabitants of Chili, including Europeans, Meſtizoes, Mulattoes, and Negroes, are reckoned at 150,000 only. Even the free Indians, it ſeems, now acknowledge the dominion of the King of Spain, and pay tribute to his governor; but the ſubjected Indians belong entirely to the Spaniards, living among them, and ſerving them in the ſame manner as the natives of Peru and Mexico.

The greater part of Chili is ſtill poſſeſſed by the free Indians, who are rather allies than ſubjects of Spain, having, it is ſaid, in the laſt treaty, conſented to acknowledge the king of Spain for their lawful ſovereign, only upon condition that they were ſuffered to continue under the protection of their own laws and government; an engagement which it will be hazardous for the Spaniards to break, however it may counteract their great deſign of gaining entire poſſeſſion of theſe countries, and thereby repairing the conſtant decline of wealth and decay of their precious metals in their other ſettlements. The free Indians are governed by their own chiefs, whom the Spaniards call caciques, who claim no authority, beſides that of adminiſtering juſtice, and commanding their tribes in times of war; having neither palaces, guards, revenue, or any other badges of ſovereign authority, veſted in them.

CHAP. XXIV.

PARAGUAY, OR LA PLATA.

Situation, &c. Diviſions, Cattle, Poultry, Wild Animals, Chief Towns, Provinces, and Commerce.

THIS country is ſituated between the 50th and 75th deg. of weſt long. and between the 12th and 37th deg. of ſouth lat. being 1500 miles in length, and 1000 in breadth. It is bounded by Amazonia on the north; by Brazil on the eaſt; by Patagonia on the ſouth; and by Peru and Chili on the weſt.

Diviſions.	Provinces.	Chief Towns.
The eaſt diviſion contains.....	Paraguay.....	Aſſumption.
	Parana.....	St. Ann.
	Guaira.....	Cividad Real.
	Uragna.....	Los Reyes.
The ſouth diviſion contains.....	Tucuman.....	St. Jago.
	Rio de la Plata..	Buenos Ayres.

Beſides horſes, mules, ſheep, goats, hogs, poultry, game, grain, fruits, &c. this country produces an admirable drug called by the name of the country, Paraguay; which is an excellent emetic, and of itſelf might form a conſiderable article of commerce. The foreſts abound with wild beaſts, and the rivers and lakes, beſides various kinds of fiſh, with crocodiles, alligators, &c. The mines contain gold, ſilver, copper, iron, amethyſts, &c. To the weſt of the great river Paraguay, the country is barren, but to the eaſt, where the Jeſuits have erected a temporal and ſpiritual monarchy, it is fertile. The next conſiderable river is that of Plate or La Plata, which riſes in Peru, and falls into the Atlantic Ocean.

This country abounds with lakes, the chief of which are the Xaraya, the Caracoraes, and the Veronas. The principal bay is that at the mouth of the river La Plata, on which ſtands the capital city of Buenos Ayres, hereafter mentioned; and Cape St. Antonio, at the entrance of that bay, is the only promontory.

The climate of Paraguay differs but little from that of Spain; and the diſtinctions between the ſeaſons are much the ſame. In winter, indeed, violent tempeſts of wind and rain are very frequent, accompanied with ſuch dreadful claps of thunder and lightning, as fill the inhabitants, though uſed to them, with terror and conſternation. In ſummer, the exceſſive heats are mitigated by gentle breezes, which conſtantly begin at eight or nine in the morning. In ſhort, for the enjoyment of life, eſpecially with regard to the ſalubrity of the air, a finer country cannot be imagined.

Nueſtra Sennora de Buenos Ayres, the capital of Paraguay, ſtands on a point called Cape Blanco, in 34 deg. 34 min. ſouth lat. in a fine plain, riſing by a gentle aſcent from a ſmall river fronting it. It has ſtraight broad ſtreets, and is of a conſiderable extent, containing no leſs than 3000 houſes, built moſtly of chalk or brick. The river La Plata, is here ſeven leagues in breadth, and navigable for any ſhip 60 leagues above the town, but no further, by reaſon of a cataract. The Spaniards bring hither, down the river, part of the treaſures of Peru, and ſhip them for Spain, with vaſt quantities of hides, cotton, ſtuffs, fruits, and other commodities of this country, and their returns are very valuable.

There are three other towns in Paraguay, called Monte de Vides, Corrientes, and Santa Fé; but neither of them merits a particular deſcription.

What has rendered this province ſo very remarkable, is an extraordinary ſpecies of commonwealth which was eſtabliſhed in the interior parts by the labours of the Jeſuits. The foundations of this remarkaple republic were laid about the middle of the laſt century, when thoſe fathers obtained an uncontrolled liberty to practiſe every expedient, within certain limits, for converting the Indians, and forming them into a body or republic. At the ſame time time the governors of the adjacent provinces received ſtrict orders not to interfere, nor ſuffer any Spaniard to enter into this diſtrict without a licence from the fathers. On the other hand, the Jeſuits agreed to pay a certain capitation tax in proportion to the number of their converts, and to ſend a certain number to work in the mines, whenever they ſhould be wanted; and the miſſions became ſufficiently populous to anſwer the demand.

"The terms being ſettled (ſays a modern author) the Jeſuits applied themſelves with indefatigable induſtry to ſettle the country of which they had obtained a grant. They began with gathering a few Indian families they had before converted, from the ſeveral parts of the country where they were ſettled, and uniting them into a ſmall townſhip: upon this ſlight foundation they have erected a ſuperſtructure which has aſtoniſhed the world. Wholly intent upon executing the arduous undertaking, no difficulties could ſtop, no dangers repreſs their ardour. They viſited every tribe of the Indians; they molified the minds of the moſt ſavage nations; they fixed the moſt rambling; they ſubdued the moſt averſe to government. Thouſands of diſperſed families embraced their religion, and ſubmitted to their government. By this rapid increaſe, their ſubjects amounted a few years ago to near 400,000 families. They lived in towns, were regularly clothed, practiſed agriculture, carried on manufactures; and ſome of them profeſſed the polite arts of muſic and painting. They were inſtructed in the military art with the moſt exact diſcipline, and could bring a force of ſixty thouſand men, well armed, into the field. In order to effect theſe valuable purpoſes, the fathers had from time to time

brought

brought over from Europe ſeveral mechanics, muſicians, painters, &c.

"The whole country was divided into forty-ſeven miſſions or diſtricts, over each of which a Jeſuit preſided in chief. He reſided in a large and commodious houſe, called the Preſbytery: adjoining to this houſe are the church and the magazines. No perſon under the juriſdiction of the fathers had any thing that could be juſtly called his own property. Each man's labour was allotted him in proportion to his ſtrength, or to his ſkill in the profeſſion which he exerciſed. The produce was brought faithfully to the public magazines, from whence he was again ſupplied with all things which the managers judged to be expedient for the ſuſtenance of himſelf or his family. All neceſſaries were diſtributed regularly twice a week; and the magazines always contained ſuch a ſtock of proviſions and goods of every kind, as to anſwer not only the ordinary exigences, but to provide againſt a time of ſcarcity, or for thoſe whom accidents, age, or infirmities, have rendered incapable of labour. Under the Jeſuits, magiſtrates or caciques were choſen from among the Indians; theſe regulate all matters reſpecting marriages, decide ſuch differences as were too minute for the attention of the father, and gave him regularly an exact account of the ſtate of his diſtrict, and the merit and demerit of its inhabitants; and according to this report they were rewarded or puniſhed. Nothing could equal the obedience of the people of theſe miſſions, except their contentment under it. Far from murmuring that they have only the neceſſaries of life, by a labour which might, in ſome degree, procure them the conveniences of it, they thought themſelves a diſtinguiſhed and favoured people in wanting them; and they believed their obedience a duty, which not only ſecured their order and repoſe in this world, but the very beſt means of inſuring their happineſs in the next. This was carefully inculcated; and the Indians under their juriſdiction were, by their inſtructions, rendered an innocent people, civilized without being corrupted.

"In order to preſerve this innocence and tranquillity, the Jeſuits were extremely ſtrict in preſerving their privilege in keeping all ſtrangers from among them. If any perſon happened either through accident, or in purſuing his journey, to enter the country of the miſſions, he was immediately carried to the Preſbytery, where he was treated with great hoſpitality during his ſtay, but watched with the utmoſt circumſpection. The curioſities of the place were ſhewn him in company with the Jeſuit; but he was allowed no private converſation with any of the natives. In a reaſonable time he was civilly diſmiſſed, with a guard to conduct him to the next diſtrict without expence, where he was treated in the ſame manner till he had paſſed the limits of the country of the miſſions. Cautions equally ſtrict, and in the ſame ſpirit, they obſerved, whenever the natives were obliged to go out of their own territories. They avoided all manner of converſation with ſtrangers, looking upon them with a kind of horror; and therefore returned to their country as uninformed and untainted as they left it.

"It is impoſſible to imagine any thing in the Indies more regular or more magnificent than their pariſh churches; they were capacious, well built, and very elegantly furniſhed; gilding and painting ſtrike the eye on every ſide, all the ſacred utenſils were gold and ſilver, and many of them adorned with emeralds and other precious ſtones. Divine ſervice was celebrated with the moſt ſolemn ſplendor: on one ſide of the high altar were tribunes for the civil magiſtrates; and, on the other, the ſame conveniences for military officers: the father himſelf officiated with the utmoſt devotion. Their muſic, both vocal and inſtrumental, was far from being contemptible; and the Indians had a genius for muſic, which the fathers took care to cultivate."

In the year 1757, the court of Spain thought proper to make a ceſſion of ſome part of this territory to the crown of Portugal, in exchange for Santo Sacrament, and to make the Uragna the bounds of their poſſeſſions; but the inhabitants refuſed to comply with this diviſion, or to ſuffer themſelves to be tranſferred from one hand to another, like cattle, without their own conſent. We were, however, informed, upon government authority, that the Indians actually took up arms; but, notwithſtanding the exactneſs of their diſcipline, they wete eaſily, and with conſiderable ſlaughter, defeated by the European troops, who were ſent to reduce them. And in 1767 the Jeſuits were ſent out of America by order of the king, and their late ſubjects were put upon the ſame footing with the reſt of the inhabitants of the country.

PATAGONIA.

SOME writers have deſcribed Patagonia, at the ſouthern extremity of America, as part of Chili: but as neither the Spaniards, nor any other European nation, have any colonies here, it is almoſt unknown, and is generally repreſented as a barren, inhoſpitable country. Some of the inhabitants are from ſix to ſeven feet high, but the greater part of them are of a moderate and common ſtature. Some are mere ſavages, and others of a more gentle, humane diſpoſition. They live upon fiſh and game, and what the earth produces ſpontaneouſly. Their huts are thatched, and, notwithſtanding the rigour of the climate, they wear no other clothes than a mantle made of ſeal-ſkin, or the ſkin of ſome beaſt, and that they throw off when they are in action. Their complexions are tawny, their hair black, and they paint their faces and bodies with ſeveral colours. They are exceedingly hardy, brave, and active, making uſe of their arms, which are bows, and arrows headed with flints, with amazing dexterity. In 52 deg. ſouth lat. are the ſtreights of MAGELLAN, having Patagonia on the north, and the iſlands of TERRA DEL FUEGO, or the Land of Fires, on the ſouth. Theſe ſtreights extend from eaſt to weſt 110 leagues, but the breadth in ſome places falls ſhort of one. They were firſt diſcovered by Magellan, or Magelhaens, a Portugueſe, in the ſervice of Spain, who ſailed through them in the year 1520, and thereby diſcovered a paſſage from the Atlantic to the Pacific or Southern Ocean. In 1616, La Maire, a Dutchman, keeping to the ſouthward of theſe ſtreights, diſcovered in lat. 54, one-half of another paſſage, ſince known by the name of Straights La Maire; and this paſſage, which is practicable only in January and February, and is called doubling Cape Horn, has been generally preferred by ſucceeding navigators.

GUIANA, in South America, extends from the equator to the eighth degree of north latitude, and is bounded by the river Oronoque on the north, and the Amazons, on the ſouth, but is little known, except a ſlip along the coaſt, where the French at Cayennes, and the Dutch at Surinam, have made ſome ſettlements, which, from the unhealthineſs of climate, almoſt under the equator, and other cauſes, can hardly be extended any conſiderable way back. The inhabitants of Guiana are either natives who are of a reddiſh brown, or negroes and Europeans, or a mixed progeny of theſe. This country abounds in ſerpents of various kinds; one ſort, not venomous, meaſures ſometimes above 30 feet in length, and three in circumference: it has a taper tail armed with two claws, like thoſe of a dunghill cock; ſmall deer have been found in their ſtomach.

AMAZONIA is bounded by Terra Firma on the north, La Plata on the ſouth, Brazil and the

Atlantic Ocean on the eaſt, and by Peru on the weſt. It is 1200 miles in length, and 960 in breadth; but this vaſt extent of country is but little known, except along the banks of the great river Amazons, and towards the Braſilian frontiers. The river of Amazons is the largeſt in the world. It riſes in the Cordilleras, and increaſes in a moſt amazing manner as it proceeds towards the Atlantic, into which it diſembogues itſelf by 84 channels. It winds 5000 miles is ſeveral miles broad, and near 40 fathoms deep. Many rivers fall into it, particularly the rivers Negro, Xauxa, and Maranhon. No European nation has hitherto made any ſettlement here: ſome attempts have indeed been made by the Spaniards and Portugueſe, but always attended with vaſt difficulties, ſo that few of the adventurers ever returned back; and no gold is found in the country, as was expected.

THE SPANISH ISLANDS IN AMERICA.

CHAP. XXV.

CUBA.

Extent, Situation, Fertile Soil, Produce, Towns, Commerce, and valuable Exports.

THIS iſland extends in latitude from 20 deg. 20 min. to the tropic of Cancer, and from 75 deg. 15 min. weſt long. It lies 60 miles to the weſt of Hiſpaniola, 25 leagues to the north of Jamaica, 100 miles to the eaſt of Jucatan, and as many to the ſouth of Cape Florida, being about 700 miles in length, and not above 70 in breadth. A chain of hills, which runs through the middle of the iſland from eaſt to weſt, gives riſe to ſeveral rivers, but their courſe is ſo ſhort from thence into the ſea, that ſcarce any of them are navigable. The land near the ſea, being for the moſt part level, is flooded in the rainy ſeaſon, when the ſun is vertical.

The whole iſland is well watered, and agreeably diverſified with woods, lawns, and vallies. The ſoil is capable of producing, in the greateſt plenty, every thing that grows in the other American iſlands; and the Cuba, commonly called the Havannah tobacco, is particularly thought to excel that of all the world; and their ſugar would equal their tobacco in goodneſs, had they hands to cultivate the canes. The other products are, ginger, long pepper, and other ſpices; caſſia, maſtic, aloes, large cedars, and other odoriferous trees; oaks, pines, palm-trees, plenty of large vines, fine cotton trees, plantains, bananas, ananas, guavas, lemons, cocoas, and two ſorts of fruit, called camilor and guanavana; the firſt like a china-orange, and the other ſhaped like a heart, with a juice between ſweet and acid. There are ſeveral good harbours in the iſland, which belong to the principal towns, as that of St. Jago, facing Jamaica, advantageouſly ſituated, and ſtrongly fortified, but neither populous nor rich.

Havannah, the capital, on the north-weſt coaſt of the iſland, and fifty leagues from Cape Antonio, is a place of great ſtrength and importance, containing about 2000 houſes, a great number of convents and churches, and about 26,000 ſouls. Towards the cloſe of the war of 1756, this city after a long and obſtinate defence, ſurrendered, with all its forts and dependencies, to his Britannic majeſty's arms, by capitulation, on the 12th of Auguſt 1762; but was reſtored at the peace. The value of the cargo of the galleons, flota, and other ſhips which rendezvous here in September to take in proviſions and water, previous to their return to Old Spain, is ſeldom leſs than 7,000,000l. ſterling.

†

The other towns in the iſland, worth mentioning, are, St. Jago, which is much inferior to the Havannah, and ſtands at the bottom of a large bay, about two leagues from the ſea, on the ſouth ſide of the iſland; Santa Cruz, which has a tolerable harbour, and ſtands about 168 miles eaſt of the Havannah; Porto del Principe, ſituated on the coaſt, about 300 miles ſouth-eaſt of the Havannah; and Baracoa, ſituated on the north-eaſt part of the iſland, and having a ſmall harbour.

HISPANIOLA, OR ST. DOMINGO.

THIS iſland is poſſeſſed in common by the Spaniards and French, but the far moſt conſiderable part is now in the hands of the French. The great Columbus diſcovered it in 1492, and called it The Spaniſh Iſland, a denomination it has preſerved, under that of Hiſpaniola, ever ſince. It is ſituated about 13 leagues to the eaſt of Cuba, between the 17th and 21ſt deg. north lat. and the 67th and 74th of weſt long. The face of the iſland preſents an agreeable variety of hills, vallies, woods, and rivers; and the ſoil is allowed to be uncommonly fertile, producing ſugar, indigo, cotton, maize, caſſava-root, cocoa, coffee, tobacco, ginger, various kinds of drugs and dyeing woods, pine-apples, bananas, grapes, oranges, lemons, citrons, toronias, limes, dates, and apricots: in the centre of the iſland are mountains well covered with cabbage-trees, elms, oaks, pines, acajou, and other large and lofty trees. Salt is found in plenty, and great quantities of ambergris. Mines of ſilver and gold have been diſcovered, but they are not worked. Horſes and herds of cattle are ſo numerous in this iſland, that they ſupply the neighbouring colonies. There are alſo ſeveral kinds of fowl, and the coaſts abound in fiſh, but are alſo infected with alligators. The north-weſt parts, which are in poſſeſſion of the French, conſiſt of large fruitful plains, which produce the articles above-mentioned in great plenty. In ſhort, this is the pleaſanteſt and moſt fruitful iſland in the Weſt-Indies, being every where diverſified with hills and vallies, woods and rivers.

St. Domingo, the capital, is ſituated on the ſouth ſide of the iſland, has a ſpacious harbour, and is a large, well built city, inhabited by Europeans, creoles, mulattoes, meſtizoes, and negroes, whoſe number is about 30,000. This moſt ancient town in all the new world was founded by Bartholomew Columbus, brother to the Admiral, in 1504, who called it Domingo in honour of his father Dominic, which appellation the French give to the whole iſland. Conception, twenty leagues north of St. Domingo, belonging to the Spaniards, is alſo a conſiderable town.

Cape François, the capital of the French diviſion of the iſland of St. Domingo, is ſituated on a cape on the north ſide of the iſland, at the edge of a large plain, twenty leagues long, and about four broad, between the ſea and the mountains. There are few lands better watered, but there is not a river that will admit of a ſloop above three miles. This ſpace is cut through by ſtraight roads, forty feet broad, conſtantly lined with hedges of lemon-trees, intermixed with long avenues of lofty trees, which lead to plantations producing a greater quantity of ſugar than any country in the world. The town, which is ſituated in the moſt unhealthy place of this moſt extenſive and beautiful plain, conſiſts of twenty-nine ſtraight, narrow, and dirty ſtreets, divided into 226 allotments, which comprehend 810 houſes. The governor's houſe, the barracks, and the king's magazine, are the only public buildings which attract the notice of the curious; but thoſe that deſerve to be conſidered by the humane, are two hoſpitals, called the houſes of Providence, founded for the ſupport of thoſe Europeans who come hither without money or merchandize.

The

The harbour is only a bay, open to the N. and E. winds, before which is a conſiderable extent of ſand-banks, reefs, and rocks, by which it is ſheltered from the ſea. What is called the port, is in the bottom of the bay, about three quarters of a mile from the town; the W. point going in, which is high and ſteep, is called Point Picolet.

The town is ſituated on the W. ſide, about two miles from Point Picolet, cloſe to the water, and near the mountains; lat. 19. 45 N. long. 72. 13 W.

On the 18th of June 1793, the Civil Commiſſioners, Meſſrs. Sonthonax and Polverrel, arrived at the Cape from Port-au-Prince: they immediately ſuſpended Monſ. Galbau, the governor and commander of the troops at that place, and ſent him on board; on the 12th a number of mulattoes were encouraged by theſe gentlemen to come into the town, who, by unfair means, armed all the negroes belonging to the citizens, and encouraged them to aſſiſt in deſtroying the whites; which ſcene actually began on the 20th about noon, when a moſt horrid maſſacre took place, neither women nor children were ſpared; upwards of 10,000 white inhabitants were butchered, and 2500 ſaved themſelves in the French and American veſſels in the harbour: the wretches then began to plunder the town, after which they ſet fire to it; and on the 23d, when the Captain ſailed, the burning was going on, and there was only the church, government-houſe, le Caſerne, and Gregaric ſaved; they left there the Amerique of ſeventy-four guns. Captain Fanning ſailed in company with about 150 ſail of veſſels, bound to different ports in America, under convoy of two French ſeventy-fours, and four frigates.

Cape François was a neat, well-built city, the buildings chiefly of ſtone—ſaid to be as large as New-York. The large church has eſcaped the flames, being all of ſtone, and covered ſo as fire cannot make any impreſſion. The government-houſe has ſuffered much from the cannot ſhot. The ſoldiery were ſtill engaged in fighting in town. It is ſuppoſed that this diſaſtrous affair proceeded entirely from the difference between the two Commiſſioners, who aſſumed the power, and the Governor Galbau, who thought his rightful authority invaded. He headed a number of ſailors from the ſhips, who made the firſt attack, and repulſed the mulattoes, but they having at hand a number of negroes with arms, repulſed the ſailors and whites. Capt. Fanning, who brought this account to New-York, obſerves, that he could have carried off loads of plunder when he came away, as the inhabitants had left their houſes and property to ſave their lives.

As the French poſſeſs the moſt fertile part of this iſland, they omit no pains or induſtry which may tend to its improvement. Upwards of thirty years ago, it is ſaid, their exports in ſugar, indigo, tobacco, and coffee, amounted to 1,200,000l. annually, and there is no doubt they have been much exceeded by this time. The Spaniards themſelves alſo contribute greatly to increaſe the power and wealth of the French in this iſland; for, being poſſeſſed of great treaſures, and no induſtry, they laviſh their dollars in exchange for the manufactures and commodities of their indefatigable neighbours.

When Hiſpaniola was firſt diſcovered by Columbus, the number of its inhabitants was computed to be at leaſt one million: but ſuch was the infernal cruelty of the Spaniards, and to ſo infamous a height did they carry the oppreſſion of the poor natives, that they were reduced to ſixty thouſand in the ſpace of fifteen years. The gold mines here were found to be exceedingly rich, which brought all the robbers of Spain in crowds. The greater part of the male Indians periſhed in theſe mines; and almoſt all the females by the exceſſive labour of cultivating the fields of maize for the uſe of the conquerors; the others were maſſacred either in cool blood or in ranged battles, for ſo they called thoſe kinds of chaces which the Spaniards, covered with iron and followed by bull-dogs, made to a multitude of theſe unhappy wretches quite naked, and flying with all their might.

PORTO-RICO.

THIS iſland is ſituated between the 64th and 67th deg. of weſt long. and in the 18th of north lat. lying between Hiſpaniola and St. Chriſtopher's. It is about 100 miles in length, and 40 in breadth.

The chief part of the country is diverſified with woods, vallies, and plains; and is extremely fertile, producing the ſame fruits as the other iſlands. It is well watered with ſprings and rivers; but the air is exceſſive hot, and, during the rainy ſeaſon, very unwholeſome.

The north part of the iſland, which is the moſt barren, contains ſeveral mines, ſome of which formerly produced great quantities of ſilver and gold. It was on account of the latter that the Spaniards ſettled here, but there is no longer any conſiderable quantity found in it.

The woods are ſtored with parrots, wild pigeons, and other fowl. European poultry is found here in plenty, and the coaſt abounds with fiſh. A breed of dogs, which the Spaniards brought over to hunt and tear in pieces the defenceleſs natives, are ſaid to run wild in the woods near the ſea-ſhore, and ſubſiſt upon land-crabs that burrow in the ground.

Porto Rico, the capital town, is ſituated on a ſmall iſland on the north coaſt. This iſland forms a capacious harbour, and is joined to the chief iſland by a cauſeway. It is defended by forts and batteries, which render the place almoſt inacceſſible: it was, however, taken by Sir Francis Drake, and afterwards by the Earl of Cumberland, in the reign of Queen Elizabeth. The town is well built, and populous, being the centre of the contraband trade carried on by the Engliſh and French with the Spaniards; it is alſo the ſeat of a governor, as well as a biſhop's ſee.

The Spaniſh government have taken great pains to prevent an illicit trade being carried on at this place; but ſuch is the convenience of its ſituation for that traffic, that all the ſevere edicts iſſued againſt it have been ineffectual.

At the eaſt end of Porto-Rico are a number of ſmall iſlands, called Virgin Iſlands; and there is one on the ſame coaſt called Crab's Iſland, from the great number of crabs with which it abounds.

TRINIDAD.

THIS iſland is ſituated between the 60th and 62d deg. of weſt long. and in the 10th deg. of north lat. It lies between the iſland of Tobago and the Spaniſh main, from which it is ſeparated by the Streights of Paria, and is about 90 miles in length, and 60 in breadth. The number of inhabitants is ſmall when compared with the extent of the iſland, which may be attributed to the unwholeſomeneſs of the climate. The ſoil however is fertile, and produces ſugar, tobacco, indigo, cotton, ginger, and Indian corn. This iſland was taken by Sir Walter Raleigh in 1595, and by the French in 1676, who plundered it, and extorted from the inhabitants a conſiderable ſum of money. It was taken by the Engliſh this war, who have put in a garriſon of their own troops.

MARGARETTA.

THIS is a ſmall iſland ſituated in 65 deg. of weſt long. and in 11 deg. 30 min. of north lat. being about 40 miles in length, and 24 in breadth. It abounds in wood, paſture, Indian corn, and all kinds of fruit, but has very little good water.

Formerly

Formerly a valuable pearl-fiſhery was carried on here, but it is now diſcontinued. In 1620, the Dutch invaded this iſland, and demoliſhed the caſtle, ſince which it has been entirely abandoned by the natives.

There are ſeveral other ſmall iſlands in theſe ſeas, belonging to the Spaniards, but entirely diſregarded by them. In the South-Seas they claim the iſlands of Chiloe, St. Mary's, Quiriquina, de la Moca or Mocha, Juan Fernandez, Tierra, Fuerra, and many others; but Chiloe and Juan Fernandez are the only ones that deſerve to be deſcribed.

CHILOE.

THIS is a conſiderable iſland, on the coaſt of Chili, lies between 42 and 44 deg. ſouth lat. is above 112 miles long, and 21 broad. The ſouth part is divided from the continent by a narrow ſea, and the continent there makes a bay. This coaſt is ſubject to tempeſtuous weather, eſpecially in March, when winter begins. The Spaniards have but one little fort in this iſland, called Chacao, always ill provided with warlike ſtores. Except wine, this iſland produces all neceſſary refreſhments and proviſions; and a great deal of ambergris is found here. About this iſland are forty more, all taking name from it.

Theſe iſlands of Chiloe are by a late navigator reputed barren; but their ſoil is not really ſo, only the exceſſive rains choke the ſeed, and let no corn thrive; ſo that they are without wheat, wine, or oil, and other plants which need much ſun.

With reſpect to the climate of this cluſter of iſlands, we are told, it rains almoſt all the year; ſo that only maize, or other ſuch grain, can ripen, that do not want ſo much ſun. The diet of the natives is moſtly of a root called papahs, which grows bigger here than in any other place. The manufactures are clothing for the Indians, who have a kind of veſt, which they call macun, without ſleeves, over which is a kind of cloak. They have vaſt woods of cedar trees of a prodigious ſize, ſo as hardly to be encompaſſed by a rope of ſix yards long. Caſtro is the principal town, and is the reſidence of a governor; it has a harbour well fortified.

JUAN FERNANDEZ.

THIS iſland, which lies in 83 deg. weſt long. and 33 ſouth lat. 300 miles ſouth of Chili, is at preſent uninhabited; but having ſome good harbours, is found extremely convenient for the Engliſh cruiſers to touch at and water; and here they are in no danger of being diſcovered, unleſs when, as is generally the caſe, our good friends in Braſil give notice to the Spaniards of their arrival in the South-Seas, and their motions. This was formerly a place of reſort for the Buccaneers, who annoyed the weſtern coaſt of the Spaniſh continent; they were induced to come hither from the multitude of goats, which it nouriſhed; to deprive them of this advantage, the envious Spaniards tranſported to it a conſiderable number of dogs, which increaſing greatly, have almoſt extirpated the goats, who now only find ſecurity among the ſteep mountains in the northern parts, which are inacceſſible to their purſuers.

There are inſtances of two men living, at different times, alone on this iſland for many years; the one was a Muſquito Indian; and the other Alexander Selkirk, a Scotchman, who being left aſhore in this ſolitary place by the crew of an Engliſh ſhip, was at length diſcovered by Capt. Woodes Rogers, in 1709; when taken up, he had forgotten his native language, and could ſcarcely be underſtood, ſeeming to ſpeak his words by halves: he was dreſſed in goat's ſkins, would drink nothing but water, and he could not for a conſiderable time reliſh the ſhip's victuals. During his ſtay in this iſland, he had killed 500 goats, which he caught by running them down; and marked as many more on the ear, which he let go. Thirty years after, ſome of thoſe were caught by Lord Anſon's people, and bore ſtrong marks of antiquity. From the hiſtory of this recluſe, Daniel Defoe is ſaid to have conceived the idea of writing his celebrated performance, called the Adventures of Robinſon Cruſoe, Selkirk having, we are told, put his papers into the hands of Defoe, to prepare them for publication, for which they were probably too crude and indigeſted.

The GALLIPAGO ISLES, ſituated 400 miles weſt of Peru, under the equator; and thoſe in the bay of Panama, called the King's, or Pearl Iſlands; are, beſides the above deſcribed, the only places deſerving notice.

FUERA, OR MASA-FUERO.

In 1765, Commodore Byron anchored off this iſland, and ſent out his boats to endeavour to get wood and water; but as the ſhore was rocky, and a ſurf broke with great violence upon it, he ordered the men to put on cork jackets, by the help of which they brought off a conſiderable quantity of both. Here they found plenty of goats, which proved to be as good food as veniſon in England. In this expedition the gunner, and a ſeaman who could not ſwim, went on ſhore with the waterers, and, when the buſineſs was completed, the violence of the ſurf, which beat againſt the ſhore, made them afraid to venture off to the boat; they were, therefore, left behind on the iſland. The next day the Commodore ſent out a boat to bring them back. The gunner ſwam through the ſurf, and got on board; but the ſeaman had ſo thorough a preſage of being drowned in the attempt to reach the boat, that, preferring life to ſocial intercourſe, he choſe to remain on the iſland at all events.

Having formed this reſolution, he took an affectionate leave of the people in the boat. A midſhipman, however, juſt as they were about to return without him, taking one end of a rope in his hand, jumped into the ſea, and ſwam through the ſurf to the beach, where the poor inſolated deſpondent ſat ruminating on his ſituation. The young man remonſtrated to him on the abſurdity of the reſolution he had formed, and having made a running nooſe in the rope, ſuddenly threw it over the ſailor, and fixing it round his body, the people in the boat began to drag him through the ſurf, and thus brought him on board; though he had ſwallowed ſo great a quantity of water on his paſſage, that he was to all appearance dead; but proper means being uſed, he ſoon recovered, and was, no doubt, abundantly thankful for the friendly violence that had forced him from the dreary ſolitude which his fears had before courted.

This iſland is by Capt. Carteret deſcribed to lie in 33 deg. 45 min. ſouth longitude, 80 deg. 46 min. weſt, from Greenwich. It is very high and mountainous, and, at a diſtance, appears as one hill or rock. It is of a triangular form, and ſeven or eight leagues in circumference. Here is ſuch plenty of fiſh, that a boat, with a few hooks and lines, may preſently catch as much as will ſerve 100 people. Here are coal-fiſh, cavilliers, cod, hallibut, and cray-fiſh. Capt. Carteret's crew caught a king-fiſher that weighed eighty-ſeven pounds, and was five feet and a half long. The ſharks here were ſo ravenous, that, in taking ſoundings one of them ſwallowed the lead, by which they hauled him above water; but he regained his liberty by diſgorging his prey. Seals are ſo numerous here, that Capt. Carteret ſays, if many thouſands were killed in a night, they would not be miſſed the next morning. Theſe animals yield excellent train oil: and their hearts and plucks are very good food, having a taſte ſomething like thoſe of a hog.

Their

Their ſkins are covered with very fine fur. There are many birds here, and ſome very large hawks. Of the pintado bird the crew of the ſwallow caught 700 in one night.

After the foregoing deſcriptions of the Spaniſh ſettlements in America and the Weſt-Indies, a few remarks on the policy of the Spaniards with regard to their colonies in the New World, may not be improper.—Happy would it have been for the natives, and even for the Spaniards themſelves, had not South America produced ſuch amazing quantities of gold, or had the veins of that metal ſtill remained unknown in the bowels of the mountains: the former would not then have been ſacrificed at the ſhrine of avarice and cruelty, nor the latter bartered their virtue, induſtry, and military character, for inhumanity, indolence, and eaſe. No country in Europe receives ſuch vaſt treaſures as Spain, yet in no country in Europe is ſeen ſo little money; and, ſtrange as it may appear, from the time the Indies fell into the hands of Spain, the affairs of that monarchy have been conſtantly going backward. The treaſure which flowed in annually from the New World, found them in debt to every part of the Old; for to the reſt of their revenues they had forgot to add œconomy; a great revenue itſelf, and a ſure ſupport of all others. The Spaniards unhappily adopted no means of retaining their conqueſts but by extirpating the people; no ſchemes for the advancement of trade; no attempts for the reformation of abuſes, which became formidable in proportion to the miſchiefs they had ſuffered by them; ſo that in government, there was tyranny; in religion, bigotry; in trade, monopoly. The Spaniſh nation have relied too much upon their riches: and the whole ſtate being moulded into a ſyſtem of corruption from the top to the bottom, things grew at laſt ſo bad, that the evils themſelves became a ſpecies of remedies, and they felt ſo ſeverely the conſequences of their former conduct, that they have for ſome years paſt turned their thoughts into a new and much better channel. They are beginning to open the American trade to ſome other ports in Spain beſides Cadiz. They have made a difference, in point of duty, between their own manufactures and thoſe of foreigners. They are, in ſhort, opening their eyes to the true intereſt of their country; they are moving their hand, though ſlowly, to promote it; and may in time, by perſeverance, riſe again, while others ſhall fall, by adopting the abuſes which brought them to the brink of ruin.

At preſent, the politics of Spain, with regard to America, ſeem to be;—to preſerve South-America, and particularly the navigation of the South-Seas, as much as poſſible, to themſelves; to deſtroy effectually the contraband trade; and to encourage the export of their own manufactures.

PORTUGUESE AMERICA.

CHAP. XXVI.

BRASIL.

Situation, Extent, Boundaries, Diviſions, Climate, Soil, Produce, Animals, Lakes, Rivers, Fiſh, Inhabitants, Towns, Trade, and Exports.

THIS country is ſituated between the 35th and 51ſt deg. of weſt long. and between the equator and 35 deg. of ſouth lat. being about 700 miles in breadth, and 2500 in length. It is bounded by the mouth of the river Amazons and the Atlantic Ocean, on the north; by the ſame Ocean, on the eaſt; by the mouth of the river Plata, on the ſouth; and by a chain of mountains, which divide it from Paraguay, on the weſt.

Diviſions.	Provinces.	Ch. Towns.
North diviſion contains the captainſhips of	Para	Para, or Belim.
	Marignan	St. Lewis.
	Siara	Siara.
	Petaguez	St. Luc.
	Rio Grande	Tignares.
	Payraba	Payraba.
	Tamara	Tamara.
	Pernambuco	Olinda.
Middle diviſion contains the captainſhips of	Seregippe	Seregippe.
	Bahai	St. Salvador.
	Ilheos	Paya.
	Porto Seguro	Porto Seguro.
	Spirito Sancto	Spirito Sancto.
South diviſion contains the captainſhips of	Rio Janeiro	St. Sebaſtian.
	St. Vincent	St. Vincent.
	Del Rey	St. Salvador.

There are alſo ſome ſmall Iſlands on the coaſt of Braſil, where ſhips touch ſometimes for proviſions in their voyage to the South-Sea; particularly Fernando, St. Barbara, and St. Catharine's. Theſe will be deſcribed in their proper place.

The name Braſil was given to this country, becauſe great quantities of a wood of that name were found in it.

The coaſt of Braſil is waſhed by the Atlantic Ocean, on the north and north-eaſt, upwards of 3000 miles, forming ſeveral fine bays and harbours; viz. the harbours of Pernambuco, All Saints, Porto Seguro, the port and harbour of Rio Janeiro, of St. Vincent, of St. Salvador, on the north ſhore of the river La Plata, and the harbour of St. Gabriel. The principal capes are Cape St. Mary, the moſt ſouthern promontory of Braſil, Cape Roque, Cape St. Auguſtine, and Cape Trio.

In the ſouthern provinces the heat, though exceſſive, is tolerable; the air being conſtantly refreſhed with breezes that blow from the ſea, and likewiſe from the mountains in the inland parts of the country. But the northern provinces are ſubject to great rains, and variable winds, particularly in the months of March and September, when they have ſuch deluges of rain, accompanied with ſtorms and tornadoes, that the country is almoſt entirely overflowed, and the climate rendered extremely unwholeſome. The ſoil is in general amazingly fertile, producing ſugar, tobacco, indigo, ipecacuanha, balſam of Copiaba, and Braſil wood, which is of a red colour, hard and dry, chiefly uſed in dyeing, but the colour produced by it is none of the beſt. Here are alſo five different ſorts of palm-trees, woods of ebony, maſtic, cotton-trees, citron, &c. and many others which produce admirable fruits and balſams, diffuſing around a moſt delicious fragrancy.

The animals in Braſil nearly reſemble thoſe of Peru and Mexico: and no country in the world affords a greater number of birds; ſome remarkable for their beauty, and others for their taſte. Their eatable fowls are turkies, very large and delicious: alſo hens, ducks, &c. Their bats are of a prodigious ſize; they will go into houſes in the night-time, and if they find any perſon aſleep and uncovered, will faſten on them, and ſuck their blood.

The ſea-coaſts, lakes, and rivers, are ſtored with great plenty and variety of fiſh, among which is the globe fiſh, called by the Latins *orbis minor*, from its circular form; it is ſo beſet all round with ſharp ſpikes, like thoſe of a hedge-hog, as to bid defiance to all fiſhes of prey. But of all the living creatures in this ſea, the moſt remarkable is the ſea bladder, ſo called becauſe it greatly reſembles one, and ſwims on the ſurface of the waves. The inſide is only filled with air, except about a ſpoonful of water that

ſerves to poiſe it. The ſkin is thin and tranſparent, and, like a bubble raiſed in the water, reflects a great variety of colours.

The Portugueſe in America are repreſented, by the moſt judicious travellers, as a people at once ſunk into the moſt effeminate luxury, and practiſing the moſt deſperate crimes; of a diſſembling, hypocritical temper; of little honeſty in dealing, or ſingularity in converſation; alſo lazy, proud, and cruel. They are poor and penurious in their diet, not more through neceſſity than inclination; for, like the inhabitants of moſt ſouthern climates, they prefer parade, ſtate, and attendance, to the joys of free ſociety, and the ſatisfaction of a free table; yet their feaſts, though ſeldom made, are ſumptuous even to profuſion. Being ambitious to diſtinguiſh themſelves from the reſt of mankind, by ſhewing themſelves above uſing thoſe legs which nature hath given them to walk on, they cauſe themſelves to be carried about, in a moſt ſlothful manner, on beds of fine cotton hanging by the ends to a long pole, which two negroes carry either on their heads or ſhoulders. The bed is covered with a teſter or canopy, to which are hung ſome curtains to draw cloſe or open, by which the perſon is ſecured from rain, wind, and if he pleaſes from ſight. Thus lying along at his eaſe, and his head reclined on a ſoft velvet pillow, the proud ſluggard is carried about by his ſlaves more gaily than in a coach, or ſedan. Theſe cotton hammocks are called, according to our author, ſerpentins, and not palankins, as travellers commonly ſtyle them. Almoſt every perſon of faſhion paſſes in this manner through the ſtreets.

The city of St. Salvador, or Ciudad dà Bahai, is ſituated in the bay of All Saints, and has a noble, ſpacious, and commodious harbour. it is built on a high rock, having the ſea on one ſide, and a lake, forming a creſcent, inverting it wholly on the other. This ſituation has rendered it almoſt impregnable by nature, to which ſtrong fortifications have been added by the Portugueſe. The houſes are handſome, and the public buildings ſumptuous and magnificent. A prodigious trade is carried on in this city; and the ſtreets are crowded with negroes of both ſexes, quite naked, except a piece of cloth wrapped round their middle.

All the ſhips in the Braſil trade, being under the direction of the government, have their appointed ſeaſons for going and returning, under a convoy of a certain number of men of war; nor can a ſingle ſhip clear out, or ſet ſail, except with the fleet, but by a ſpecial licence from the king, which is ſeldom obtained. The fleets ſail in exact order and at ſtated periods, viz. the firſt to Rio Janeiro, in January; the ſecond to Bahai, or the bay of All Saints, in February; and the third and laſt to Fernambuco, in the month of March. About May or June they all rendezvous in the bay of All Saints, and ſet ſail together for Europe, with a cargo little inferior in value to the treaſures of the flota and galleons: the gold alone amounts to near four millions ſterling; but this is not all extracted from the mines in Braſil, for they bring from Africa, eſpecially from their ſettlement at Mozambique, vaſt quantities of gold, together with ebony and ivory, which goes into the amount of the cargo of the Braſil fleets for Europe. Great part of their gold is coined in America.

The exports of Braſil are gold, diamonds, and other precious ſtones; ambergris, ſugar, tobacco, indigo, balſams, cotton, hides, tallow, Braſil wood, roſin, and ſweetmeats. Formerly the Portugueſe employed only twelve ſhips in their Braſil commerce; but at preſent there are no leſs than twelve hundred ſail of large veſſels conſtantly going to and returning from theſe colonies. The ſlave-trade, from the number of ſlaves annually tranſported from Africa to Braſil, alſo employs a great number of ſhips.

In order to form ſome idea adequate to the riches of the Braſil fleet, it is neceſſary to obſerve, that the diamond-mines are not rented at one-fifth part of their real value; and that there is returned to Europe, in thoſe precious ſtones, to at leaſt the value of 130,000l. This, with the ſugar, which is principally the cargo of the Fernambuco fleet, the tobacco, the hides, the valuable drugs for medicine and manufactures, may convince us of the importance of this trade, not only to Portugal, but to all the trading powers of Europe. The returns to Braſil are not the fiftieth part of the produce of Portugal: they conſiſt of the woollen goods of all kinds from England, France, and Holland; the linens and laces of Holland, France, and Germany; the ſilks of France and Italy; oil from Spain; lead, tin, iron, copper, and all ſorts of utenſils wrought in theſe metals, from England, as likewiſe ſalt-fiſh, beef, flour, and cheeſe: wine, with ſome fruits, is nearly all with which they are ſupplied from Portugal. The profits in this trade are exceedingly large, yet few of the Portugueſe merchants trade upon their own ſtocks, but are generally credited by the foreign merchants, whoſe commidities they vend, eſpecially the Engliſh.

The Portugueſe, following the example of the Spaniards, have endeavoured to prevent all foreign powers from trading to their plantations; but theſe regulations are as little attended to in Portugal as in Spain. The Portugueſe are properly nothing more than truſtees and factors, in which capacity they act with a fidelity equal to that of the Spaniards; though it is well known that, in moſt other occurrences, this nation is not remarkable for their ſentiments of honour.

Some writers have repreſented the Braſilians as very ſavage, devoid of all principles of religion, cruel in war, and cannibals, or devourers of fleſh; but theſe ſtories are generally looked upon as fictions of the Portugueſe, to juſtify their cruel and inhuman treatment of them. They believe in certain inviſible beings, the diſpenſers of good and evil, the rewarders and puniſhers of virtue and vice: and their notion with reſpect to a future ſtate is, that after death they ſhall viſit their anceſtors, dwelling beyond the Andes; but they have no temples. Their prieſts make them believe, that if they bring them offerings, thoſe inviſible beings, who give them food and all the good things they enjoy, will proſper their affairs, but if they neglect this, ſome terrible misfortune will befal them. They have caciques who rule them in peace, and lead them in war. Their towns are without walls; their mode of carrying on war is by ambuſcades, and their weapons are bows, arrows, wooden clubs, and ſhields for defence.

HISTORY OF BRASIL.

AMERICUS VESPUSIO was the firſt diſcoverer of Braſil, in 1498, but the Portugueſe did not plant it till 1549, when they ſettled at the bay of All Saints, and founded the city of St. Salvador, or St. Saviour. The court of Spain, conſidering the whole continent of South America as their property, gave them ſome interruption at firſt, but the affair was at length adjuſted by treaty, and the Portugueſe were allowed to poſſeſs all the country lying between the two great rivers Amazon and Plata, which they ſtill enjoy. The French afterwards attempting to plant colonies on this coaſt, were driven from thence by the Portugueſe, who remained without a rival till 1580, when they were ſtruck down by one of thoſe incidents, which at one blow often decides the fate of kingdoms. Don Sebaſtian, king of Portugal, loſt his life in an expedition againſt the Moors in Barbary, by which event the Portugueſe loſt their liberty, their kingdom being abſorbed into that of Spain. Some time after, the Dutch becoming independent, firſt attacked the Spaniſh, and afterwards the Portugueſe American territories: they took almoſt all the fortreſſes of the latter in the Eaſt-Indies, and ſome time after took

ſeven

ſeven of the captainſhips or provinces of Braſil; and would have ſubdued the whole country, had not their career been ſtopt by the archbiſhop, at the head of his monks, and a few ſcattered forces: however, about the year 1654, the Dutch were entirely driven out of Braſil; but their Weſt-India company, continuing their pretenſions, ſtill purſued the Portugueſe at ſea, till the latter agreed, in 1661, to pay the Dutch eight tons of gold to relinquiſh their intereſt in that country; which was accepted.

The only iſlands on the coaſt of Braſil, belonging to the Portugueſe, which merit deſcription, are thoſe of Fernando de Norona, Barbara, and St. Catharine's.

Fernando de Norona lies in 3 deg. 50 min. ſouth lat. and 30 deg. 35 min. weſt long. It is only about twenty miles in circumference, and almoſt wholly inſuſceptible of tillage, for want of moiſture, inſomuch that from the ſcarcity of water, the plants wither and die in their growth. Here are two harbours capable of receiving ſhips of the greateſt burden, and two ſmall forts are erected on the eaſt part. The French took poſſeſſion of this iſland ſoon after the Portugueſe ſettled at Braſil, but they were driven out in 1738, when the latter ſent a colony thither.

St. Barbara is a very ſmall iſland ſituated near the coaſt of Braſil, in 18 deg. 6 min. ſouth lat. and 40 deg. 4 min. weſt long. it is no more than 12 miles in circumference, but very fertile, and at the ſame time very thinly inhabited: it has no harbour capable of receiving ſhips of any conſiderable burden, and therefore very little frequented.

St. Catharine's is ſituated in 27 deg. 45 min. ſouth lat. and in 47 deg. 58 min. weſt long. It is about 27 miles in length, and ſix in breadth, and lies about 10 miles eaſt of the coaſt of Braſil. The ſoil is very luxuriant, producing fruits of moſt kinds ſpontaneouſly. The ground is covered with one continued foreſt of trees, of a perpetual verdure. Fruits and vegetables of all climates thrive here, almoſt without culture, and are produced in the greateſt plenty; ſo that there is no want of pine-apples, peaches, apricots, grapes, oranges, lemons, citrons, melons, plantains, onions, and potatoes. Here are a ſpecies of wild black cattle, reſembling buffaloes; monkeys, parrots, and pheaſants. The harbours and bays are ſtored with plenty of excellent fiſh, of various kinds. The water is extremely good, and found in various parts of the iſland. But amidſt all theſe bounties of nature, the air is far from being ſalutary, owing to the woods and mountains, which prevent a free circulation, and to other cauſes.

CHAP. XXVII.

FRENCH AMERICA.

BEFORE the war of 1756, the French made their poſſeſſions in North America, to conſiſt of almoſt the whole continent; and divided this vaſt country into two great provinces, the northern of which they called Canada (comprehending a much greater extent than the Britiſh province of that name, and in which a great part of the provinces of New-York, New-England, and Nova-Scotia, was included.) They called the ſouthern province Louiſiana, compriſing therein a diviſion of Carolina. Theſe unreaſonable claims, and the meaſures taken by the French to ſupport them, laid the foundation of the war in 1756, between Great-Britain and that nation, the iſſue of which has been already noticed. But while the French were uſing every means to increaſe their infant colonies, and with the moſt flattering hopes forming vaſt deſigns of an extenſive empire, one injudicious ſtep in politics loſt them the whole; and their imaginary dominions, which had no exiſtence but in their maps, vaniſhed like ſmoke. Having over-rated their ſtrength, they commenced hoſtilities many years too ſoon; and the conſequence was, they were forced to yield to Great-Britain all that fine country of Louiſiana, eaſtward of the Miſſiſſippi; but at the treaty of peace in 1763, they were allowed to keep poſſeſſion of the weſtern banks of that river, and the ſmall town of New Orleans, near the mouth of it; and even this they ceded to Spain in 1769, for reaſons beſt known to themſelves.

OLD CAYENNE, OR, EQUINOCTIAL FRANCE.

THIS country is ſituated between the equator and 5th degree of north lat. and between the 50th and 55th of weſt long. It extends 240 miles along the coaſt of Guiana, and near 300 miles within land; is bounded by Guiana, on the weſt; by Amazonia, on the ſouth; by the Atlantic Ocean, on the eaſt; and by Surinam, on the north. Caen is the chief town. The land along the coaſt is low, marſhy, and very ſubject to inundations during the rainy ſeaſons, from the multitudes of rivers which deſcend with great impetuoſity from the mountains; higher up there are five hills, very proper for ſettlements, where the air is healthy, and the heats greatly mitigated by the ſea breezes; but the French have not yet extended them ſo far as they might, though they raiſe here the ſame commodities which they have from the Weſt-India iſlands, and in no inconſiderable quantity.

The iſland of CAYENNE, which the French have taken poſſeſſion of, on this coaſt, lies at the mouth of the river of that name, and is about 45 miles in circumference, it is very unhealthy, but having ſome good harbours, they have ſeveral ſettlements; but the fort, which ſtands at the bottom of one of the harbours, has no other freſh water than what is ſaved from rain in large ciſterns. The iſland is, however, extremely fertile in ſugar, coffee, tobacco, Indian corn, plants, fruits, and other neceſſaries of life.

CHAP. XXVIII.

FRENCH ISLANDS IN AMERICA.

MARTINICO.

THIS is the moſt conſiderable of all the Weſt-India iſlands belonging to the French. It is ſituated about 120 miles north-weſt of Barbadoes, between the 14th and 15th deg. of north lat. and in 61 deg. weſt long. The inland parts are mountainous, and from thence ariſe numerous rivulets, which in their courſe towards the ſea at once adorn and fertilize the country. The ſoil is in general fertile, and yields ſugar, tobacco, cotton, coffee, ginger, pimento, indigo, cocoa, aloes, plantains, and ſuch fruits as are common in theſe parts. Its bays and harbours, are numerous, ſafe, and commodious; and ſo well fortified, that they for ſome time bid defiance to the attempts of the Engliſh to take the place; but in the war of 1756, when the Britiſh arms were everywhere triumphant, this iſland ſurrendered to them, but was reſtored to the crown of France at the peace. Sugar is here, as in all the Weſt-India iſlands, the principal commodity, of which they export every year a conſiderable quantity. Martinico is the reſidence of the governor of the French iſlands in theſe ſeas. The moſt conſiderable places in the iſland are St. Pierre,

Pierre, Port-Royal, and Trinity-Town. An ineffectual attempt to take this iſland was made by the Engliſh in 1793.

GUADALUPE.

THIS iſland is ſituated in 16 deg. north lat. and in 62 deg. weſt long. about 30 leagues north of Martinico, and almoſt the ſame ſouth of Antigua: it is about 45 miles long, and 38 broad, and divided into two parts by a ſmall arm of the ſea, or rather a narrow channel, through which no ſhips can venture; the inhabitants paſs it in a ferry-boat. It has a healthy air; and the ſoil is amazingly fertile, producing ſugar, coffee, cotton, indigo, ginger, baſtard cinnamon, and a variety of vegetables. This iſland is in a flouriſhing condition, and its exports of ſugar, which is of an excellent quality, are almoſt incredible, amounting, it is ſaid, to 100,000 hogſheads annually: and it is aſſerted, that if the ſoil of Guadalupe was as well cultivated as that of Barbadoes, it would yield ſugar enough to ſupply all Europe. Every attempt to reduce this iſland proved ineffectual, till the year 1759, when it was obliged to ſubmit to the Engliſh valour; but, like Martinico, it was, by the treaty of peace in 1763, given back to the French. It was again reduced by the Engliſh in 1794, but evacuated a few months after. Guadalupe was ſo called by Columbus, from the reſemblance of its mountains to thoſe of that name in Spain.

ST. LUCIA.

THIS iſland is about 23 miles in length, and 12 in breadth; and ſituated in 14 deg. north lat. and in 61 deg. weſt long. 80 miles north-weſt of Barbadoes. It is diverſified with hills and vallies, well watered, and furniſhed with excellent harbours; ſo that upon the whole, it is eſteemed one of the beſt iſlands among the Caribbees. The land is rich, but little of it cleared. The woods yield excellent timber, and abound in wild fowl, as the ſurrounding ſea does in fiſh. The Engliſh firſt ſettled on this iſland in 1637. From this time they encountered with various misfortunes from the natives and French; and by the Definitive Treaty it was agreed on between the latter and the Engliſh, that this iſland, together with Dominica and St. Vincent, ſhould remain neutral. But before the war of 1756 broke out, the French began to ſettle theſe iſlands, which, by the treaty of peace, were yielded up to Great-Britain, and this iſland to France. The Engliſh made themſelves maſters of it in 1778, but it was reſtored to the French by the ſubſequent peace; and was declared a free port under certain reſtrictions. It was taken by the Engliſh in the preſent war, and ſtill remains in their poſſeſſion.

TOBAGO.

THIS iſland lies in 11 deg. 15 min. north lat. and in 60 deg. 27 min. weſt long. being 40 leagues ſouth by weſt from Barbadoes, about 35 ſouth-eaſt from St. Vincent, 40 eaſt from Grenada, and between 30 and 40 from the Spaniſh main. It is 32 miles in length, about 9 in breadth, and 70 in circumference; ſo that it is rather larger than Barbadoes, or, indeed, any of our Leeward Iſlands; and near the north-weſt extremity lies a ſmall iſland called Little Tobago, which is two miles in length, and one in breadth.

The climate is far more temperate than could be expected in an iſland that is but 11 deg. 10 min. north from the equator; for the force of the ſun is diminiſhed by the ſea breezes. The ſpice and gum trees, with which it abounds, contribute to its ſalubrity. Tobago has another favourable circumſtance to recommend it, namely, its lying out of the track of thoſe hurricanes that often prove ſo fatal to the other Weſt-India iſlands. The north-weſt extremity is mountainous, but the reſt of the iſland agreeably diverſified with riſings and fallings. The ſoil, in general, is a rich black mould, proper for producing, in the greateſt plenty, whatever is raiſed in other parts of the Weſt-Indies. There are many ſprings, together with commodious bays and creeks. But the valuable trees which grow here are, perhaps, its greateſt riches; for, beſides the different kinds of wood that are found in the other Weſt-India iſlands, it is ſaid, that the true nutmeg-tree, and the cinnamon-tree, with that which produces the real gum copal, are found on this iſland. The fig-trees of Tobago are reckoned equal to thoſe of Spain and Portugal. Indian and Guinea corn, French beans, various kinds of peas, the coſhou-apple, that is both meat and drink, and yields an excellent lamp-oil; the prickle-apple, banana, pomegranate, pine-apple, ſweet and bitter oranges, lemons, ſugar, tobacco, indigo, ginger, ſarſaparilla, ſemper vivum, citrons, vanellos, limes, guavas, plantains, tamarinds, grapes, cuſtard-apple, ſour-apple, papaw-apple, mammea-apple, yellow plum, cherries; the cocoa-tree, that yields both meat, drink, and clothing; muſk, cucumbers, water-melons, pumkins, gourds, potatoes, yams, carrots, turnips, parſnips, onions, caſſada-root, natural balſam, ſilk-graſs, with five different ſorts of pepper, the long, the cod, the bell, the round, and the Jamaica.

As for animals, here are wild hogs, pickarees, which reſemble a hog; armadilloes; guanoes, which are of the alligator kind; Indian conies, badgers, horſes, cows, aſſes, ſheep, deer, goats, and rabbits. No iſland in the world, we are told can boaſt of ſuch a variety of fiſhes, both ſhell and others, particularly turtle and mullets, of a moſt delicious taſte. Of the feathered ſpecies there is alſo a great variety. Laſtly, in different parts of the iſland are found green tar, ſoap earth, with many curious ſhells, ſtones, marcaſites, and minerals.

King Charles II. granted this iſland to the duke of Courland, under whoſe auſpices a colony of Engliſh, and another of Dutch, were ſettled on it: but their plantations were ſo often ravaged by the Caribbees of the neighbouring continent, that the Engliſh abandoned the place. The Dutch, however, continued in their ſettlements, and had ſuch an opinion of their value and importance, that they long ſupported themſelves with the moſt obſtinate perſeverance again all the attempts of the Engliſh and French. It was declared a neutral iſland by the treaty of Aix-la-Chapelle, in 1748; ceded to the Engliſh by the treaty of 1763; taken by the French in June 1781, and yielded to them by the late peace. It was taken by the Engliſh April 15, 1793.

MARIGALANTE.

THIS iſland was diſcovered by Columbus, in his ſecond voyage to America, in 1493, and received its appellation from that of his ſhip. It is ſituated a little to the ſouth-eaſt of Guadalupe, about five leagues in length, and four in breadth: it abounds in all the productions of the other iſlands. A great many grottoes are found here, abounding with large land crabs; and the high rocks, that run along the eaſtern ſhore, being full of great holes, give ſhelter to vaſt numbers of tropical birds. There are ſeveral rivers and ponds of freſh water in the iſland. The French began to ſend colonies hither about the year 1647; and, before the laſt reduction of it by the Britiſh arms, it manufactured above one thouſand hogſheads of ſugar annually.

ST. MARTIN, ST. BARTHOLOMEW, AND DESEADA.

THESE are three of the moſt inconſiderable iſlands the French poſſeſs in theſe parts.

ST. MARTIN lies a little to the north-weſt of St. Bartholomew, and is of no conſeqnence whatever.

ST. BARTHOLOMEW is ſituated about ten leagues north

north of St. Chriſtopher's, and, though encompaſſed with formidable rocks, produces tobacco and caſſava, with ſome excellent woods, and lime-ſtone; but this iſland is now to be conſidered as belonging to the crown of Sweden, being ceded to it by France in 1785.

DESEADA, which is a corruption of the word Deſiderada, or the Deſirable Iſland, was ſo called by Columbus, from being the firſt land he diſcovered in his ſecond voyage to America. It is ſituated about twenty miles north-eaſt of Guadalupe, and is ſaid to produce the beſt cotton of any of the French Weſt-India iſlands.

Though the French were among the laſt nations who formed ſettlements in the Weſt-Indies, they have made ample amends for the time they had loſt by the vigour with which they purſued their undertakings, and by that chain of judicious and admirable meaſures which they uſed in drawing from them every advantage which the nature of the climate would admit, and in ſtruggling with the difficulties which attend all infant ſettlements, eſpecially in the torrid zone.

As France is become ſenſible that all the benefits of her labours and acquiſitions, as well as all the proſperity of her plantations, muſt be derived from the attention with which they are regarded at home; we ſhall therefore lay before our readers ſome part of the wiſe plan of conduct which this politic nation purſued, in order to render her colonies ſo highly advantageous to the mother country.

The colonies were particularly under the care and inſpection of the council of commerce; a board very judiciouſly conſtituted to anſwer all the purpoſes for which it was deſigned: for, to give it a proper reſpect and authority, it is compoſed of twelve of the moſt conſiderable officers of the crown; and then to enable it to judge perfectly of the matters which come before it, theſe twelve are aſſiſted by the deputies of all the conſiderable trading cities and towns in France, choſen out of the richeſt and moſt intelligent of their traders, and paid handſome ſalaries for their attendance at Paris, from the funds of their reſpective cities. This council ſits once a week. The deputies propoſe plans for redreſſing every grievance in trade: for raiſing the branches that are fallen; for extending new ones; for ſupporting the old; and in fine, for every thing that may improve the working or promote the vent of their manufactures, according to their own lights, or the inſtructions of their conſtituents. They keep a watchful eye upon every article of commerce; and they not only propoſe helps and improvements to it themſelves, but they hear the propoſals of others, which are not diſdainfully rejected, nor raſhly received; nor do they render the acceſs to themſelves difficult by unwieldy ſtate. They do not diſcourage thoſe who apply, by admitting the vexatious practice of fees, perquiſites, and exactions in their inferior officers. They do not ſuffer form and methods to load and burden that buſineſs they were ſolely intended to advance. They ſummon and examine thoſe who are ſuppoſed the moſt competent judges of the matter before them, and of every part of it, even the loweſt artizans. But though they examine thoſe men, and gain inſtruction from their experience, they are not determined by their opinions. When they are ſatisfied of the uſefulneſs of any regulation, they propoſe it to the royal council, where their report is always received with particular attention. An edict to enforce it iſſues accordingly, and it is executed with a punctuality which diſtinguiſhes their government, and which alone can render the wiſeſt regulations any thing better than ſerious mockeries. To the care of this body the plantations are particularly intruſted.

That the colonies may have as little load as poſſible, and that the governor may have leſs temptation to ſtir up troubleſome intrigues, or favour factions in his government, his ſalary is paid by the crown. His perquiſites are none; and he is ſtrictly forbidden to carry on any trade, or to have any plantations in the iſlands or on the continent, or to have any intereſt whatſoever in goods or lands within his government, except the houſe he reſides in, and a garden for his convenience and recreation. All the other officers are paid by the crown out of the revenues of France; the fortifications are built and repaired, and the ſoldiers are paid out of the ſame fund.

The colonies pay hardly any taxes; and when upon an extraordinary emergency taxes have been raiſed, they are very moderate; and even then, they who have begun new plantations are exempted from them. The duty upon the export of their produce at the iſlands, or at its import into France, is next to nothing; in both places hardly making two per cent. The commodities exported from France to the iſlands pay no duty.

Beſides thoſe above-mentioned, their regulations reſpecting the judges of the admiralty, law-ſuits, recovery of debts, lenity to ſuch as have ſuffered by earthquakes, hurricanes, or bad ſeaſons, the peopling their colonies, number of whites to be employed by the planters, and, laſtly, the management of negroes, cannot be ſufficiently admired; and ſome of them would, no doubt, be of great ſervice, were they introduced into our ſugar iſlands, where ſuitable regulations in many reſpects ſeem to be loudly called for.

CHAP. XXIX.

DUTCH AMERICA.

SURINAM, OR DUTCH GUIANA.

THIS country is ſituated between 5 and 7 deg. north lat. bounded by the Atlantic Ocean, on the north; by the French ſettlements, on the eaſt and ſouth; and by the Spaniſh ſettlements, on the weſt; extending 100 miles along the coaſt from the mouth of the river Oronoque, north, to the river Maroni, or French Guiana, ſouth.

Surinam is the moſt conſiderable of all the Dutch colonies in Guiana; the plantations extend 30 leagues above the mouth of this river, on which the town is built. The climate of this country is generally reckoned wholeſome. The colony is in a leſs proſperous condition than it was ſome years ſince, owing, among other cauſes, to the wars the Dutch have been engaged in with their fugitive negroes, whom they have treated with great barbarity, and who are become ſo numerous by their continual increaſe year after year, that they have formed a kind of colony in the woods, which are almoſt impenetrable, along the rivers of Surinam, Saramaca, and Copename, and have been very troubleſome neighbours. They have even elected chiefs among themſelves, cultivate lands for their ſupport, and take frequent opportunities of revenging the injuries they have received from their old oppreſſors, by making incurſions into their plantations.

The exports of Surinam conſiſt of ſugar, tobacco, coffee, gums, dyeing woods, drugs, cotton, flax, and ſkins. In theſe the Dutch trade with Europe, and our American colonies; from the latter of which they receive in return, molaſſes, horſes, live cattle, and various kinds of proviſions. They alſo carry on a conſiderable traffic with the Weſt-India iſlands, to which they tranſport various kinds of timber, adapted for the building of mills. This is purchaſed by the planters at a very advanced price, not leſs than fifty pounds ſterling being given for the largeſt pieces.

The two Dutch colonies of Iſſequibo and Demerara, on account of their proximity, are compriſed in one colony, which bears the name of them both.

Iſſequibo, however, is the moſt ancient, having been ſettled between 60 and 70 years, while the ſettlement of Demerara does not exceed 20 years. On theſe rivers are ſeveral forts, iſlands, and plantations. One of the iſlands in the Demerara is the reſidence of the commandant, and there the courts of judicature are held, and the company's troops ſtationed. They were taken by the Engliſh in 1781, but were ſoon after retaken by the French. They again ſurrendered to the Britiſh arms, April 21, 1796.

There is an extraordinary animal here peculiar to the country, called laubba, an amphibious creature, about the ſize of a ſmall pig. The head and feet are like thoſe of a pug dog, but is without a tail. The monkies of this country are innumerable, and their ſpecies various. Here are bats twice as large as ours, and without tails. Moſt people in Guiana ſleep in hammocks, as being more ſecure from ſerpents and poiſonous inſects; but this does not ſecure them from the bats which approach any part of the body that is uncovered, generally the feet open a vein, and ſuck the blood till they are ſatisfied. There is alſo peculiar to Guiana a large venemous toad, called the pipa. Its young are bred in the back of the male, where the females depoſits the eggs.

There is ſo great a variety of beautiful birds in Guiana, that ſeveral perſons in the Dutch colony employ themſelves and their ſlaves in killing and preſerving birds for the cabinets of Europe.

Moſt of the fiſhes of Guiana alſo are common to it with other countries. The torporific eel, when touched either by the hand, or by a rod of iron, gold, ſilver, copper, or by a ſtick of ſome particular kinds of heavy American wood, communicates a ſhock reſembling that of electricity.

Guiana abounds in ſerpents of various kinds. There is one ſort, not venemous, that meaſures ſometimes above thirty feet in length, and three in circumference. It has a taper tail armed with two claws, like thoſe of a dunghill cock. Small deer have been found in their ſtomachs. There are alſo ſome of thoſe called amphis bæna.

The inſects of Guiana are innumerable, owing to the conſtant warmth and humidity of the climate.

The inhabitants of Guiana are either natives, who are of a reddiſh brown, or negroes and Europeans, or a mixed progeny of theſe in various combinations. The natives are divided into different tribes, more or leſs enlightened, and poliſhed as they are more or leſs remote from the ſettlements of the Europeans. They allow polygamy, and have no diviſion of lands. The men go to war, hunt and fiſh: the women look after domeſtic affairs. Their arms are bows, arrows, clubs, and poiſoned darts blown through a reed. They go almoſt naked, excepting upon particular occaſions; when they ornament their heads with feathers. They are chearful, humane and friendly; but timid, and addicted to drinking.

Their houſes are quadrangular, conſiſting of four ſtakes with croſs poles, and are covered with leaves. They ſet them up, pull them down, and carry the whole with them at pleaſure; as their dwellings are light, and their lives ambulatory. They bury their dead naked, and get drunk at the funeral to bury their ſorrows. When the body has been interred a ſufficient time for the fleſh to be rotten they take up the bones, diſtribute them among the relations and friends of the defunct, and again get drunk to teſtify their reſpect for the memory of the deceaſed. Their wants are eaſily ſupplied, and their vices are but few. Continence before marriage is not conſidered as a virtue; a man cares not whether the woman he marries is a virgin or not; but no injury is ſo ſurely revenged as the infidelity of a wife.

Nothing is cultivated here by the natives but plantains, caſſava and yams; and one month's cultivation is ſufficient for all theſe. The men are all hunters, and they can always find game or fiſh, if they prefer it, without danger or toil. They dreſs it by boiling, either in water or in the juice of caſſava, and ſeaſon it very high with kyan, or red pepper. The only ſet time of eating is the evening, when they return from hunting; in general they eat when they are hungry. They ſcarce know ſalt, but ſometimes preſerve animal food by ſmoak-drying it. Their drink is water, or a fermented liquor, prepared from the plantain, called pievoree: when they have plenty of this they are continually drunk; ſo that their indolence and improvidence, by preventing a conſtant ſupply, become public and private bleſſings.

As ſupplying the wants of nature in ſo fertile and delightful a country takes up but a ſmall portion of their time, they fill up the intervals by various amuſements: they bathe and ſwim in the rivers, in large companies, ſeveral times a day, without paying any regard to diſtinction of ſex, and they ſwim ſo well, that they may be almoſt reckoned among amphibious animals. At other times they viſit each other, and are mutually entertained with the ſimple occurrences of their lives, and a great variety of fables, which are merry, ſignificant and moral. Sometimes they dance, and frequently burſt into immoderate laughter; and ſometimes they recline indolently in their hammocks, where they not only ſleep, but eat, converſe, and play, blow a kind of ruſtic flute, pluck out the hair of their beards, or admire themſelves in looking-glaſſes.

The women ſuffer nothing in child-birth, which is attended neither with danger or pain. The mother and child, immediately after delivery, are plunged into the water, and the next day ſhe returns to her domeſtic employment, as if nothing had happened. The children are fed, and during their infancy no other care is taken of them; none are ſickly or deformed: the boys, as they grow up, attend their fathers in hunting, and the girls aſſiſt their mothers. In old age they become wrinkled; but never either bald or grey. As they have no method of computing time to any number of years, their age cannot be aſcertained; but there is ſufficient reaſon to conclude, that their lives are long.

In all their traffic with each other, or with the Europeans, they eſtimate every thing by their preſent want of it; they will at one time demand a hatchet, for what at another time they will exchange for a fiſh-hook.

Theſe happy people live together upon terms of perfect equality, having no diſtinction but of age, or perſonal merit; neither have they any diviſion of property: each amicably participates the ample bleſſings of a delightful and extenſive country: envy, fraud, and violence are precluded, natural deſires are immediately and innocently indulged, and government rendered wholly unneceſſary.

The States of Holland, to whom the colony of Surinam originally belonged, made it over to the Dutch Weſt-India company; but that company not being in a condition to ſend thither the neceſſary ſupplies, made over a third part of their ſhare to the magiſtrates of Amſterdam, and another third part to Mynheer Van Aarſens, lord of Sommelſdyk. Hence this colony is the joint property of the Weſt-India company, the city of Amſterdam, and the lord of Sommelſdyk, but the ſovereignty is inveſted in the ſtates-general. Accordingly five directors of this colony are choſen by the city of Amſterdam, four by the Weſt-India company, and one by the lord of Sommelſdyk, but the governor muſt be approved by the ſtates-general as well as by the directors. The whole colony is at preſent in a very flouriſhing condition, and carries on a great trade in various commodities.

CHAP.

CHAP. XXX.

DUTCH ISLANDS IN AMERICA.

ST. EUSTATIUS, OR EUSTATIA.

THIS iſland is ſituated between 17 and 29 min. north lat. and 63 deg. 10 weſt long. is only a mountain, riſing out of the ſea like a pyramid, and almoſt round. It is about 29 miles in circumference, and is well cultivated. Beſides tobacco, the inhabitants have of late years raiſed and exported great quantities of ſugar. They alſo breed hogs, rabbits, goats, and moſt ſorts of poultry. The air is wholeſome, but it is ſubject to terrible thunder-claps, earthquakes, and hurricanes; and there is a ſcarcity of freſh water.

St. Euſtatius is reckoned the ſtrongeſt of all the Caribbee iſlands, there being but one landing-place, which is commanded by a fort, and may be eaſily defended by a few men. The Dutch took poſſeſſion of it in 1635; and ſince the treaty of Ryſwick, have preſerved it without interruption, till after hoſtilities were commenced by Great-Britain againſt Holland, in 1781, when this iſland ſurrendered at diſcretion to Admiral Rodney, who was ſent againſt it with a conſiderable land and ſea force: but on the 27th of November, the ſame year, it was retaken by the French, commanded by the marquis de Bouillé, whoſe force conſiſted of only three frigates and ſome ſmall craft, and about three hundred men. After the capture of St. Euſtatius by the Engliſh, as abovementioned, the private property of the inhabitants was confiſcated, with a degree of rigour very uncommon among civilized nations, and entirely inconſiſtent with the humanity and generoſity by which the Britiſh nation uſed to be characteriſed, even by her rival neighbours. The reaſon aſſigned for this extraordinary conduct was, that the inhabitants of this place had aſſiſted the Americans with warlike ſtores during her conteſt with the mother country.

CURASSOU, OR CURACOA.

THIS iſland is ſituated about ten leagues from the coaſt of Terra Firma, in 12 deg. 14 min. north latitude. It is about 30 miles in length, and 10 in breadth. The climate is neither wholeſome or agreeable, nor the ſoil fruitful; yet the iſland is populous, and the induſtry of the inhabitants ſuch, that it produces a great deal of ſugar and tobacco. It is well ſupplied with proviſions, and all other commodities from Europe, and the other Dutch ſettlements, in which it carries on a very lucrative and extenſive contraband trade with the Spaniards in Terra Firma. Let the Spaniſh governors prohibit this trade never ſo ſeverely, the Spaniards ſtand ſo much in need of European commodities, that they will run all hazards to obtain them: for theſe they pay in gold and ſilver coined or in bars, cocoa, vanilla, jeſuits bark, cochineal, and other valuable articles. In time of peace, the trade of this iſland is ſaid to be annually worth 500,000l. to the Dutch, but the profit is ſtill greater in time of war, when it furniſhes the contending parties with arms and ammunition to deſtroy each other.

The trade of all the Dutch American ſettlements was originally carried on by the Weſt-India company alone: at preſent, ſuch ſhips as go upon that trade pay two and a half per cent. for their licences: the company, however, reſerve to themſelves the whole of what is carried on between Africa and the American iſlands.

The chief town and harbour is about three leagues from the ſouth-eaſt end of the iſland. The town, for its ſize, is one of the faireſt and fineſt in America, and contains every thing neceſſary to render it commodious and agreeable, as far as the climate and ſoil will permit.

The Dutch-ſhips from Europe touch at this iſland for intelligence, or pilots, and then proceed to the Spaniſh coaſts for trade; which they force with a ſtrong hand, it being very difficult for the Spaniſh guarda coſtas to take theſe veſſels; for they are not only ſtout ſhips, with a number of guns, but are manned with large crews of choſen ſeamen, deeply intereſted in the ſafety of the veſſel and the ſucceſs of the voyage. They have each a ſhare in the cargo, of a value proportioned to the ſtation of the owner, ſupplied by the merchants upon credit, and at prime coſt. This animates them with an uncommon courage, and they fight bravely, becauſe every man fights in defence of his own property. Beſides this, there is a conſtant intercourſe between this iſland and the Spaniſh continent.

Their other iſlands are, Bonaire, Aruba, Saba, and St. Martin's.

Bonaire and Aruba are chiefly coſiderable for their ſituation near the coaſt of Terra Firma, which gives the inhabitants an opportunity of carrying on a clandeſtine trade with the Spaniſh ſettlements in Terra Firma: they may alſo be regarded as appendages to Curaſſou, for which they are chiefly employed in raiſing cattle and other proviſions. Saba and St. Martin's are two ſmall iſlands, ſituated about 13 miles north-weſt of Euſtatius, and are too inconſiderable to merit particular deſcription. They were both captured by Admiral Rodney and General Vaughan, about the time of the ſurrender of Euſtatius, but the French retook them afterwards.

On the ſouth ſide of Bonaire is a good ſalt-pond, whither the Dutch ſloops come for ſalt, which is become a conſiderable commodity.

CHAP. XXXI.

DANISH ILANDS IN AMERICA.

THE Danes have very little intereſt in America. They have no ſettlement on the continent, and only two ſmall iſlands lying in the Archipelago, known by the name of the Weſt-India iſlands: theſe are St. Thomas, and St. Croix, or Santa Cruz.

The iſland of ST. THOMAS is ſituated in the 64th deg. of weſt long, and the 18th of north lat. It is the largeſt of that cluſter called the Virgin iſlands, being about 15 miles in circumference. It has an excellent harbour, nearly ſurrounded by two promontories, which defend the ſhips that lie within from almoſt every wind. In the centre of the port is a very ſmall fortreſs very indifferently fortified. The ſoil is tolerably good, and every foot of it cultivated; the chief production being ſugar, of which the annual quantity is about 3000 hogſheads of 1000 weight each. The Brandenburghers have a conſiderable factory here; but the principal perſons now belonging to it are French refugees, who fled thither when the Proteſtants were expelled from the French iſlands. The inhabitants, who are very numerous, are ſupplied with moſt of their proviſions from Porto Rico.

The principal town, called St. Thomas, conſiſts of one long ſtreet, at the end of which is the magazine, a large, magnificent, and convenient building, wherein there is room for ſtores, ſlaves, and goods of all ſorts. This is the reſidence of the governor, who is always a man of rank, and ſoon acquires a large fortune, as do moſt of the inhabitants, owing to the extenſive and various kinds of trade carried on here. The Spaniards not only purchaſe ſlaves, which the Danes bring hither from Africa, but likewiſe all ſorts of European goods, of which there is always a conſiderable

derable ſtock in the magazines, belonging principally to the Dutch, who carry on an extenſive and advantageous commerce in the iſland of St. Thomas. In time of war, the trade of this iſland is amazingly increaſed; for being a neutral port, the privateers of all nations reſort hither to ſell their prizes, and the Dutch have always agents there, with large ſums of money, ready to purchaſe theſe goods.

This iſland derives a peculiar advantage from its commodious harbour, mentioned above: it lies on the ſouth ſide, where 50 ſhips may lie in ſafety. It is defended by a fort, whoſe batteries at the ſame time protect the ſmall town built round the ſhore. This harbour is much frequented by merchant ſhips: when they are chaſed, in time of war, they find here a ſafe protection; and, in time of peace, a vent for their goods, by the clandeſtine trade which the boats of St. Thomas continually carry on with the Spaniſh coaſts.

Two leagues to the ſouth of St. Thomas is another iſland, about the ſame ſize, called St. John's. It is the beſt watered among the Virgins, and its harbour has not only the reputation of being better than that of St. Thomas, but paſſes alſo for the beſt to the leeward of Antigua. The Engliſh give it the name of "Crawl Bay." But notwithſtanding theſe advantages there is ſo little good land in the iſland, that its planting and exportations form only a very trifling object.

St. Croix, or Santa Cruz, ſituated about five leagues to the eaſt of St. Thomas, is between ten and twelve leagues in length, and about four in breadth. The ſoil is rich and fertile, yielding ſeveral kinds of fruits, and excellent timber. This iſland, not many years ſince, was a perfect deſert; but the number of ſettlers now begin to increaſe apace: ſeveral perſons from the Engliſh iſlands, and among them ſome of great wealth, have gone to ſettle there, and received very great encouragement. The air of St. Croix is extremely unhealthful; but this ill diſpoſition will probably continue no longer than till the woods, with which the iſland at preſent is almoſt covered, are cut down, and the land improved by cultivation.

The Danes, when they firſt ſettled in America, were under the government of a Weſt-India company; ſo that their affairs appeared with a very unpromiſing aſpect, and nothing like the proper advantages were made of theſe ſettlements. The late king of Denmark, who was inferior in abilities to none of his anceſtors ſaw that there were no hopes of rendering theſe iſlands flouriſhing while the company continued their prepoſterous meaſures; accordingly he purchaſed the company's ſtock, and laid the trade open. The effects were ſoon perceived; commerce raiſed its head, and the colonies were ſoon changed from a ſtate of torpid indolence into that of vigorous traffic; the plantations daily increaſed, new ſettlers continually arrived; and the iſland of St. Croix, from an almoſt deſolate wilderneſs, became a cultivated garden, and the inhabitants an opulent people.

In time of war, privateers bring in their prizes here for ſale; and a great many veſſels trade from hence along the Spaniſh main, and return with money in ſpecie or bars, and valuable merchandiſe.

Having thus given an ample Geographical account and deſcription, not only of the whole continent of America, but likewiſe of the adjoining iſlands, with every New Diſcovery made by the moſt modern, accurate and authentic navigators and travellers, and preſerved every incident and circumſtance we could collect for the entertainment of the Reader, we ſhall conclude our account of this part of the globe with giving a conciſe detail of the particular circumſtances that unfortunately occaſioned the ſeparation of a great part of it from the Mother-country.

†

The circumſtance that gave riſe to the diſſentions which took place between Great Britain and her American colonies (and which was productive of a tragic progreſs and unfortunate iſſue) was that unpopular act of the Britiſh legiſlature called the Stamp Act.

The firſt commotions were in the province of Maſſachuſetts Bay, and more particularly at Boſton, where the commiſſioners for enforcing the revenue acts, and collecting the monies ariſing therefrom, were badly received, and narrowly eſcaped with their lives. All perſons, directly or indirectly, belonging to government, were looked upon with a ſuſpicious eye; the cool and diſpaſſionate were ſilent, and the commonalty declared they would not be taxed by the Britiſh parliament without their own conſent; that was to ſay, without actual repreſentation. Some of the commiſſioners were compelled, upon oath, to renounce at that time and for ever all concern with theſe taxes. The tax-gatherers were tarred and feathered; the ſhips which carried over the ſtamps were threatened with conflagration unleſs they delivered up the exceptionable parts of their cargoes to be committed to the flames; and, in fine, anarchy ſucceeded amity, and mutual enmity uſurped the place of reciprocal concord.

At length, the inhabitants of Boſton, and ſome other parts of New England, came to a determination not to make uſe of any articles of Britiſh manufacture; and about the beginning of February 1768 the Houſe of Repreſentatives gave their ſanction and authority to this reſolution.

The moſt acrimonious diſputes now took place between many of the inhabitants of New England in general; moſt of the people of Boſton in particular on the one part, and governor Bernard with the loyaliſts on the other. Aggravating things were ſaid, ill-natured actions done, and libels were publiſhed by both parties. Thus a war of ſentiments commenced before real hoſtilities; the obſolete terms of Whig and Tory were revived, and the ſouls of each faction were in arms, previous to any manual exertions of the animoſity that ſubſiſted between them.

In the middle of June 1768, the captain of a ſhallop wanting to run ſome wine, and ill uſing the tide-water, the veſſel was ſeized, and, for better ſecurity, put along ſide the Romney man of war. This occaſioned a riot, when the comptroller and collector of the cuſtoms took refuge on board the ſaid man of war.

Government, however, in order to conciliate matters as much as poſſible, repealed the ſtamp act; but ſtill the Americans were diſſatisfied; for they inſiſted that, though the act itſelf was repealed, yet the ſpirit of it remained, while a revenue was demanded from the colonies. Frequent meetings were continued, riots were frequent, and intereſted perſons fomented the diſputes.

In June, 1768, the governor directed the houſe of repreſentatives at Boſton, to reſcind a reſolution concerning a circular letter to ſome of the other governments, but they refuſing, he diſſolved the aſſembly on the 3d of Auguſt following.

At length it was determined to coerce the Americans, and a body of troops arrived there accordingly, from Halifax, September 30, 1768, eſcorted by ſome ſhips of war.

The riotous proceedings of the Boſtonians increaſing, more troops were ordered to Boſton, and a variety of altercations took place, not only between the governor and the people, but between them and General Gage.

In the begining of the year 1769, many perſons in the colony of New York thought proper to adopt the ſentiments of the Boſtonians, and to engage in the political ſquabbles which were daily heightening in New England. Other colonies ſoon after acceded to

to the combination, and, in particular, to the reſolutions for the non-importation of the Britiſh manufactures and Eaſt-India goods: and thus the fire of diſſention increaſed with great rapidity, and the flame of diſcord blazed through the greateſt part of North America.

The Boſtonians now ſummed up a variety of grievances, among which complaints were theſe: "That the civil power was diſregarded, and centinels placed in various parts of the town: That the negroes had been united to take away the lives and properties of their maſters, and to repair to the army for protection: That ſome of the ſoldiers had attacked the magiſtrates of the town: That many ſoldiers had been repeatedly reſcued from the peace-officers: That many perſons had been wounded by the military: And that on the 5th of March 1770, eleven perſons were either killed, or dangerouſly wounded."

Theſe charges were either denied or palliated by the other party, by the plea of the military being compelled to act as they did, and to defend themſelves; and at the ſame time accuſations, equally attrocious, were brought againſt the people of New England. Some perſons were tried for the murders, but none executed.

Sir Francis Barnard having returned to England, the animoſities and diſputes ſtill continued between the people and Lieutenant-governor Hutchinſon, who remained in his room. But as political ſquabbles are not worthy of recording in a performance of this kind, and acrimonious accuſations, proceeding from prejudice, and propagated by partiality, ought to be conſigned to oblivion, and not introduced into a work of ſcience, we ſhall wave trivial altercations, and only regiſter the more important points of theſe unhappy differences by which the mind may be informed, and the memory will not be oppreſſed.

About the middle of December, in the year 1773, ſome ſhips, laden with tea, being at Boſton, (as a duty was to be paid,) the people would not ſuffer them to be landed. The ſhips being refuſed a clearance by the governor, unleſs the cargoes were landed, and properly diſpoſed of, a mob, dreſſed like Mohawk Indians, entered the three ſhips which contained the tea, and were commanded by the Captains Hall, Bruce, and Coffin, and emptied the cargoes, conſiſting of 342 cheſts of tea, into the water. This, and other outrages, occaſioned the Boſton-Port Bill, paſſed April 4, 1774, by which the town of Boſton was proſcribed and blocked up.

The people of New England now began to form themſelves into companies, practiſe the military arts, enter into ſolemn leagues and covenants, &c. Several of the other colonies followed their example, provincial aſſemblies were held, and a general congreſs eſtabliſhed, to which diſputes from the ſeveral provinces were invited.

Excluſive of Bickerings and animoſities between the Royaliſts and Provincials, and the martial parade of the latter, the next martial tranſaction was the ſeizure of Fort William and Mary, near Portſmouth, in New Hampſhire, by the Provincial militia, in which they found 106 barrels of gunpowder, ſeveral cannon, ſhot, ſmall arms, &c.

General Gage being informed that a great quantity of military ſtores were in the poſſeſſion of the Provincial troops, at the town of Concord, ſent a detachment of troops, under the command of Lieutenant-Colonel Smith, and Major Pitcairn, ſupported by another body, commanded by Lord Percy, in order to ſeize or deſtroy them. This ſervice was effectually performed, after ſome ſkirmiſhes; but on April 19, 1775, the troops were attacked at Lexington, on their return towards Boſton. Several were killed and wounded on both ſides, the Provincials firing from behind ſtone walls, hedges, buſhes, &c.

The Provincials now inveſted the town of Boſton; and the people of New York, hearing of the action at Lexington, and the affair of Concord, roſe in a tumultuous manner, entered the town-houſe, ſeized a great many ſtands of arms, appropriated to their own uſe the cargoes of two ſhips laden with military ſtores for General Gage, and then marched to the aſſiſtance of the Boſtonians.

The provincials not only continued to block up the town of Boſton, but began to raiſe batteries on the heights of the peninſula of Charles Town, in order to cannonade his Majeſty's troops. This brought on the action of Bunker's Hill; for, on the 17th of June, 1775, a conſiderable body of troops, under the command of Major-General Howe, and Brigadier-General Pigot, were ſent to diſlodge the Provincials. This body of forces, with a proportionable quantity of artillery, made good their landing againſt Bunker's-Hill, under the protection of the ſhips of war, armed veſſels, floating batteries, &c. and being ſoon after reinforced by another detachment, a deſperate action commenced, in which the Britiſh forces were victorious, the Provincial lines being forced, and themſelves compelled to retreat, leaving behind them ſeveral pieces of cannon, and other military ſtores. The loſs of the Provincials, in killed and wounded, was very great. Of the Britiſh troops, according to the return of General Gage, 226 were killed, and 828 were wounded, ſome of the latter dying ſoon after; and more than a proportionable number of officers being included in both liſts.

At New York, on the night of the 23d of Auguſt, 1775, the cannon were ſeized upon, by order of the congreſs, though the Aſia man of war, which lay in the harbour, tried to prevent it, by cannonading the town.

At the ſame time General Carleton was indefatigable in putting the province of Canada into a proper ſtate of defence. And the earl of Dunmore, governor of Virginia, having thought proper to take refuge on board a ſhip of war, harraſſed the coaſt, and made frequent deſcents upon the laſt mentioned province, laying waſte the country; carrying off, or ſpiking up, a great number of cannon; deſtroying vaſt quantities of military ſtores belonging to the Provincials, &c. &c. But, on the other ſide, Fort St. John ſurrendered to the Provincial forces, on the 3d of November, 1775, and the garriſon became priſoners.

On the 18th of November, 1775, the Regulars and Provincials had a hot engagement near Savannah, in Georgia, in which the latter were defeated: And on the 31ſt of December, in the ſame year, the Provincial General Montgomery, who had for ſome time laid ſiege to the city of Quebec, attempted to take it by ſtorm. In this attempt, however, he was defeated and ſlain, with ſeveral of his officers, and about 60 private men, and 300 were taken priſoners. On January the 4th, 1776, ſome ſhips of war deſtroyed the town of Norfolk, in Virginia.

General Gage having been recalled, General Howe, who ſucceeded in the command, thought proper to evacuate the town of Boſton, which he effected on the 17th of March, 1776, and made good his landing, and the capture of New York. In June, 1776, a battle was fought in Canada, between the Regulars, under General Carleton, and the Provincials, at a place called Three Rivers, when the latter were defeated, many of them being killed and wounded, and about 200 taken priſoners. In June, 1776, an attempt was made on Charles Town, South Carolina, by Sir Peter Parker, at the head of a fleet of ſhips of war, and General Clinton, with a body of land forces; but it failed of ſucceſs. On the 4th of June following, the congreſs declared the colonies independent.

After the King's troops were in poſſeſſion of New York, many ſkirmiſhes happened between them and the Provincials, but nothing deciſive till October, 1776, when the latter were defeated, in an action, which, from the place where it was fought, was termed the battle of the White Plains.

In the month of November, 1776, Fort Waſhington, and Fort Lee, were taken by the Britiſh forces, together with a great variety of military ſtores, and many priſoners. In December, Rhode iſland was taken by General Clinton. About the ſame time Lord Cornwallis took poſſeſſion of Eaſt Jerſey; and General Lee was taken priſoner by a patrole, conſiſting of 30 Britiſh dragoons, commanded by Lieutenant-Colonel (afterwards Lord) Harcourt.

Several ſkirmiſhes happened in the beginning of the year 1777, in the Jerſeys, with various ſucceſs. On the 23d and 24th of March, a great quantity of proviſions, ſtores, &c. with barracks, ſtorehouſes, &c. belonging to the Provincials, were deſtroyed by the King's troops at Peek's Hill, upon the North River. The cruizers belonging to Lord Howe and Commodore Hotham's fleet, continued to take many prizes. In Connecticut, on the 27th of April, 1777, the King's troops deſtroyed a great quantity of ſtores at Danbury.

General Burgoyne, with the northern army, proceeded to Ticonderago, and Fort Indepenence, which he took poſſeſſion of July 6, 1777, and found in them great quantities of ſtores and proviſions, beſides what he deſtroyed of both at Skeneſborough. Soon after he took poſſeſſion of Fort Edward, which the Provincials abandoned, and then proceeded to Saratoga, where they were ſtrongly poſted.

On the 11th of September, 1777, the troops under the command of General Howe, had an engagement with the Provincials on the Heights of Brandywine, in which many were killed and wounded on both ſides, and 400 Provincials were taken priſoners: but though the latter were defeated, and the action at firſt ſeemed of an indeciſive nature, yet it occaſioned Philadelphia to fall into the hands of the Britiſh troops. While General Howe was thus employed, an unſucceſsful attack was made by the Provincials on Staten iſland; for they were repulſed. Much about the ſame time General Clinton ſtormed and took Fort Clinton and Fort Montgomery.

On the 16th of October, 1777, the Provincials, under the command of General Gates, having ſurrounded General Burgoyne's army at Saratoga, the latter thought proper to enter into the articles of capitulation, by which himſelf and his troops, after laying down their arms, were to have a free paſſage to Great Britain.

In the latter end of the year 1777 ſeveral forts were taken by the troops and ſhipping; and many ſkirmiſhes happened on the banks of the Delaware, in order to keep up the communication with the army at Philadelphia. The Provincials likewiſe evacuated their intrenchments at Red Bank.

The campaign of 1778 began by many ravages made by the Britiſh troops in the neighbourhod of Philadelphia, and they poſſeſſed themſelves of great quantities of military ſtores, proviſions, veſſels, &c.

On the 18th of June, General Clinton (Sir William Howe having previouſly departed for England, and left to him the grand command of the Britiſh forces,) purſuant to the inſtructions received from government, evacuated Philadelphia. He was attacked on his march by the Provincials, whoſe principal object appeared to be the gaining poſſeſſion of the Britiſh baggage: but in this, however, they were diſappointed, and every where repulſed.

About this time the earl of Carliſle, Mr. Eden, and Governor Johnſtone, were ſent as commiſſioners from Great Britain, to treat of a pacification with America, but they did not meet with the ſucceſs that every true lover of both countries wiſhed.

On the 10th of December, Commodore Hotham arrived at Barbadoes with about 4000 troops from England, where he was joined by a ſmall ſquadron under the command of Admiral Barrington. They ſailed together to St. Lucia, where they landed the troops; but before they could make themſelves maſters of the iſland, Count D'Eſtaign appeared, and landed 5000 men. He was, however, repulſed with great ſlaughter, and the men obliged to make a precipitate retreat to their ſhips; againſt which Admiral Barrington's ſmall force had fully defended the harbours.

In the beginning of the year 1779, two bodies of forces, one under the command of Colonel Campbell, and the other from St. Auguſtin, in Florida, were ordered for the reduction of Georgia, in which they ſucceeded after a few actions and deſperate reſiſtance from their opponents.

In the month of December, Count D'Eſtaign, having conquered the Grenades and St. Vincent's, laid cloſe ſiege to Charles Town, then in the hands of Sir Henry Clinton, but was repulſed with great ſlaughter, and himſelf ſeverely wounded in the action.

In the month of April, 1780, Sir Henry Clinton quitted Charles Town, and went to New York, leaving the care of the former place to the Lords Cornwallis and Rawdon. The Americans, during his abſence, made ſeveral attempts on the place, but were always repulſed, owing to the vigilance of the Britiſh commander.

During Admiral Byron's ſtay in the Weſt-Indies, he in company with Admiral Barrington, engaged the French off St. Vincent's, with ſome loſs, both parties claiming the victory. About the ſame time Count D'Eſtaign made an unſucceſsful expedition to the Savannah, and afterwards returned to France.

Some time after this Admiral Rodney (who had been with ſuccours to the relief of Gibraltar, then cloſely beſieged by the Spaniards) arrived in the Weſt-Indies, and engaged the French fleet under the command of M. Guichen, but it terminated without any material victory on either ſide.

About this time hoſtilities were commenced between Great Britain and the United States of Holland, owing to a bag of papers being found belonging to Mr. Laurens, formerly preſident of the continental congreſs, who was taken by his Majeſty's frigate the Veſtal, as he was paſſing over to Holland. Mr. Laurens, after his examination, was committed cloſe priſoner to the Tower.

During theſe tranſactions a mutinous ſpirit prevailed among the continental forces in America. Brigadier Arnold had for ſome time held a correſpondence with the Engliſh General, which was principally carried on by means of Major André, adjutant-general to the Britiſh army. This young officer gave Arnold a meeting at a place appointed, the latter of whom adviſed him to diſguiſe himſelf, and, under the feigned name of John Anderſon, to make his way for New York. This advice he readily followed; but at a place called Ferry Town was ſeized by three militia men, and conducted to General Waſhington. He was immediately tried by a court-martial as a ſpy, and being found guilty, and ſentenced to death, was executed accordingly.

The campaign of the year 1781 was opened by a deſperate battle between the Britiſh forces, under the command of Lord Cornwallis, and the Provincials, under the command of General Sumpter. The Britiſh forces proved victorious, all the artillery and ammunition waggons belonging to the enemy being taken, and between eight and nine hundred ſlain, beſides great numbers taken priſoners.

On the 17th of February, Lieutenant-Colonel Tarleton, being detached with a body of forces, engaged

gaged a ſtrong party of the enemy near Broad River, under the command of General Morgan. The battle continued obſtinate on both ſides for ſome time, till at length Tarleton was obliged to retreat, leaving his killed and wounded behind him.

While theſe things were taking place on the continent, an attack was made on the Iſland of St. Euſtatius, by Sir George Brydges, Rodney, and General Vaughan, and the place was ſurrendered by the enemy without the leaſt reſiſtance. The quantity of merchandiſe found on the iſland was ſo great that the warehouſes could not contain it. The Iſlands of St. Martha and Saba likewiſe ſurrendered. This blow was ſeverely felt by the Dutch. The ſhips in the harbour were ſeized, and a fleet of 30 ſail of merchantmen fell into the hands of the Engliſh; but, on their way home, 22 of them were re-taken by the French.

About this time the Spaniards laid ſiege to Penſacola, which they took after an obſtinate reſiſtance. The garriſon obtained honourable terms, and were conveyed to New York.

During theſe tranſactions the war was carried on with great vigour on the continent. The Britiſh troops repeatedly baffled the efforts of the Provincials, and in moſt encounters came off victorious. Lord Cornwallis engaged a conſiderable body of troops, under the command of General Greene, at the town of Guildford, and, after an obſtinate reſiſtance, which laſted about half an hour, obtained a complete victory, great numbers of the Provincials being killed, and the reſt put to flight. General Greene, however, after being thus defeated, marched to Wilmington, where getting ſome ſupplies, and recruiting his ſcattered forces, he ſet out for Camden, which he expected to have found ill defended; but Lord Rawdon, who was left there, did not wait for the attack of the enemy; on the contrary, he with about 800 men, marched out to meet General Greene, whom he encountered and defeated, obliging the enemy to ſave themſelves by a very precipitate flight.

On the 20th of May Earl Cornwallis arrived at Peterſburgh in Virginia, where he joined a body of Britiſh troops that had been under the command of Major-general Philips, but the command of which, in conſequence of the death of that officer, had devolved upon Brigadier-general Arnold. Before this junction he had encountered conſiderable inconveniences from the difficulty of procuring proviſions and forage.

On the 26th of June, about ſix miles from Williamſburgh, Lieutenant-colonel Simcoe, and 350 of the Queen's Rangers, were attacked by a much ſuperior body of the Americans, but whom they repulſed with great gallantry, and with equal ſucceſs, making four officers and twenty private men priſoners. The loſs of the Americans in this action amounted to 120, beſides great numbers taken priſoners.

On the 6th of July an action happened near a place called the Green Springs in Virginia, between a reconnoitring party of the Americans under General Wayne amounting to about 800, and a large part of the Britiſh army under Lord Cornwallis, in which the Americans had 127 killed and wounded, and the loſs of the royal troops was conſiderably greater. It was an action in which no ſmall degree of military ſkill and courage were exhibited by the Americans.

In South Carolina an action happened on the 9th of September near the Eataw Springs, between a large body of Britiſh troops, under the command of Lieutenant-colonel Steward, and a much ſuperior body of Americans, amounting to 4000, under the command of General Greene. It was an obſtinate battle, and laſted near two hours; but the Americans were defeated, and two of their ſix pounders fell into the hands of the Engliſh. The loſs, however, of the royal troops was very conſiderable, amounting to more than 400 killed and wounded, and upwards of 200 miſſing.

In the courſe of the ſame month General Arnold was ſent on an expedition againſt New London in Connecticut, where he deſtroyed a great part of the ſhipping and an immenſe quantity of Naval ſtores, European manufactures, and Eaſt and Weſt India commodities. The town itſelf was alſo burnt, which was unavoidable on account of the exploſions of great quantities of gunpowder, which happened to be in the ſtorehouſes that were ſet on fire. A fort, of which it was thought neceſſary to gain poſſeſſion in this expedition, was not taken without conſiderable loſs. This was fort Griſwold, which was defended by the Americans with great gallantry, and the aſſault was made by the Engliſh with equal bravery. The Britiſh troops entered the works with fixed bayonets, and were oppoſed with great vigour by the garriſon with long ſpears. After a moſt obſtinate defence of near forty minutes the aſſailants gained poſſeſſion of the fort, in which 85 Americans were found dead, and 60 wounded, moſt of them mortally. Of the Britiſh troops Major Montgomery was killed by a ſpear in entering the American works: and 192 men were alſo killed and wounded in this expedition.

During theſe tranſactions the moſt effectual meaſures were adopted by General Waſhington for ſurrounding the Britiſh army under Earl Cornwallis. A large body of French troops under the command of Lieutenant-general the Count de Rochambeau, with a very conſiderable train of artillery aſſiſted in the enterprize. The Americans amounted to near 8000 continentials, and 5000 militia, and General Waſhington was inveſted with the chief command of theſe combined forces.

In the mean time various ſkirmiſhes took place in different parts of the American continent, and were attended with various ſucceſs; but in general the Engliſh gained the ſuperiority.

On the 18th of October, 1781, a moſt deſperate battle took place between the conjunctive forces under the Provincial General Waſhington and M. Rochambeau, the French commander, and the Britiſh troops under the command of Lord Cornwallis. The latter was ſituated in a very diſadvantageous ſpot, being hemmed in on one ſide by the French fleet in the Cheſapeak River, and on the other by the continential land forces. The attack was made with great reſolution by the enemy, and, for ſome time, as ſtrongly reſiſted by the brave Cornwallis, who cut to pieces the greater part of three regiments of the French forces; but being at length overpowered with numbers, he was obliged to ſurrender, and enter into the like articles of capitulation as took place with general Burgoyne at Saratoga. Sir Henry Clinton had left New York with a conſiderable body of forces, in order to give aſſiſtance to the brave Cornwallis; but, by a manœuvre of General Waſhington (who, a ſhort time before, appeared to have ſome deſigns againſt New York) Sir Henry was too late, and the whole army of Lord Cornwallis, which amounted to 7000 men, fell into the hands of the Provincials. The earl made a defence ſuitable to the character he had acquired for courage and military ſkill; but he was compelled to ſubmit to ſuperior numbers. A conſiderable number of cannon, and a large quantity of military ſtores fell into the hands of the Americans on this occaſion.

The ſurrender of earl Cornwallis was the laſt military tranſaction of moment on the continent of North America, and led to the concluſion of a civil war, which had been unhappily attended with the loſs of a vaſt profuſion of blood and treaſure on both ſides.

No other event of that war contributed ſo effectually to produce a general conviction in the minds of men of the impracticability of the conqueſt of the American

rican colonies, eſpecially as they had formed ſuch powerful alliances.

When intelligence of the defeat of Earl Cornwallis arrived in England, that conviction appeared to be irreſiſtible; for men of all ranks and parties now declaimed againſt the continuance of a war unproductive of the effects originally deſigned, and abſolutely ruinous to the intereſts of both countries.

A member of the Britiſh Houſe of Commons, in December 1781, made two motions declaratory of the ſenſe of the houſe againſt the further proſecution of the American war.

On the 22d of February, 1782, a motion was made of the ſame tendency by a military officer, and negatived by only one voice. In a ſhort time after the ſame motion being carried, inſtructions were diſpatched in conſequence of the reſolution of the houſe of Sir Guy Carleton (who ſucceeded Sir Henry Clinton in the command of the army and the government of New York) to uſe his utmoſt endeavours for producing an accommodation with the Americans.

Sir Guy Carleton having received theſe advices, diſpatched, in the month of May, 1782, a letter to General Waſhington, informing them of the proceedings of parliament, of the diſpoſition prevalent both in that body and the Britiſh government, and of his own conſequent inſtructions, accompanied with ſuch written or printed documents as were neceſſary to illuſtrate and authenticate what he had ſtated.

As by a reſolution of the Britiſh Houſe of Commons powers had been granted to the crown for negociation and concluding a general or particular peace or truce with the whole, or any part, of the Americans, the ſeveral ſtates reprobated the idea of opening ſeparate negociations with particular governments, or bodies of men, or even of attempting to open a treaty with Congreſs without the concurrence of his allies, and came to a general determination to exert their utmoſt power conjunctively to carry on the war with vigour until peace ſhould be obtained in a manner conſiſtent with their national union.

A reſolution was alſo paſſed by Congreſs, that the United ſtates could not, with propriety, hold any conference, or treaty, with any commiſſioners on the part of Great Britain, unleſs they ſhould, as a preliminary thereunto, either withdraw their fleets or armies, or elſe, in poſitive and expreſs terms, acknowledge the independence of the ſaid States.

In the month of October, Congreſs iſſued a public declaration, in which, after reciting, that France and they were equally bound by the conditions of their alliance, that neither ſhould conclude either peace or truce with Great Britain without the conſent of the other, and obſerving that their miniſters in Europe were veſted with full power and authority in their behalf, and in conſort with their allies, to negociate and conclude a general peace, they proceeded to declare, in the ſtrongeſt terms, their fixed and unalterable determination inviolably to adhere to the treaty of alliance with his moſt Chriſtian Majeſty, and to conclude neither a ſeparate peace or truce with Great Britain; and that they would not enter into the diſcuſſion of any overtures for pacification, but in confidence and in conſort with his moſt Chriſtian Majeſty.

While the Americans were thus avowing their inflexible attachment to their allies, and endeavouring, as it were, to ſhut out every overture towards a ſeparate accommodation, the belligerent powers in Europe ſeemed diſpoſed to pacific meaſures.

As the attainment of the independence of America was avowedly the grand object of the French court in the war, its being granted ſeemed at once to remove the very ground of contention. With reſpect to the adjuſtment of matters with the Britiſh court, that did not ſeem to be very difficult, as, though the acquiſitions of France in the Weſt Indies were conſiderable, her loſſes in the Eaſt left the means of a conſiderable equivalent in the hands of the Engliſh.

As to Spain, which ſeems to have entered into the war rather as an auxiliary, and in conſequence of the family compact, than as acting upon national principles, neither the embarraſſed ſtate of her finances, the repeated failure of her deſigns upon Jamaica, her very ſignal defeat at Gibraltar, or other circumſtances of her then condition, ſeemed to afford any ſolid ground upon which ſhe could reaſonably eſtabliſh further claims.

The United States of Holland, fallen and degraded to the loweſt degree, were reduced to the neceſſity of depending entirely upon the favours and protection of France, as well in the concluſion of a peace as ſhe had through the progreſs of the war.

With reſpect to the general circumſtances of the contending parties, the moſt ſucceſsful members of the alliance, great and formidable as it was, ſcarcely ſtood much leſs in need of peace than Great Britain, notwithſtanding all her loſſes, and expoſed as ſhe had ſo long been as a common mark to withſtand ſingly all their attacks in every quarter.

Under theſe general circumſtances of the contending powers, the independence of America being allowed, there did not ſeem to be any inſurmountable obſtacle in the way to the reſtoration of the public tranquility.

This plan was adopted by the new adminiſtration in England by their coming into power; commiſſioners and plenipotentaries were appointed by the reſpective powers, and on the 30th of November 1782, proviſional articles were ſigned by the commiſſioners from his Britannic Majeſty, and the commiſſioners on the part of the United States of America, which were to be inſerted in, and to conſtitute a future treaty of peace to be finally concluded between the parties, when that between Great Britain and France took place.

The hiſtory of this civil war is handed down at large to poſterity by able writers, in order to ſerve as the moſt forcible leſſons of inſtruction to the ſovereigns and ſubjects of every ſtate. In the courſe of ſuch a war the paſſions may be ſuppoſed to be inflamed to a high degree of rancour; but this will ever be the caſe in all ſublunary events; and the cruelties perpetrated on either ſide by heated or unprincipled individuals no intelligent perſon will impute to the national character at large. The virtues that ſhine in human nature, and render life deſirable and happy, are the growth of no particular country; for where the light of knowledge is diffuſed, their endearing influence will be felt with irreſiſtible force; and the poſterity of Great Britain and America, while they read with concern the phrenzy of their fathers, may be nobly vying with each other in virtuous and philoſophical emulation, and cultivating ſuch friendly connections as may render both a great and happy people.

A NEW

HISTORICAL AND COMMERCIAL

SYSTEM OF GEOGRAPHY.

NEW DISCOVERIES.

CHAP. I.

NEW HOLLAND.

General Deſcription of it, and its Diſcovery by Captain COOK. Particular Account of BOTANY-BAY, PORT-JACKSON, NORFOLK-ISLAND, &c. including the lateſt Diſcoveries, by Captains KING, BALL, and HUNTER.

THIS immenſe tract in the ſouthern clime, called New Holland, from its having been chiefly explored by Dutch navigators, was never aſcertained as an iſland or continent, till Captain Cook, with an ardour and perſeverance pecuſiar to himſelf, and which diſtinguiſhed him from predeceſſors of every country, explored it on the eaſtermoſt coaſt in 1770, and diſcovered it to be an iſland of vaſt extent, reaching from 10 to 44 degrees ſouth, and between 110 and 154 degrees eaſt of London.

The reſpective parts on this coaſt being diſcovered by different navigators at different periods of time, they had names given them by thoſe who diſcovered them. Thus the firſt land diſcovered in theſe parts was called Eendraught (or Concord) Land, from the name of the veſſel in which the diſcovery was made in 1616, in 24 deg. 25 min. ſouth. The next ſituated in 15 deg. ſouth, was called Arnheim and Diemen, by Zeachen, who diſcovered it in 1618, though not the ſame part with that afterwards called Diemen's Land, by Taſman, which is the ſouthern extremity of the iſland, in lat. 43 degrees, and was diſcovered in 1642. Jan Van Edels gave his name to a ſouthern part diſcovered by him in 1619. A coaſt that communicates to Leawen's land towards the weſtward, and a part of the weſtern coaſt, near the tropic of Capricorn, was called De Witts, from the Peter Van Nuitz, who diſcovered them in 1627; as was the great gulph of Carpentaria, between 10 and 20 degrees ſouth, from Peter Carpenter, a Dutchman, who diſcovered it in 1628. Dampier, an Engliſhman, ſailed from Timor in 1687, and coaſted the weſtern parts of New Holland. In 1699, as the Dutch ſuppreſſed their diſcoveries, he left England in order to explore this country, and ſailing along the weſtern coaſt, from 28 to 15 degrees, ſaw the land of Eendraught and of De Witts. Returning to Timor, he ſet out from thence to proſecute his deſign, explored the iſles of Papua, ſailed round New Guinea, diſcovered the paſſage that bears his name, afterwards gave the appellation of New Britain to a conſiderable iſland that forms this paſſage, and then returned to Timor by the way of New Guinea. Captain Cook, in conſequence of his diſcovery, gave it the name of

NEW SOUTH-WALES.

This country is in general low and level, and, upon the whole, rather barren than fruitful, yet the riſing ground is chequered with woods and lawns, and the vallies and plains are, in many places, covered with herbage. The face of the country is by far moſt pleaſing to the ſouthward, the trees in that quarter being taller, and the herbage more verdant, than towards the northward; the graſs in general is high but thin, and the trees, where largeſt, are ſeldom leſs than forty feet aſunder. The whole eaſtern coaſt is well watered by ſmall brooks and ſprings. Though there are no great rivers, theſe brooks might probably be increaſed in rainy weather; it being the height of the dry ſeaſon when viſited by Captain Cook.

Of timber trees, there are but two ſorts; the largeſt is the gum-tree, which grows all over the iſland; it produces a gum of a deep red; the wood is heavy, hard, and dark-coloured, reſembling the lignum vitæ, with narrow leaves, like thoſe of the willow. The other is a ſort of pine, ſomething like the live oak of America. Of palm-trees there are three ſorts. There is alſo a kind of cherry-tree and trees with a red apple, as alſo trees with a ſoft bark, which is eaſily peeled off, and is the ſame with that uſed for calking ſhips in the Eaſt-Indies. Though there are but few eſculent plants in theſe parts, they afford a variety of ſuch as are adapted to gratify the curioſity of the naturaliſt.

In this country there were not many animals ſeen: the only tame ones were dogs. Of the wild ſpecies of quadrupeds, was a kind of opoſſum, about the ſize of a large rat, a creature with a membraneous bag near the ſtomach, in which it conceals and carries its young when apprehenſive of danger. There is a remarkable animal, called by the natives kanguroo, which, when full grown, is as large as a ſheep, ſome weighing upwards of eighty pounds. It goes in an erect poſture, and its motion is by ſucceſſive leaps or hops of a great length. The ſkin is covered with a ſhort fur of a dark mouſe or grey colour, except the head and ears, which are ſomewhat like thoſe of a hare, which it alſo reſembles in taſte, but is deemed better flavoured. They have likewiſe an animal reſembling a pole-cat, which the natives call *quoll*; the back is brown ſpotted with white, and the belly is unmixed white. It was alſo affirmed by ſome of Captain Cook's people, that they had ſeen ſome animals of the wolf and weazel kind; but as they were not caught, they cannot be deſcribed.

There are gulls, ſhaggs, ſolan-geeſe, or gannets, of two ſorts, boobies, noddies, curlieus, ducks, and pelicans of an enormous ſize. The principal land birds are brown hawks or eagles, crows, large pigeons, parrots, paroquets, cockatoos or doves, quails, buſtards, herons, cranes, and many others. Here are ſerpents, of which ſome are venomous, others harmleſs, ſcorpions, centipedes, and lizards.

The moſt remarkable inſect found in this country is the ant, of which there are ſeveral ſorts; one is green, and builds its neſt upon trees, by bending down ſeveral leaves, each of which is as broad as a man's hand, and gluing the points of them together, ſo as to form a purſe. Thouſands of theſe buſy inſects were ſeen uniting all their ſtrength to hold the leaves in due poſition, while other buſy multitudes were employed within, in applying the glutten, which is an animal juice, to prevent their returning back. Another kind burrows in the root of a plant which grows on the bark of trees, in the manner of miſletoe,

miſletoe, and is about the ſize of a large turnip. When cut, it appears interſected by innumerable winding paſſages, all filled with theſe inſects; yet the vegetation of the plant does not appear to ſuffer any injury. Another ſort are black; their habitations are the inſide of the branches of trees, which they render hollow by working out the pith, almoſt to the extremity of the twigs, yet the tree flouriſhes at the ſame time, as if it had no ſuch inmates. Theſe three ſpecies of ants are all furniſhed with ſtings, which cauſe a kind of pugnant titillation; but it ſoon ceaſes. There is ſtill another ſort poſſeſſing no power of tormenting; they reſemble the white ants of the Eaſt-Indies, and the conſtruction of their habitations is ſtill more curious than that of the former. They have two ſorts, one ſuſpended on the branches of trees, and the other built on the ground. The materials of the firſt ſeem to be formed of ſmall parts of vegetables kneaded together with a gluttinous matter, with which nature has probably ſupplied them. Upon breaking the outſide of this dwelling, innumerable cells, ſwarming with inhabitants, appear in a great variety of winding directions, all communicating with each other, and with ſeveral apertures that lead to other neſts upon the ſame tree. Their habitations upon the ground are generally at the root of a tree. They are of different ſizes, formed like an irregular ſided cone, and ſometimes more than ſix feet high. The outſide is of well tempered clay, about two inches thick; and within are the cells, which have no opening outward. Theſe ſtructures are proof againſt any wet that can fall, which thoſe on the trees are not, from the nature and thinneſs of their cruſt or wall.

Here are abundance of fiſh, and of various kinds, but unknown in Europe, except the muller and ſome of the ſhell-fiſh. Upon the ſhoals and reefs are great quantities of the fineſt green turtle in the world, and oyſters of various kinds, particularly the rock and pearl oyſter. In the rivers and ſalt creeks are alligators.

This extenſive country appears to be very thinly inhabited; as the natives along the coaſt ſeldom appear in larger companies together than thirty. The inland parts are, moſt probably, quite uninhabited, as no part of the coaſt that was viſited had any appearance of cultivation; and the wretched natives drew their whole ſubſiſtence from the ſea. The whole tribe, with which any intercourſe was eſtabliſhed, conſiſted of twenty-one perſons, twelve men, ſeven women, a boy, and a girl.

The men are of middle ſtature; their complexion is nearly of a chocolate colour, their features tolerable, their eyes pretty good, and their teeth rather even and regular. Their hair, which naturally grows long and black, they crop ſhort; their beards grow buſhy and thick, but they keep them ſhort by ſingeing them. In general, they are clean limbed, and remarkably vigorous, active, and nimble. Their countenances are not without expreſſion; but their voices are remarkably ſoft and effeminate.

Though both ſexes go ſtark naked, as deſcribed by Captain Cook, yet they are not without their ornaments, the principal of which is a bone, which they thruſt through the cartilage that divides the noſtrils from each other, and reaching quite acroſs the face, cauſes the wearer to ſnuffle, ſo as ſcarcely to be underſtood, and obliges him to keep his mouth conſtantly open in order to breathe freely. Beſides this noſe-ornament, they wear necklaces made of ſhells, bracelets of ſmall cords wound two or three times about the upper part of the arm, and a ſtring of human hair plaited, about as thick as a thread of yarn, tied round the waiſt. Some had large gorgets of ſhells hanging on the breaſt, and a few women had feathers on their heads ſtuck on with gum.

The natives paint their bodies both white and red, and draw a circle of white round each eye; they have holes in their ears; but were not ſeen to wear any thing in them. On their bodies were ſeveral large ſcars in irregular lines, apparently made by ſome blunt inſtruments, probably as memorials of grief for the dead.

Neither town nor village appeared in the whole country, nor did either art or induſtry appear in the conſtruction of their houſes, if they can be ſo called. They are built with pliable rods, not thicker than a finger, in the form of an oven, by bending them and ſticking the two ends to the ground. The covering is of palm leaves and pieces of bark, and the entrance by a large hole at one end, oppoſite to which the fire is made. Some of them are juſt high enough to ſit upright in, but not large enough for a man to extend himſelf in any direction; ſo that the tenants of theſe hovels are under the neceſſity of coiling themſelves up with their heels to their heads, in order to make room for three or four of them to ſleep together. The warmer the weather, the ſlighter the ſheds are conſtructed; one ſide is entirely open, and none of them are more than four feet deep. They are put up occaſionally as exigence may require, and left behind them when they remove to another ſpot. When they take up their reſidence only for a night in a place, they put up no ſhed, but repoſe on the buſhes and graſs, which grows here to a great height.

Their utenſils are a veſſel made of bark to hold the water they fetch from ſprings, and a bag about the ſize of a moderate cabbage-net, which the men carry upon their backs with a ſtring which paſſes over their heads. It contains paint, fiſh-hooks, darts, and bracelets, which compoſe the whole property of the richeſt men amongſt them. Their fiſh-hooks, of which many are extremely ſmall, are made with great nicety, and their mode of ſtriking turtle is curious. For this purpoſe they have a wooden peg, about a foot in length, and well bearded. This fits into a ſocket at the end of a ſtaff of light wood, in length about ſeven or eight feet, and about the thickneſs of a man's wriſt. One end of a looſe line, about three or four fathoms long, is tied to the ſtaff, and the other end faſtened to the peg. In order to ſtrike the turtle, the peg is fixed into the ſocket, ſo that when it has entered the body, and is there retained by the barb, the ſtaff flies off, and ſerves for a float to trace their victim in the water.

Fiſh indeed is their chief food, though they ſometimes contrive to kill the kanguroo, and birds of various kinds. They either broil or bake their proviſions by the help of hot ſtones, like the inhabitants of the South-ſea iſlands, for there is no appearance of their eating any animal-food raw. The only vegetable that can be conſidered as an article of food is the yam, though they may probably eat of thoſe very few fruits the country produces.

To produce fire, they take two pieces of ſoft dry wood, one a round ſtick about eight or nine inches long, the other piece is flat. One end of the round piece they ſhape into a bluntiſh point, and make a hole in the flat piece. In this hole they twirl the end of the ſtick, in the manner that we do a chocolate-mill, preſſing it down in the hole as much as poſſible. By this method they get fire in leſs than two minutes, and from the ſmalleſt ſpark increaſe it with aſtoniſhing ſpeed and dexterity. They will wrap up a ſpark in a little dry graſs, which by moving will be fanned into a blaze. Thus a man will run on for miles, and without any fire viſible in his hands, will, at a hundred yards or leſs, ſtoop down and leave fire behind him. The principal means of annoying their European viſitors, was by ſetting fire to the high graſs in the neighbourhood of the place where the tents were fixed, which being very dry, burnt with great rapidity, and did much damage.

Spears or lances of different kinds, ſome with four

prongs,

prongs, pointed with bone and barbed, are their weapons. The points are ſmeared with hard reſin, which gives them a poliſh, and makes them enter deeper into what they ſtrike. To the northward, the lance has but one point, the ſhaft is made of cane very ſtraight and light, and from eight to fourteen feet long. Theſe weapons are thrown with great force and dexterity; if intended to wound at a ſhort diſtance, as from ten to twenty yards, ſimply with the hand, but if at the diſtance of forty or fifty yards, with a throwing ſtick, and that with ſo good an aim, that the natives are as ſure of their mark as the moſt expert ſportſman with a fowling-piece. Theſe lances cannot be drawn out of a wound without tearing away the fleſh, or leaving the ſharp ragged ſplinters of the bone or ſhell which forms the barb behind them.

The canoes of this country make as wretched an appearance as their dwellings. Thoſe on the ſouthern part of the coaſt are made of one piece of bark, tied together at the ends, and kept open in the middle by ſmall bows of wood. In ſhallow water, they puſh them on by a pole; in deeper, by paddles about eighteen inches long, two of which they uſe at a time. To the northward, they are made of the trunk of a tree hollowed out by fire. They are about fourteen feet in length, very narrow, and fitted with an outrigger to prevent their overſetting None of theſe boats will carry more than four people.

The only tools ſeen among them were an adze clumſily made of ſtone, ſome ſmall pieces of the ſame ſubſtance in form of a wedge, a wooden mallet, and ſome ſhells and fragments of coral.

The New-Hollanders have no idea of traffic, for though they received the things that were given them, they appeared wholly inſenſible to all the ſigns that were made them that ſomething was expected in return. Many of the trinkets that were given them were afterwards found negligently thrown away in the woods, like toys, the charms of which ceaſed with their novelty.

The cauſe of the ſmall number of the human ſpecies which are to be met with throughout this country cannot be aſcertained: but from their total ignorance of agriculture, commerce, and the means of procuring the comforts and conveniences of life, they appear ſuch as Europeans would rank among the moſt miſerable of the human ſpecies.

BOTANY-BAY.

Its ſeveral Productions; alſo the Genius and Cuſtoms of the Inhabitants.

GOVERNMENT having formed a deſign to remove the great inconvenience which this country ſuffered, from the gaols being ſo exceedingly crowded with criminals, who had by the laws been ſentenced to tranſportation, determined, for this neceſſary purpoſe, to eſtabliſh a ſettlement on the eaſt coaſt of New Holland; and as Botany-Bay was the only place entered by Captain Cook's ſhip, which could be called a harbour, it was fixed on as the moſt convenient place for the intended purpoſe.

This place was called Botany-Bay, from the great quantity of plants collected there; and the ſpot where our new ſettlement is made, lies in latitude 34 ſouth, and in longitude from Greenwich 151 degrees 23 minutes. Captain Cook deſcribes it as capacious, ſafe, and convenient; to be known by the land on the ſea coaſt, which is nearly level and of a moderate height, with ſteep rocky cliffs next the ſea, which have the appearance of a long iſland lying cloſe under the ſhore. About the middle of this land lies the harbour, which, on approaching it from the ſouthward, is diſcovered before the veſſel comes abreaſt of it, but it is not diſcovered ſo ſoon from the northward: the entrance is little more than a quarter of a mile, and lies to the W. N. W.

There are but two kinds of timber-wood here. The trees are as large, or larger than the Engliſh oak, and one of them has ſome reſemblance of it. It is that which yields the reddiſh gum like dragons blood, and the wood is heavy, hard, and dark-coloured like *lignum vitæ*. The other, which grows tall and ſtraight, is ſomething like a pine; and the wood of it, which bears ſome ſimilitude to the live oak of America, is likewiſe hard and heavy. There are few ſhrubs and ſeveral kinds of palm: mangroves abound towards the head of the bay.

The country in general, as far as it was obſerved, is level, low, and woody. In the woods are great numbers of birds of exquiſite beauty, particularly of the parrot kind; there were found alſo crows exactly ſimilar to thoſe in England. There is great plenty of water fowl towards the head of the harbour, where are large flats of ſand and mud, but their ſpecies is chiefly unknown. One of the moſt remarkable was black and white, much larger than a ſwan, and in ſhape ſomewhat reſembling a pelican. The banks of ſand and mud produced great quantities of oyſters, muſcles, cockles, and other ſhell fiſh, which ſeem to be the chief ſubſiſtence of the inhabitants, who go in ſhoal water with their little canoes, and gather them up. Beſides theſe, they catch other fiſh, ſome of which they ſtrike with gigs, and ſome they take with hook and line.

Of their preciſe manner of life little can be known, as no connection was formed with them, for they never afforded an European navigator an opportunity for a parley, nor would they touch any one article that was left in their huts (or any places they frequented) on purpoſe for them to take away.

From the place where the ſhip anchored in April 1770, which was abreſt of a ſmall village conſiſting of ſix or eight houſes, as the men were preparing to hoiſt out the boat, they obſerved an old woman and three children come out of the wood, where they had been to fetch materials for firing. She frequently caſt an eye towards the veſſel, but expreſſed neither in look or geſture the ſmalleſt degree of fear or ſurpriſe. Having kindled a fire, ſome men landed from four canoes that came in from fiſhing, and having hauled up their boats began to prepare their food, wholly unconcerned about the ſtrangers, though within only half a mile of them. They had not yet ſeen one of them but was ſtark naked, the old woman herſelf being deſtitute of the leaſt covering.

A company ſet out from the ſhip (with Tupia, one of the natives of that clime, of the party) with a deſign of landing on the ſpot where they ſaw the people, hoping to meet no interruption, as they ſo little regarded their coming into the bay. But they found themſelves diſappointed, for as ſoon as they approached the rock, two of the natives came down, each armed with a lance about ten feet long, and a ſhort ſtick which appeared to be uſed as a machine to aſſiſt them in throwing it. They ſeemed determined to defend their coaſt, though the party that landed were forty in number.

Tupia, above-mentioned, was a native of Otaheite, viſited by Captain Cook previous to his arrival here. This man was ſo firmly attached to our people, from being almoſt conſtantly with them during their ſtay in his own country, that he often expreſſed a deſire of going with them. To have ſuch a perſon on board was certainly deſirable, for many reaſons. He was a man of the firſt rank in his country, and had great experience in navigation. By learning his language, and teaching him theirs, our people might derive much uſeful information; and as there was reaſon to apprehend there was great ſimilarity (as appeared in the inſtance of New Zealand) between the languages of the natives of theſe ſouthern climes, he might occaſionally ſerve as an interpreter. In fine, as he

was

was evidently a man of genius and ſcience, Captain Cook gladly admitted him and his ſervant on board, on the ſhip's departure from Otaheite. But to return:

The Captain, with his wonted humanity, being deſirous of preventing hoſtilities with ſuch inequality of force, ordered the boat's crew to lie upon their oars, when they parlied by ſigns, and to procure their good will he cauſed nails, beads, and other trifles to be thrown to them, which they took up with apparent ſatisfaction. Signs were then made by the Europeans, that they wanted water, and every means uſed that could be deviſed to prevail with them to believe the innocence of their deſign. The natives waving to them being interpreted as an invitation, they put on the boat, but the men on ſhore reſumed their poſture of defence. One appeared to be a youth about nineteen or twenty, and the other a man of middle age. Captain Cook, now urged by neceſſity, fired a muſket between them, upon the report of which, the younger dropped a bundle of lances, but, upon inſtantaneous recollection, ſnatched them up in great haſte. Two diſcharges of ſmall-ſhot from the muſket on the one party, and a diſcharge of a ſtone and a lance from the other enſued, in conſequence of which the eldeſt of the natives was ſlightly wounded in the legs, but the Europeans received no hurt; when on the ſuggeſtion of Mr. Banks (now Sir Joſeph) that the lances might be poiſoned, it was deemed imprudent to venture into the woods. They then viſited the huts, in one of which were ſome children hid behind a ſhield, and ſome bark. They were left in their retreat without knowing they had been diſcovered, and the viſitors on their departure threw in ſome beads, ribbons, pieces of cloth, and other preſents, in order to conciliate the inhabitants on their return. They took away with them all the lances they found lying about, to the number of fifty. They were in length from ſix to fifteen feet, had four prongs like a fiſh-gig, each pointed with a fiſh bone, and very ſharp. They were ſmeared with a vicious ſubſtance, of a green colour, which favoured the opinion of their being poiſoned; though it proved after to be a miſtake, for it was diſcovered from the ſea weed that adhered to them, that they had been uſed for the purpoſe of ſtriking fiſh.

The canoes on the beach ſeemed to be the worſt that had been ſeen. They were between twelve and fourteen feet long, and made of the bark of a tree of one piece, which had been drawn together and tied up at each end, the middle being kept open by ſticks, which were placed from gunwale to gunwale as thwarts. It was now remarked that this boldneſs of the natives dwindled into a general trepidation; not only from the ſmall-ſhot which had been diſcharged at the two champions who firſt defended the coaſt, but likewiſe the havock made by the ſmall arms amongſt the birds.

The Europeans having re-embarked in their boat, depoſited their lances on board, and proceeded to the north point of the bay, but the inhabitants they had ſeen on their entrance, had by this time totally deſerted it. Upon going on ſhore the following day in queſt of water, a ſmall ſtream was found fully anſwerable to their purpoſe. It was obſerved by ſome of the officers, upon re-viſiting the huts, that the beads, ribbons, &c. which had been left there the preceding night, remained in the very ſame place untouched, nor was there an Indian to be ſeen. Thoſe alſo whom they ſaw upon a future excurſion, fled at their approach, as they did upon every like occaſion.

In proceſs of time, Captain Cook, accompanied by Mr. Banks, Dr. Solander, and ſeven others, determined to make an excurſion into the country, and having properly accoutred themſelves for the expedition, ſet out and firſt viſited the huts, near the watering place, where ſome of the natives daily reſorted; and though they found the preſents ſtill remained untouched, they left other articles of more value, and then went up into the country. The ſoil was found to be either ſwamp or light ſand, and the face of the country to be pleaſingly variegated by woods and lawns. The trees are tall, ſtraight, and ſtand at ſuch a diſtance from each other, that the whole country, or that part at leaſt where the ſwamps do not interpoſe, might be cultivated without felling one of them. The ground between the trees is covered with graſs, of which there is great abundance growing in tufts as large as can be graſped in the hand, which ſtand very cloſe to each other. Many ſheds of the natives, and places where they had ſlept on the graſs, without any ſhelter, were ſeen; but only one of the people, who fled the moment he was diſcovered. Preſents were left at all theſe places, with the ſame veiw as before, of producing confidence.

With reſpect to diſcoveries on this firſt excurſion, it is noticed, that they had a tranſient and imperfect view of a quadruped about the ſize of a rabbit. An Engliſh greyhound, which was with them, got ſight of it, and would probably have caught it, had he not been lamed by a ſtump that lay concealed in the graſs. They afterwards ſaw the dung of an animal that fed upon graſs, and which they judged could not be leſs than a deer; and the footſteps of another, which was clawed like a dog, and ſeemed about the ſize of a wolf. They alſo traced a ſmall animal, whoſe feet reſembled that of a pole-cat or weazle. Birds of various kinds were ſeen in their trees, ſome of them of exquiſite beauty, particularly loriquets and cockatoos, which flew in numerous flocks. The trees were not of many ſorts, but it appeared that ſteps had been cut in ſome of them at certain diſtances for the convenience of climbing.

The ſame party made another excurſion along the ſea coaſt to the ſouthward, and the next day gathered many plants, beſides which they ſaw nothing worthy of notice. But Captain Cook, with his wonted perſeverence, went with two ingenious gentlemen to the head of the bay, in order to explore that part of the country, and make further attempts to form ſome connection with the natives. Proceeding up the country to ſome diſtance, they found the face of it, nearly the ſame with that which has been already deſcribed; but the ſoil was much richer, for inſtead of ſand, there was diſcovered a deep black mould, which appeared very fit for the production of grain of any kind. In the woods was found a tree which bore fruit that in colour and ſhape reſembled a cherry, the juice was agreeably tart, though it had but little flavour. Interſperſed were ſome very fine meadows; ſome places were rocky, but thoſe were comparatively few; the ſtone is ſandy and fit for building.

A petty officer, having ſtraggled a long way from his companions, met with a very old man and woman and ſome little children ſitting under a tree by the water ſide, and though neither party ſaw the other till they were cloſe together, the Indians ſhewed ſigns of fear, but did not attempt to run away. The man and woman were both grey headed with age, the hair on the man's head was buſhy, and his beard long and rough, the woman's hair was cropped, and both of them were ſtark naked. Another party afterwards went over to the north ſhore, and made an excurſion a few miles into the country, proceeding afterwards in the direction of the coaſt. This part was found without wood, and ſomewhat reſembling the marſhes in England. The ſurface of the ground was covered with a thin bruſh of plants about as high as the knees: the hills near the coaſt are low, but others riſe behind them, increaſing by a gradual aſcent to a conſiderable diſtance, with marſhes and moraſſes between.

To the northward is Hervey's-Bay, in which was found

†

found a real mangrove, ſuch as grows in the Weſt-Indies, and the firſt of the kind met with in theſe ſeas. In the branches of this mangrove were many neſts of a remarkable kind of ant as green as graſs. There were alſo ſeen upon them great numbers of ſmall green caterpillars, their foreheads were thick ſet with hairs, and they were ranged upon the leaves ſide by ſide like a file of ſoldiers to the number of twenty or thirty together. The hair of their bodies on touching them was found to have the quality of a nettle, and gave a much more acute though leſs durable pain.

A ſpecies of the buſtard was found further to the northward, as large as a turkey, one of which weighed ſeventeen pounds and an half. Thoſe who partook of it allowed it to be the beſt bird they had taſted ſince they left England; and in honour of it they called the inlet Buſtard-Bay. It lies in latitude 24 degrees 4 minutes, and 151 degrees 42 minutes eaſt. Here are oyſters in great plenty; amongſt others, the hammer oyſter, and abundance of ſmall pearl oyſters, from whence Captain Cook took occaſion to remark, "that if in deeper water there was equal plenty of ſuch oyſters at their full growth, a pearl fiſhery might be eſtabliſhed here to very great advantage."

During the ſtay of the Engliſh in the harbour, they cauſed the Britiſh colours to be diſplayed on ſhore every day, and the ſhip's name and the date of the year to be inſcribed on one of the trees near the watering place, to perpetuate the memory of their tranſactions; and on the 6th of May they ſet ſail from New Holland.

Along the coaſt of New South-Wales the ſea in all parts conceals ſhoals that ſuddenly project from the ſhore, and rocks that abruptly riſe like a pyramid from the bottom for an extent of 22 degrees latitude, more than 1300 miles. Off Cape Tribulation our bold and hitherto fortunate adventurers very nearly eſcaped the miſeries of ſhipwreck; for on the 10th of June 1770, at eleven o'clock at night, the ſhip ſuddenly ſtruck againſt a coral rock and became immoveable, except by the heaving of the ſurge, which beat her againſt the crags of the rock upon which ſhe lay, and cauſed ſo violent a concuſſion, that it was with the utmoſt difficulty the ableſt man on board could ſtand upon his legs. At length, after a ſeries of hardſhips, fatigue, and danger, they were happily delivered, and the river which afforded themrelief in this emergency was named *Endeavour River*.

Captain Cook, being reſolved to determine whether this country did or did not join to New Guinea, in effecting his deſign braved ſuch dangers as would have appalled the reſolution of any man whoſe ſpirit for diſcovery had not abſorbed all regard to perſonal ſafety. After much inveſtigation he found the two countries to be divided by a narrow ſea, which he therefore called *Endeavour Streights*.

The moſt northern promontory of the country is York Cape, in 142 degrees eaſt longitude; 10 degrees 37 minutes ſouth latitude. On a ſmall iſland our countryman took poſſeſſion of the whole eaſtern coaſt in right of his Majeſty King George the Third, by the name of New South-Wales, on which account the iſland received the name of Poſſeſſion-Iſland. Here the few inhabitants that were ſeen, both men and women, were alſo ſtark naked. Endeavour Straights are ten leagues long from north-eaſt to ſouth-weſt, and about five leagues broad. The north-eaſt entrance of this paſſage is formed by New Holland, and the ſouth-eaſt by an aſſemblage of iſlands, which have been called the Prince of Wales's Iſlands, and probably extend near to New Guinea. Monſieur de Bougainville, the celebrated French navigator, who came juſt at the entrance of theſe ſtraights to the moſt ſouth-eaſt parts of New Guinea, called that ſea, "That Gulph of the Louiſiade," the ſtraights ſince navigated by Captain Cook being not known to exiſt.

Before we leave Botany-Bay, we preſume the following ſhort account of the proceedings in trying offenders in the criminal courts there (as related by Captain Hunter, in his Hiſtorical Journal) will be acceptable to our readers: "The judge-advocate iſſues his precept for the three ſenior naval officers, and their military officers, to aſſemble at the time appointed, dreſſed in their uniforms and their ſide-arms. When they are met, the judge advocate adminiſters an oath to the members, ſimilar to that which is uſed at military courts-martial; afterwards, one of the members adminiſters the ſame oath to the judge-advocate who preſides at the court, and the reſt take their ſeats according to their rank. The priſoner is then aſked, whether he is guilty or not, and, as the general anſwer is, Not Guilty, the accuſations againſt him are read, and witneſſes are examined on oath to ſupport or prove the charge; after which the priſoner enters on his defence, and brings evidence to prove his innocence: the court is then cleared, and the members conſider what ſentence to pronounce; if it be death, five out of the ſeven muſt concur in opinion. The governor can reſpite a criminal condemned to die, and the legiſlature has fully impowered him to execute the ſentence of the law, or to temper it with mercy. Actions for debt, to a certain amount, are cognizable by this court, as are all other actions of common law, when they are decided according to the law of England, as nearly as the ſituation will allow.

PORT-JACKSON.

Deſcription of the Country, and its Produce. Some Account of the Natives: their Diſpoſition, Weapons, Ornaments, &c.

AS nothing was found in Botany-Bay to recommend it as a place on which to form an infant ſettlement; the governor, accompanied by Captain Hunter, and two other officers, ſoon diſcovered a large opening, or bay, about three leagues and a half to the northward of Cape Banks; and ſuch was their account of the harbour, and the advantages attending the place, upon their return, that a reſolution was formed of evacuating Botany-Bay, and fixing their reſidence here.

At day-break a general alarm was given, by the appearance of two ſhips, of conſiderable ſize, ſtanding in for the mouth of the bay, it being the prevailing opinion that they were Dutchmen, ſent to aſſert a claim to the country. The two ſtrangers proved to be the Buffalo and Aſtrolabe, which ſailed from Breſt in June 1785, upon diſcoveries, and were commanded by Monſieur de la Peyrouſe; M. de L'Angle, who commanded one of the ſhips when they left France, had been lately, when the ſhips were at the Iſlands of Navigators, murdered, with ſeveral other officers and ſeamen, by the natives, who had, before that unfortunate day, always appeared to be upon the moſt friendly and familiar terms with them. This accident, it ſeems, happened when their launches were on ſhore filling water, on the laſt day they intended remaining on thoſe Iſlands. While they were employed in filling their water-caſks, having the moſt perfect confidence in the friendly diſpoſition of the natives, the ſailors had been attentive to the keeping the boats afloat. Some miſunderſtanding having alſo happened between ſome of the ſeamen and the natives, an inſult had been offered by one or other, which was reſented by the oppoſite party: a quarrel enſued, and the impoſſibility of moving the boats expoſed the officers and crew to the rage of the multitude, who attacked them with clubs and ſhowers of ſtones; and would inevitably have maſſacred the whole, if there had not been a ſmall boat at hand, which picked up thoſe who, depending on

their ſwimming, had quitted the ſhore. Many of the natives were killed upon this occaſion; and the loſs of the ſhips was ſaid to be fourteen perſons killed, including Captain de L'Angle, and ſome other officers; ſeveral were much wounded, and the boats were entirely deſtroyed.

The paſſage from Botany-Bay to Port-Jackſon was both ſpeedy and pleaſant. Having paſſed between the Capes which form its entrance, the fleet arrived at Port-Jackſon, one of the fineſt and moſt extenſive harbours in the univerſe, and at the ſame time the moſt ſecure, being ſafe from all the winds that blow. It is divided into a great number of coves, to which the governor has given different names. That on which the town is to be built is called Sydney-Cove. It is one of the ſmalleſt in the harbour, but the moſt convenient, as ſhips of the greateſt burden can with eaſe go into it, and heave out cloſe to the ſhore. Trincomalée, acknowledged to be one of the beſt harbours in the world, is by no means to be compared to it. In a word, Port-Jackſon would afford ſufficient and ſafe anchorage for all the natives of Europe. During a run up the harbour of about four miles, in a weſterly direction, a luxuriant proſpect preſented itſelf on the ſhores, covered with trees to the water's edge, among which many of the Indians were frequently ſeen, till the fleet arrived at a ſmall ſnug cove to the ſouthward, on the banks of which the plan of operations were deſtined to commence. On their arrival, the natives appeared tolerably numerous, from whence they had reaſon to conclude the country more populous than Captain Cook thought it, as they were aſſembled on the beach, to the ſouth ſhore, to the number of not leſs than forty perſons, ſhouting, and making many uncouth ſigns and geſtures. As the boat, in which were the governor, ſome officers, and attendants, rowed up the harbour cloſe to the land, for ſome diſtance, the Indians kept pace with her on the beach. When ſigns were made of a want of water, the natives directly comprehended the meaning, and pointed to a ſpot where it could be procured; on which the boat was immediately puſhed in, and a landing took place. The Indians, though timorous, ſhewed no ſigns of reſentment at our people's going on ſhore; and when an interview commenced, ſeemed highly entertained with their new acquaintance, from whom they accepted of a looking glaſs, ſome beads, and other toys.

In the late expedition, the adventurers had ſeveral more interviews with the natives, which ended in ſo friendly a manner, that hopes were entertained of bringing about a connection with them. The firſt object of our people was to win their affection, and the next to convince them of our ſuperiority. To this purpoſe an officer one day prevailed on one of them to place a target, made of bark, againſt a tree, which he fired at with a piſtol, at the diſtance of ſome paces. The Indians, though terrified at the report, did not run away; but their aſtoniſhment exceeded their alarm, on looking at the ſhield which the ball had perforated. As this produced a little ſhyneſs, the officer, to diſſipate their fears, and remove their jealouſy, whiſtled the air of *Marlbrouk*, with which they appeared highly charmed, and imitated him with equal pleaſure and readineſs.

Upon this occaſion an officer remarked, that he was afterwards told by Monſieur de Peyrouſe, the French commandant before mentioned, that the natives of California, and throughout all the iſlands of the Pacific Ocean, and, in ſhort, wherever he had been, ſeemed equally touched and delighted with this little plaintive air.

Some of the officers one day met a native, an old man, in the woods. He had a beard of conſiderable length, which his new acquaintance gave him to underſtand, by ſignals, they would rid him of, if he pleaſed; ſtroaking their chins, and ſhewing him the ſmoothneſs of them at the ſame time. At length the old Indian conſented; and one of the officers, taking a penknife from his pocket, and making uſe of the beſt ſubſtitute for lather he could find, performed the operation with great ſucceſs, and, as it proved, much to the liking of the old man, who, in a few days after, repoſed a confidence in our people, of which they had hitherto known no example, by paddling along-ſide one of the ſhips in his canoe, and pointing to his beard. Various arts were ineffectually tried to induce him to enter the ſhip; but as he continued to decline the invitation, a barber was ſent down into the boat along-ſide the canoe, from whence leaning over the gunwale, he complied with the wiſh of the old beau, to his infinite ſatisfaction In addition to the conſequences expected from this dawning of cordiality, it afforded proof, that the beard is conſidered by theſe people more as an incumbrance than a mark of dignity.

After tranſacting the neceſſary previous buſineſs, the commiſſions were upon an appointed day read, and poſſeſſion was taken of the ſettlement in form. The marine battalion being drawn up, and the convicts aſſembled on the occaſion, his Majeſty's commiſſion was read, appointing his Excellency Arthur Philip, Eſq. Governor and Captain General in and over the territory of New South-Wales, and its dependencies; together with the acts of parliament for eſtabliſhing trials by law within the ſame, and the patents, under the great ſeal of Great-Britain, for holding civil and criminal courts of judicature, by which all caſes of life and death, as well as matters of property were to be decided.

The extent of this authority is defined, in the governor's commiſſion, to reach from the latitude of 43 deg. 49 min. ſouth, to the latitude of 10 deg. 37 min. ſouth, being the northern and ſouthern extremities of New Holland. It commences again at the 135th degree of longitude eaſt, and proceeding in an eaſterly direction, comprehends all iſlands within the limits of the above ſpecified latitudes in the Pacific Ocean. As the diſcoveries of Engliſh navigators alone are compriſed in this territory, it is preſumed, this partition will obviate all cauſe of future ligitation between us and the Dutch. It appears from the commiſſion, conſidered in the whole, that government have been no leſs attentive in arming Mr. Phillip with plenitude of power, than extent of dominion.

In order to enforce the rigour of the law, it was found neceſſary to reſtrain the violation of public ſecurity. A ſet of deſperate and hardened miſcreants leagued themſelves for the purpoſes of depredation; and, as is generally the caſe, had inſinuation enough to entice others, leſs verſed in iniquity, to become inſtrumental in carrying it on.

About the middle of March, the French departed from this place, on the proſecution of their voyage; and that during their ſtay in that part, the officers of the two nations had frequent opportunities of teſtifying their mutual regard, by viſits, and every token of friendſhip and zeal. The gentleman to whom we are indebted for this account, mentions Monſieur de Peyrouſe with the higheſt reſpect, as an officer of eminent qualifications, and a man of exemplary humanity, of which he gave proof, in a ſtriking, as well as laudable, inſtance of conduct, when ordered to deſtroy our ſettlement at Honduras in the laſt war. He always mentioned the name and talents of Captain Cook in the moſt feeling manner, and declared with the utmoſt frankneſs and candour, that "our illuſtrious circumnavigator had left nothing to thoſe who might follow in his track to deſcribe or fill up." Being aſked what reception he had met with when he touched at the Sandwich-Iſlands, his anſwer is highly worthy of notice: "During the whole of our voyage in the South-Seas, ſaid he, the people of the Sandwich-Iſlands were the only Indians who never

gave

gave us cauſe of Complaint. They furniſhed us liberally with proviſions, and adminiſtered cheerfully to all our wants." It is remarked, upon this occaſion, with equal candour, that Owhyhee was not one of the iſlands viſited by that navigator.

Captain Hunter obſerves, "That with a ſmall company he was one day on ſhore in another part of the harbour, making friendſhip with a party of the natives, when in a ſhort time their numbers increaſed to eighty or ninety men, all armed with a lance and throwing-ſtick, and many with the addition of a ſhield made of the bark of a tree: ſome were in ſhape an oblong ſquare, and others of theſe ſhields were oval; theſe were the firſt ſhields we had ſeen in the country; it has been ſince found that they are made in general of wood. The natives were much ſurpriſed at one of our gentlemen, who, pulling a piſtol out of his pocket, that was loaded with ball, and ſtanding at ſome diſtance, fired the ball through the thickeſt part of the ſhield; which they examined with aſtoniſhment, and ſeemed to wonder that an inſtrument ſo ſmall ſhould be capable of wounding ſo deep.

"The natives were noiſy, but did not appear diſpoſed to quarrel; we gave them ſuch little preſents as we had with us, with which they ſeemed well pleaſed; although we had much reaſon afterwards to believe that ſuch trifles only pleaſed them as baubles do children, for a moment; for at other times we had frequently found our preſents lying diſperſed on the beach, though caught at by theſe people with apparent avidity at the time they were offered.

"While we were employed with this party, we obſerved at a diſtance a number of women, who were peeping from their concealments, but durſt not gratify their natural curioſity, by appearing openly and converſing with us, as the men appeared here to be very abſolute. I ſignified to the men, that we had obſerved the women, and that I wiſhed to make them ſome preſents, if they might be permitted to come forward and receive them. The men ſeemed unwilling to ſuffer them to advance; for we had frequently obſerved, that they took particular care upon every occaſion to keep the women at a diſtance, and I believe wholly from an idea of danger. They deſired to have the preſents for the women, and they would carry and deliver them; but to this propoſal I poſitively refuſed to agree, and made them underſtand, that unleſs they were allowed to come forward, they ſhould not have any.

"Finding I was determined, an old man, who ſeemed to have the principal authority, directed the women to advance, which they did immediately, with much good humour; and, during the whole time that we were decorating them with beads, rags of white linen, and ſome other trifles, they laughed immoderately, although trembling at the ſame time through an idea of danger. Moſt of thoſe we ſaw at this time were young women, whom I judged were from eighteen to twenty-five years of age: they were all perfectly naked, as when firſt born; are in general well made, not quite ſo thin as the men, but rather ſmaller limbed."

The account further obſerves, that the men, being armed, ſcarified, and painted, drew themſelves up in a line on the beach, and each man had a green bough in his hand, as a ſign of friendſhip; their diſpoſition was as regular as any well diſciplined troops could have been; and this party, it was apprehended, they deſigned entirely for the defence of the women, if any inſult had been offered them. At this interview, two very ſtout men were placed upon a rock, near to where the boats lay, as centinels, for they never moved from the ſpot till the boats left the beach: ſo that it is probable they were ordered there to watch the motions of their viſitors.

As the governor was exploring Broken-Bay, which is contiguous to Port-Jackſon, he ſaw a great number of the natives. One of the females had formed an attachment to his great coat; and to obtain it ſhe uſed a variety of means. Firſt, ſhe danced and played a number of antic tricks; but finding this mode ineffectual, ſhe had recourſe to tears, which ſhe ſhed plentifully. This expedient not anſwering, ſhe ceaſed from weeping, and appeared as cheerful as any of the party around her. We have introduced this incident, to ſhew that they are not a people devoid of art and fineſſe, in order to obtain their ends; for though their women appeared with ſuch few decorations, yet it was evident they had no averſion to finery.

The ſurgeon obſerved, at a repaſt, wherein he grouped with the natives, one of the women who ſat next to him, obſerving that he had a white handkerchief in his hand, exhibited a number of laſcivious airs, in order to obtain it. He therefore tore it into ribbons, being deſirous of multiplying one preſent into many, with which he decorated her head and neck. On her admiring the buttons of his coat, as he had nothing elſe left, he cut them away, and tied them round her waiſt. Thus ornamented, and charmed with her acquirements, ſhe turned away with a look of inexpreſſible archneſs and joy, which ſeemed to ſhew that, like the women in the South-Seas in general, they are fond of new ornaments. He alſo obſerved, that there is no hoſpitality nor harmony among them; as appeared from their eating ſo greedily without regarding the accommodation of any about them; devouring the fiſh voraciouſly, which had been thrown on the fire and ſcarcely warm.

Theſe people are very ravenous in their appetites, as appears from the following inſtance. One of the officers ſhot a bird, which fell at an old man's feet. The exploſion at firſt greatly alarmed him; but perceiving no ill was intended, he ſoon got over his fears. The bird was then given to him, which, having barely plucked, and not more than half broiled, he devoured, entrails, bones and all.

A convict, who had been gathering what they call ſweet tea, about a mile from the camp, met a party of the natives, conſiſting of fourteen, by whom he was beaten and wounded with the ſtick uſed in throwing their ſpears. They then made him ſtrip, and would have taken from him his clothes, and probably his life, had it not been for the report of ſome muſkets, which they no ſooner heard than they ran away.

The following circumſtances will convince us of the deſtructive nature of their weapons, and their ſkill and adroitneſs in the uſe of them. A convict, being in a ſtate of convaleſcence, had obtained permiſſion from the governor to go a little way up the country, to gather herbs, for the purpoſe of making tea. This man, after night ſet in, was brought to the hoſpital, with one of the ſpears uſed by the natives ſticking in his loins. It had been darted at him as he was ſtooping, and while his back was turned to the aſſailant. The weapon was barbed, and ſtuck ſo very faſt, that it would admit of no motion. The ſurgeon, after dilating the wound to a conſiderable length and depth, with ſome difficulty extracted the ſpear, which had penetrated the fleſh nearly three inches. After the operation, the convict gave information, that he had received his wound from three of the natives, who came behind him at a time when he expected no perſon to be near him, except another convict, whom he had met a little before, employed on the ſame buſineſs as himſelf. He added, that after they had wounded him, they beat him in a cruel manner; and ſtripping the clothes from his back, carried them off, making ſigns to him (as he interpreted them) to return to the camp. He further related, that after they had left him, he ſaw his fellow convict in the poſſeſſion of another party of the natives,

natives, who were dragging him along, with his head bleeding, and ſeemingly in great diſtreſs; while he himſelf was ſo exhauſted with the loſs of blood, that inſtead of being able to aſſiſt his companion, he was happy to eſcape with his life.

They afterwards continued to avail themſelves of every opportunity of exerciſing their cruelty on our people. An officer of the marines, who had been up the harbour to procure ſome ruſhes for thatch, brought to the hoſpital the bodies of two men employed as ruſh-cutters, whom he found murdered by the natives in a ſhocking manner. One of them was transfixed through the breaſt with one of their ſpears, which was extracted with great difficulty and force. He had two other ſpears ſticking in him to a depth which muſt have proved mortal. His ſkull was divided and comminuted ſo much, that his brains eaſily found a paſſage through. His eyes were out. The other was a youth, and had only ſome trifling marks of violence about him. This lad could not have been many hours dead; for when the officer found him among ſome mangrove trees, and at a conſiderable diſtance from where the other man lay, he was not ſtiff, nor very cold; nor was he perfectly ſo when brought to the hoſpital. The natives, whenever an opportunity offers, never fail to ſteal or deſtroy any of the live ſtock they can poſſibly get poſſeſſion of. Nor are they leſs cowardly than cruel; for they always behave with an apparent civility when they fall in with men that are armed; but when they meet perſons unarmed, they ſeldom fail to take every advantage of them; in conſequence of which, many of the convicts have fallen ſacrifices to theſe ſavages: but the ſoldiers they never aſſail, being always terrified at the ſight of a red coat.

Theſe people are very happy at grimace and mimicry; as an inſtance of which, it is remarked by the ſurgeon of the ſettlement, that, going upon an excurſion, they obſerved a party of the natives fiſhing, and ſat down near the bank, to watch their motions. To paſs away time, one of the gentlemen ſung ſeveral ſongs; and when he had done, the females in the canoes either ſung one of their own ſongs, or imitated him, in which they ſucceeded beyond conception. Any thing ſpoken by our people they moſt accurately recited, and this in a manner in which the Europeans fell greatly ſhort in their attempts to repeat the language after them, which ſhews the ſtrength of their organical powers. Nor are they without ingenuity, as appeared from various figures obſerved by a party of our people on their excurſion to the weſtward. Theſe figures were cut on the ſmooth ſurface of ſome large ſtones, and conſiſted chiefly of repreſentations of themſelves in different attitudes, of their canoes, of ſeveral ſorts of fiſh, and animals: and conſidering the rudeneſs of the inſtruments with which the figures muſt have been executed, they ſeemed to exhibit tolerable likeneſſes.

The natives are generally of the common ſtature; but their limbs are remarkably ſmall. Their ſkin is of the colour of wood ſoot, or what would be called a dark chocolate colour. Their hair is black, but not woolly; it is ſhort, but not cropt; in ſome lank, in others curled. Some parts of their bodies are painted red; and the upper lip and breaſts of ſome of them are painted with ſtreaks of white. Their features are far from diſagreeable; and their teeth even and white. Their voices are ſoft and tuneable. It is remarked, that the deficiency of one of the fore teeth of the upper jaw, mentioned by Dampier, was ſeen in almoſt the whole of the men; but their organs of ſight, ſo far from being defective, as that author mentions thoſe of the inhabitants of the weſtern ſide of the continent to be, are remarkably quick and piercing. They have bracelets upon the upper part of their arms, made of plaited hair. They are

† fond of ornament, though abſolutely without apparel: and one of them, to whom was given an old ſhirt, inſtead of throwing it over any part of the body, tied it as a fillet round his head.

Both men and women go ſtark naked, and ſeem to have no more ſenſe of indecency in diſcovering their whole body, than the inhabitants of England have in diſcovering their hands and face. Their principal ornament is the bone which they thruſt through the cartilage that divides the noſtrils from each other. What perverſion of taſte could induce them to think this a decoration, or what could prompt them, before they had worn it, or ſeen it worn, to ſuffer the pain and inconvenience that muſt of neceſſity attend it, is perhaps beyond the power of human ſagacity to determine. As this bone is as thick as a man's finger, and between five and ſix inches long, it reaches quite acroſs the face, and ſo effectually ſtops up both the noſtrils, that they are forced to keep their mouths wide open for breath, and ſnuffle ſo when they attempt to ſpeak, that they are ſcarcely intelligible even to each other. The ſeamen, with ſome humour, called it the ſpritſail-yard; and, indeed, it had ſo ludicrous an appearance, that, till our people were uſed to it, they found it difficult to refrain from laughter. Beſides the noſe-jewel, they have necklaces made of ſhells, very neatly cut and ſtrung together; bracelets of ſmall cord, wound two or three times about the upper part of their arm; and a ſtring of plaited human hair, about as thick as a thread of yarn, tied round the waiſt. Some of them have alſo gorgets of ſhells hanging round the neck, ſo as to reach acroſs the breaſt.

Though theſe people wear no clothes, their bodies have a covering beſides the dirt; for they paint them both white and red. The red is commonly laid on in broad patches upon the ſhoulders and breaſt; and the white in ſtripes, ſome narrow and ſome broad: the narrow are drawn over the limbs, and the broad over the body, not without ſome degree of taſte. The white is alſo laid on in ſmall patches upon the face, and drawn in a circle round each eye. The red ſeemed to be ochre, but what the white was could not be diſcovered: it was cloſe grained, ſaponaceous to the touch, and heavy. Beſides the paint with which they beſmear their bodies, they alſo uſe greaſe, or ſome ſtinking oily ſubſtance, for the ſame purpoſe. Some of them ornament their hair with the teeth of fiſh, faſtened on by gum and the ſkin of the kanguroo.

No marks of diſeaſe or ſores were found upon their bodies, but large ſcars, in irregular lines, which appeared to be the remains of wounds they had inflicted upon themſelves with ſome blunt inſtrument, and which our people underſtood, by ſigns, to have been memorials of grief for their dead relations or friends.

They ſeemed to ſet ſo great a value upon ſuch ornaments as they had, that they would never part with the leaſt article for any thing that could be offered; which was the more extraordinary, as the European beads and ribbons were ornaments of the ſame kind, but of better form, and more ſhowy materials.

Though, as before obſerved, both ſexes, and thoſe of all ages, are invariably found naked, it muſt not be inferred from this, that cuſtom ſo inures them to the change of the elements, as to make them bear, with indifference, the extremes of heat and cold; for they give viſible and repeated proofs, that the latter affects them ſeverely, when they are ſeen ſhivering and huddling themſelves up in heaps in their huts, or the caverns of the rocks, until a fire can be kindled.

Theſe people have no fixed habitations, for nothing can be ſeen like a town or village in the whole country. Their houſes, if ſo they may be called, are conſtructed without art or induſtry. They are built with pliable

pliable rods, not thicker than a finger, in the form of an oven, by bending them, and ſticking the two ends to the ground. The covering is of plain leaves, and pices of bark; and the entrance by a large hole at one end, oppoſite to which the fire is made. Some of them are juſt high enough to ſit upright in, but not large enough for a man to extend himſelf in any direction; ſo that the tenants of theſe hovels are under the neceſſity of coiling themſelves with their heels to their heads, in order to make room for three or four of them to ſleep together. The warmer the weather, the ſlighter the ſheds are conſtructed. One ſide is entirely open, and none of them are more than four feet deep. They are put up occaſionally, as exigence may require, by thoſe people, who may be conſidered as a wandering herd, in queſt of any place that would furniſh them with a temporary ſubſiſtence, and therefore leave them behind them when they remove to another ſpot. When they take up their reſidence only for a night in a place, they put up no ſhed, but repoſe on the graſs, which grows to a great height in this country.

A kind of oblong veſſel was the only furniture belonging to theſe houſes, that fell under obſervation; it was made of bark, by the ſimple contrivance of tying up the two ends with a withy, which, not being cut off, ſerves for a handle. Their chief utenſil is a ſmall bag, about the ſize of a moderate cabbage-net, which is made by laying threads loop within loop, ſomewhat in the manner uſed by ladies to make purſes. This bag the man carries looſe upon his back with a ſmall ſtring, which paſſes over his head. It generally contains a lump or two of paint or reſin, ſome fiſh-hooks and lines, a few points of darts, and their uſual ornaments, which include all the worldly treaſure of the richeſt man among them.

They are utterly ſtrangers to that uſeful branch of knowledge, the cultivation of the ground, and wholly depend for food on the few fruits they gather; the roots they dig up in the ſwamps; and the fiſh they pick up along ſhore, or contrive to ſtrike from their canoes with ſpears. Fiſhing, indeed, ſeems to engroſs nearly the whole of their time, probably from its forming the chief part of their ſubſiſtence, which, obſervation has proved, cannot be procured without the moſt painful labour, and unwearied aſſiduity. They ſometimes indeed contrive to kill the kanguroo, and ſome birds; but theſe are ſo ſhy, that our people find it difficult to get within reach of them with a fowling-piece. The only vegetable that can be conſidered as an article of food is the yam.

Many of their fiſh-hooks are extremely ſmall, but made with great nicety; and their mode of ſtriking turtle is curious. For this purpoſe they have a peg of wood, about a foot in length, and well bearded. This fits into a ſocket, at the end of a ſtaff of light wood, in length about ſeven or eight feet, and about the thickneſs of a man's wriſt. One end of a looſe line, about three or four fathoms long, is tied to the ſtaff, and the other end faſtened to the peg. In order to ſtrike the turtle, the peg is fixed into the ſocket, ſo that, when it has entered the body, and is there retained by the barb, the ſtaff flies off, and ſerves for a float to trace their object in the water.

In general they do not eat animal-food raw; but having no veſſel in which water can be boiled, they either broil it upon the coals, or bake it in a hole by the help of hot ſtones.

No ſigns of any religion has been obſerved among them, yet they are not entirely ignorant of a future ſtate, as they ſay the bones of the dead are in the grave, and the body (probably they mean the ſoul) is in the clouds: Wolarre-warré once aſked the judge advocate, if the white men went to the clouds alſo?

They put their dead for ſome time in a fire; after which they are laid at length in a grave, dug very clean out, the bottom being firſt very carefully covered with long graſs, or fern; the body is then put in, and covered over with long graſs, and the grave is then filled with earth, the mould riſing above it as in England.

Wolarre-warré affirms, that there are apparitions in the country, which he calls *mané*. He deſcribes them as coming up with a ſtrange noiſe, and catching hold of any one by the throat. He made uſe of many words on this occaſion, and pointed up to the ſky. He alſo related, that theſe apparitions ſinge the beards and the hair: this he deſcribes as a very painful operation, rubbing his face after every operation of the brand.

The ſun, moon, and ſtars, they call *weré*, bad. A native girl among our people, once went into very violent convulſions on ſeeing a falling ſtar, and ſaid, that every body would be deſtroyed, though ſome who were about her obſerved, that ſhe particularly alluded to the *Murray nowee*, the Sirius.

To give ſome idea of their language: the emu (marvang), the patagorang, and the menagine, a ſmall animal, are all named *go-along*, which term is ſuppoſed to mean an animal, as Wolarre-warré uſes it in contradiſtinction to a bird or a fiſh. On being aſked if the emu was a bird (binyan) he ſhook his head, and ſaid, *go-along*. He calls Governor Phillip, *beanga*, father, and names himſelf *dooroow*, ſon. The judge and commiſſary he calls *babunna*, brother. Wolarre-warré ſings a great deal, and with much variety. The following are ſome words which were caught: "E eye at wange-wandeliah chiango wandego mangenny wakey angoul barre boa lah barrema." In counting the numerals, he cannot reckon beyond four; which he does in this manner: One, wogul or ya-ole; two, bulla and yablowxe; three, boorooi, or brewé; four, cal-una-long. On laying down a fifth object, he named it with the reſt, marry diola. He calls the four principal winds by the following names: The north, boo-roo-way; the ſouth, bain-marree; the weſt, bow-wan; the eaſt, gonie-mah. He throws the ſpear ninety yards with great force and exactneſs.

The following is the deſcription of a family in New South-Wales: The natives ſing an hymn, or ſong of joy, from day-break until ſun-riſe. They procure fire with infinite labour, by fixing the pointed end of a round piece of ſtick into a hole, made in a flat piece of wood, and twirling it round ſwiftly betwixt both hands, ſliding them at the ſame time upwards and downwards, until the operator is fatigued, when he is relieved by ſome of his companions, who are all ſeated in a circle for that purpoſe, and each takes his turn in the operation, until fire is procured. This being a tedious proceſs, it is no wonder that they are never ſeen without a piece of lighted wood in their hand.

When equipped for any exploit, the natives are armed with a ſhield, made of the bark of a tree, with which they very dextrouſly ward off any thing thrown at them. They have alſo a bludgeon, or club, about twenty inches long, with a large and pointed end; and ſometimes a ſtone hatchet. Theſe make up the catalogue of their military implements. But the principal means of annoying their European viſitors was by ſetting fire to the high graſs, which, being very dry, burnt with great rapidity, and did much damage.

The kanguroo is one of the moſt valuable animals produced in this iſland, it grows to a very conſiderable ſize; ſome of them weigh not leſs than 150 pounds. A male of 130 pounds weight has been killed, whoſe dimenſions were as follow: Extreme length, ſeven feet three inches; length of the tail, three feet four inches and a half; length of the hinder legs, three feet two inches; length of the fore paws, one foot ſeven inches and a half; circumference of the tail at the root, one foot five inches.

Notwithſtanding this, the kanguroo, on being brought forth, is not larger than a rat. In running, this animal confines himſelf entirely to his hinder legs, which are poſſeſſed with an extraordinary muſcular power. Their ſpeed is very great, though not in general quite equal to that of a greyhound: but when the greyhounds are ſo fortunate as to ſeize them, they are incapable of retaining their hold, from the amazing ſtruggles of the animal. The bound of the kanguroo, when not hard preſſed, has been meaſured, and found to exceed twenty feet. At what time of the year they copulate, and in what manner, is not known. The teſticles of the male are placed contrary to the uſual order of nature.

When young, the kanguroo eats tender and well flavoured, taſting like veal; but the old ones are more tough and ſtringy than bull-beef. They are not carnivorous, but ſubſiſt altogether on particular flowers and graſs. Their bleat is mournful, and very different from that of any other animal: it is, however, ſeldom heard but in the young ones. The female opoſſum has a pouch, or pocket, in which ſhe carries her young. Some have been ſhot with a young one, not larger than a walnut, ſticking to a teat in this pocket. Others with young ones no bigger than a rat; one of which was moſt perfectly formed, with every mark and diſtinguiſhing characteriſtic of the kanguroo. Of its naturl hiſtory at preſent little is known: from which the author of the lateſt narratives of the tranſactions, diſcoveries, and remarks on this part of the globe, very pertinently infers, that, as ſo very little knowledge is as yet obtained of its habits, haunts, and cuſtoms, to attempt particular and accurate deſcriptions of it, might beget error, which time, or a fuller knowledge of its properties, would directly contradict. It is further added, that, with reſpect to mere conjectures (and ſuch too often are impoſed on the public for inconteſtible facts) it cannot be improper to ſuppreſs them.

The native dog of this country is much fiercer than the kanguroo. The chace, if in an open field (which is the place moſt frequented by that animal) is ſeldom more than eight or ten minutes; and if there are more dogs than one, ſeldom ſo long. As ſoon as the hound ſeizes him, he turns, and catching hold with the nails of his fore-paws, ſprings upon and ſtrikes at the dog with the claws of his hind-feet, which are wonderfully ſtrong, and tears him to ſuch a degree, that it has frequently happened, that we have been under the neceſſity of carrying the dog home, from the ſeverity of his wounds. Few of theſe animals have ever effected their eſcape after being ſeized by the dog, for they have generally caught them by the throat, and there held them until they were aſſiſted, although many of them have very near loſt their lives in the ſtruggle. Some of the male kanguroos are of a very large ſize, and, when ſitting on their haunches, were five feet eight inches high. Such an animal is too ſtrong for a ſingle dog, and, though he might be much wounded, would, except the dog had aſſiſtance at hand, certainly kill him. Theſe dogs may be more fierce, but they do not appear to be ſo ſtrong as our large greyhound. There was one ſeen in purſuit of a kanguroo by a perſon who was employed in ſhooting, who, miſtaking the two animals, as they paſſed him to be of the kind he was looking for, he fired at the hindmoſt and brought him down; but when he came up, it proved to be a native dog. Of thoſe dogs we have had many which were taken when young, but never could cure them of their natural ferocity. Although well fed, they would at all times, but particularly in the dark, fly at young pigs, chickens, or any ſmall animal which they might be able to conquer, and immediately kill, and generally eat them. The writer of this account tell us, he had one which was a little puppy when caught, but notwithſtanding he took much pains to correct and cure of its ſavageneſs, perceived it took every opportunity it met with, to ſnap off the head of a fowl, or worry a pig, and would do it in defiance of correction. They are a very good-natured animal when domeſticated, but it is thought impoſſible to cure that ſavageneſs which all of them ſeem to poſſeſs.

The animals here partake, in a great meaſure, of the nature of the kanguroo. There is the kanguroo opoſſum, the kanguroo rat, &c. the formation of the four legs and feet of which bear no proportion to the length of the hind legs. There is a quadruped, which the natives call *quoll*. It reſembles a pole-cat. The back is brown, ſpotted with white; and the belly white, unmixed. To beaſts of prey our people were utter ſtrangers; nor have they yet any cauſe to believe that they exiſt in the country. And happy it is for them that they do not, as their preſence would deprive them of the only freſh meals the ſettlement affords, the fleſh of the kanguroo. The only domeſtic animal they have is the dog, which, in their language, is called *dingo*, and much reſembles the fox dog of England. Theſe animals are equally ſhy of ſtrangers, and attached to the natives.

There are many different kinds of bats, particularly one, which is larger than a partridge. Our people were not fortunate enough to take one, either alive or dead.

As moſt of the large trees are hollow, by being rotten in the heart, the opoſſum, kanguroo rat, ſquirrel, and various other animals which inhabit the woods, when they are purſued, commonly run into the hollow of a tree: in order therefore to make ſure of them (which the natives ſeldom fail in) when they find them in the tree, one man climbs even the talleſt tree with much eaſe, by means of notches at convenient diſtances, that are made with a ſtone hatchet: when he is arrived at the top, or where there may be an outlet for the animal, he fits there with a club or ſtick in his hand, while another perſon below applies a fire to the lower opening, and fills the hollow of the tree with ſmoke: this obliges the animal to attempt to make its eſcape, either upwards or downwards; but which ever way it goes, it is almoſt certain of death, for they very ſeldom eſcape. They alſo, when in conſiderable numbers, ſet the country on fire for ſeveral miles extent, which, it is generally underſtood, is for the purpoſe of diſturbing ſuch animals as may be within reach of the conflagration, whereby they have an opportunity of killing many.

Birds of various kinds are very numerous here, amongſt which are many of exquiſite beauty, particularly loriquets and cockatoos. The water fowl are, gulls, ſhags; ſolan geeſe, or gannets, of two ſorts; boobies, noddies, curlieus, ducks, pelicans of an enormous ſize, and many others. One of the moſt remarkable was black and white, much larger than a ſwan, and in ſhape ſomewhat reſembling a pelican. The land birds are, crows, parrots, pigeons, doves, quails, buſtards, herons, cranes, hawks, and eagles. But the bird which principally claims attention is the caſſowary, a ſpecies of oſtrich, approaching nearer to the emu of South America than any other known. One of them was ſhot, at a conſiderable diſtance, with a ſingle ball, by a convict employed for that purpoſe by the governor. Its weight when complete, was ſeventy pounds; and its length, from the end of the toe to the tip of the beak, ſeven feet two inches; though there was reaſon to believe it had not attained its full growth.

On diſſection, many anatomical ſingularities were obſerved: the gall-bladder was remarkably large, the liver not bigger than that of a barn-door fowl; and, after the ſtricteſt ſearch, no gizzard could be found. The legs, which were of a vaſt length, were covered with thick, ſtrong ſcales, plainly indicating the animal to be formed for living amidſt deſerts; and the foot differed from an oſtrich's by forming a triangle,

inſtead

inſtead of being cloven. Goldſmith, whoſe account of the emu is the only one we can refer to, ſays, "that it is covered, from the back and rump, with long feathers, which fall backward, and cover the anus: theſe feathers are grey on the back, and white on the belly." The wings are ſo ſmall as hardly to deſerve the name, and are unfirniſhed with thoſe beautiful ornaments which adorn the wings of the oſtrich. All the feathers are extremely coarſe; but the conſtruction of them deſerves notice: they grow in pairs from a ſingle ſhaft, a ſingularity which the author we have quoted has omitted to remark. It may be preſumed, that theſe birds are not very ſcarce, as ſeveral have been ſeen, ſome of them immenſely large; but they are ſo wild as to make ſhooting them a matter of great difficulty. Though incapable of flying, they run with ſuch ſwiftneſs, that our fleeteſt greyhounds are left far behind in every attempt to catch them. The fleſh was eaten, and taſted like beef.

Here are in general excellent fiſh; but ſeveral of them partake of the properties of the ſhark, like the animals in ſome degree reſembling the kanguroo. The land, the graſs, the trees, the animals, the birds and the fiſh, in their different ſpecies, approach by ſtrong ſhades of ſimilitude to each other. A certain likeneſs runs through the whole. They are in general palatable, and ſome of them are very delicious. Upon the ſhoals and reefs are incredible numbers of the fineſt green turtle in the world, and oyſters of various kinds, particularly the rock-oyſter, and the pearl-oyſter. The cockles are of ſuch an enormous ſize, that one of them is more than one perſon can eat. There are alſo large muſcles, and ſtingrays, which weigh no leſs than 336 pounds after the entrails are taken out. In the rivers and ſalt creeks are alligators. A ſhark of an enormous ſize was found here, which meaſured, at the ſhoulders, ſix feet and a half in circumference. His liver yielded twenty-four gallons of oil; and in his ſtomach was found the head of a fiſh of the like ſpecies. The Indians, probably from having felt the effects of their voracious fury, teſtify the utmoſt horror on ſeeing theſe terrible fiſh.

Among the inſects here, is a very peculiar kind of ant, as green as a leaf. They live upon trees, where they build their neſts. Theſe neſts are of a very curious ſtructure: they are formed by bending down ſeveral of the leaves, each of which is as broad as a man's hand: they glue the points of them together, ſo as to form a purſe. The viſcus uſed for this purpoſe is an animal juice, which nature has enabled them to evacuate. Their method of firſt bending down the leaves, our naturaliſts had not an opportunity to obſerve; but they ſaw thouſands uniting all their ſtrength to hold them in this poſition, while other buſy multitudes were employed within, in applying the glutten that was to prevent their returning back. To ſatisfy themſelves that the leaves were bent and held down by the efforts of theſe diminutive artificers, our people diſturbed them in their work; and, as ſoon as they were driven from their ſtation, the leaves, on which they were employed, ſprang up with a force much greater than they could have thought them able to conquer by any combination of their ſtrength. But though our people gratified their curioſity at the expence of theſe inſects, the injury did not go unrevenged, for thouſands immediately threw themſelves upon them, and gave them intolerable pain with their ſtings, eſpecially thoſe which took poſſeſſion of the neck and hair, from whence they were not eaſily driven.

There are upon the leaves of the mangrove, great numbers of ſmall green caterpillars; their foreheads are thick ſet with hairs, and they range upon the leaves, ſide by ſide, like a file of ſoldiers, to the number of twenty or thirty together; the hair of their bodies, on touching them, have the quality of a nettle, and give a more acute, though leſs durable pain.

With reſpect to the climate, it is undoubtedly very deſirable to live in. In ſummer the heats are uſually moderated by the ſea breeze, which ſets in early; and in winter the degree of cold is ſo ſlight, as to occaſion but little inconvenience. It is remarked, as a circumſtance peculiar to this country, that every part of it, even the moſt inacceſſible and rocky, appears as if, at certain times of the year, it was all on fire. Indeed, in many parts, large trees are ſeen, the trunks and branches of which are evidently rent and demoliſhed by lightning. The ground was ſo very dry and parched, that poles or pegs could not be driven into it without conſiderable difficulty and labour.

As the governor was invariably intent on exploring the country, he for that end formed a party, with unwearied induſtry, and great toil, traverſing an extenſive tract of ground, which appeared, from ſuch obſervations as could be made, capable of producing every thing which a happy ſoil and genial climate can bring forth. The face of the country was ſuch as to promiſe ſucceſs, whenever it ſhould be cultivated, for the ſoil was found to be much richer than it was deſcribed by Captain Cook; as, inſtead of ſand, they found a deep black mould, which ſeemed very fit for the production of grain of any kind. But ſuch were the labour and difficulty attending the clearing of the ground, that, incredible as it may appear, it is a known fact, that ten or twelve men have been employed for five whole days in grubbing up a tree; and when this has been effected, the timber has only been fit for fire-wood; ſo that, in conſequence of the great labour in clearing the ground, and the weak ſtate of the people, to which may be added the ſcarcity of tools, moſt of thoſe brought from England being loſt in the woods among the graſs, through the careleſſneſs of the convicts, the proſpect of future ſucceſs is not the moſt promiſing, till they can ſo far clear the ground, as to produce a ſufficient ſupport for the new ſettlement: but, nevertheleſs, the richneſs of the ſoil will amply repay them, when this difficulty is happily ſurmounted.

The timber was found to be very unfit for building; the only purpoſe for which it will anſwer is firewood, and for that it is excellent: but in other reſpects, it is the worſt wood that any country or climate can produce; although ſome of the trees, when ſtanding, appear fit for any uſe whatever, maſts for ſhipping not excepted. Strange as it may be imagined, moſt of the wood in this country, though dried ever ſo well, will not float. Repeated trials have only ſerved to prove, that, immediately on immerſion, it ſinks to the bottom like a ſtone. The trees were not of many ſpecies. Among others, there was a large one, which yielded a gum not unlike that called dragon's blood. In the woods was found a tree, which bore a fruit that, in colour and ſhape, reſembled a cherry: the juice had an agreeable tartneſs, though but little flavour.

Between the trees the ground is covered with graſs, of which there is great abundance, growing in tufts as large as can well be graſped in the hand, which ſtand very cloſe to each other. In thoſe places where trees are ſcarce, a variety of flowering ſhrubs abound, moſt of them entirely new to an European, and ſurpaſſing in beauty fragrance, and number, all ever ſeen in an uncultivated ſtate. Among theſe a tall ſhrub, bearing an elegant white flower, which ſmells like Engliſh May, is particularly delightful, and perfumes the air around to a great diſtance.

A kind of vine grows here, which runs to a great extent along the ground: the ſtalk is not ſo thick as the ſmalleſt honey-ſuckle, nor is the leaf ſo large as the common bay-leaf, though ſomewhat ſimilar to it; and

and the taſte is ſweet, exactly like the liquorice root of the ſhops. Of this the convicts and ſoldiers make an infuſion, which is tolerably pleaſant, and ſerves as no bad ſuccedaneum for tea. The ſurgeon found it to be a good pectoral, and not at all unpleaſant.

This country abounds with free-ſtone of an excellent quality, which was conſidered as an happy circumſtance, as it tended ſo materially to forward the intended plan of forming the town. The greateſt impediment to building was a want of lime-ſtone, of which no ſigns had hitherto appeared. Clay, for making bricks, abounding, a conſiderable quantity of them were burned, and ready for that neceſſary purpoſe.

With reſpect to the preſent ſtate of the colony, we muſt obſerve, that when the plan of the ſettlement was firſt projected, it was apprehended that the ſtores ſent from England, together with the produce of the country, would be ſufficient for the ſupport of the people, till they ſhould receive a further ſupply, but the eatable vegetable productions being ſo ſcarce, the animal productions not abounding in that degree as was imagined, and the fiſheries proving unſucceſsful, they were, in conſequence, reduced to an allowance of two ounces of meat a day; and freſh proviſions became ſcarcer than in a blockaded town. The little live ſtock which, at ſo much expence, and with ſo many difficulties, had been brought on ſhore, prudence forbad the uſe of; and fiſh, which, for a ſhort time, had been tolerably plenty, was become very ſcarce: ſo that had it not been for a ſtray kanguroo, which fortune now-and-then threw in the way, the people would, in general, have been ſtrangers to the taſte of freſh food.

In conſequence of this ſcarcity of wholeſome proviſions, the ſcurvy began its uſual ravages, and extended its baneful influence through all deſcriptions of perſons, particularly as the eatable vegetable productions of the country neither abound, nor are efficacious in the removal of this diſeaſe. Many other calamitous circumſtances combined to aggravate their diſtreſs; and, amongſt others, the whole ſtock of black cattle, conſiſting of five cows and a bull, had ſtrayed into the woods, and, notwithſtanding the moſt diligent ſearch, could not be found. But at length they were happily relieved by the arrival of the fleet from England with ample ſupplies; and from the laſt accounts tranſmitted ſince that time, it appears, that the produce of the country being more abundant in conſequence of a better knowledge being obtained of its reſources, and the fiſheries proving more ſucceſsful, they are now in a more comfortable ſituation; and their future proſpects are very promiſing, as is evident from ſome late accounts which were conveyed by Governor Philip to Lord Sydney, who cauſed them to be laid before the Houſe of Commons.

Captain Hunter, before he left Port-Jackſon, gives an entertaining deſcription of a dance, with which the natives diverted the governor and his people, before he left the place.

"The natives, he obſerves, were become very familiar and intimate with every perſon in the ſettlement. Many of them now took up their reſt every night in ſome of the gentlemen's houſes; their very unprovoked attack on the governor and his party, being now paſſed over, and almoſt forgot.

"We have frequently obſerved, ſince this familiar intercourse took place, that they often had a dance amongſt themſelves at night, on the lower part of Sydney-Cove, where a ſmall houſe had been built by the governor's order for their accommodation. It had been ſignified to ſome of the principal amongſt them, that we ſhould be glad to have an opportunity of ſeeing them dance, which they readily agreed to; and the following night was appointed, when the governor and a conſiderable number attended, every one being provided with arms of ſome kind; a caution, which, notwithſtanding friendly appearances, was generally allowed to be neceſſary; for experience had convinced us, that theſe people have a great deal of treachery in their diſpoſition.

"Preparatory to this exhibition, much attention was paid to the decorating themſelves: they were all Adams and Eves, without even a ſingle fig-leaf, and alſo without their dignity. The young women were employed with all their art in painting the young men, who were chiefly ornamented with ſtreaks of white, done with pipe-clay, and in different forms, according to the taſte of the man himſelf, or to that of the lady who adorned him: no fop preparing for an aſſembly was ever more deſirous of making his perſon irreſiſtibly beautiful. This paint, ſo much in uſe among them, could not be applied without a little moiſture; and the lady, in drawing theſe marks on the face, which were ſo eſſential a part of the decoration, I obſerved frequently to ſpit in the face of her friend, whom ſhe was employed in adorning, in order to make the white clay mark the ſtronger.

"When they were all prepared, we walked down to the place appointed after dark (for they prefer taking their amuſement by fire-light) we found ſeveral fires lighted, and a conſiderable number of people aſſembled. We walked round, to ſee that there were no armed lurkers among the buſhes.

"The dancers being ready, we were placed in a ſemicircle by Ba-na-lang and Co-al-by, who ſeemed to have the chief authority and direction. The dance was begun by a few young boys, and was increaſed by men and women, chiefly by the former, until their number amounted from twenty to twenty-ſix. Their dance was truly wild and ſavage, yet in many parts there appeared order and regularity. One man would frequently ſingle himſelf out from the dance, and, running round the whole of the performers, ſing out in a loud voice, uſing ſome expreſſions in one particular tone of voice which we could not underſtand; he would then join the dance, in which it was obſerved, that certain parties alternately led forward to the front, and there exhibited, with their utmoſt ſkill and agility, all the various motions, which, with them, ſeemed to conſtitute the principal beauties of dancing. One of the moſt ſtriking was, that of placing their feet very wide apart, and, by an extraordinary exertion of the muſcles of the thighs and legs, moving the knees in a trembling and very ſurpriſing manner, ſuch as none of us could imitate, which ſeemed to ſhew, that it required much practice to arrive at any degree of perfection in this ſingular motion.

"There appeared a great deal of variety in their different dances; in one of which they paired themſelves, and frequently danced back to back; they then changed ſuddenly, and faced each other. Sometimes all the performers ſat down on the ground, with their feet under them; and at a particular word or order, they raiſed themſelves up. This motion they performed without any aſſiſtance from the hands. Now they ran back in direct rows, then advanced in the ſame order; again they would form a circle, with ſome diſtinguiſhed perſon in the centre, and ſometimes the whole of the performers would appear with a green bough in their hands, which they held up in a conſpicuous manner. In all the different figures which they performed, they generally finiſhed by certain numbers of their principal dancers advancing to the front, and going through that favourite part of the dance, the quivering motion of the knees. Whenever this was done, the whole company faced to the front, and went through the ſame motions; but it was noticed, that ſome were more frequently in the front than others, and thoſe we ſuppoſed were ſuch as had great confidence in their own ſkill in the execution of this very difficult part of the performance; and no doubt were vain enough

to outſhine in their ability the reſt of the company. On the whole, this exhibition was well worth ſeeing; and this was the firſt opportunity that had offered for us to ſee any thing of the kind ſince we had been in the country.

"Their muſic conſiſted of two ſticks of very hard wood, one of which the muſician held upon his breaſt in the manner of a violin, and ſtruck it with the other, in good order and regular time. The performer, who was a ſtout, ſtrong-voiced man, ſung the whole time, and frequently applied thoſe graces in muſic, the piano and forte. He was aſſiſted by ſeveral young boys and girls, who ſat at his feet, and, by the manner of croſſing the thighs, made a hollow between them and their belly, upon which they beat time with the flat of their hand, ſo as to make a kind of ſound, which will be better underſtood from the manner of its being produced, than from any verbal deſcription. Theſe children alſo ſung with the chief muſical performer, who ſtood up the whole time, and ſeemed to have the moſt laborious part of the performance. They very frequently, at the concluſion of the dance, would apply to us for our opinions, or rather for marks of our approbation of their performance, which we never failed to give, by often repeating the word *boojery*, which ſignifies good; or *boojery caribberie*, a good dance. Theſe ſigns of pleaſure in us, ſeemed to give them great ſatisfaction, and generally produced more than ordinary exertions from the whole company of performers in the next dance."

Late Accounts reſpecting the Colony at PORT JACKSON, as far as Sept. 4, 1799.

"It appears, that the great number of ſpermaceti whales which had been ſeen on the coaſt of New South-Wales, induced the maſters of thoſe veſſels which were fitted out for that fiſhery (and intended, after landing the convicts, to proceed to the north-weſt coaſt of America) to try for a cargo here.

"The Matilda, and the Mary-Ann tranſports, returned from their fiſhing-cruize on the 10th of November 1791. Theſe veſſels had run to the ſouthward in ſearch of ſeals, and met with very bad weather, but ſaw no fiſh. The Matilda had put into Jervis Bay, which, according to the maſter's account, is a very fine harbour, capable of receiving the largeſt ſhips, and the anchorage very good. Theſe two veſſels, after refitting, ſailed again to try for fiſh on this coaſt.

"Our colony began to reap barley on the 22d of November, and the wheat was getting ripe.

"The Supply armed tender, after having been under repair from the time ſhe returned from Norfolk-Iſland, was found, on a ſurvey, to be in ſo bad a ſtate, that the beſt repair which could be given her in this country, would only render her ſerviceable for ſix months longer; Governor Phillip, therefore, ordered her to England, and ſhe ſailed on the 26th of November.

"From the debilitated ſtate in which many of the convicts were landed from the laſt ſhips, the number of ſick were greatly increaſed: the ſurgeon's returns on the 27th, being upwards of 400 ſick at Parramatta; and the ſame day medicines were diſtributed to 192 at Sydney. To the number of ſick at Parramatta, upwards of 100 may be added, who were ſo weak, that they could not be put to any kind of labour, not even to that of pulling graſs for thatching the huts. Forty-two convicts died in the month of November, and in theſe people nature ſeemed to be fairly worn out; many of them were ſo thoroughly exhauſted, that they expired without a groan, and apparently without any kind of pain.

"Showers of rain had been more frequent lately than for many months paſt, but not in the abundance which the ground required; and from the extreme dryneſs of the weather, and from the ground not being ſufficiently worked before the maize was put into it, a great number of acres was likely to be deſtroyed. This was one of the many inconveniencies the ſettlement laboured under, from the want of people to employ in agriculture, who would feel themſelves intereſted in the labour of thoſe that were under their direction, and who had ſome knowledge as farmers.

"The following parcels of land were in cultivation at Parramatta in November 1791.

Acres.	Roods.	Perches.	
351	2	5	in Maize.
44	1	8	Wheat.
6	1	30	Barley.
1	0	0	Oats.
2	0	3	Potatoes.
4	2	0	Not cultivated, but cleared.
4	2	15	Moſtly planted with vines.
6	0	0	The governor's garden, partly ſown with maize and wheat.
80	0	0	Garden-ground belonging to individuals.
17	0	0	Land in cultivation by the New South Wales corps.
150	0	0	Cleared, and to be ſowed with turnips.
91	3	2	Ground in cultivation by ſettlers.
28	0	0	Ground in cultivation by officers of the civil and military.
134	0	0	Encloſed, and the timber thinned for feeding cattle.

Making in the whole upwards of 918 acres.

"The above grounds were meaſured by David Burton, the public gardener, who obſerves, that the ſoil in moſt places is remarkably good, and only wants cultivation to be fit for any uſe, for the ground that has been the longeſt in cultivation bears the beſt crops.

"Of the convicts who were received by the laſt ſhips, there were great numbers of the worſt of characters, particularly amongſt thoſe who came from Ireland, and whoſe great ignorance led them into ſchemes more deſtructive to themſelves, than they were likely to be to the ſettlement. Some of theſe people had formed an idea, that they could go along the coaſt, and ſubſiſt on oyſters and other ſhell-fiſh, till they reached ſome of the Chineſe ſettlements: others had heard, that there were a copper-coloured people only 150 miles to the northward, where they would be free. Full of theſe notions, three parties ſet off; but after ſtraggling about for many days, ſeveral of them were taken, and others returned to the ſettlement. Governor Phillip was leſs inclined to inflict any puniſhment on theſe people, than he was to puniſh thoſe who had deceived them by the information of "not being far from ſome of the Chineſe ſettlements, and near people who would receive them, and where they would have every thing they wanted, and live very happy." Theſe reaſons moſt of them aſſigned for going into the woods, and where ſome of them ſtill remained, dreading a ſevere puniſhment if they returned. A general pardon was therefore promiſed to all thoſe who came back within a certain time, as ſeveral were ſuppoſed to be lurking in the woods near the ſettlement: however, ſome of theſe wretches were ſo prepoſſeſſed with an idea of being able to live in the woods, and on the ſea coaſt, until they could reach a ſettlement, or find a people who would maintain them without labour, that ſeveral who were brought in when almoſt famiſhed, and carried to the hoſpital, went away again as ſoon as they were judged able to return to their labour: and although what would be called a day's work in England, is very ſeldom done by any convict in the ſettlement, yet ſome of them declared, that they would ſooner periſh in the woods, than be obliged to work; and forty were now abſent. In order to give thoſe

who might be ſtill lurking near the ſettlement, an opportunity of returning, all the convicts were aſſembled, and a pardon was promiſed to all who returned within five days: at the ſame time they were aſſured, that very ſevere puniſhment would be inflicted on any who were taken after the expiration of that time, or who ſhould in future attempt to leave the ſettlement. Several appeared ſenſible of the lenity ſhewn them when their irons were taken off; but ſome of them appeared capable of the moſt daring attempts, and even talked of ſeizing on the ſoldiers arms; they were however informed, that no mercy would be ſhewn to any who were even ſeen near thoſe that might make an attempt of the kind.

"All the whalers who came into the harbour to refit, ſailed again by the 11th of December; and the Albemarle and the Active tranſports ſailed on the 2d for Bombay, where they were to load with cotton for England.

"A new ſtore was now covered in at Sydney, which was the beſt that had been built in the colony, and was intended for the convicts clothing and the implements of huſbandry: it has a ſecond floor, and is eighty feet in length, by twenty-four in breadth. A building of twenty-ſix feet by twenty-four, was likewiſe covered in at Parramatta, and was intended for a place of worſhip, until a church could be built.

"The idea of finding a Chineſe ſettlement at no great diſtance to the northward, ſtill prevailed amongſt the Iriſh convicts; and on the 4th of December two of them ſtole the ſurgeon's boat, but they only got a few miles to the northward of the harbour, when they were obliged to run her on ſhore. Some officers who were out a ſhooting, ſaw this boat on the beach, and ſtove a plank in her, that ſhe might not be carried away; they alſo ſaw two men, who ran into the woods: however, a convict, who had been ſix weeks in the woods, and was ſcarcely able to walk, gave himſelf up to the officers, and, with their aſſiſtance, was able to return to Sydney.

"Many of thoſe convicts who left the ſettlement, as has already been related, came back; ſome were ſtill miſſing, and ſeveral were ſaid to be killed by the natives. The miſerable ſituation of thoſe who returned to the ſettlement would, it was believed, moſt effectually prevent any more excurſions of the like nature.

"On the 5th of December, the Queen tranſport returned from Norfolk Iſland, with the lieutenant-governor of the territory, who was relieved by lieutenant governor King; a detachment of marines, who had been doing duty on the iſland, a party of the New South Wales corps, who were relieved by captain Paterſon, and ſome convicts, whoſe times for which they had been ſentenced were expired. By the 7th, the Gorgon was nearly ready for ſea, and the detachment of marines, who came from England in the firſt ſhips, was ordered to hold themſelves ready to embark, except one captain, three lieutenants, eight non-commiſſioned officers, and fifty privates, who were to ſtay at Port Jackſon, until the remainder of the New South Wales corps ſhould arrive. Thoſe marines who were deſirous of becoming ſettlers, remained likewiſe, to the number of thirty-one.

"Of thoſe convicts who were received from the laſt ſhips, 114 males, and two females, died before the 15th of December. The number of ſick had conſiderably decreaſed lately, the ſurgeon's liſt being now reduced from 602 to 403.

"The Matilda and the Mary-Ann tranſports came into harbour on the 16th; theſe ſhips had been out but nine days. The Matilda had been into Jervis Bay, but had not ſeen any ſpermaceti whales. The Mary-Ann fell in with one ſhoal; it was in the evening, when all the boats were abſent from the ſhip. The maſter was in hopes they ſhould have the fiſh about them the next morning, but he had the mortification to find, that a current had driven the ſhips fifty miles to the ſouthward."

The following is an extract of a letter from a perſon who went out as a ſettler, addreſſed to his father in Edinburgh, dated Parramatta, near Sydney, Port Jackſon, Sept. 4, 1799:

"We arrived here, after a tedious voyage of 14 months, on the 3d of May. Soon after we parted with the convoy, in the latitude of Madeira. We arrived at Rio Janeiro on the 11th of Auguſt, and anchored in Table Bay, Cape of Good Hope, on the 17th of October. Here we diſcharged our ſtores, and took in 100 head of black cattle, beſides horſes, goats, pigs, and all manner of fowl, which gave our ſhip ſomething of the appearance of Noah's ark.

"After ſtopping 16 weeks, we took a long adieu of our countrymen, and continued our voyage to this out of the way place. Immediately on our arrival I was ſtrongly recommended to a gentleman of great fortune and equal worth, by whom I am employed as an overſeer. Charles is gone apprentice to a carpenter and joiner, which is the beſt trade here, a common journeyman making 10s. or 12s. a day. My buſineſs conſiſts in ſuperintending the captain's ſtock, which is diſtributed through three different eſtates. He is poſſeſſed of a good many horſes and black cattle, ſeveral thouſand ſheep, hogs, goats, &c. I have no ſettled wages, but half the profits made by upwards of 200 hogs, which may bring me 300l. a year. I have alſo a good houſe, and fire, a garden, and what land I chuſe to cultivate for my other ſtock, and aſſiſtance to trade when any veſſel comes in.

"We live at a place called Parramatta, near 20 miles from the capital of Sydney; it is a very pleaſant ſituation, and paſſage boats go and come every day. There are ſeveral fine ſettlements in the country, ſuch as Hawkeſbury, a delightful and fertile ſpot, 40 miles off; George's River, Proſpect, &c. &c. Sydney is the ſeat of government, and makes a handſome appearance. There is an elegant church and county gaol, built of free ſtone. The officers' and ſoldiers' barrack, ſtore-houſes, &c. are built of brick; the houſes of the inhabitants of wood, and are in number near 500.

"Several of the convicts, whoſe times have expired, purſue different branches of buſineſs, and ſuch as are ſober and induſtrious ſoon amaſs pretty fortunes, but the generality of them are a hardened and depraved ſet. The free ſettlers are not ſo numerous as I expected, nor ſo induſtrious as I could wiſh. I can ſay very little for their morals. Vice in them as well as in the convicts, ſeems to be deeply rooted. The military make a very reſpectable appearance. The officers are very worthy men, and moſt of them have acquired decent fortunes. European goods, as well as the neceſſaries of life, are extravagantly high, but vary in a little time in an extraordinary manner.—While I am now writing a ſhip is come in, which will reduce the prices one half. Rum and brandy are now for inſtance 5l. per gallon, tea 50s. per lb. ſugar 2s. ſoap 5s. tobacco 10s. freſh pork 1s. ſalt ditto 1s. 6d. mutton 2s. a laying hen 5s. and every thing elſe in proportion. We have ſeveral South Seamen put in here at times for refreſhment, as well as Americans. Store and convict ſhips are the only ones that come regular from England, and theſe generally return by China or India. The Buffalo, by which I ſend this, is the firſt ſhip that has gone direct to the Cape ſince I arrived."

NORFOLK-ISLAND,

As deſcribed by Lieutenant Governor King, in a Paper delivered by him, and dated Jan. 10, 1790.

THIS iſland is ſituated in the latitude of 29 degrees, 0 min. ſouth; and in the longitude of 168 degrees, 0 min. eaſt. Its form is nearly oblong,

long, and it contains from twelve to fourteen thouſand acres.

The face of the country is hilly, and ſome of the vallies are tolerably large for the ſize of the iſland; many of the hills are very ſteep, and ſome few ſo very perpendicular, that they cannot be cultivated; but where ſuch ſituations are, they will do very well for fuel: on the tops of the hills are ſome very extenſive flats.

Mount-Pitt is the only remarkable high hill in the iſland, and is about one hundred and fifty fathoms high. The cliffs which ſurround the iſland are about forty fathoms high, and perpendicular: the baſis of the iſland is a hard firm clay. The whole iſland is covered with a thick wood, choked up with a thick underwood; but it is well ſupplied with many ſtreams of very fine water, many of which are ſufficient to turn any number of mills. Theſe ſprings are full of very large eels.

From the coaſt to the ſummit of Mount-Pitt, is a continuation of the richeſt and deepeſt ſoil in the world, which varies from a rich black mould, to a fat red earth. We have dug down forty feet, and found the ſame ſoil.

The air is very wholeſome, and the climate may be called a very healthy one; there has been no ſickneſs ſince I firſt landed on the iſland.

Five kinds of trees grow on the iſland, which are good timber, viz. The pine, live oak, a yellow wood, a hard black wood, and a kind of beech. The pine trees are of a large ſize, many of which are from one hundred and eighty to two hundred and twenty feet in height, and from ſix to nine feet in diameter. Thoſe trees which are from one hundred to one hundred and eighty feet in height, are, in general, ſound: from the root to the lower branches, there are from eighty to ninety feet of ſound timber: the reſt is too hard and knotty for uſe. It ſometimes happens, that, after cutting off twenty feet from the butt, it becomes rotten or ſhaky; for which reaſon no dependance can be put in it for large maſts or yards. The timber of the pine is very uſeful in buildings, and is plentiful along the coaſts. Its diſperſed ſituation in the interior part of the iſland, is well calculated for erecting ſuch buildings as may be neceſſary. From what I have ſeen of this wood, I think it is very durable; two boats have been built of it, and have anſwered the purpoſe fully. The live oak, yellow wood, black wood, and beech, are all of a cloſe grain, and are a durable wood.

The flax plant of New Zealand grows ſpontaneouſly in many parts of the iſland, but moſtly abounds on the ſea-coaſt, where there is a great quantity of it. The leaves of the flax, when fully grown, are ſix feet long, and ſix inches wide. Each plant contains ſeven of thoſe leaves. A ſtrong woody ſtalk ariſes from the centre, which bears the flowers. It ſeeds annually; and the old leaves are forced out by the young ones every year. Every method has been tried to work it; but I much fear, that, until a native of New Zealand can be carried to Norfolk Iſland, the method of dreſſing that valuable commodity will not be known; and could that be obtained, I have no doubt but Norfolk Iſland would very ſoon cloath the inhabitants of New South Wales.

This iſland abounds with pigeons, parrots, hawks, and other ſmaller birds, which are now in a wild ſtate. The ground is much infeſted with different kinds of the grub worms, which are very deſtructive to the growth of vegetables. They are moſtly troubleſome about the ſpring. It is to be hoped, that when more ground is cleared away, this evil will ceaſe.

There are great quantities of very fine fiſh on the coaſts of this iſland, which are principally the ſnapper, and weigh from four to eight pounds each. A few fiſh are at times caught from the ſhore: this however happens but ſeldom; ſo that a ſupply of fiſh muſt depend on the weather, and the ſurf permitting boats to go out. In moderate weather, boats might land in Collins's Bay, on Phillip's Iſland, where a great quantity of fiſh might be cured, from March to September, after which time the fly prevents it. No opportunities were ever loſt of ſending the boat out, which enabled us to make a ſaving of two pounds of meat each man a week.

Sydney Bay lies in latitude 29 degrees 95 minutes ſouth, longitude 168 degrees 2 minutes eaſt, and variation 11 degrees eaſt. The tide flows faſt, and changes at three quarters paſt ſeven, and riſes from five to ſeven feet. The flood runs to the S. W. by S. and the ebb to the N. E. by N. On the ſouth ſide of the iſland, is where the ſettlement is made. Landing at this place entirely depends on the wind and the weather. I have ſeen as good landing as in the Thames for a fortnight or three weeks together; and I have often ſeen it impracticable to land for ten or twelve days ſucceſſively; but it is much oftener good landing than bad. Anſon's Bay is a ſmall bay, with a ſandy beach, where landing is in general good, with an off-ſhore wind, and moderate weather. Ball Bay is on the ſouth-eaſt ſide of the iſland; the beach is of a large looſe ſtone. When landing is bad in Sydney Bay, it is very good here; as it alſo is in Caſcade Bay, on the north ſide of the iſland.

In general the tides are equal each way; the ebbs and the flows regular along the ſhore fix each tide. The eaſtern tide is ſtronger than the weſtern tide. Sometimes the eaſtern tide runs ſeveral hours beyond its uſual courſe, and ſometimes the weſtern tide thus irregularly; which irregularities, though they ſeldom happen, make it neceſſary to bring to, and try the tide, before you come within the outer part of the Nepean Iſland; and beware of an indraught, which ſometimes ſets into the bight, on the weſt ſide of the bay, on both ſides, while you are baffled by the ſouth-eaſt and ſoutherly winds, as you come in with Sydney Bay. All within Nepean Iſland is foul ground, and very irregular ſoundings, and no ſafe paſſage between it and Port Hunter; but if a ſhip ſhould be preſſed by neceſſity, it is recommended to keep within half a cable's length of Nepean Iſland, after having paſſed the bed of rocks to the weſtward of the little bay.

At Norfolk Iſland, the ſpring is very viſible in Auguſt; but the trees in many parts of the iſland are in a conſtant ſucceſſion of flowering and ſeeding all the year round. Every kind of garden vegetable thrives well, and comes to great perfection. The ſummer is very hot: governor King obſerves, that he had no thermometer to determine the degree of heat; but it is exceſſive. From the 23d of September, to the 22d of February, 1790, not one drop of rain fell, excepting on two days in December; but it ſhould be remarked, that there was no drought in the former year. All the grain and the European plants ſeeded in December. From February to Auguſt, may be called the rainy ſeaſon; not that we may ſuppoſe there is any regular time of rains during theſe months, as the weather is ſometimes very fine for a fortnight together; but when the rain does fall, it pours in torrents. The governor adds, that he does not recollect more than three claps of thunder, or lightning, during the time he remained on the iſland. The winter, which may be ſaid to commence in April and in July, is very pleaſant. There is never any froſt; but when the ſouth-weſt winds blow, which are very frequent and violent in theſe months, the air is raw and cold. It is very remarkable, that during ſome days in December and January, the weather has been much colder than in the winter months. The ſouth-eaſt and eaſt winds are very parching and dry, as no dew falls when thoſe winds prevail.

During the winter months, the wind is moſtly from

from ſouth to weſt, blowing with great violence for a week together; afterwards it veers round to the ſouthward and ſouth-eaſt, which brings fine weather for a few days; then it veers to eaſt, north-eaſt, and north-weſt, blowing in heavy gales, and generally accompanied with violent torrents of rain; after which it ſhifts to ſouth-weſt; but not a ſingle inſtance was obſerved of the wind coming to the north-eaſt round by weſt. The ſouth-eaſt wind blows during the ſummer with very little variation, and ſometimes very ſtrong.

The coaſts of the iſland are in general ſteep, and, excepting Sydney, Anſon, Ball, and Caſcade Bays, are inacceſſible, being ſurrounded by ſteep clifts, which riſe perpendicularly from the ſea. A number of large rocks lie ſcattered about cloſe to the ſhore, on which a continued ſurf breaks with great force.

The following are Lieutenant-Governor King's lateſt diſpatches reſpecting Norfolk-Iſland: they are dated Dec. 29, 1791, and received Nov. 30, 1792.

"The wheat harveſt at Norfolk-Iſland was finiſhed by the 10th of December, 1791, when about one thouſand buſhels of wheat were got in, and well thatched in ſtacks. The Indian corn had ſuffered by a ſeries of dry hot weather, ever ſince the preceding July.

"Lieutenant governor King, finding great inconvenience from the ſize and conſtruction of the frame of a ſtore-houſe, which was eighty feet long by twenty-four feet wide, as well as from its ſituation, it being near the ſhore, determined to build one, forty feet by twenty-four, on the terrace at Mount-George. He had alſo found it neceſſary to build a gaol oppoſite the barrack-yard, and another at Queenſborough.

"A good road has been made to the landing rock in Caſcade Bay, ſo that now any thing may be landed with the greateſt ſafety.

"Eighteen copper bolts, ſix copper ſheets, two ſixteen-inch cables, two hundred weight of lead, one fiſh-tackle fall, twenty pounds of chalk, three rudder-chains, two top-chains, and iron work of various ſorts, had been ſaved from the wreck of the Sirius. The greateſt part of theſe articles, lieutenant governor King propoſed ſending to Port Jackſon.

"Ten ſettlers, who lately belonged to the Sirius, were doing exceedingly well; but there was reaſon to fear, that great part of the marine ſettlers, when the novelty of their ſituation was gone off, would have neither ability nor inclination to improve the portions of ground allotted them. They had already been extremely troubleſome, and the lieutenant governor had been under the neceſſity of impoſing heavy fines on two; the firſt, for beating the watch, and uſing inflammatory language; and the ſecond, for cruelly beating a convict woman.

"The convict ſettlers were all doing very well, and were quiet, attentive, and orderly: they were increaſed to the number of forty. The whole number of ſettlers on the iſland were eighty; and it will be difficult to fix more, until the ground is further cleared.

"A quantity of coral and other teſtaceous ſubſtances, with different kinds of ſtones, were burnt forty-eight hours, and produced a very fine white lime, much ſuperior to any lime made of chalk, and it proved a very tough cement.

"Eighteen convicts, under the direction of an overſeer, who is a ſettler, were employed in making bricks. A bricklayer was much wanted, as one who was ſent in the Queen, died in his paſſage.

"Lieutenant governor King, finding it neceſſary to diſcharge Mr. Doridge, the ſuperintendant of convicts at Queenſborough, has appointed Mr. Darcy Wentworth to ſucceed him. Mr. Wentworth had behaved with the greateſt attention and propriety as aſſiſtant-ſurgeon, which duty he ſtill continued to diſcharge. Mr. W. N. Chapman was appointed ſtore-keeper at Phillipſburgh.

"A corporal and ſix privates were ſtationed in a houſe with a good garden to it, on an eminence commanding Queenſborough; and a ſerjeant and ten men were fixed in a ſimilar ſituation at Phillipſburgh; and they were kept as ſeparate from the convicts as poſſible.

"The lieutenant governor had been under the neceſſity of appointing a town-adjutant and inſpector of out-poſts, and he named lieutenant Abbott for theſe duties. He alſo eſtabliſhed rules and regulations for the obſervance of every perſon on the iſland, and for keeping a night patrole; a deputy provoſt-marſhal was alſo appointed.

"The wreck of the Sirius went to pieces on the 1ſt of January, 1792, and every thing poſſible was ſaved out of her. The ſame day, every perſon on the iſland went to a reduced allowance of proviſions; but the fiſh daily caught, was ſufficient to ſerve all the inhabitants three times over.

"Some of the ſettlers were permitted to employ the convicts as their ſervants, on condition of maintaining them without the aid of the public ſtores; and ſome of the convicts were allowed to work for themſelves, on the ſame condition.

"It will be abſolutely neceſſary to eſtabliſh a court of juſtice, as corporal puniſhments have but little effect, although robberies were confined to a particular claſs of convicts, and were by no means general.

"By the 15th of January, 260 buſhels of Indian corn were gathered in; a number of acres were then in different ſtates of growth, which were likely to yield about 300 buſhels more. The wheat threſhed well, and yielded plentifully. The granary was finiſhed, and every endeavour uſed to keep the wevil out of it."

For the above concluſive accounts, as likewiſe for ſeveral intereſting particulars relating to our other ſettlements in this quarter, we acknowledge ourſelves indebted to that valuable work, lately publiſhed, entitled, "An Hiſtorical Journal of the Tranſactions at Port Jackſon and Norfolk Iſland; with the Diſcoveries which have been made in New South Wales, and in the Southern Ocean, ſince the publication of Phillip's Voyage, &c. by John Hunter, Eſq. Poſt Captain in his Majeſty's Navy."

GENERAL OBSERVATIONS.

It has been remarked, by an obſerver on the ſpot, of eminent diſcernment and penetration, that if the colony is intended only as a receptacle for convicts, this place ſtands unequalled, from the ſituation, extent, and nature of the country: but that, if taken in a commercial view, its importance will not appear ſtriking, as the New Zealand hemp, of which ſanguine expectations were formed, is not a native of the ſoil: and an adjacent iſland, where an aſſurance was entertained of finding it, is without it; conſequently, the ſcheme of being able to aſſiſt the Eaſt Indies with naval ſtores, in caſe of a war, muſt be rendered abortive, both from the deficiency and quality of the timber growing in this country. It is alſo given as an opinion, formed on due obſervation, that through ſufficient numbers, and induſtry in cultivation, the country would, in the courſe of a few years, produce grain enough for the ſupport of its new poſſeſſors, but to effect this, the preſent limits muſt be greatly extended.

To men of ſmall property, contracted deſires, and a diſpoſition for retirement, the continent of New South Wales may have its inducements. One of this deſcription, with letters of recommendation, and a ſufficient capital to furniſh an aſſortment of tools for agricultural and domeſtic purpoſes, poſſeſſed alſo of a few houſehold utenſils, a cow, a few ſheep, and breeding ſows, with proper protection and encouragement,

ragement, might obtain a comfortable ſubſiſtence, and a moderate independence in a courſe of time. But they who are induced to emigrate hither, are recommended, before they quit England, to provide all their wearing apparel for themſelves, family, and ſervants; their furniture, tools of every kind, and implements of huſbandry among which a plough need not be included, (the hoe being uſed) as they will touch at no place where theſe articles can be purchaſed to advantage.

If the ſheep and hogs are Engliſh, it will be the better. With reſpect to wines, ſpirits, tobacco, ſugar, coffee, tea, rice, and many other articles, they may venture to rely on Teneriffe or Madeira, the Brazils, and Cape of Good Hope. It will not be their intereſt to draw bills on their voyage out, as the exchange of money will be found invariably againſt them, and a large diſcount is alſo deducted. Drafts on the places they are to touch at, or caſh (dollars if poſſible) will beſt anſwer their purpoſe. Men of deſperate fortunes, and the lower claſſes, can propoſe to themſelves no kind of advantage, unleſs they can procure a paſſage as indented ſervants, ſimilar to the cuſtom of emigrating to America; for it is abſurd to imagine that government will be diſpoſed to maintain them here until they can be ſettled, and without ſuch ſupport they muſt eventually periſh for want of ſubſiſtence.

CHAP. II.

VAN DIEMAN'S LAND.

Deſcription of Van Dieman's Land, the Southern Extremity of New Holland, with Remarks on the Perſons, Manners, Cuſtoms, Language, and Character of the Natives, and the ſeveral Productions of the Country.

IN the year 1766, captain Cook having embarked in his third voyage, again viſited the coaſt of New Holland, which he approached from the ſouthward. On the 24th of January, 1777, he fell in with Van Dieman's Land, and on the 26th anchored in Adventure Bay, in latitude 43 degrees 21 minutes ſouth, being about five degrees more to the ſouthward than that part of the land which he firſt ſaw in his courſe from New Zealand in the year 1770. Before we proceed to relate the particular tranſactions of our modern navigators, we deem it proper to ſet forth the firſt account of the country now under conſideration upon its diſcovery.

Captain Abel Janſen Taſman having been ſent from Batavia for the expreſs purpoſe of making a perfect ſurvey of this country, in Auguſt 1642, found himſelf, on the 6th of November following, in latitude 49 degrees 4 min. ſouth, longitude 114 deg. 56 min. eaſt. Streſs of weather then determining him to ſtand towards the north eaſt, on the 24th of the ſame month, being in the latitude of 42 deg. 25 min. ſouth, longitude 163 deg. 50 min. he diſcovered land lying eaſt ſouth-eaſt, which he called Van Dieman's Land.

On the 1ſt of December he anchored in a bay, which he called the Bay of Frederic Henry; and heard, or at leaſt fancied he heard, the ſound of people upon the ſhore, but ſaw no perſon. The moſt remarkable and worthy of obſervation, were two trees, of two fathoms, or two fathoms and a half in girth, and 60 or 65 feet high, from the root to the branch. They had cut with a flint a kind of ſteps in the bark, in order to climb up to the birds neſts.—The ſteps were at the diſtance of five feet from each other, from whence it was concluded, either that thoſe people were of a prodigious ſize, or that they have ſome way of climbing trees unknown to Europeans. In one of the trees the ſlips were ſo freſh, that it was judged they could not have been cut above four days. A noiſe heard reſembled that of ſome ſort of a trumpet; it ſeemed to be at no great diſtance, but no living creature was ſeen notwithſtanding. The marks of wild beaſts were perceived in the ſand; they reſembled thoſe of a tyger, or ſome ſuch creature.—Some gum, and likewiſe ſome lack, were gathered from the trees. Smoke was obſerved in ſeveral places; nothing more was done, however, than ſetting up a poſt, on which every one preſent cut his name and his mark, and upon which a flag was hoiſted by Taſman, the commander.

The natives, who firſt preſented themſelves to the view of the Engliſh here at the wooding-place, were eight men and a boy. They approached with great confidence, none of them having any weapons but one, who had a ſhort ſtick pointed at one end. Our countrymen deſcribe them as of a middling ſtature, and ſomewhat ſlender, their hair black and woolly, and their ſkin alſo black. They were entirely naked, with large punctures or ridges, ſome in curved and others in ſtraight lines, on different parts of their bodies. They were not diſtinguiſhed by lips remarkably thick, nor their noſes ſo flat as the natives of Guinea; on the contrary, their features were far from being diſagreeable. They had pretty good eyes, and their teeth were tolerably even and regular, though very dirty. Moſt of them had their hair and beards ſmeared with a red ointment, and ſome had their faces alſo painted with the ſame compoſition. They received the preſents that were made them without the leaſt appearance of ſatisfaction. When ſome bread was given them, and they were made to underſtand, that it was to be eaten, they either returned or threw it away without ever taſting it. They all refuſed ſome elephant fiſh; but accepted ſome birds that were preſented, and in ſuch a manner as indicated they were fond of ſuch food.

A dead calm prevented the ſhip from ſailing; the commander ſent parties on ſhore to cut wood and graſs, and accompanied the wooding party himſelf. As ſeveral of the natives had been obſerved ſauntering on the ſhore, and thereby indicated they had no apprehenſion of injury, but, on the contrary, were deſirous of maintaining an intercourſe, he wiſhed to be preſent on the occaſion. The party had not been long landed, before about twenty of them, men and boys, joined them, without expreſſing the leaſt fear or diſtruſt. One of this company was diſtinguiſhed not only by his deformity, but the drollery of his geſtures, and the ſeeming humour of his ſpeeches, which, however, could not be underſtood by thoſe for whoſe entertainment they were ſuppoſed to be exhibited. Their language appeared to be different from that ſpoken by the inhabitants of the more northern parts of this country explored in a former voyage, which is not extraordinary, ſince theſe our navigators ſaw now, and thoſe they then viſited, differed in many other reſpects. Some of the preſent groupe wore round their necks three or four folds of ſmall cord, made of the fur of ſome animal; others had narrow ſlips of the kanguroo ſkin round their ancles. They were each of them preſented with a ſtring of beads and a medal, and ſeemed to receive them with ſome ſatisfaction. They did not appear to ſet any value on iron, or even to know the uſe of fiſh-hooks, though it is more than probable they were acquainted with ſome method of catching fiſh. Several deſerted habitations were obſerved near the head of the bay. There were little ſheds or hovels, built of ſticks, and covered with the bark of trees. There appeared evident ſigns of their abode in the trunks of large trees, which had been hollowed by fire, moſt probably for this very purpoſe. In or near all theſe habitations, and wherever there was an heap of ſhells, there remained the marks of fire,

an indubitable proof that they do not eat their food raw.

After the commander left the ſhore, ſeveral women and children made their appearance, and were introduced by the men to Lieutenant King. Theſe females wore a kanguroo ſkin, in the ſame ſhape as it came from the animal, over their ſhoulders, the only uſe of which ſeemed to be to ſupport their children on their backs, for it left thoſe parts uncovered which modeſty directs to conceal. In all other reſpects they were as naked as the men, and as black, and their bodies marked with ſcars in the ſame manner. They differed, however, in having their heads ſhaved, leaving a very narrow circle of hair all round, ſomewhat reſembling the tonſure of the Romiſh eccleſiaſtics. Many of the children had pleaſing features; but of the perſons of the women, eſpecially thoſe advanced in years, a leſs favourable report was made. Some of the gentlemen paid their addreſſes to them, and made liberal offers; but they were rejected with great diſdain; whether from a ſenſe of virtue, or fear of diſpleaſing their men, cannot be determined. That this gallantry was not very agreeable to the latter is evident; for an elderly man, as ſoon as he obſerved it, ordered all the women and children to retire, which they obeyed, though ſome ſhewed a degree of reluctance. It is here to be obſerved, that the people now ſeen differed, particularly in the texture of their hair, from the natives of the more northern parts of this country.

Van Dieman's Land had been twice viſited before. In the beginning of our account, it is ſet forth to have been ſo named by Taſman, who diſcovered it in November 1642. From that time it had eſcaped all further notice by European navigators, till captain Furneaux touched at it in March 1773. Captain Cook obſerves, that if the whole of the country now deſcribed does not deſerve the name of a continent, it is, by far, the largeſt iſland in the univerſe.

For the moſt part the land is of a good height, agreeably diverſified with hills and vallies, and exhibits, upon the whole, a verdant appearance. It abounds with wood, and, from what was met with in Adventure Bay, ſeems not ill ſupplied with water; for plenty was found in three or four places in this bay. The beſt, or what is moſt convenient for ſhips that touch here, is a rivulet, which is one of ſeveral that fall into a pond that lies behind a beach at the head of the bay. It there mixes with the ſea water; ſo that it muſt be taken up above this pond, which may be done without any great trouble. In ſeveral places fire-wood is to be procured with great eaſe.

As Mr. Anderſon, ſurgeon of the Reſolution, a perſon of general knowledge, ſpent the ſmall time the ſhips remained in Adventure Bay, in examining the iſland; the following are his remarks on the inhabitants and their language, and his account of the natural productions of the country.

At the bottom of Adventure Bay, there is a beautiful ſandy beach, about two miles long, formed, to all appearance, by the particles waſhed by the ſea from a very fine white ſand-ſtone. This beach is well adapted for hauling a ſeine: behind it is a plain, with a blackiſh lake, out of which were caught, by angling, ſome bream and trout. The other parts of the country are moſtly hilly, and are an entire foreſt of tall trees, rendered almoſt impaſſable by ſhrubs, breaks of fern, and fallen trees.

The ſoil on the flat land, and on the lower part of the hills, is ſandy, or conſiſts of a yelloviſh mould, and, in ſome parts, of a reddiſh clay; but further up the hills it is of a grey tough caſt. The country, upon the whole, bears many marks of being very dry, and the heat appears to be great.

No mineral bodies, or ſtones of any other ſort than the white ſand ſtone, already mentioned, were obſerved, nor were there any vegetables found that afforded ſubſiſtence for man.

The foreſt trees are all of one kind, and, in general, quite ſtraight; they bear cluſters of ſmall white flowers. The principal plants are a ſpecies of gladiolus, ruſh, bell-flower, ſamphire, wood-ſorrel, milk-wort, and Job's tears, with a few others peculiar to the place.

The only animal of the quadruped kind ſeen diſtinctly, was a ſpecies of opoſſum, about twice the ſize of a large rat. The kanguroo, another animal, found further northward in New Holland, muſt certainly inhabit here, as ſome of the natives had pieces of their ſkins. And there are ſeveral ſorts of birds; but, as in other neighbouring parts, all ſo ſcarce and ſhy, that it is plain they are haraſſed by the natives, who chiefly ſubſiſt upon them. In the woods, the principal ſorts are large brown hawks or eagles; crows nearly the ſame as ours in England; yellowith paroquets, and another ſmall one, which has part of the head and neck of a moſt beautiful azure colour, and was thence named *motacilla cyanea*. On the ſhore were ſeveral gulls, black oyſter-catchers or ſea-pies, and plovers of a ſtone colour, with a black hood. About the pond or lake behind the beach, a few wild ducks were ſeen, and ſome ſhags were obſerved to perch upon the high leafleſs trees near the ſhore.

Some pretty large blackiſh ſnakes were ſeen in the woods, and a lizard was killed that was fifteen inches long and ſix round, beautifully clouded with black and yellow.

Great variety of fiſh are found in the ſea, as the elephant-fiſh, rays, nurſes, leather-jackets, white bream, ſoles, flounders, gurnards, beſides a ſort not recollected to have been ſeen before, and which partakes of the nature both of a round and of a flat fiſh. Upon the rocks are plenty of muſcles and other ſmall ſhell-fiſh; and ſome Meduſa's heads were found upon the beach.

There is a variety of inſects here, though they are not numerous. The moſt troubleſome are the muſquitoes, and a large black ant, whoſe bite is very painful.

In this country the natives had little of that ferocious aſpect common to ſavages; but, on the contrary, ſeemed mild and cheerful, without reſerve, or jealouſy of ſtrangers. They are almoſt devoid of perſonal activity and genius, and, in thoſe particulars, nearly upon a par with the inanimate inhabitants of Terra del Fuego, who are ſo deficient in point of invention, as not to be capable of making clothing for defending themſelves from the extreme rigour of their climate, though furniſhed with the materials. They diſplay indeed ſome ingenuity in their method of cutting their arms and bodies in lines of different directions, raiſed above the ſurface of their ſkins. However, their want of curioſity, indifference for preſents made them, and general inattention, plainly teſtified they were not poſſeſſed of any acuteneſs of underſtanding. Their colour is a dull black, ſometimes heightened by ſmutting their bodies, as was ſuppoſed from their leaving a mark behind on touching any clean ſubſtance. Their hair is perfectly woolly, and clotted with greaſe like that of the Hottentots. Their noſes, though flat, are broad and full, and the lower part of the face projects conſiderably. Their eyes are of a moderate ſize, and though not remarkably quick and piercing, give the countenance a frank, cheerful, and pleaſing caſt. Their teeth are not very white, nor well ſet, their mouths are rather wide; they wear their beards long and clotted with paint. In other reſpects they are well proportioned, though the belly projects rather too much. Their moſt favourite attitude is to ſtand with one ſide forward, and one hand graſping acroſs the back the oppoſite arm, which, on this occaſion, hangs down by the projecting ſide.

In

In the bay, near the ſhore, were obſerved ſome wretched conſtructions of ſticks, covered with bark, which ſcarcely deſerve the name of huts. They ſeemed, indeed, to have been merely temporary, as many of their largeſt trees appeared to have been converted into more comfortable and commodious habitations. The trunks of theſe were hollowed out by fire to the height of ſix or ſeven feet. That they ſometimes dwell in them was evident from the hearths in the middle, made of clay, round which four or five perſons might ſit. Theſe places of ſhelter are rendered durable by their leaving one ſide of the tree ſound ſo that it continues growing as luxuriantly as thoſe which remain untouched.

Voyagers have generally concluded, that the people here are of the ſame ſtock with thoſe of New Zealand, and other ſouthern iſlands, though they differ in point of language.

CHAP. III.

NEW ZEALAND.

Diſcovery and Deſcription of the Country; its Situation, Extent, Soil, Climate, Mountains, &c.

THIS iſland was firſt diſcovered by Taſman, a Dutchman, in the year 1642, who meeting with a very hoſtile reception from the natives, as ſoon as he came to anchor, he thought it prudent to weigh without ſo much as attempting to land; but gave the appellation of Murderer's Bay to the road in which he dropped anchor, and the general name of New Zealand to the whole country, at that period ſuppoſed to be part of a ſouthern continent.

Captain Cook often viſited New Zealand, firſt in 1769, in the cloſe of which and the beginning of the enſuing year, he coaſted the country during a ſpace of ſix months, and found it to conſiſt of two large iſlands divided by a paſſage (now called Cook's Straights) about four or five leagues broad, and lying nearly north and ſouth of each other, between the latitudes of 34 degrees 22 minutes and 47 degrees 25 minutes ſouth, and between the longitude of 166 and 180 degrees eaſt. The ſame navigator viſited it again in 1773, and for the third time in 1774. Theſe two iſlands are nearly of the ſame extent, and taken together as large as Great Britain, having many ſmall iſlands about them. The northernmoſt is called by the natives Eahei-Nomarve, and the ſouthernmoſt Tovy or Tovai-Poenammoo. The latter is moſtly hilly, and, to appearance, barren and thinly inhabited; but the former, though very mountainous, is tolerably fertile, and can boaſt of a rivulet running through every valley. Though theſe vallies do not abound with wood, yet, from the apparent nature of the ſoil, it was the opinion of ſome ingenious perſons, that every kind of European grain would flouriſh here, and that through the exertion of induſtry in cultivation, not only the neceſſaries but luxuries of life might be obtained in rich variety. The climate, upon the whole, is ſaid to be more temperate than that of England, from the vegetables that were found growing there in the winter ſeaſon.

During ſix months circuit, in which captain Cook fully explored the coaſts of both iſlands, he gave names to ſeveral bays, rivers, and other parts of thoſe coaſts, from remarkable characters and various occurring circumſtances. He called the firſt place where he anchored Poverty Bay, becauſe no neceſſaries were found there but wood. The next port he made was named Mercury Bay, becauſe an obſervation was there made of the Tranſit of Mercury over the Sun; it is ſituated in latitude 36 degrees 57 minutes. The river that empties itſelf at the head of Mercury Bay was called The River Thames, from its apparent reſemblance to our river of that name; and its banks are pointed out as the moſt advantageous ſpot in theſe iſlands for planting a colony. The bay of iſlands, lying more to the northward, derives its appellation from the great number of iſlands contiguous, and from its ſeveral harbours, which are equally ſafe and commodious.

North-Cape, or Cape-North, ſo called from its ſituation, is the northern extremity of land on the iſland Eahei-Nomarve. The coaſt along the weſtern ſhore was called, The Deſert Coaſt, and a peak remarkably high, of moſt majeſtic appearance, and from the ſpace which the ſnow occupies upon it, ſuppoſed to be not much inferior to the Peak of Teneriffe, named Mount Egmont; and the ſhore under it, forming a large cape, received the appellation of Cape Egmont.

The ſouthern iſland was as accurately ſurveyed as the northern. Here likewiſe, from the cauſes abovementioned, names were given to ſeveral parts, as Banks's-Iſland, Cape-Saunders, The Traps, Duſky-Bay, Admiralty-Bay, &c. &c.

In Queen Charlotte's Sound (in which is ſituated Murderers'-Bay, ſo called by Taſman) was diſcovered a fine ſtream of excellent water, and wood in abundance. The inhabitants, who ſcarcely exceeded four hundred in number, were diſperſed along the ſhore; they are poorer than the inhabitants of other parts of the country, their ground is uncultivated, their chief food is fiſh and fern roots, and their canoes are without ornament. The climate here is much milder than that of Duſky-Bay, and as no froſt was ſeen at the beginning of June, almoſt the depth of winter, it is probable that it ſeldom freezes here. There were ſome curioſities found on the hills and beaches, and, from many different appearances, the former exiſtence of a volcano in New Zealand was more than conjectured. Queen Charlotte's Sound is particularly eligible as a port and place of refreſhment, from the number of antiſcorbutic plants which grow upon every beach, many of which contribute both to health and aliment.

From the hills in general towards the ſea, are one continued foreſt of lofty trees, which flouriſh with uncommon vigour; and it was remarked that no country abounded upon the whole ſo much with trees and plants, that were entirely unknown to the naturaliſts of Europe, as New Zealand. The ſize, growth, and durability of the timber render it fit for any kind of building. The large trees on the hills are chiefly of two ſorts, one of them is of the ſize of our largeſt firs, and grows nearly in the ſame manner. A decoction of its leaves fermented with ſugar or treacle, ſupplies the place of ſpruce in making beer, and our countrymen acknowledged it to be little inferior to American ſpruce beer; the other ſort of tree is like a maple, and often grows very large, but is only fit for fuel, the wood being too heavy for maſts and yards, though it was the general opinion, that if ſome means could be deviſed to lighten them, they would produce maſts ſuperior to thoſe of any country in Europe. In Duſky Bay a beautiful tree was found in flower, of the myrtle kind, of which an infuſion was drank inſtead of tea. Its leaves are aromatic, aſtringent, and have a very pleaſant flavour at the firſt infuſion, which is changed to a ſtrong bitter on pouring water on the leaves a ſecond time.

Trees of various ſorts grow on the flats behind the beaches: two or three bear a kind of plum of the ſize of prunes; the one which is yellow is called karraca, and the other, which is black, maitao, though neither of them afforded a pleaſant taſte. The woods in many parts were ſo over-run with ſupple-jacks, that it was ſcarcely poſſible to force a way through them; ſeveral of theſe were fifty or ſixty feet long.

This country produces wild celery and a kind of creſſes, which grow in abundance on all parts of the ſea coaſts; theſe are ſometimes uſed as ſalad or dreſſed as greens; in all thoſe ways they are excellent, and,

together

together with the fiſh, form a deſirable refreſhment. Here is the proper mulberry-tree, but extremely rare; alſo a berry which ſerves the natives inſtead of flax and hemp, and exceeds all that are made uſe of for ſuch purpoſes in other countries. There are two ſorts of this plant, in one kind the flowers are yellow, and in the other, a deep red. Of the leaves of theſe plants, with very little preparation, the natives make all their common apparel; of theſe alſo they make all their lines and cordage for every purpoſe. Theſe are much ſtronger than any thing we can make with hemp. This plant grows in all places near the ſea, and ſometimes a conſiderable way up the hills, in bunches or tufts; being perennial it may be cut down to the root every year, and requires little care and attendance in the cultivation. It is remarked that our botaniſts were greatly tantalized here by the appearance of numerous trees and ſhrubs, which had loſt their flowers and fruits, and only ſerved to give them an idea of the great profuſion of vegetables in this country.

There are not many inſects in this country. There is a ſort of little crane fly, particularly troubleſome in the ſouthern parts during bad weather. The ſand fly, the only noxious one, is very numerous here, and is almoſt as diſagreeable as the muſquito. Their bite cauſes a ſwelling and intolerable itching. There are ſome butterflies, two ſorts of dragon-flies, ſome ſmall graſshoppers, ſeveral ſorts of ſpiders, ſome black ants, and ſcorpion flies, with whoſe chirping the woods reſound. There are ſnakes and lizards of an enormous ſize.

In the woods are a great number and variety of birds, ſome are very beautiful, and moſt of them peculiar to the place. The only bird here which reſembles any in Europe is the gannet; here are ducks and ſhaggs, but very different from any among us: their hawks, owls, and quails differ but little. There is a ſmall green bird, almoſt the only muſical one to be found here. His melody is ſo ſweet, and his notes ſo varied, that the liſtener would imagine himſelf ſurrounded by a variety of birds, when he exerts his vocal powers. From this circumſtance he was called the mocking bird. Here are water hens of a large ſpecies; rails are ſcarce in all parts of New Zealand, except at Duſky Bay, where they were ſeen in great numbers; alſo cormorants, oyſter-catchers or ſeapies, albatroſſes, ducks, penguins, and other ſorts of the aquatic kind. Five ſpecies of ducks were found in Duſky Bay, differing from each other in ſize and plumage. Among the ſmall birds are the wattle-bird, the poy-bird, and the fantail. Of the fantail there are different ſorts; but the body of the moſt remarkable one is ſcarcely larger than a good filbert, yet it ſpreads a tail of moſt beautiful plumage, ſurpriſing in extent conſidering its ſize. Our late travellers remark, that though it would be difficult and fatiguing to follow the birds of ſport on account of the quantity of underwood and the climbing plants, yet by continuing in one place, a fowler may ſhoot as many in a day as would ſerve ſeven or eight perſons. The reaſon aſſigned for this obſervation is, that theſe birds were ſo little acquainted with mankind, that they familiarly perched on the neareſt branches, and hopped even on the ends of the fowling pieces, looking at every one that came near them with the greateſt curioſity.

In this extenſive country, the only quadrupeds which are known are dogs and rats. The dogs are of the rough, long-haired ſort, with pricked ears, and much reſembling the ſhepherd's cur; they are of different colours, and though kept by the natives as a domeſtic animal, pampered and indulged with fiſh as food in common with their maſters, their bodies are afterwards eaten by them, and their ſkins applied to various uſes of dreſs and ornament. The cuſtom of eating dog's fleſh is partly general among the inhabitants of theſe ſouthern climes, and was at length adopted by our European navigators as a relief from the loathſome taſte of ſalt proviſions. The leg of a dog, killed on board one of the ſhips, was roaſted and ſerved up at the captain's table, which the company, through diſuſe, could not diſtinguiſh from mutton.

Many ſorts of fiſh were caught here by the Seine, and among the reſt a ſpecies unknown in Europe, but very delicious. Every creek ſwarms with them. Mackerel of various kinds were caught in immenſe ſhoals; but the higheſt luxury which the ſea affords here, is the lobſter, or ſea cray-fiſh, which differs from thoſe in Europe in ſeveral particulars. They have a great number of prickles on their backs, and are red when firſt taken out of the water. There are elephant-fiſh, mullets, ſoles, flounders, bream, conger-eels, and a fiſh of five or ſix pounds weight, called by the natives a mogge. With the hook and line was caught a blackiſh fiſh called cole fiſh by the ſeamen, but differing greatly from that of the ſame name in Europe. There is alſo a ſort of ſmall ſalmon, ſkate, gurnards, and nurſes; theſe in general are well-flavoured, but the ſmall ſalmon, cole-fiſh, and mogge are ſuperior to the others. There are vaſt quantities of muſcles among the rocks, many cockles in the ſand of the ſmall beaches, and in ſome places oyſters, which, though ſmall, have an agreeable taſte, together with other ſhell fiſh of various kinds. There is not here any mineral deſerving notice, except a green jaſper ſtone of which the tools and ornaments of the inhabitants are made. This is held in high eſtimation among them, and they entertain ſome ſuperſtitious notions about the mode of its generation, but the particulars our countrymen could not comprehend.

In New Zealand the number of inhabitants bears no proportion to the extent of country. The ſouthern part is very thinly inhabited, conſiſting chiefly of wanderers; but the northern is better peopled, though the weſtern ſide of the iſland is quite a deſert, and the interior parts are ſo mountainous that ſcarce any place is inhabited but the ſea coaſts.

The ſtature of the iſlanders in general is equal to the Europeans, but they are not ſo well formed, eſpecially about the limbs, which are diſtorted by ſitting ſo much on their hams, and being deprived, by the mountainous nature of the country, from uſing that kind of exerciſe which would render the body ſtraight and well proportioned. Some, however, are well made, vigorous and active, and have a good ſhare of adroitneſs and manual dexterity.

Their complexion is moſtly brown, though not deeper than that of a Spaniard who has been expoſed to the heat of the ſun. They are rather darker in the ſouthern iſland. Their faces are commonly round, their lips rather full, and their noſes (though not flat) large towards the point. Their eyes are large, their teeth broad and irregular, their hair in general black, ſtrong and ſtraight, commonly cut ſhort on the hinder part, and the reſt tied on the crown of the head. The countenance of the young is generally free and open, but in many of the men it has a ſerious or ſullen caſt. The men are larger than the women, who are not remarkable for any peculiar graces either of form or feature; but their voices are very ſoft and harmonious, by which they are chiefly diſtinguiſhed, the dreſs of both ſexes being nearly the ſame. Like the women of moſt other countries, they have a chearfulneſs ſuperior to the men, and a greater flow of animal ſpirits.

They have a garment made of ſilky flax, about five feet in length and four in breadth. This appears to be their principal manufacture, which is performed by knotting. Two corners of this garment paſs over the ſhoulders, and they faſten it on the breaſt with that which covers the body; it is again faſtened about the belly with a girdle made of mat. It is ſometimes covered with dog ſkin or large feathers. Many

of

of them wear coats over this garment, extending from the ſhoulders to the heels. The moſt common covering, however, is a quantity of the ſedgy plant, badly manufactured, faſtened to a ſtring and thrown over the ſhoulders, whence it falls down on all ſides to the middle of the thighs. They adorn their heads with feathers, combs of bone or wood, pearl ſhells, and the inner ſkin of leaves. Both ſexes have their ears ſlit, in which are hung beads, pieces of jaſper, or bits of cloth. Some have the ſeptum of the noſe bored in the lower part, but no ornament was ſeen in it. Their tattowing is done very curiouſly, in ſpiral and other figures, and in many places indented with their ſkin, ſo as to look like carving; but, at a diſtance, it appears as if it had been only ſmeared with black paint. This tattowing and ſtaining the face is peculiar to the principal men among them; thoſe of inferior rank, as well as women, content themſelves with beſmearing their faces with red paint or ochre. The women wear necklaces of ſhark's teeth, or bunches of long beads, and ſome of them have ſmall triangular aprons, adorned with feathers or pieces of pearl-ſhells faſtened about the waiſt with a double or treble ſet of cords. Their winter dreſs is a ſhaggy cloak, called boghee boghee, which hangs round their necks like a thatch of ſtraw. Their cloth is white and as gloſſy as ſilk, worked by hands, and wrought as even as if it had been wrought in a loom, and is chiefly worn by the men, though it is made by women, who alſo carry burdens and do all the drudgery.

They erect their huts with great facility. They have been ſeen to erect above twenty of them on a ſpot of ground which was covered with plants and ſhrubs not an hour before. The ſavages had no ſooner leaped from the canoes, than they tore up the ſhrubs and plants from the ground they had fixed on, and put up ſome part of the framing of a hut. Theſe huts are ſufficiently calculated for affording ſhelter from the rain and wind, and are built contiguous to each other. The beſt ſeen was built in the manner of one of our country barns, and was about ſix feet in height, fifteen in breadth, and thirty-three in length. The inſide was ſtrong and regular, well faſtened by means of withes, &c. and painted red and black. At one end it had a hole ſerving as a door to creep out at, near which was a ſquare hole, which ſerved both for window and chimney.

Their hippahs, or fortified villages, conſiſt of ſtrong holds, erected on rocks, and ſecured on the land ſide by a bank, a ditch, and an high paling within the ditch. Some have out-works curiouſly conſtructed. Theſe places ſeem only to be the occaſional abodes of the natives, in caſe of danger from their enemies; for as ſoon as their ſtate of tranquillity returns, they quit theſe heights for the level country.

They feed moſtly on fiſh, which they catch with different kinds of nets, or wooden fiſh-hooks, pointed with bone, but made in ſo extraordinary a manner, that it appears aſtoniſhing how they can anſwer ſuch a purpoſe. They ſhewed themſelves more expert fiſhermen than any of their European viſitants, nor were any of the methods practiſed by our people equal to theirs. They dreſs their fiſh by roaſting, or rather baking them, being entirely ignorant of the art of boiling. It is thus they alſo dreſs the root of the large fern-tree, in a hole prepared for that purpoſe: when dreſſed, they ſplit it, and find a glutinous ſubſtance within, not unlike ſago powder. The ſmaller fern-root ſeems to be their ſubſtitute for bread; being dried and carried about with them, together with great quantities of dried fiſh, when they go far from their habitations.

Water is their only drink, and they conſtantly refuſed to touch either wine or brandy, when on board the European veſſels, and drank pure water, or ſweetened with ſugar, though they partook very freely of the proviſions that were put on the table. They are as filthy in their feeding as in their perſons, which often emit a very offenſive effluvia, from the quantity of greaſe about them, and from their never waſhing their garments.

For an uncivilized people, their ingenuity claims notice; as, without the aſſiſtance of metal tools, they make every thing by which they procure their ſubſiſtence, clothing, and warlike weapons, with neatneſs, ſtrength, and convenience. Their chief mechanical tools are the adze and axe, made of hard black ſtone, chiſels of human bone, or fragments of jaſper. They eſteem their axes the moſt valuable of their poſſeſſions, nor will part with one of them upon any conſideration. They have baſkets of various kinds and ſizes, made of wicker-work. The making of nets ſeem to be the ſtaple manufacture of thoſe parts of the country which were viſited. Theſe nets are of a circular form, extended by two hoops, and about ſeven or eight feet in diameter; the top is open, and they faſten ſea-ears to the bottom as a bait. They let down this net, ſo as to lie upon the ground; and when they imagine fiſh enough are collected over it, they draw up by a gentle motion, ſo that the fiſh riſe with it, ſcarcely ſenſible that they are lifted, till they come near the ſurface of the water, and then a ſudden jerk brings them with the net into the boat.

They have a ſingular taſte for carving, which muſt be admitted as their maſter-piece. This appears on the moſt trifling things: the ornaments on the heads of ſome of their canoes, not only diſplay much deſign, but execution, though their tools in general are very awkward. A ſhell, a piece of flint or jaſper, is their ſubſtitute for a knife, and a ſhark's tooth, fixed on the end of a piece of wood, is their auger.

Their chief weapons are ſpears or lances, darts, battle-axes, and the patoo-patoo. The ſpear is fourteen or fifteen feet long, pointed at both ends, and ſometimes headed with bone. It is graſped by the middle, ſo that the part behind balancing that before, makes a puſh more difficult to be parried, than that of a weapon which is held by the end. The patoo-patoo is formed like a pointed battledore, with a ſhort handle, and ſharp edges, and deſigned for cloſe fighting: through the handle there is a ſtring to twiſt round the hand when the weapon is uſed. The patoo-patoo is worn in the girdle, as a conſiderable military ornament.

The chiefs carry about them a ſtaff of diſtinction, generally the rib of a whale, ornamented round the top with carving, dog-ſkin, and feathers, like our halberts. Sometimes this ſtaff is merely a ſtick, about ſix feet long, adorned in the ſame manner, and inlaid with a ſhell reſembling mother-of-pearl.

Their canoes are of different ſizes, and much reſemble the New-England whale-boat. Some of the largeſt ſort ſeem to be built for war, being near ſeventy feet long, five feet broad, and three feet and a half deep. They have a ſharp bottom, conſiſting of three trunks of trees hollowed, of which that in the middle is the longeſt. The ſide-planks are ſixty-two feet long, in one piece, and carved in basrelief; the head is ſtill more richly adorned with carving. The gunwale boards are likewiſe frequently ornamented with tufts of white feathers placed upon a black ground. Their boats are worked by paddles, about ſix feet long, neatly made, the blade being oval, pointed at the bottom, and gradually loſing its oval form in the handle. They make their ſtrokes with thoſe paddles with incredible quickneſs, and keep time ſo exactly, that all the rowers ſeem actuated by one common impulſe. Sails of matting fixed upright, between two poles, are ſometimes uſed; but they can make no way with theſe, unleſs it be right before the wind. The ſmaller canoes were no other than trunks of trees, intended wholly for fiſhing, without either convenience or ornament.

The New Zealanders are by no means expert in navigation.

The natives of this country live under continual apprehenſions of being deſtroyed by each other; moſt of their tribes having, as they think, ſuſtained injuries from ſome other tribe, which they are over-eager to revenge. They generally ſteal upon the adverſe party in the night; and if they chance to find them unguarded, which however ſeldom happens, they put every one to death without diſtinction, not ſparing even women or children. When they have completed the inhuman maſſacre, they gorge themſelves on the ſpot, or carry off as many bodies as they can, and feaſt on them at home with the moſt horrid acts of brutality. If they are diſcovered before they have time to execute their ſanguinary purpoſe, they uſually ſteal off again, and ſometimes they are purſued and attacked by the adverſe party in their turn. They never give quarter, ſo that the vanquiſhed muſt truſt to flight alone for ſafety. From this ſtate of perpetual hoſtility, and this deſtructive mode of carrying it on, a New Zealander acquires ſuch habitual vigilance and circumſpection, that he is ſeldom off his guard; indeed, they have the moſt powerful motives to be vigilant.

The inhabitants of the ſouthern iſle, in particular, lead a wandering kind of life, and ſeem to be under no regular kind of government, yet the head of each tribe is reſpected, and, on ſome occaſions, commands obedience. Thoſe of the northern iſle acknowledge a ſovereign, to whom great reſpect is paid, and by whom juſtice is probably adminiſtered. The European viſitants were given to underſtand, that they poſſeſſed their authority by inheritance.

It appears that the men here till the ground, make nets, catch birds, and fiſh with nets and lines, and the women dig up fern-roots, collect lobſters, and other ſhell-fiſh, in the ſhallow waters near the beach, dreſs the food, and weave cloth. Reſpect is paid to old men among them, who may be ſuppoſed to owe their conſequence to the long experience they have gained; but their chiefs are ſtrong, active young men, in the prime and flower of their life.

Their exceſſive cruelty towards ſome of our countrymen, in the year 1773, will appear by the following relation:

The two ſhips commanded by the captains Cook and Furneaux having parted company, and not happening to join again, ſome time after the departure of captain Cook, captain Furneaux arrived in the month of December in Queen Charlotte's Sound.—While he lay there, a cutter, with two petty officers and eight ſeamen, being ſent up a creek to procure wood and water, not returning the next day, a boat was ſent with an officer in queſt of them. They were ſoon alarmed by the ſight of ſome parts of the cutter, and ſome ſhoes, one of which was known to belong to a midſhipman who was one of the party: preſently a piece of meat was found, which at firſt was ſuppoſed to be ſome of the ſalted meat belonging to the cutter's crew; but on cloſer examination, was found to be freſh. Several baſkets lay on the beach tied up, which they eagerly cut open, and found to contain roaſted fleſh and fern-roots, which ſerved them for bread. On further ſearch many ſhoes were found, and a hand, which was immediately known to belong to a forecaſtle-man, it being marked with the initial letters of his name with an inſtrument, by a native of Otaheite. Many other articles were found, till having ſearched in vain in every part of the beach for the cutter, a ſhocking ſpectacle ſuddenly opened to their view. Here were ſcattered the heads, hearts, and lungs of ſeveral of the unhappy men, who had been maſſacred by the natives, and dogs were ſeen devouring their entrails. The ſailors ſtood aghaſt, ſtruck with horror at the ſight, and with imprecations vowed revenge, which was ſoon executed, by firing at and killing many of the ſavages, and deſtroying all the canoes that lay on the beach.

Yet notwithſtanding their ferocity in the above, and divers other inſtances in their diſpoſition, our countrymen had an opportunity of remarking, not only their perſonal ſubordination, but ſome proofs of their hoſpitality. Going on ſhore in ſearch of the natural productions of the country, two very ingenious gentlemen accidentally fell in with an agreeable Indian family. The principal were a widow, and a darling ſon about ten years old. The widow was mourning for her huſband, according to their cuſtom, with tears of blood, and the child, by the death of the father, was become proprietor of a diſtrict of land. The widow and her ſon were ſitting upon mats, and the reſt of the family, to the number of ſixteen or ſeventeen of both ſexes, ſat round them in the open air; for they did not appear to have any home, or other ſhelter from the weather, the inclemencies of which cuſtom had enabled them to endure without any laſting inconvenience. It was remarked, that their whole behaviour was obliging, affable, and unſuſpicious. They preſented their viſitants with a fiſh, and a brand of fire to dreſs it, and importuned them to ſtay till morning, which they would have done, had they not expected the veſſel to ſail.

When our Britiſh navigators firſt explored theſe parts, the firſt inhabitants they ſaw were a man and two women. The man ſtood with a battle-axe and club in his hand, on the rocky point of an iſland, and called to the commander and others who were paſſing near him in a boat. The women were behind him, each with a long ſpear in her hand. His ſalutation was anſwered in the language of Otaheite, "Tayo barre mai;" Friend, come hither. He did not, however, ſtir from his poſt; but held a long ſpeech, frequently ſwinging round his club, on which he leaned at other times. The commander landed on the rock alone. The poor native gave evident tokens of fear, but ſtood however firm on the ſame ſpot. The commander went up to him and embraced him, according to the cuſtom of the country, by joining noſes. This token of amity diſpelled all apprehenſions on the part of the natives. The man received the preſents that were made him, and the two women joined company. One of them had a prodigious excreſcence on the upper lip, and was in every reſpect remarkably ugly. But on a renewal of the viſit the next day, the natives received all the articles that were offered them with great indifference, except hatchets and ſpike nails; in return for which, they parted with ſeveral of their ornaments and weapons, but did not ſeem inclined to part with their ſpears. A good underſtanding being now eſtabliſhed, the next time our countrymen viſited them, they found them dreſſed out in the higheſt taſte of the country. Their hair was combed, tied to the crown of the head, and anointed with oil or greaſe; white feathers were ſtuck at the top; ſome had fillets of white feathers all round the head, and others wore pieces of an albatroſs ſkin, with the fine down in their ears. A cloak of red baize was preſented to the chief, in return for which, he gave the commander a patoo-patoo, which he drew from his ſide.

A man and young woman being prevailed on to come on board, the former, before he left the ſhore, broke off a ſmall green branch from a buſh, walked on with it in his hand, and having ſtruck the ſhip's ſide with it ſeveral times, began to recite a kind of ſpeech or prayer, which ſeemed to have regular cadences, and to be arranged in metre as a poem. It laſted two or three minutes, and when over, he threw the branch into the main chain, and went on board. His manner of delivering ſolemn orations, and making peace, is practiſed by all nations in the South-Seas, as appears from the teſtimonies of various

ous voyagers. All they ſaw excited the curioſity both of the girl and the man: they were particularly pleaſed to find the uſe of chairs, and that they might be removed from place to place; but it was not poſſible to fix their attention to any one thing for a ſingle moment.

Of all the various preſents that were made the man, hatchets and ſpike nails ſtill continued to be moſt valuable in his eyes; theſe he would never ſuffer to go out of his hands after he had once laid hold of them, whereas he would lay many other articles careleſsly down, and often at laſt leave them behind him. They could not be prevailed upon to eat any thing; but paſſed ſome compliments on our countrymen, according to their own forms and cuſtoms.

In a ſhort time an acquaintance was cultivated with a few more of the natives, who ſeemed to be the only inhabitants in this part of the country. Theſe coveted the poſſeſſion of every thing they ſaw, or could lay their hands on, except muſkets, which they would not touch, having learnt to dread them as inſtruments of death, from the deſtruction they had ſeen them make among the wild-fowl.

The diſpoſition of theſe people is however very open, for if they had not diſcovered themſelves, and thereby made the firſt advances, they might with great eaſe have kept themſelves concealed; but a certain openneſs and honeſty appeared ſtrongly to mark their character; for had they been inclined to treachery, they would have endeavoured to have cut off ſmall parties that were frequently diſperſed in different parts of the woods, in which they might have been but too ſucceſsful.

The following little anecdotes may tend further to a diſplay of the diſpoſition of theſe iſlanders.

A New Zealander came on board an European veſſel when ſhe lay in Queen Charlotte's Sound, accompanied by his ſon and daughter. Being introduced into the cabin, the ſon was preſented by the captain with divers trinkets, and dreſſed out in one of his own white ſhirts. Unable to withſtand the impulſe of puerile vanity, he ran upon deck in order to ſhew his finery to his countrymen. An old he-goat, conceiving a kind of capricious diſlike to the ludicrous figure of poor Khoaa (for that was the boy's name) aſſailed him, and raiſing himſelf on his hind legs, with one butt of his head, laid him proſtrate on the deck. The father, amazed to ſee the ineſtimable preſent begrimed with filth, beſtowed many blows on the unfortunate ſufferer, in token of his reſentment. The ſhirt, however, by waſhing, was ſoon brought to its former ſtate of purity; and what was more, the boy was waſhed all over; moſt probably for the firſt time in his life: but the provident father, dreading another miſchance to the precious veſtment, carefully rolled it up, and taking off his own dreſs, made a bundle of it, in which he placed all the preſents that he and his ſon had received.

A diſpoſition to ſteal and ſecrete every thing they could lay their hands on, was diſcoverable in all that came on board the veſſel in Queen Charlotte's Sound; and thoſe that were detected, were treated with merited diſgrace and ignominy. They appeared to feel the whole weight of ſhame which their behaviour brought on them; nay, one of them uttered threats, and made violent geſtures in his canoe. Upon another occaſion of the like nature, a young New Zealander diſcovered his reſentment by ſtriking a ſailor, merely for recovering his property that had been ſtolen; but the tar, according to the law of retaliation, imprinted the marks of his fiſt on the face of the aggreſſor.

A boy, about fourteen years of age, was prevailed on to drink a glaſs of Madeira wine, which cauſed him to make wry faces; but a glaſs of ſweet Cape wine being filled out to him, he reliſhed it ſo well as to lick his lips, and deſired to have another, which he likewiſe drank off. This ſoon began to elevate his ſpirits, as appeared from the volubility of his tongue and his antic geſtures, as well as his expreſſion of indignation at being refuſed divers articles, for which he had conceived a predilection. In a word, his behaviour was ſuch, as exhibited a very juſt ſample of the impatient temper of thoſe people.

Several of the natives here had very expreſſive countenances; particularly ſome old men with grey and white beards, and ſome young men with great quantities of buſhy hair, which hung wildly over their faces, and increaſed the ferocity of their looks. As proofs of the force of ſuperior genius, their enquiries after Tupia, and the concern they ſhewed for his death, were ſingularly emphatical. It was ſhrewdly obſerved by one of our countrymen preſent, that this man, with the capacity with which he was endowed, and which had been cultivated no further than the ſimplicity of his native manners extended, was probably better qualified for civilizing the New Zealanders, than any of the more enlightened Europeans.

Their various methods of attack and defence, as exhibited before the Europeans, were as follow: One of their young men mounted a fighting ſtage, which they call porava, and another went into a ditch. Both he who was to defend the place, and he who was to aſſault it, ſung the evar-ſong, and danced with frightful geſticulations. Theſe were practiſed as means of working themſelves up into that mechanical fury, which among all uncivilized nations is the neceſſary prelude to a battle. Their engagements, whether in boats or on ſhore, are generally hand to hand, and the ſlaughter muſt conſequently be great, as a ſecond blow with any of their weapons is unneceſſary, if the firſt takes place. Their truſt, however, ſeems to be principally placed in the patoo-patoo, already deſcribed. They gloried in their cruelties, and ſhewed their viſitors the manner in which they diſpatched their priſoners, which was to knock them down with their patoo-patoos, and then to rip them up. They made no ſcruple of declaring their practice of eating their enemies. The bones of a man were ſeen with the fleſh off; and every circumſtance concurred to render it evident that theſe people were cannibals, for there was found in one of their proviſion baſkets, the remaining fleſh, which appeared to have been dreſſed by fire, and in the griſtles at the end were the marks of teeth which had knawed them. To aſcertain the fact, Tupia was directed to aſk what bones they were: the Indians without heſitation replied, the bones of a man: when aſked what was become of the fleſh, they replied, they had eaten it. One being afterwards aſked why they did not eat the body of a woman that was ſeen floating upon the water? The woman, they ſaid, died of a diſeaſe; and added, that ſhe was their relation, and they eat only the bodies of their enemies.

The people of New Zealand are more paſſionate than the other South Sea iſlanders in general, yet they are more modeſt; and if the women are not invincible, the terms and manner of their compliance are as decent as thoſe in marriage among the Europeans. When an overture is made to any young woman, the party is given to underſtand, that the conſent of friends is neceſſary; that a ſuitable preſent muſt be made; that the conſenting female muſt be treated with good manners; that no unbecoming liberties muſt be taken, and that day-light muſt not be witneſs to what paſſes between them.

The lower garment worn by the women, is bound faſt round them, except when they go into the water to catch lobſters, and then they take care not to be ſeen by the men. But, in courſe of time, the morals of the natives, both male and female, appeared not to be at all mended by their intercourſe with Europeans. It was obſerved by our countrymen, on their ſecond viſit, that inſtead of behaviug with the ſame reſerve,

reſerve that had marked their conduct before, both ſexes had abandoned their native principles, and the men promoted a ſhameful traffic of their daughters and ſiſters. It did not appear, however, that the married women were ſuffered to have any intercourſe of this kind. The ideas of female chaſtity, which prevail here, are quite different from ours; for here a girl may grant her favours to a plurality of lovers, without any ſtain on her character; but conjugal fidelity is rigorouſly expected if ſhe marries. Polygamy is allowed; and it is not uncommon for a man to have two or three wives. The females are marriageable at a very early age; and it ſhould ſeem that one who is unmarried is but in a forlorn ſtate: ſhe can with difficulty get a ſubſiſtence, at leaſt ſhe is in a great meaſure without a protector, though in conſtant want of a powerful one.

In ſome places to the northward, there were conſiderable traces of cultivation, and the ground appeared as well broken and tilled as amongſt us. The plantations were of different extent from one or two acres to ten, and in the whole of Poverty Bay there appeared from 150 to 200 acres in cultivation, though an hundred people were not ſeen all the time the Europeans continued there.

As Tupia was perfectly underſtood in his own language by the natives of this country, and there ſeemed to be a ſimilarity of dialect in all the iſlands viſited by our European navigators, it was deemed a ſtrong argument for the inhabitants being all deſcended from one common ſtock. Exceptions are however found to the univerſality of the language, among the inhabitants of New Caledonia and the New Hebrides.

The war-ſong of New Zealand is extraordinary. In it the women join the men with horrid diſtortions of countenance and hideous cries, which they utter in extreme good time. Their muſical inſtruments conſiſt of a trumpet, or tube of wood, about four feet long, and pretty ſtraight. It makes a ſtrange and uncooth noiſe, and it was obſerved they always ſounded the ſame note. Another trumpet was made of a large whelk, mounted with wood, curiouſly carved, and pierced at the point where the mouth was applied. An hideous bellowing was all the ſound that could be produced from this inſtrument. The natives were frequently heard ſinging on ſhore, as well as in their canoes, and ſometimes they ſang on board the European veſſels.

Some of the New Zealanders, inhabitants of Queen Charlotte's Sound, exhibited an *heiva*, or dance, on the quarter-deck. They placed themſelves in a row, and parted with their ſhaggy upper garments; one of them ſang ſome words in a rude manner, and all the reſt accompanied the geſtures he made, alternately extending their arms, and ſtamping with their feet in a violent and moſt frantic manner. The laſt words, which might be ſuppoſed to be the chorus, they all repeated together, and ſome ſort of metre was diſtinguiſhable, but whether it was calculated to make rhyme, could not be diſcovered.

The eaſe with which their wounds heal, is adduced as a ſtrong proof of the health which theſe people enjoy. One of them had a ſhot with a muſket ball through the fleſhy part of the arm, which, without any application, ſoon appeared well adjuſted, and in a fair way of being perfectly healed. The venereal diſeaſe is now, indeed, too common among them. This dreadful diſorder is ſaid to have been introduced among the natives by the crew of a veſſel unknown, that put into an harbour on the north-weſt coaſt of Teerawitte, a few years before our countrymen arrived in the Sound in the Endeavour.—The only method they practice as a remedy, is to give the patient the uſe of a kind of hot bath, produced by the ſteam of certain green plants placed over hot ſtones.

The New Zealanders acknowledge a Supreme Being; they believe in many inferior divinities; yet there was not a ſingle ceremony obſerved in any part of New Zealand, that could be ſuppoſed to have a religious tendency, nor did they appear to have any prieſts. Here were no places of public worſhip, like the *Morais* in other parts; but in a plantation of ſweet potatoes was ſeen a ſmall area of a ſquare figure, ſurrounded with ſtones, in the middle of which a ſharp ſtake, (which they uſe as a ſpade) was ſet up. The natives being queſtioned about it, ſaid, it was an offering to the gods, by which the owner hoped to render them propitious, and to reap a plentiful harveſt.

The manner of burying their dead could not be aſcertained. From the minuteſt enquiry, it ſeemed, that in the northern parts they buried them in the ground, and in the ſouthern, that they threw them into the ſea; the only proceſs which they uſe being to tie a ſtone to the body to cauſe it to ſink. They affect, however, to conceal every thing relating to the dead with a kind of myſterious ſecrecy. Whatever may be their forms and modes of funeral, they lament the loſs of their friends in a manner the moſt tender and affectionate.

Both men and women, upon the death of a relation or friend, bewail them with the moſt miſerable cries, at the ſame time cutting large gaſhes in their foreheads, cheeks, arms, or breaſts, with ſhells, or pieces of flint, till the blood flows copiouſly, and mixes with their tears. They alſo carve the reſemblance of a human figure, and hang it about their necks as a memorial of thoſe who were dear to them. They likewiſe perform the ceremony of lamenting and cutting for joy, at the return of a friend who has been ſome time abſent.

Captain Cook, on his laſt viſit to this country, in 1777, anchored in his old ſtation in Queen Charlotte's Sound, ſoon after which ſeveral canoes filled with natives came along-ſide the veſſels; but very few of them would venture on board, which appeared the more extraordinary as the commander was well known to them all. There was one man in particular amongſt them whom he had treated with remarkable kindneſs during his whole ſtay; yet now, neither profeſſions of friendſhip, nor preſents, could prevail upon him to come into the ſhip. This ſhyneſs was to be accounted for only upon this ſuppoſition, that they were apprehenſive of a reviſit to revenge the deaths of our countrymen on a former voyage. The commander, therefore, deemed it expedient to uſe every endeavour to aſſure them of the continuance of his friendſhip, and that he ſhould not diſturb them on that account. It ſhould ſeem that this had the deſired effect; for they ſoon laid aſide all manner of reſtraint and diſtruſt. As a proof of this, great numbers of families came from different parts of the coaſt, and took up their reſidence cloſe to the Europeans, from which they derived very conſiderable advantages, and, in particular, an ample ſupply of fiſh and vegetables.

It was remarked, upon an excurſion up the iſland, that though upon the former voyage ſeveral ſpots were planted with Engliſh garden ſeeds, not the leaſt veſtige of theſe ever remained; and it was there ſuppoſed, that they had been all rooted out to make room for buildings when theſe ſpots were re-inhabited; for at all the other gardens then planted by captain Furneaux, although now wholly over-run with the weeds of the country, were found cabbages, onions, leeks, purſlain, radiſhes, muſtard, together with a few potatoes.

When the commander, accompanied by ſeveral officers, Omai (who was then on his return to his own country) and two of the natives, proceeded about three leagues up the ſound, in order to cut graſs, &c. They viſited, on their return, Graſs Cove, the memorable ſcene of the maſſacre of their countrymen. Here the commander met with a friendly chief, called

Pedro,

Pedro, who had attended him on a former occaſion, and therefore avaling himſelf of the opportunity of enquiring into the circumſtances attending their melancholy fate, uſed Omai as interpreter: the natives anſwered all the queſtions that were put to them on the ſubject without reſerve, and like men who are under no dread of a puniſhment for a crime of which they are not guilty: for it was already known, that none of theſe had been concerned in the unhappy tranſaction.

Though the narration was in ſome degree intricate, it appeared upon the whole, that the quarrel firſt took its riſe from ſome thefts, in the commiſſion of which the natives were detected. The Europeans chaſtiſed them with blows for the offence, in reſentment of which the quarrel opened, and two New Zealanders were ſhot dead by the only two muſkets that were fired; for before our people had time to diſcharge a third, or to load again thoſe that had been fired, the natives ruſhed in upon them, overpowered them with their number, and put them all to death. Thoſe who eſcaped, beſides relating the ſtory of the maſſacre, made the party acquainted with the very ſpot that was the ſcene of it. They pointed to the place of the ſun to mark to them at what hour of the day it happened, according to which it muſt have been late in the afternoon. They alſo ſhewed the place where their boat lay, and it appeared to be about two hundred yards diſtant from that where the crew were ſeated at dinner at the time of the commiſſion of the theft of ſome bread and fiſh. They all agreed, that there was no premeditated plan of bloodſhed, and that if the theft had not been unfortunately too haſtily reſented, no miſchief would have happened.—Amongſt occaſional viſitors was a chief, named Kahoora, who ſtood charged as the head of the party that committed the maſſacre: but his greateſt enemies, at the ſame time that they ſolicited his deſtruction, exculpated him from any intention to quarrel, much leſs to kill, till the fray had actually commenced.

It appeared alſo, that the unhappy victims were under no apprehenſion of their fate, otherwiſe they would not have ventured to ſit down to a repaſt at ſo conſiderable a diſtance from their boat, amongſt people who were the next moment to be their murderers. What became of the boat could not be learnt. Some ſaid ſhe was pulled to pieces and burnt, others ſaid ſhe was carried they knew not whither by a party of ſtrangers.

The party continued here till the evening; when having loaded the reſt of the boats with graſs, celery, ſcurvy-graſs, &c. they embarked to return to the ſhips. The day following, Pedro and all his family came and took up his abode near their European viſitors. The proper name of this chief is Metahouah, the other being given him by ſome of the people during the laſt voyage, which till now was unknown to the commander. He was, however, equally well known amongſt his countrymen by both names.

At one time our people were viſited by a tribe or family, conſiſting of about thirty perſons, men, women, and children. The name of their chief was Tomaton-Geauooramec, a man of about forty-five years of age, with a cheerful, open countenance. It was remarked, indeed, that the reſt of his tribe were the handſomeſt of the New Zealand race ever met with.

By this time, great numbers of them daily frequented the ſhips and the encampment on the ſhore; but the latter became by far the moſt favourite place of reſort, while our people there were melting ſome ſeal-blubber. It appeared from obſervation, that no Greenlander was ever fonder of train-oil than the New Zealanders; for they reliſhed the very ſkimmings of the kettle and dregs of the caſks; and a little of the moſt ſtinking oil, was a delicious repaſt.

The ſhips weighing anchor, and ſtanding out of the cove, were ſeen from ſtreſs of weather under a neceſſity of coming to again, a little without the iſland of Moheara, to wait for a more favourable opportunity of putting into the ſtreight. Here three or four canoes, filled with natives, came off to the crews, and a briſk trade was carried on for the curioſities of this place. In one canoe was Kahoora, already mentioned as the leader of the party who cut off the crew of the Adventure's boat. He was pointed out to the commander by Omai, who ſolicited him to ſhoot him. Not ſatisfied with this, he addreſſed himſelf to Kahoora, threatening to be his executioner, if he ever preſumed to face our people again. The New Zealander, however, paid ſo little regard to his threats, that the very next morning he returned with his whole family, men, women, and children, to the number of twenty and upwards.

Omai then renewed his ſolicitations to the commander to kill him; and though he uſed ſeveral ſpecious arguments, they had no weight. He deſired him, however, to aſk the chief, why he had killed captain Furneaux's people? At this queſtion, Kahoora folded his arms, hung down his head, and there was every reaſon, from his appearance, to think, he expected inſtant death: but no ſooner was he aſſured of his ſafety, than he became cheerful. He did not, however, ſeem willing to anſwer the queſtions put to him, till repeatedly promiſed he ſhould not be hurt. He then ventured to give information, that one of his countrymen having brought a ſtone hatchet to barter, the man to whom it was offered, took it, and would neither return, or give any thing for it; on which the owner ſnatched up the bread as an equivalent, and then the quarrel began.

The reſt of the ſtory differed very little from what had been before related by his countrymen.

Moſt of the natives well knew that the Britiſh commander was acquainted with the hiſtory of the maſſacre, and expected it to be avenged in the death of Kahoora. Many of them indeed ſeemed not only to wiſh it, but expreſſed a ſurprize at what they deemed ſo undeſerved a forbearance. The commander profeſſes this admiration of the man's courage, in putting himſelf in his power, and of the proofs he gave of placing his whole ſafety in the declarations he had uniformly made to thoſe who ſolicited his death, "that he (the captain) had been a friend to them all, and would continue ſo, unleſs they gave him cauſe to act otherwiſe; that as to their inhuman treatment of his countrymen, he ſhould think no more of it, the tranſaction having happened long ago, and when he was not preſent; but that if ever they made a ſecond attempt of this kind, they might reſt aſſured of feeling the weight of his reſentment."

Some time before the arrival of our ſhips at New Zealand, Omai had expreſſed a deſire of taking one of the natives with him to his own country, and ſoon had an opportunity of being gratified in the ſame; for a youth about ſeventeen or eighteen years of age, named Taweihooa, offered to accompany him, and took up his reſidence on board. The commander paid little attention to this at firſt, imagining that he would go off when the ſhip was about to depart.—At length, finding that he was fixed in his reſolution, and having learnt that he was the only ſon of a deceaſed chief, and that his mother, ſtill living, was a woman much reſpected there, he was apprehenſive that Omai had deceived him and his friend, by giving them hopes and aſſurances of his being ſent back. He therefore cauſed it to be made known to them all, that if the young man went away with the ſhips, he would never return. But this declaration ſeemed to make no ſort of impreſſion. The afternoon before the ſhip left the Cove, his mother came on board to receive her laſt preſent from Omai. The ſame evening, ſhe and Taweihooa parted, with all the marks of tender affection that might be expected between a parent and a child, who were never to meet again.

But ſhe ſaid ſhe would cry no more, and indeed ſhe kept her word; for when ſhe returned the next morning to take her laſt farewel of him, all the time ſhe was on board, ſhe remained cheerful, and went away apparently unconcerned.

Another youth was to have gone with Taweihooa as his ſervant, and with this view, as was ſuppoſed, he remained on board till the ſhip was about to ſail, when his friends took him on ſhore. His place, however, was ſupplied next morning by another boy, of about nine or ten years of age, named Kokoa. He was preſented to the commander by his own father, who, it was believed, would have parted with his dog with far leſs indifference. He ſtripped the boy of the very little clothing he had, and left him as naked as he was born. It was totally in vain to endeavour to perſuade theſe people of the impoſſibility of theſe youths ever returning home. Not one, not even their neareſt relations, ſeemed to trouble themſelves about their future fate; and as this was the caſe, the commander was well ſatisfied that the boys would be no loſers by exchange of place; and he the more readily gave conſent to their going on that account.

CHAP. IV.

NEW CALEDONIA, AND ISLANDS CONTIGUOUS.

Their Situation, Vegetables, Animals, Dreſs, Dwellings, Diſpoſition, Muſical Inſtruments, and various Cuſtoms of the Natives.

CAPTAIN COOK diſcovered this iſland in 1774, and called it New Caledonia, after he had in vain endeavoured to diſcover the Indian name. Indeed, it is probable, that it was not known by one general name, as it has been repreſented as the largeſt iſland that has been diſcovered in the ſouthern Pacific Ocean, New Zealand and New Holland excepted, extending from 19 deg. 37 min. to 22 deg. 30 min. ſouth latitude, and from 163 deg. 37 min. to 167 deg. 14 min. eaſt long. In length it is computed to be 87 leagues, in the direction of north-weſt and ſouth-eaſt, but its breadth no where exceeds 10. It is ſituated about 12 deg. diſtant from New Holland.

This country is diverſified by hills and vallies of various extent. From the hills iſſue many fine ſtreams, which render the vallies both fertile and pleaſant, and but for which the whole ſpot might be called a dreary waſte, nature having been leſs bountiful to New Caledonia than to the other tropical iſlands in the South Seas. The mountains, and other high parts, are, for the general, incapable of cultivation, conſiſting chiefly of barren rocks. The iſland bears, upon the whole, a reſemblance to thoſe parts of New South Wales that are under the ſame parallel of latitude; ſeveral of its natural productions being the ſame, and the woods without underwood, as in that country.

The whole coaſt appeared ſurrounded by reefs or ſhoals, which render the acceſs to it very dangerous; though, at the ſame time, they guard it from the attacks of wind and ſea, cauſe it to abound with fiſh, and ſecure an eaſy and ſafe navigation along it for canoes. The coaſt in general ſeems to be inhabited; the plantations in the plains appear to be laid out with judgment, and cultivated with induſtry. Some of them were lying fallow, ſome ſeemed to be lately laid down, and others of longer date, parts of which they were again beginning to dig up, having previouſly ſet fire to the graſs, &c. that had over-run the ſurface. Yet though recruiting the land by letting it continue fallow for a ſeries of time, was obſerved by all the different nations in this ſea, none appeared to have any notion of manuring it. On the beach was found a large irregular maſs of rock, not leſs than a cube of ten feet, which conſiſted of a cloſe-grained ſtone, ſpeckled, full of granites, rather larger than pins heads; from whence it was conjectured, that ſome rich and uſeful mineral might be depoſited in this iſland.

There is no great variety in the vegetable ſyſtem in this country; however, ſeveral of a new ſpecies were found here, and a few young bread-fruit trees; but they ſeem to have come up without culture.—There are a few plantations of ſugar-canes, and ſome cocoa-nut trees ſmall and thinly planted. A new kind of paſſion-flower was alſo met with, which was never before known to grow wild any where but in America. Several trees called *caputi* trees, were found in flower. They had a looſe bark, which in many places burſt off from the wood, and concealed within it beetles, ants, ſpiders, lizards, and ſcorpions. This bark is ſaid to be uſed in the Eaſt-Indies, for calking ſhips. The wood of the tree is very hard, the leaves are long and narrow, of a pale, dead colour, and a fine aromatic.

A great variety of the feathered tribe, and for the moſt part entirely new, were found here, particularly a beautiful ſpecies of parrots, unknown to naturaliſts. There were alſo ducks, large tame fowls, with bright plumage, a kind of ſmall crow, tinged with blue, turtle-doves, fly-catchers, hawks, boobies, tropic birds, and others.

Turtles and fiſh are here in plenty, particularly a ſpecies of a poiſonous quality, as appeared from its effects upon ſome of our countrymen, who ate a ſmall part of the liver for ſupper. A few hours after they had retired to reſt, they were awakened by very alarming ſymptoms, being ſeized with extreme giddineſs; their hands and feet were numbed, ſo as ſcarcely to be able to crawl, and a dreadful languor took poſſeſſion of their whole frame. Emetics were adminiſtered with ſome ſucceſs; but ſudorifics proved moſt effectual. It ſeemed that the natives had not the leaſt notion of goats, ſwine, dogs, or cats, as they had not even a name for any one of them. The chief inſects are muſquetos, which abound here.

In general the natives of New Caledonia are ſtout, and well proportioned. They have good features, black hair, ſtrong and frizzled. Their principal colour is ſwarthy, or what we call mahogany. Some wear their hair long, and tie it up to the crown of their heads. Others ſuffer only a large lock to grow on each ſide, which they tie up in clubs; many of the men, as well as all the women, wear it cropped ſhort. They uſe a kind of comb made of ſticks of hard wood, from ſeven to ten inches long, and about the thickneſs of knitting-needles. A number of theſe, amounting to about twenty, are faſtened together at one end, parallel to each other, and near one-tenth of an inch aſunder: the other ends, which are a little pointed, will ſpread out or open like the ſticks of a fan. Theſe combs they wear conſtantly in their hair, on one ſide of their head. Some had a kind of ſtiff black cap, like that of an huſſar, which appeared to be a great ornament among them, and was ſuppoſed to be worn only by chiefs and warriors. The men go naked, except tying a wrapper round the middle, and another round the neck. A piece of brown cloth, which is ſometimes tucked up to the belt, and ſometimes hangs down, ſcarcely deſerves the name of a covering, and in the eyes of Europeans would appear rather obſcene than decent. This piece of cloth is ſometimes of ſuch a length, that the extremity is faſtened to a ſtring round the neck. To this ſtring they hang ſmall round beads of a pale green nephritic ſtone. Coarſe garments were ſeen among them, made of a ſort of matting; but they ſeemed never to wear them except when in their canoes, and unemployed. They ſtretch the flaps of their ears to a great length, cut out the whole cartilage

tilage or griſtle, and hang a number of tortoiſeſhell rings in them.

In New Caledonia, the women are kept at a diſtance by the men, and ſeem fearful to offend them, either by look or geſture. They were the only perſons in the family who ſeemed to have any employment, ſeveral of them bringing bundles of ſticks and fuel on their backs. Their indolent huſbands ſcarcely deigned to regard them, though they exhibited that ſocial cheerfulneſs which is the diſtinguiſhing ornament of the ſex. They carried their infants on their backs in a kind of ſatchel, and were ſeen to dig up the earth in order to plant it. Their ſtature is of the middle ſize, and their whole form rather clumſy. Their dreſs is very diſfiguring, and indeed gives them a thick, ſquat ſhape. It is a ſhort petticoat, reſembling fringe, conſiſting of filaments or little cords about eight inches long, juſt dropping below the waiſt.—Theſe filaments were ſometimes dyed black; but frequently thoſe on the outſide only were of that colour, while the reſt were of a dirty grey. They wore ſhells, ear-rings, and pieces of nephritic ſtones, like the men, and tattowed or beſmeared themſelves in three black ſtraight lines, from the under lip downwards to the chin. Their features expreſſed much good nature.

Some of the women were ſhy, and ſeemed by their motions to indicate an apprehenſion of being ſlain, if obſerved alone with a ſtranger: while others expreſſed no dread of the jealouſy of the men. They came among the crowd, and ſometimes amuſed themſelves in encouraging the propoſals of the ſailors, though they conſtantly eluded their purſuit, and heartily derided their diſappointment. It was remarkable, that during the veſſel's ſtay in the iſland, there was not a ſingle inſtance of the women permitting an indecent familiarity from an European.

The houſes or huts here are of a circular form, ſomething like a bee-hive, and full as cloſe and warm: the entrance is by a ſmall door, or long hole, juſt big enough to admit a man bent double: the roof is lofty, and brought to a point at the top; the framing is of ſmall reeds, &c. and both ſides and roof are thick and cloſe covered with thatch, made of coarſe long graſs. In the inſide of the habitation are ſet up poſts, to which coarſe ſpars are faſtened, and platforms made for the convenience of laying any thing on. In moſt of theſe huts were no fire-places, and there was no paſſage for the ſmoke but through the door; they were inſupportable to thoſe unaccuſtomed to them. The ſmoke was ſuppoſed to be deſigned to drive out the muſquetoes that ſwarm here: they commonly erect two or three of theſe huts near each other, under a cluſter of lofty fig-trees, whoſe foliage is ſo thick as to keep off the rays of the ſun. Theſe trees are deſcribed by voyagers, as ſhooting forth roots from the upper part of the ſtem, perfectly round, as if made by a turner: the bark ſeems to be the ſubſtance of which they prepare the ſmall pieces of cloth ſo remarkable in their dreſs.

Their canoes are heavy and clumſy, and made out of two large trees hollowed out, the gunnel raiſed about two inches high, and cloſed at each end with a kind of bulk head of the ſame height. Two canoes thus conſtructed, are ſecured to each other about three feet aſunder, by means of croſs ſpars, which project about a foot over each ſide; over which is laid a deck, or heavy platform, made of plank, on which they have a fire-hearth, and generally a fire burning: they are navigated by one or two ſails, extended on a ſmall yard, the end of which is fixed in a notch or hole in the deck. Their working tools are made of the ſame materials, and nearly in the manner as thoſe of the iſlands contiguous. They have no great variety of houſehold utenſils; the principal is a jar made of red clay, in which they bake their roots, and probably their fiſh.

The natives are well provided with offenſive weapons, ſuch as clubs, ſpears, darts, and ſlings for caſting ſtones: their clubs are about two feet and a half long, and of various forms; ſome like a ſcythe, others like a pick-axe; ſome have a head like a hawk, and others have knobs at the ends; but they are all neatly made, and well poliſhed. Many of their darts and ſpears are ornamented with carved work: their ſlings are as ſimple as poſſible, being no other than a ſlender round cord, no thicker than packthread, with a taſſel at one end, a loop at the other, and in the middle. They take ſome pains to form the ſtones they uſe into a proper ſhape, which is ſomething like an egg: theſe exactly fit the loop in the middle of the ſling, and are kept in a pocket of matting, tied round the waiſt for that purpoſe. They caſt the dart by the aſſiſtance of ſhort cords, knobbed at one end, and looped at the other, which the ſeamen call Beckets, and were dexterous in the uſe of them. Their ſpears are fifteen or twenty feet long, blackened over, and have a prominence near the middle, carved ſo as to bear ſome reſemblance to an human face.

The language of the inhabitants of New Caledonia bears little affinity to any of the various dialects ſpoken in the other iſlands in the South Seas, the word *areekee*, and one or two more excepted: this is the more extraordinary, as different dialects of one language were ſpoken, not only in the eaſterly iſlands, but at New Zealand: their pronunciation is indiſtinct.

Theſe people are remarkably courteous and friendly, and not in the leaſt addicted to pilfering, in which laſt reſpectable quality they ſtand alone.—They are good ſwimmers, and fond of ſinging and dancing. The only muſical inſtrument obſerved among them was a kind of whiſtle made of a poliſhed piece of brown wood, about two inches long, ſhaped like a bell, though apparently ſolid, with a rope fixed at the ſmall end: two holes were made in it near the baſe, and another near the inſertion of the rope, all which communicated with each other, and, by blowing in the uppermoſt, a ſhrill ſound like whiſtling was produced.

Many inhabitants in New Caledonia were ſeen with very thick legs and arms, which ſeemed to be affected with a kind of leproſy. The ſwelling was found to be extremely hard, but the ſkin was not alike harſh and ſcaly in all the ſick perſons. The preternatural expanſion of the leg and arm did not appear to be a great inconvenience to thoſe who ſuffered it, and they indicated, by tokens, that they felt pain in it very rarely; but in ſome the diſorder began to form blotches, which were marks of a great degree of virulence.

The method uſed by the people of New Caledonia to depoſit their dead in the ground, is more judicious and decent than that of ſome others in the South Seas, where they expoſe them above ground, till the fleſh is putrified; as the laſt-mentioned cuſtom muſt be attended with the moſt pernicious conſequences, and produce dreadful epidemical diſtempers. The grave of a chief who had been ſlain in battle here, bore reſemblance to a large mole-hill, and was decorated with ſpears, darts, &c. all ſtuck upright in the ground round about it. It appears a cuſtom univerſally prevalent with mankind, to erect a monument on the ſpot where their dead are buried.

One of the Engliſh officers was ſhewed a chief whom they called Tea-Booma, and ſtyled their *areekee*, or king; but little is known of their mode of government, and leſs of their religion. They gave the Europeans a very welcome and peaceable reception, addreſſing the commander firſt in a ſhort ſpeech, and then inviting him on ſhore; but they are indolent, and deſtitute of curioſity: the greater part of them did not remove from their ſeats when the ſtrangers paſſed them for the firſt time: they are alſo remarkably grave,

grave, ſpeak always in a ſerious tone, and laughter is hardly ever obſerved among them.

When captain Cook firſt landed in this part, he was accompanied by a native who appeared to be a man of ſome weight, and who had come on board the veſſel before ſhe came to an anchor. The natives aſſembled in great numbers on the beach, induced merely by curioſity; for many had not ſo much as a ſtick in their hands: the party were received on landing with the greateſt courteſy, and with the ſurpriſe natural for people to expreſs at ſeeing men and things ſo wonderful. The commander made preſents to all whom his companion pointed out; but on his going to give a few beads and medals to ſome women who ſtood behind the crowd, the chief held his arm, and would not ſuffer him to do it. As they proceeded up the creek, one of the party ſhot a duck, which was the firſt uſe the natives had ſeen of fire-arms: the friendly chief requeſted to have it, and when he had landed, he told his countrymen in what manner it was killed. From this excurſion, the party learned that they were to expect nothing from theſe people, but the privilege of viſiting their country undiſturbed, for they had little elſe than good nature to beſtow. In this particular, they are ſaid to have exceeded all the nations our voyagers had met with; and they obſerved, that although it did not ſatisfy the demands of nature, it at once pleaſed, and left all their minds in tranquillity.

A hatchet here was not quite ſo valuable as a ſpike nail; ſmall nails were of little or no value to them; nor did they admire beads, looking-glaſſes, &c.—Many of the natives came on board the ſhip with perfect confidence, and one of them exchanged a yam for a piece of red cloth. They admired every thing that had a red colour, particularly red cloth or baize, but did not chooſe to give any thing in exchange. Captain Cook ſent the king, Tea-Booma, a dog and a bitch, both young, but nearly full grown, which may be the means of ſtocking the country with that ſpecies of animals; and to Hebai, the friendly chief before ſpoken of, he gave a ſow and boar pig, in order to provide, if poſſible, a ſtock of domeſtic animals, for a nation whoſe inoffenſive character ſeemed highly deſerving of ſuch a preſent. To enhance their value with the Indians, and thereby induce them to be more careful of their ſtock of hogs, it was explained to them how many young ones the females would have at one time, and how ſoon this would multiply to ſome hundreds. Not one of the natives attempted to take the leaſt trifle by ſtealth, but all behaved with the ſtricteſt honeſty. Some of them ſpoke of a great land to the northward, which they called Mingha, the inhabitants of which were their enemies, and very warlike. They likewiſe pointed out a ſepulchral mount, where one of their chiefs lay buried, who had been killed, fighting in the defence of his country, by a native of this Mingha. The appearance of a large beef bone, which an officer began to pick towards the concluſion of the ſupper, interrupted this converſation.

The natives talked loudly and earneſtly to each other, looked with great ſurpriſe and ſome marks of diſguſt at the ſtrangers, and at laſt went away all together, expreſſing by ſigns, that they ſuppoſed it to be the limb of a man. The officer was very deſirous of freeing himſelf and his countrymen from this ſuſpicion, but was prevented by two inſurmountable obſtacles, want of language, and the natives having never ſeen a quadruped. At another time the Europeans were given to underſtand, by very ſignificant geſtures, that the natives had enemies who feaſted upon fleſh, which, doubtleſs, had cauſed them to impute the ſame practice to their new viſitors.—This iſland remains entirely unexplored on the ſouth ſide: its minerals and vegetables have not been touched upon; animals, it ſhould ſeem to have none, from the ignorance which the natives to the northward diſcovered of ſuch as they ſaw. The commander cauſed the following inſcription to be cut in a remarkable large and ſhady tree on the beach cloſe to a rivulet: "His Britannic Majeſty's Ship Reſolution, September 1774," to perpetuate the memory of the expedition.

The Isle of Pines, to the S. W. of New Caledonia, lies in latitude 22 deg. 40 min. ſouth, longitude 167 deg. 43 min. eaſt. This iſland, ſo far from being an inconſiderable ſpot, as ſome have believed, is not leſs than fourteen or fifteen miles over in a ſouth-eaſt and north-weſt direction: it is high, and remarkable in the middle, being quite a pointed hill, ſloping towards the extremities, which are very low; the low land had many tall pine trees upon it; theſe trees ſeemed exceedingly to ſurpaſs in length thoſe of Norfolk Iſland, but their branches did not appear to extend ſo far from the body of the tree.

Botany-Island is about two miles in circuit, entirely flat and ſandy, ſix leagues diſtant from the ſouth end of New Caledonia. This iſland was ſo called by captain Cook, from its containing in ſo ſmall a ſpace a *flora* of near 30 ſpecies, among which were ſeveral new ones. It is a ſmall iſland, wholly covered with cypreſs trees; but in the interior part it is mixed with vegetable earth, from the trees and plants which continually decay on it, without being cleared away by human induſtry.

Norfolk-Island likewiſe received its name from captain Cook, who diſcovered it in the year 1774. It is ſituated in latitude 29 deg. 0 min. ſouth, longitude 168 deg. 0 min. eaſt. It abounds, like the former, with cypreſs trees. There were ſoundings at a great diſtance in about twenty fathom, and eight leagues from the ſouth-eaſt end bottom was found at thirty and forty fathom. The rocks of this iſland conſiſt of a common yellowiſh clayey ſtone, and ſmall bits of reddiſh lava, which ſeemed to be decaying, and indicated that this iſland had been a volcano. It is but a few miles long, very ſteep, and uninhabited, and is ſuppoſed never to have had a human footſtep upon it till that time. Vegetables here thrive with great luxuriance in a rich black mould, accumulated during ages paſt from decayed trees and plants. The cypreſs and cabbage-palm flouriſh here in great perfection: the former yields timber, and the latter a moſt palatable refreſhment. The central ſhoot, or heart of this fruit, more reſembles an almond than a cabbage in taſte. Here were parrots, parroquets, pigeons, and a number of ſmall birds peculiar to the ſpot, ſome of which were very beautiful. The fiſh caught, together with the birds and vegetables, enabled the whole ſhip's company to fare ſumptuouſly for a day or two. Here is likewiſe the flax-plant, and rather more luxuriant than any where in New Zealand. It was the opinion of two eminent naturaliſts, that if this iſland was of greater extent, it would ſerve every purpoſe of eſtabliſhing an European ſettlement.

CHAP. V.

THE NEW HEBRIDES.

Diſcovery, Soil, Climate, Cuſtoms and Manners of the Inhabitants.

De Quiros, in the year 1606, diſcovered the northernmoſt of theſe iſlands; they were then conſidered as a part of the ſouthern continent, which till very lately was ſuppoſed to exiſt. In 1768, they were viſited by Monſ. de Bougainville, who, beſides landing on the iſland of Lepers, did no more than diſcover

cover that the land was not connected, but compoſed of iſlands, which he called *The Great Cyclades*.

In the year 1774, captain Cook, beſides aſcertaining the extent and ſituation of theſe iſlands, added the knowledge of ſeveral in this groupe that were before unknown. He explored the whole cluſter, and thence claiming a right to affix to them a general appellation, named them THE NEW HEBRIDES. They are ſituated between the latitudes of 14 deg. 21 min. and 20 deg. 4 min. ſouth, and 170 deg. 21 min. eaſt longitude. They extend 125 leagues in the direction of N. N. W. and S. S. E. The whole cluſter conſiſts of the following iſlands, ſome of which have received names from the different European navigators; others retain the names they bore among the natives. They are as follow: Tierra del Eſpiritu Santo, Mallicollo, St. Bartholomew, Iſle of Lepers, Aurora, Whitſuntide, Ambrym, Apee, Three Hills, Sandwich, Montague, Hinchinbroke, Erromango, Immer, Annatom, and Tanna.

TIERRA DEL ESPIRITU is the moſt weſtern and largeſt of all the Hebrides, being twenty-two leagues long, twelve broad, and ſix in circuit. It lies in 15 deg. 20 min. ſouth latitude, and 166 deg. 50 min. eaſt longitude. The land, eſpecially to the weſt ſide, is very mountainous, and in many places the hills riſe directly from the ſea. Every part of it, except the cliffs and beaches, is covered with trees, or laid out in plantations, and every valley watered with a ſtream. On the north ſide is a very fine bay, called by De Quiros, St. Philip and St. Jago. The two points which form its entrance, lie at ten leagues diſtance from each other. Here De Quiros is ſuppoſed to have anchored, and to have given the name of Vera Cruz to the port in which his ſhips lay. He deſcribes it as capacious enough to contain 1000 ſhips with clear ſoundings. The country ſeemed fertile and populous. Two canoes with triangular ſails, came off towards the ſhip: the men were tall and ſtout, of a dark colour, and had woolly hair; they were naked; ſome of them had a bunch of feathers on the top of the head, and others wore a white ſhell tied on the forehead. On their arms they wore bracelets of ſhell work, and round their middle a narrow belt, from whence two long ſlips of matting hung down before and behind.

On the firſt day of the arrival of our navigators, no tokens of friendſhip could prevail with the natives to come near enough to hold any intercourſe; but the next morning, they ventured ſo cloſe as to receive a preſent of nails, medals, and red baize; but the nails were moſt valued. They faſtened a branch of the pepper plant to the ſame rope by which the nails had been lowered to them from the ſhip; and this was the only return they made for what had been given them. The diffidence with which they approached the veſſel, may well be accounted for, from the traditional knowledge which doubtleſs ſubſiſts among them concerning the viſit made them by De Quiros; for on his coming to an anchor, and ſending a boat from the ſhip, a chief, (as he is called in the narrative) the king, attended by ſome Indians, came to the ſtrand, and endeavoured to excite their departure by preſents of fruit; but the Spaniards leaping on the ſhore, made ſigns of peace: the natives, ſtill anxious for the departure of the ſtrangers, and the latter perſiſting in their endeavours to force their way, hoſtilities commenced between the parties: but the arrows of the one flew without effect, whilſt the fire-arms of the other laid the king and many of his followers breathleſs on the beach. This iſland, from appearance, as to vegetable productions, would have afforded the botaniſt an ample harveſt of new plants.

Mallicollo is the moſt conſiderable iſland next to Eſpiritu Santo: it is eight leagues long, and ſituated in 16 deg. 25 min. ſouth latitude, and 167 deg. 57 min. eaſt longitude. On inquiry of the natives concerning the name of this iſland, anſwer was made, that it was Mallicollo, which has the cloſeſt reſemblance poſſible to Manicollo, the name which De Quiros received for it 168 years before. He did not viſit the iſland, but had his intelligence from the natives.

When our countrymen touched at Mallicollo, they attentively examined the ſouth coaſt, and found it luxuriantly clothed with wood, and other productions of nature. They picked up an orange, which the natives call abbi-mora. This was the firſt orange that was met with in this ſea, and the only one that was ſeen here; being decayed, it cannot certainly be known whether it was fit to be eaten. The country is deſcribed as mountainous and woody, but the ſoil is rich and fertile, producing ſugar-canes, yams, cocoa-nuts, bread-fruit, bananas, and turmeric. There are hogs here, and various kinds of birds; and as the frequent ſqueaking of pigs was heard in the woods, it was concluded that there were abundance of the former.

A ſhark, which meaſured nine feet in length, was caught, and afforded the crew a very palatable refreſhment. This ſhark, when cut open, was found to have the bony point of an arrow ſticking in its head, having been ſhot quite through the ſkull. The wound was healed ſo perfectly, that not the ſmalleſt veſtige of it appeared on the outſide. A piece of the wood ſtill remained ſticking to the bony point, as well as a few fibres with which it had been tied on; but both the wood and the fibres were ſo rotted, as to crumble into duſt at the touch. A large reddiſh fiſh, of the ſea-bream kind, was likewiſe caught, but it proved of very noxious quality, for all who ate of it were ſeized with violent pains in the head and bones, attended with ſcorching heat all over the ſkin, and numbneſs in the joints. It affected the hogs and dogs, who had eaten the garbage, in the higheſt degree. The opinion of naturaliſts upon the whole, was, that theſe fiſh may not always be poiſonous, but that, like many ſpecies in the Eaſt and Weſt Indies, they may acquire that quality by feeding on poiſonous vegetables.

The people here are deſcribed as remarkably ugly, dark, ill-proportioned, diminutive in ſize, and in every reſpect different from the other iſlanders in the South-Seas. They have flat noſes and foreheads, woolly hair, and ſhort beards. To add to their natural deformity, they have a cuſtom of tying a belt or cord, uncommonly tight, round the waiſt, ſo that the belly ſeems in a manner divided, one part being above and the other below the rope. They wear bracelets of ſhells on the arm, a piece of white curved ſtone in the noſtrils, and on their breaſt hangs a ſhell ſuſpended by a ſtring round their necks; ſome wear tortoiſe-ſhell ear-rings, and other rings of ſhells.

The firſt natives that were ſeen upon the iſland had clubs in their hands, and waded into the water, carrying green boughs, the univerſal ſign of peace. In a day's time they ventured to come within a few yards of the ſhip's boat, which was ſent out, when they dipped their hands into the ſea, and gathering ſome water in the palms, poured it on their heads. The officers in the boat, in compliance with their example, did the ſame, with which the Indians appeared to be much pleaſed, repeating the word Tomarr, or Tomarro, continually. The greater part being now armed with bows and arrows, they ventured near the ſhip, and received and exchanged a few preſents. They continued about the ſhip, talking very loudly, but in ſuch a manner as was very entertaining. Some continued about the ſhip till midnight; finding, however, at length they were but little noticed, they returned on ſhore, where the ſound of ſinging and drums was heard all night. Theſe people ſeemed to covet whatever they ſaw, but never repined at a refuſal. They were highly delighted with the looking-glaſſes that were given them;

them; and notwithſtanding their remarkable deformity, were enraptured at viewing themſelves.

Next morning the natives came off to the veſſel in their canoes, and four or five of them went on board without any arms. They ſoon became familiar, and with the greateſt eaſe climbed up the ſhrouds to the maſt head. When they came down, the commander took them all into the cabin, and gave them preſents of various articles. They appeared the moſt intelligent of any nation that had been ſeen in the South-Seas; readily underſtood meanings conveyed by ſigns and geſtures, and ſoon taught the officers words in their language, which appeared peculiar to themſelves. When ſome of the moſt reſpectable of our countrymen went on ſhore, the natives with great good-will ſat down on the ſtump of a tree to teach them their language. They were ſurpriſed at the readineſs of their gueſts in remembering, and ſeemed to ſpend ſome time in pondering how it was poſſible to preſerve the ſound by ſuch means as pencils and paper. Nor were they leſs apt in catching the ſounds of the European languages; from whence it was juſtly remarked, that what they wanted in perſonal beauty was compenſated in acuteneſs of underſtanding.—But they expreſſed their admiration by hiſſing like a gooſe. There appeared but few women amongſt them; thoſe few, however, were no leſs ugly than the men. They were of ſmall ſtature, and their heads, faces, and ſhoulders were painted red. Some wore a kind of petticoat, others a bag made of a kind of cloth, in which they carry their children. They younger females went ſtark naked, like the males of the ſame age.

The women in general were not obſerved to have any finery in their ears, or round their necks and arms, it being faſhionable in this iſland for the men only to adorn themſelves; and as, wherever this cuſtom prevails, the other ſex is commonly oppreſſed, deſpiſed, and in a ſtate of ſervility; ſo the men here ſeemed to have no kind of regard for them; none of them came off to the ſhip, and they generally kept at a diſtance when any party landed from the boat.

The houſes, or rather huts, here are low and thatched with palm leaves. Some few are encloſed with boards, and the entrance is by a ſquare hole at one end.

Their chief weapons are bows and arrows, and a club about two feet and a half in length, made of hard wood, commonly knobbed at one end, and well poliſhed. This weapon they hang on their right ſhoulder from a thick rope made of a kind of graſs. Their arrows are compoſed of a kind of reed made of hard wood or bone, ſuppoſed to be poiſoned. They are very careful of them, and keep them in a ſort of quiver made of leaves.

As theſe people apply themſelves to huſbandry, their food ſeems to be principally vegetables; though as fowls and hogs are bred, theſe may conſtitute a part of their ſubſiſtence, as well as that derived from the ocean. Their canoes were ſmall, not exceeding two feet in width, of indifferent workmanſhip, and without ornament, but provided with an out-rigger.

One of the lateſt navigators gave the following relation, which we cite as an indication of the genius and diſpoſition of theſe people. "When the natives ſaw us under ſail for our departure from the iſland, they came off in canoes, making exchanges with more confidence than before, and giving ſuch extraordinary proofs of their honeſty as ſurprized us. As the veſſel at firſt had freſh way through the water, ſeveral of the canoes dropped aſtern after they received goods, and before they had time to deliver theirs in return. Inſtead of taking advantage of this, they uſed their utmoſt efforts to get up with us and deliver what they had already been paid for. One man in particular followed us a conſiderable time, and did not reach us till it was calm, and the thing was forgotten. As ſoon as he came alongſide he held up the article, which ſeveral on board were ready to buy; but he refuſed to part with it, till he ſaw the perſon to whom he had before ſold it, and to whom he gave it. The perſon, not knowing the man again, offered him ſomething in return, which he refuſed; and ſhewing him what had been given before, made us ſenſible of the nice ſenſe of honour which had actuated this Indian."

St. Bartholomew-Iſland was ſo called by Captain Cook, from its having been diſcovered on St. Bartholomew's day. It is between ſix and ſeven leagues in circumference, and ſituated in lat. 15 deg. 23 min. ſouth.

The Iſle of Lepers received its denomination from the number of people afflicted with the leproſy that were ſeen upon it. This iſle lies between Eſpiritu Santo and Aurora-Iſland, eight leagues from the former, and three from the latter, in latitude 15 deg. 22 min. ſouth. It is of an oval figure, very high, and 18 or 20 leagues in circuit. Many beautiful caſcades of water were ſeen pouring down from the hills. Here the palms grow on the hills. The natives are of two colours; their lips are thick, their hair woolly, and ſometimes of a yellowiſh caſt. They are ſhort, ugly, and ill proportioned, and moſt of them infected with the leproſy. The women are no leſs diſguſting than the men; they go almoſt naked; they have bandages to carry their children on their backs. In the cloth of which theſe bandages are made, are very pretty drawings of a fine crimſon colour.

None of theſe men have beards: they pierce the noſe in order to fix ſome ornament to it: they likewiſe wear on the arm, in form of a bracelet, a tooth, of a ſubſtance like ivory; on the neck they have pieces of tortoiſe-ſhell. Their arms are bows and arrows, clubs of hard wood, and ſtones, which they uſe without ſlings. The arrows are reeds armed with a long and very ſharp point made of bone. Some of theſe points are formed in ſuch a manner as to prevent the arrows being drawn out of a wound.

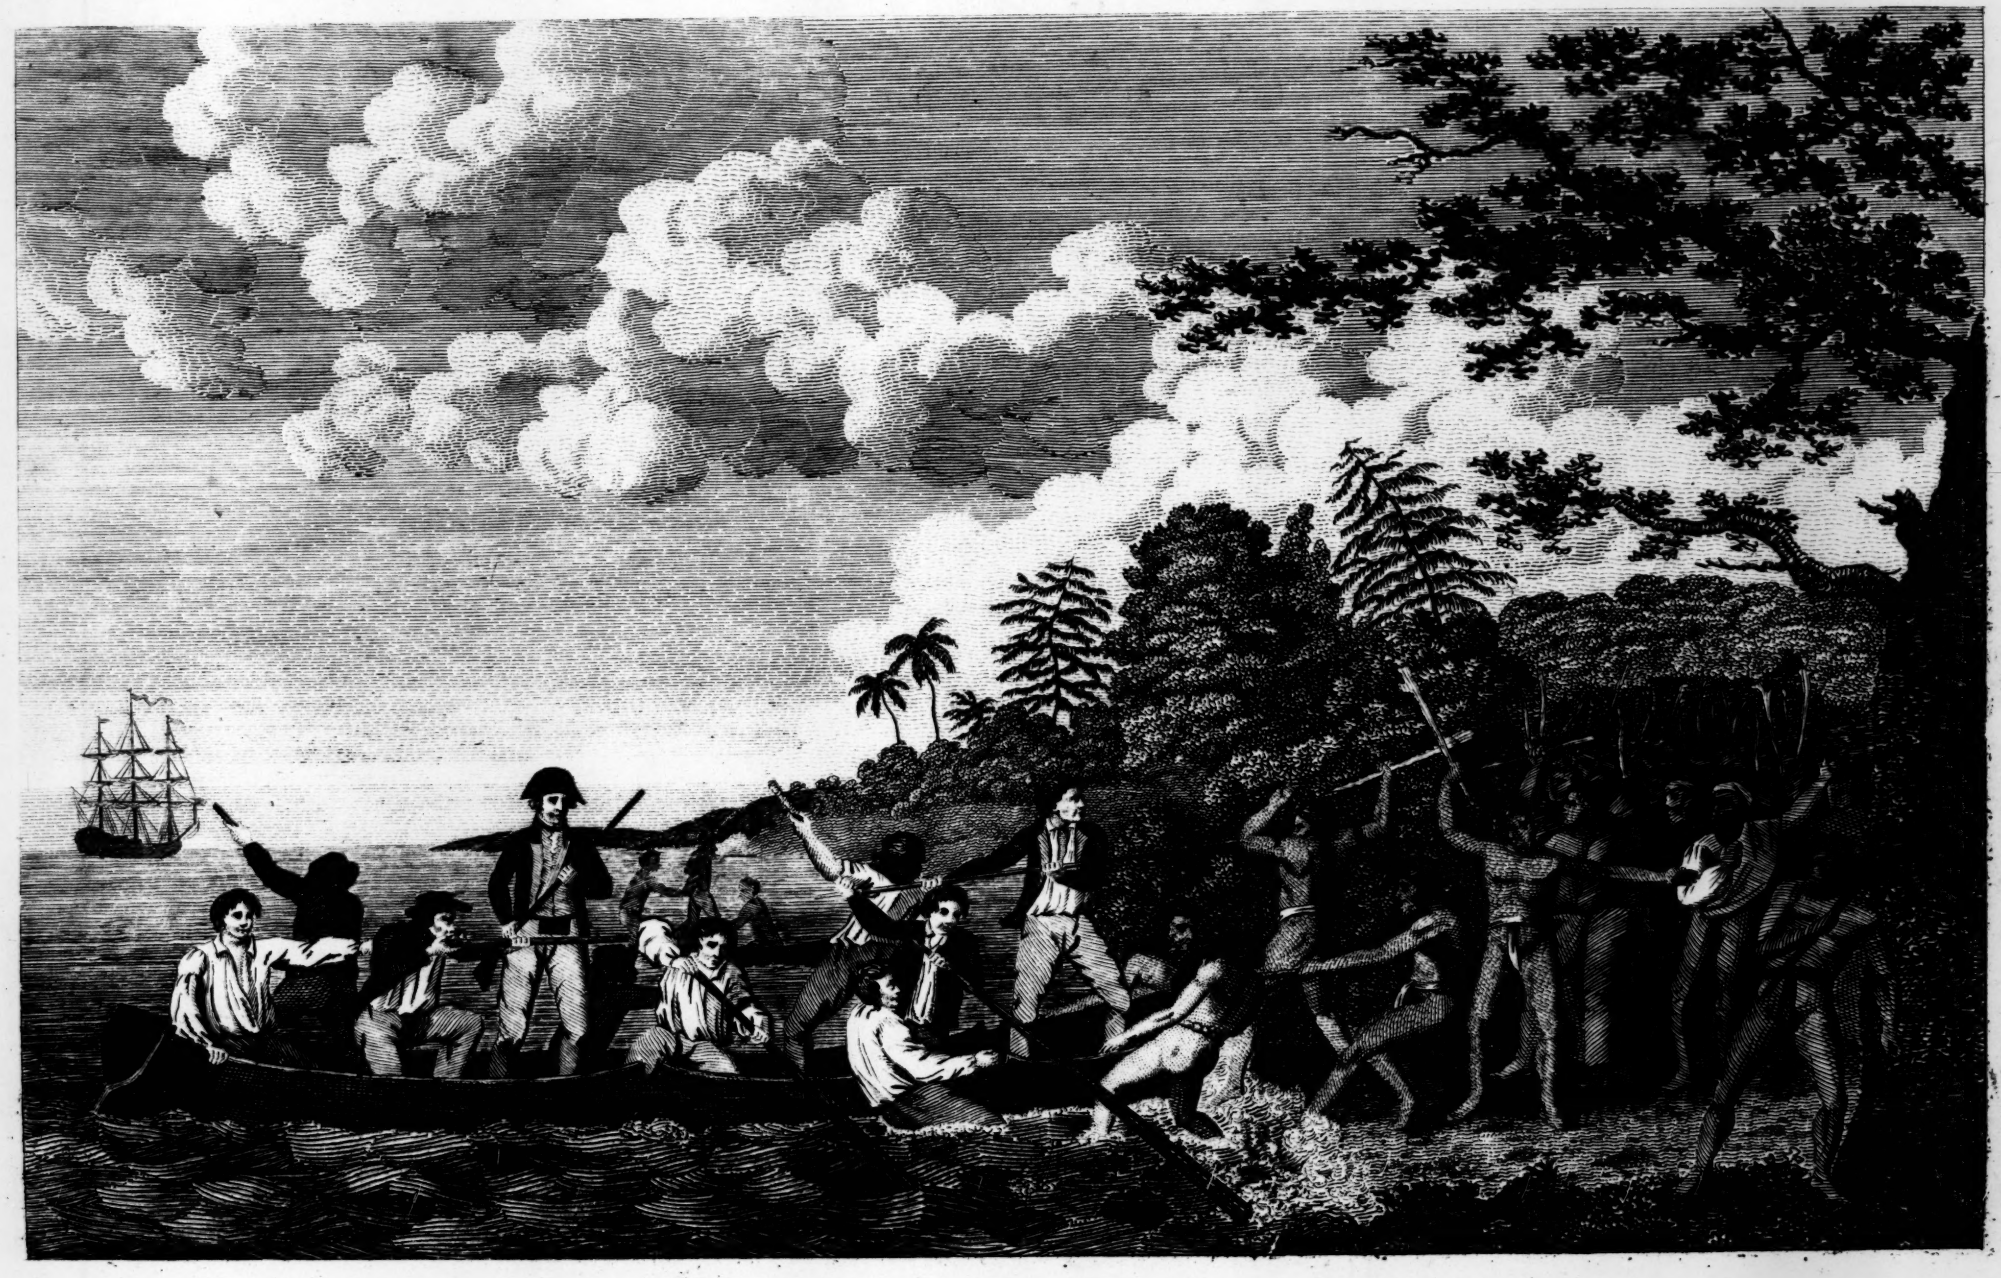
The natives appeared to be very friendly to M de Bougainville, when he touched here in 1768, until all the men were embarked; but then they ſent a flight of arrows after them; which aſſault, although it was attended with no bad conſequences, was revenged by diſcharging a volley of muſketry, which killed ſeveral of the natives. It is not, therefore, to be wondered at, that when captain Cook appeared off their coaſt, the natives ſhould be ſo ſhy of any intercourſe with ſtrangers. Two or three natives put off in a canoe; but no tokens of friendſhip could induce them to come near the ſhip.

In Aurora-Iſland inhabitants were diſcovered, and ſome canoes; but none came off to the ſhip. A fine beach and moſt luxuriant vegetation preſented themſelves. The whole country was woody, and a beautiful caſcade poured through a foreſt. The iſland is about twelve leagues long, but not above five miles broad in any part, lying nearly north and ſouth. A channel divides this iſland from

Whit-Sunday-Iſle, which lies, as was computed, about four miles to the ſouth, runs in the ſame direction, and is of the ſame length, having more ſloping expoſures than Aurora; it appears to be better inhabited, and to contain more plantations.

Ambrym is about 17 leagues in circuit, and two leagues and a half from the ſouth end of Whit-Sunday-Iſle. Its ſhores are rather low, but the land riſes with an unequal aſcent to an high mountain in the middle of the iſland, which gave occaſion to ſuppoſe that a volcano was ſeated there.

Apee, diſtant from Ambrym about five leagues, is not leſs than twenty leagues in circuit. Its longeſt direction is about eight leagues north weſt and ſouth eaſt.



THE FORTUNATE ESCAPE of CAPT.N COOK, from the FURIOUS NATIVES of ERRAMANGO.

eaſt. It is of conſiderable height, and richly diverſified with woods and lawns.

Sandwich-Iſle, which, in compliment to lord Sandwich, is ſo called, is 10 leagues long and 25 in circuit. It exhibits a delightful view, the hills gently ſloping to the ſea. Several ſmall iſlands lay diſpoſed about here, to which captain Cook gave the names of the Shepherd's-Iſlands, Three Hills, Two Hills, The Monument, Montague, and Hinchinbrook.

Erromango lies 18 leagues from Sandwich-Iſland, and is between 24 and 25 leagues in circuit. The middle of it lies in 18 deg. 54 min. ſouth latitude. The natives of this iſland ſeem to be of a different race from thoſe of Mallicollo, and ſpeak a different language. They are of the middle ſize, have a good ſhape and tolerable features. Their colour is very dark, and they paint their faces, ſome with black, and others with red pigment; their hair is very curly and criſp, and in ſome degree woolly. But few women were ſeen, and thoſe very ugly; they wore a petticoat made of the leaves of ſome plant. The men were in a manner naked, having only the belt about the waiſt, and a piece of cloth or leaf uſed for a wrapper. No canoes were ſeen in any part of the iſland They live in houſes covered with thatch, and their plantations are laid out by line, and fenced round.

Captain Cook went on ſhore here with two boats. He preſented ſome of the natives with medals and cloth, and received every token of amity in return. Making ſigns that he wanted water, one of them ran to a hovel at a ſmall diſtance, and preſently returned with a little in a bamboo. On aſking for ſomething to eat, he was as readily preſented with a yam and ſome cocoa nuts. During this time the whole groupe were armed with clubs, ſpears, darts, bows, and arrows, which excited ſome ſuſpicion, and led captain Cook to cut ſhort his viſit, telling the chief, by ſigns, that he ſhould ſoon return. Seeing their gueſts about to depart, they endeavoured to haul that boat on ſhore, which had the commander on board, whilſt others ſnatched the oars out of the people's hands. At the head of this party was the chief. Thoſe who could not come at the boat, ſtood behind, armed with weapons, ready to ſupport thoſe that were moſt forward. Signs and threats having no effect on theſe people, perſonal ſafety became the only conſideration; but in this emergency the Britiſh commander was unwilling to fire among the crowd, and reſolved to make the chief alone fall a victim to his own treachery. His muſket, at that critical moment, miſſed fire, which could not fail of giving the natives a very mean opinion of the weapons that were oppoſed to them. They determined, therefore to ſhew how much more effectual theirs were, by throwing ſtones and darts, and ſhooting arrows. This being the caſe, a general diſcharge of fire-arms could no longer be avoided. It threw them into confuſion; but a ſecond was hardly ſufficient to drive them off the beach. Four lay to all appearance dead on the ſhore; but two of them afterwards crawled into the buſhes. Not half of the muſkets would go off, which ſaved the lives of many of theſe poor miſtaken wretches. One of the men in the boat was wounded in the cheek with a dart; an arrow ſtruck the maſter on the breaſt, but as its force was ſpent it hardly penetrated the ſkin. The report of the muſkets on ſhore alarmed thoſe in the ſhip, and another boat was immediately ſent off, and a ſwivel, that fired to the part where a number of the natives were aſſembled, and a great gun fired towards the hills, which ſtruck them with a panic, and they all haſtened to ſkreen themſelves in the buſhes. With this unhappy ſkirmiſh all intercourſe ended.

Inmer is the moſt eaſtern iſland of all the Hebrides. It appeared to be about five leagues in circuit, of a conſiderable height, and flattiſh top.

Annatom is the ſouthernmoſt iſland, ſituated in latitude 20 deg. 3 min. ſouth; longitude 170 deg. 4 min. eaſt.

Six leagues on the ſouth ſide of Erromango is Tanna. It is about eight leagues long, three or four broad, and twenty-four in circuit. Its latitude is 19 deg. 30 min. ſouth, and longitude 169 deg. 38 min. Its name ſignifies *earth* in the Malay language.—The ſoil in ſome places was found to be a rich black mould; in other parts it ſeemed to be compoſed of decayed vegetables and the aſhes of a volcano, which was ſeen about eleven miles to the weſtward of the veſſel burning with great fury. The country is in general ſo covered with trees, ſhrubs, and plants, as to choke up the bread fruit and cocoa nuts; but it is not populous, nor the houſes conſequently numerous.

The volcano emitted at different times vaſt quantities of fire and ſmoke for ſixteen days, accompanied with an exploſion about once in five minutes. Some of theſe exploſions reſembled violent claps of thunder: the whole air was filled with ſmoaky particles and aſhes, which occaſioned much pain when they fell into the eye: at one time great ſtones were ſeen thrown up into the air, ſome of which were at leaſt as large as the hull of a ſhip's long boat. It firſt preſented a moſt magnificent ſight. The ſmoke, which rolled up from time to time, in thick and heavy volumes, was coloured with all the various hues of yellow, orange, crimſon, and purple, which died away into a reddiſh grey and brown. As often as a new exploſion happened, the whole country, with its ſhaggy foreſts, were tinged with the ſame orange and purple, according to its diſtance, or particular expoſure to volcanic light. It ſometimes continued quite ſilent for five or ſix days together. It was remarked, that the exploſions of the volcanos recommenced after a ſhower of rain, ſo that it ſhould ſeem that rain excites them, by promoting or increaſing the fermentation of various mineral ſubſtances in the mountain. The black aſhes with which the whole country was ſtrewed, were found to be long, needle-like, and ſemi-tranſparent, and to contribute greatly to that luxuriance of vegetation which is remarkable on this iſland; many plants here attaining twice the height which they reach in other countries; their leaves are broader, their flowers larger and more richly ſcented.

Some new plants were collected here, and a variety of odoriferous ſhrubs, and ſome others were cultivated only for their elegant appearance. The plantations on this iſland conſiſt for the moſt part of yams, bananas, eddoes, and ſugar-canes, all which being very low, permit the eye to take in a great extent of country. Here are great numbers of fig-trees, which the natives cultivate for the ſake of the fruit and leaves. They are of two or three different kinds, and one ſort in particular bears figs of the common ſize, which are wholly like peaches on the outſide, and have a beautiful crimſon pulp like pomegranates; they are ſweetiſh and juicy, but rather inſipid.

Several ſmall birds were obſerved here with a very beautiful plumage, and of a kind that had not been ſeen before. The natives were ſeen to have no methods of catching fiſh, but by ſtriking; it is probable that they draw but little of their ſubſiſtence from the water. Upwards of three hundred pounds weight of mullet, and other fiſh, were caught by three hauls with the ſeine.

A young native was ſhewn every part of the ſhip, but nothing fixed his attention a moment, or cauſed in him the leaſt ſurpriſe. He had no knowledge of goats, dogs, or cats, calling them all hogs (booga). The commander made him a preſent of a dog and a bitch, as he ſhewed a liking to that kind of animal. They appear to have plenty of hogs, but very few domeſtic fowls. Some rats of the ſame kind as is common on the other iſlands in the Pacific Ocean, frequent the fields of ſugar-cane, in which they make great

great depredations; the natives, therefore, dig ſeveral holes all round theſe plantations, in which they catch theſe animals.

The natives of this iſland are of a middle ſize, and tolerably proportioned. Their colour is a dark cheſnut brown, with a very ſwarthy mixture. They go naked, having only a ſtring round the belly, which did not, however, cut the body in ſo ſhocking a manner as that in the iſland of Mallicollo. Their hair is generally black or brown, growing to a tolerable length, and very criſp and curly. Their beards, which are ſtrong and buſhy, are generally ſhort. The women wear their hair cropped, as do the boys till they approach manhood. They make uſe of a cylindrical piece of alabaſter two inches long, which they wear in the cartilaginous part between the noſtrils, as a noſe-jewel. Not one ſingle corpulent man was ſeen here; all are active and full of ſpirits. Their features are large, the noſes broad; but the eyes full, and in general agreeable. They make inciſions chiefly on the upper arm and belly, which are inſtead of punctures; they cut the fleſh with a bamboo or ſharp ſhell, and apply a particular plant, which forms an elevated ſcar on the ſurface of the ſkin after it is healed. Theſe ſcars are formed to repreſent flowers and other fancied figures, which are deemed a great beauty by the natives. Moſt of them have an open, manly, aud good-natured air, though ſome were ſeen as in other nations, whoſe countenances indicated malevolence.

Though, like all the tropical nations, the people are active and nimble, they were not fond of labour, nor would ever aſſiſt in any work that the ſhip's company was carrying on, which the Indians of the other iſlands uſed to delight in. They throw all the laborious drudgery on the women; from which occaſion was taken to remark, that though they were not beauties, they were handſome enough for the men, and too handſome for the uſe that was made of them. Their ears are hung full of tortoiſe-ſhell rings, and necklaces of ſhells fall on their boſoms. Some of the elderly women had caps made of a green plantain leaf, or of matted work; but this head dreſs was rather uncommon. The number of ornaments conſiderably increaſed with age, the oldeſt and uglieſt being loaded with necklaces, ear-rings, noſe-jewels, and bracelets. The women here are expert cooks; they roaſt and boil the yams and bananas, they ſtew the green leaves of a kind of fig, they bake puddings made of a paſte of bananas and eddoes, containing a mixture of cocoa-nut kernel and leaves.

The people of Tanna, with reſpect to their domeſtic life, are rather of a ſerious turn, yet are not wholly deſtitute of amuſements, and their muſic is in greater perfection than any in the South-Seas. Their European viſitants gave them a variety of airs, in return for which, the natives ſang ſeveral times very harmoniouſly. They likewiſe produced a muſical inſtrument, which conſiſted of eight reeds, regularly decreaſing in ſize, and comprehending an octave, though the ſingle reeds were not perfectly in tune.

Their houſes are like the roof of a thatched houſe in England, taken off the walls, and placed on the ground. Some were open at both ends, others cloſed with reeds, and all were covered with a palm thatch. A few of them were thirty or forty feet long, and fourteen or ſixteen broad. Beſides theſe, they have other mean hovels, which were ſuppoſed to be deſigned only to ſleep in.

In point of neatneſs, their weapons come far ſhort of ſome that were ſeen in other iſlands. They are clubs, ſpears or darts, bows and arrows, and ſtones. The clubs are of three or four kinds, and from three to five feet long. They ſeem to place moſt dependence on the darts, with which they kill both birds and fiſh, and are ſure of hitting a mark within the compaſs of the crown of a hat, at the diſtance of eighteen yards; but at double that diſtance, it is a chance if they hit a mark the ſize of a man's body, though they will throw the weapon ſixty or ſeventy yards. The arrows are made of reeds pointed with hard wood; ſome are bearded, and ſome are not, and thoſe for ſhooting birds have two, three, and ſometimes four points. The ſtones they uſe in general are the branches of coral rocks, from eight to fourteen inches long, and from an inch to an inch and a half diameter. Thoſe who uſe ſtones keep them generally in their belts.

Their canoes can boaſt neither art or ornament; all of them have out-riggings, and ſome may contain twenty people. Their ſails are low triangular mats, of which the broadeſt part is uppermoſt, and the ſharp angle below. A long piece of timber, hollowed out in the middle, forms the bottom of the canoe, and upon this one or two planks are fixed, forming the two ſides, by means of ropes of the cocoa-nut fibres. Their oars are ill ſhaped, and very clumſily made.

Added to the common language of the land, and a dialect of the neighbouring iſlands, ſome words were collected of a third language, which was chiefly current among the inhabitants of the weſtern hills. Some of our intelligent voyagers, on comparing their vocabularies, to diſcover that two different words were uſed to ſignify the ſky, applied to one of the natives to know which of the expreſſions was right. He immediately held out one hand and applied it to one of the words; then moving the other hand under it, he pronounced the ſecond word, intimating, that the upper was properly the ſky, and the lower, clouds that moved under it.

No other liquor was ſeen here than water and the cocoa-nut juice. They ſignified, in the moſt pointed manner, to our countrymen, that they eat human fleſh, and that circumciſion was practiſed among them. Nay, they introduced the ſubject of eating human fleſh, by aſking our people, if it was a practice among them. They appeared to have ſome nominal chief, with very little authority. One old chief was ſaid to be the king of the iſland. His name was Geogy, and they gave him the title of Areekee. Notwithſtanding his advanced years, he had a merry, open countenance.

No information could be derived reſpecting the religion of theſe people, only every morning at daybreak was heard a ſlow ſolemn ſong or dirge, ſung on the eaſtern ſide of the harbour, which laſted more than a quarter of an hour. As this was ſuppoſed to be a religious act, the curioſity of our navigators was excited to enquire farther concerning it. But when they attempted to paſs that way, the natives crowded about them, and intreated them with the greateſt earneſtneſs to return. As they ſtill ſeemed to perſiſt, they were at length given to underſtand, that if they remained obſtinate in their attempt, they would be killed and eaten. They now turned off towards a hut about fifty yards diſtant, where the ground began to riſe, on which ſeveral of the Indians took up arms out of the hut, apparently meaning to force them to return back. Unwilling, therefore, to give offence, our people checked their curioſity, and were content to leave this point undetermined. Nothing, however, was ſeen in the general behaviour of theſe people that bore any reſemblance to a religious act, nor any thing that could be conſtrued into ſuperſtition.

When the boat firſt went on ſhore, the natives were drawn up in great numbers on the beach, armed with clubs, darts, ſpears, ſlings, and ſtones. From this hoſtile appearance, the Britiſh commander was induced to re-embark ſpeedily to prevent diſagreeable conſequences. In order to terrify without hurting them, he ordered a muſket to be fired over their heads, but the alarm was only momentary, as the natives inſtantly recovered themſelves, and began to diſplay their weapons. A few great guns, however, being fired from the ſhip, they all diſperſed, leaving

leaving the beach free for a ſecond debarkation. The commander having marked out boundaries on the ſhore with a line, the natives came gradually forward, ſome unarmed.

An old man, named Paowang, ſhewed a very friendly diſpoſition in forwarding an intercourſe between the commander and the natives. Such was the honeſty of this old man, that he brought an axe which had been left by the ſhip's company upon the beach. They were extremely jealous of any one going up the country, or even along the ſhore of the harbour, a diſpoſition that greatly obſtructed the naturaliſts in their attempts to explore.

As the carrying of bundles is the office of the women in this country, the natives imagined that thoſe from the ſhip who carried loads were females. A man who carried a bag which contained the plants ſelected by the naturaliſts, was followed by ſome of them, who, by their converſation, which was overheard, conſidered him as a woman, until by ſome means they diſcovered their miſtake, on which they cried out, *Erromange! erromange!* It is a man! it is a man!

A tillar to the rudder being wanted, the carpenter was ſent on ſhore to look at a tree for the purpoſe, and with him an officer with a party of men to cut it down, provided leave could be obtained of the natives. The officer underſtanding that there was no objection, the people accordingly went to work; but as the tree was large, the felling of it was a work of time, and before it was down, word was brought that *Paowang* was not pleaſed: orders were therefore ſent from on board to deſiſt. The commander ſoon after went on ſhore, and ſending for *Paowang*, preſented him with a dog and a piece of cloth, and then explained to him the purpoſe for which the tree was wanted. All the natives preſent diſcovered great ſatisfaction at the means that were uſed to obtain the grant of the tree, and unanimouſly conſented to its being felled.

But many were afraid to touch the preſents that were offered them, nor did they ſeem to have any notion of exchanging one thing for another. But few refreſhments were obtained on this iſland; ſome fruit or roots were daily procured from the natives, though greatly inadequate to the demands of the ſhip's company.

As the natives had no knowledge of iron, nails, iron tools, beads, &c. which were ſo current in other parts, they were of no value here, nor was cloth of any uſe in a country where the inhabitants went moſtly naked. The only commodity they ſeemed deſirous of obtaining was tortoiſe-ſhell; but as no demand was expected for ſuch an article, there were only a few ſmall pieces remaining in the ſhip, which had been purchaſed at another iſland. The ſailors, however, notwithſtanding the loathſomeneſs of ſalt proviſions of long ſtanding, had not a ſingle provident thought for the future, but exchanged their tortoiſe-ſhell for bows and arrows, inſtead of furniſhing themſelves with a ſtock of yams.

A party from the ſhip paſſing through a ſhrubbery, obſerved a man at work cutting ſticks, and ſeeing him make a very ſlow progreſs with his hatchet, which was only a bit of ſhell in lieu of a blade, they ſet about helping him with an iron hatchet, and in a few minutes cut a much greater heap than he had done the whole day. Several Indians, who were witneſſes to this diſpatch, expreſſed the greateſt aſtoniſhment at the utility of this tool, and ſome were very deſirous of poſſeſſing it, by offering their bows and arrows for it. This was conſidered as a favourable opportunity for procuring hogs; but they were deaf to every propoſal of that kind, and never exchanged a ſingle hog; one pig only was obtained as a preſent to the commander from *Paowang*.

There being great reaſon to ſuppoſe that the inhabitants of Tanna are haraſſed by frequent wars; the diſtruſt which they expreſſed on the firſt debarkation from the ſhips is not ſurpriſing. But as ſoon as they were aſſured of the pacific diſpoſition of their new viſitants, all ſuſpicions entirely ſubſided. They did not trade, indeed, becauſe they had not the means in proportion to the other iſlanders; but they were as aſſiduous in offering their ſervices, and from leſs intereſted motives. If any of the botaniſts had procured a plant, of which he was deſirous of having other ſpecimens, he had only to ſignify it to ſome natives, who would immediately haſten to the ſpot where it was to be found, and bring it with the moſt engaging alacrity. The civility of the natives was conſpicuous in this particular inſtance. If they met any officer or gentleman of the ſhip in a narrow path, they always ſtepped aſide, in order to make way. If they happened to know their names, they pronounced them with a ſmile, which could be extremely well underſtood as a ſalutation. If they had not ſeen them before, they commonly enquired their names, in order to know them again. They have the ſame engaging manner of expreſſing their friendſhip by a mutual exchange of names, as is common in the moſt eaſtern iſlands of this ſea.

CHAP. VI.

THE FRIENDLY ISLANDS.

Diſcovery, Number, Situation, Soil, Productions, Extent, Manners, and Cuſtoms of the Inhabitants.

THESE iſlands form a cluſter extending about three deg. of latitude and two of longitude. The principal are Middleburg, Rotterdam, or Anamooka, Hapaee, Amſterdam, or Tongataboo, and Pylſtart, ſo denominated by Taſman; there are alſo others which have been ſeen and viſited by more modern navigators. We ſhall attend to them ſeverally in their reſpective order.

Middleburg, called by the natives Eooa.

This iſland forms a very beautiful landſcape. Its ſkirts are in general laid out in plantations, eſpecially thoſe on the north-weſt and ſouth-weſt ſides. The interior parts are not, indeed, ſo well cultivated as they might be, but this heightens the proſpect; for while the other iſles of this cluſter are level, the eye can diſcover nothing but the trees that cover them; here the land riſing gradually upwards preſents an extenſive view, where groves of trees are only interſperſed at irregular diſtances, in a kind of beautiful diſorder. It is ſhaded near the ſhore with various trees, amongſt which are the habitations of the natives, laid out in ſuch order as convenience requires, and they may boaſt a moſt delightful ſituation. About half way up the iſland is a deep valley, the bottom and ſides of which, though compoſed of hardly any thing but coral rock, are clothed with trees. The ſoil in general is reddiſh clay, which in many places ſeems to be very deep.

On the moſt elevated part of the iſland is a round platform or mount of earth, ſupported by a wall of coral ſtones, to bring which to ſuch an height muſt have coſt much labour. This mount, called by the natives *Etchee*, is ſaid to have been erected by order of one of their chiefs. Not many paces from this, though on a former voyage, complaint was made of a dearth of water; on the laſt was found an excellent ſpring, and about a mile lower down a running ſtream, which, it is ſaid, found its way to the ſea, when the rains were copious. It appeared from information, that all or moſt of the land in this iſland belonged to the great chiefs of Amſterdam or Tongataboo, and

that the inhabitants were only tenants or vaſſals to them. This, indeed, is repreſented to be the caſe at all the other neighbouring iſles, except Rotterdam or Anamooka, where there are ſome chiefs who ſeem to act with a degree of independence.

Yams, with other roots, bananas, and bread-fruit, are the principal articles of food here; but the latter appeared to be ſcarce. The pepper tree, or *ava ava*, of which they make a favourite intoxicating liquor, alſo grows here. There are many odoriferous trees and ſhrubs, and one in particular of the lemon ſpecies; naturaliſts likewiſe met with divers new kinds of plants. The *caſuaria*, or club-wood, as in ſome neighbouring iſlands, points out alſo to the repoſitories of their dead. The ſhaddock, and ſeveral other trees are found upon the iſland.

The common complexion of the natives is mahogany or cheſnut brown, with black hair. Some are of an olive colour, and ſome of the women much fairer, which may be the effect of being more or leſs expoſed to the ſun. The men in general are of the middle ſtature; though ſome meaſured ſix feet.—Their bodies are well proportioned, though muſcular, which ſeems a conſequence of much exerciſe. Their features are various, nor are they characteriſed by any general likeneſs, unleſs it be a fullneſs at the point of the noſe, which is very common. The women in general are not ſo tall as the men; their bodies and limbs are well proportioned, and what peculiarly diſtinguiſhes them is the uncommon ſmallneſs and delicacy of their fingers, which may be put in competition with the fineſt in any part of the world.

Puncturing or tattowing the ſkin is in full faſhion amongſt the men here; on the tendereſt part of the body are marked configurated ſcars, which muſt be very painful as well as dangerous. The chiefs are exempted from this cuſtom. The dreſs of both men and women is much the ſame, and conſiſts of a piece of cloth or matting (though moſtly the former) about two yards wide, and two and an half long, ſo as to wrap in great abundance round the waiſt, to which it is confined by a girdle or cord. Before it is double, and hangs down like a petticoat as low as the middle of the leg. This, as to form, is the general dreſs; but large pieces of cloth and fine matting are worn only by thoſe of ſuperior rank. The inferior claſs are ſatisfied with ſmall pieces, and often wear nothing but a covering made of leaves of plants, or the *maro*, which is a narrow piece of cloth or matting like a ſaſh. This they paſs between the thighs and wrap round the waiſt, but the uſe of it is chiefly confined to the men. They have various dreſſes made for the purpoſe of their haivas or grand entertainments; but the form is always the ſame; the richeſt are adorned more or leſs with red feathers. Both ſexes ſometimes ſcreen their faces from the ſun with little bonnets made of divers materials.

The ſexes differ as little in their ornaments as their clothing. Of theſe the moſt common are necklaces made of various ſweet ſcented flowers, which go under the general name of *Kahulla*. Others conſiſt of ſeveral ſtrings of ſmall ſhells, ſharks teeth, and other things, which hang looſe upon the breaſt. In the ſame manner they likewiſe wear a mother of pearl ſhell, neatly poliſhed, and a ring of the ſame ſubſtance carved, on the upper part of the arm, as alſo rings of tortoiſeſhell on the fingers, and a number of theſe joined together as bracelets on the wriſts. The lobes of the ears are perforated with two holes, in which they wear cylindrical pieces of ivory, ſtuck through both ſides the holes. Some uſe reeds filled with a yellow pigment. This ſeems to be a fine powder of turmeric, with which the women rub themſelves all over in the ſame manner as the European females uſe dry rouge upon their cheeks.

What particularly characterizes theſe people, and was remarked by Taſman, is, that moſt of them want the little finger on one, and ſometimes on both hands; nor did the difference of age or ſex exempt from this amputation, for the very children were obſerved to have ſuffered that loſs. They had alſo a round ſpot on each cheek bone, which appeared to have been burned or bliſtered, on ſome it ſeemed to have been recently made, on others it was covered with ſcurf, and the mark was ſlight; but the purport of it could not be diſcovered. The women in general here are repreſented as modeſt and reſerved in their behaviour, though, as in all other iſlands, there were ſome exceptions.

The natives of theſe iſlands are much commended by voyagers for their cleanlineſs, to produce which they are ſaid to bathe frequently in ponds which ſeem to ſerve no other purpoſe. Though the water in moſt of them is nauſeous to a degree, they prefer them to that of the ſea, imagining, that ſalt water hurts their ſkins. When neceſſity obliges them to bathe in the ſea, they commonly have ſome cocoa-nut ſhells filled with freſh water poured over them, to waſh it off. The cocoa-nut oil has an admirable effect on the ſkin in rendering it ſmooth: for which theſe people hold it in ſuch eſtimation, that they not only pour a great quantity of it upon their heads and ſhoulders, but rub the body all over briſkly with a ſmaller quantity. The language here is ſoft and not unpleaſing, and whatever they ſay is ſpoken in a kind of ſinging tone.

In building their houſes, they do not diſcover much taſte or ingenuity; though the defect is rather in the deſign than the execution. Thoſe of the lower people are poor huts, thoſe of the better are larger and more comfortable. Their houſes, properly ſpeaking, are thatched roofs or ſheds ſupported by poſts and rafters diſpoſed in a tolerably judicious manner. The floor is a little raiſed, covered with ſtrong thick matting, and kept very clean. They are moſtly cloſed on the weather ſide with the ſame ſort of matting, the other being open. A thick ſtrong mat, of two or three feet broad, bent into the form of a ſemicircle and ſet upon its edge, with the ends touching the ſide of the houſe, in ſhape reſembling the fender of a fire hearth, encloſes a ſpace for the maſter and miſtreſs of the family to ſleep in. The latter indeed ſpends moſt of her time during the day within it. The reſt of the family ſleep upon the floor wherever they pleaſe to lie down, the unmarried men and women apart from each other. If the family be large, there are ſmall huts adjoining, to which the ſervants retire in the night, ſo that privacy is as much obſerved here as can be expected. They have mats made on purpoſe for ſleeping on, and the clothes they wear in the day ſerve for their covering in the night. Their houſehold furniture conſiſts of ſome bowls and platters, cocoa-nut ſhells, ſome ſmall wooden ſtools which ſerve them for pillows, and perhaps a large ſtool for the maſter of the family to ſit on.

Clubs, ſpears, bows, and arrows, are their weapons. The former are of a great variety of ſhapes, and many of them ſo heavy as not to be managed with one hand, but with difficulty. The moſt common form is quadrangular. The far greater part were carved all over in many chequered patterns, which ſeemed to have required great patience and a long time to work up, as a ſharp ſtone or piece of coral are the only tools made uſe of. The whole ſurface of the plain clubs was as highly poliſhed, as if furniſhed by an European artiſt with the beſt inſtruments. Their ſpears are ſometimes plain ſharp-pointed ſticks, and ſometimes barbed. Their bows and arrows are of a peculiar conſtruction. The former, which is about ſix feet long, is about the ſize of a little finger, and when ſlack forms a ſlight curve: the convex part is channelled with a ſingle deep groove in which the bow-ſtring is lodged. The arrow is made of reed near ſix feet long, and pointed with hard wood. When the bow is to be bent, inſtead of drawing it ſo as to increaſe the natural curve, they draw it the contrary

way,

way, make it perfectly ſtraight, and then form the curve on the other ſide.

There is much ingenuity diſplayed in the conſtruction of their canoes. They have out-riggers made of poles, and their workmanſhip is admirable. Two of theſe are joined together with ſurpriſing exactneſs, and the ſurface is poliſhed in a very curious manner. Their paddles have ſhort blades, and are very neatly wrought.

A circumſtance occurred in this place which afforded an opportunity of obſerving how theſe people treat conjugal infidelity. Some of our people, on their return from an excurſion, being informed that a party of the natives had ſtruck one of their own countrymen with a club, which laid bare, or, as others ſaid, fractured his ſkull, and then broke his thigh with the ſame, enquired the reaſon of ſuch treatment, and were given to underſtand that he had been diſcovered in a ſituation rather indelicate with a woman that was *tabood*, that is, forbidden. But the female delinquent had by far the ſmaller ſhare of puniſhment; as our people were told, ſhe would only receive a ſlight beating for her miſdemeanour.

When our navigators firſt viſited this iſland, they obſerved, that ſeveral of both ſexes were affected with leprous diſorders in the moſt virulent degree, in various parts of their bodies. The face of one woman was corroded by the acrid humours, ſo as to exhibit a moſt horrid ſpectacle. Many others were likewiſe ſo diſfigured by the diſorder, that they could not be beheld without a mixture of diſguſt and pity.

The amicable diſpoſition of theſe people is fully evinced from the friendly reception all ſtrangers have met with who have viſited them. When captain Cook firſt anchored on the W. N. W. ſide of this iſland, two canoes with ſeveral men in each, came along-ſide the ſhip; one of them on board, without the leaſt heſitation, preſented a root of the pepper tree, touched the noſes of the officers with his own, in token of friendſhip, and then ſat down on the deck without ſpeaking a word. The native was preſented with a nail, which, on receiving, according to the general cuſtom of the iſland, he held over his head, pronouncing the word *fagafetai* or *fagafatie*. This was moſt probably meant as an expreſſion of his thankfulneſs.

No people could give greater proof of liberality of diſpoſiton, for they came in great numbers about our veſſels, threw bales of cloth into them, and retired without ſo much as waiting for a return. As an inſtance of their hoſpitality, captain Cook, with ſeveral officers and gentlemen, were conducted, on their landing, by a chief, named Tioony, to his manſion, delightfully ſituated about three hundred yards from the ſea, at the head of a fine lawn, and under the ſhade of ſome ſhaddock trees, and there elegantly entertained. The very ſame chief, on the commander's laſt viſit, viſited him on board immediately as he came to an anchor, and with the utmoſt cordiality rendered him every friendly ſervice within his power. The European ſtrangers indeed were careſſed by old and young, men and women, who embraced them, kiſſed their hands, and laid them on their breaſts with the moſt expreſſive looks of affection. It was very remarkable that the diſcharge of guns neither excited their admiration, nor their fear, which plainly proved that their civility aroſe from the bent of natural diſpoſition, and not from a motive of conciliating the favour of their gueſts, becauſe they knew they were able to do them an injury.

The only glaring defect that ſullies their character is, a propenſity to theft, which is ſaid to be confined to nails, on which they ſet ſo high a value, that they would endeavour to poſſeſs them at any rate; but we are ſorry to ſay, that truth and candour obliges us to confeſs, that from later experience, in many inſtances, the propenſity in ſome appeared to be ſo univerſal as to admit of no limitation.

The inhabitants of the Friendly Iſlands are ſo agreeably circumſtanced, as neither to be ſubject to exceſſive labour on the one hand, or ſupine indolence on the other. Their occupations are agreeably diverſified, and their recreations and amuſements follow in pleaſing ſucceſſion, ſo that they neither diſguſt or tire. To the women is committed the care of making the cloth, and to them is alſo conſigned the manufacture of their mats.

Architecture, boat-building, agriculture, and fiſhing, are the principal objects of the men's attention. As cultivated roots and fruits form their chief ſubſiſtence, they find it neceſſary to practiſe huſbandry, which they have brought by their diligence to ſome degree of perfection. In planting yams and plantains, they dig ſmall holes for their reception, and afterwards root up the ſurrounding graſs. The inſtruments uſed by them for this purpoſe are called *hoo*; and are nothing more than ſtakes of various lengths, flattened and ſharpened to an edge at one end; and the largeſt ones have a ſhort piece fixed tranſverſely, by means of which they preſs the implement into the ground with the foot. When they plant the two above-mentioned vegetables, they obſerve ſuch particular exactneſs, that, whichever way you turn your eyes, the rows preſent themſelves complete and regular. Some of their vegetable productions, and in particular the bread-fruit and cocoa-nut trees, are ſcattered without order, and reared without pains. The ſame may be ſaid of another large tree, which produces a roundiſh compreſſed nut, called *eceſee*; and of a ſmaller tree bearing an oval nut, with two or three triangular kernels. The *kappe* is, in general, planted regularly, and in large ſpots; but the *mawhaha* is interſperſed among other things, as is alſo the *jeejee*. Sugar-cane is uſually in ſmall ſpots, cloſely crowded. The tree of which the cloth is made, is kept very clean, and has a good ſpace allowed for it. The *pandanus* is commonly planted in a row, cloſe together, at the ſides of the fields.

The dwellings of the lower claſs of people are wretched huts, ſcarcely ſufficient to ſhelter them from the weather. Thoſe of the better ſort are larger, as well as more commodious and comfortable. An houſe of a middling ſize is about twelve feet in height, twenty in breadth, and thirty in length. Their houſes are, properly ſpeaking, thatched roofs or ſheds, ſupported by rafters and poſts. The floor is raiſed with earth ſmoothed, and covered with thick matting. Some of their habitations are open all round; but the major part of them are encloſed on the weather ſide with ſtrong mats, or with branches of the cocoa-nut tree, plated or interwoven with each other. A thick mat, about three feet broad, bent into a ſemicircular form, and placed edgeways, with the ends touching the ſide of the houſe, encloſes a ſufficient ſpace for the maſter and miſtreſs to ſleep in. The reſt of the family ſleep upon any part of the floor, the unmarried men and women lying apart from each other. If the family is large, there are little huts adjoining, in which the ſervants ſleep. Their whole furniture conſiſts of ſome wooden ſtools, which ſerve them for pillows; baſkets of different ſizes, in which they put their combs, fiſh-hooks, and tools; two or three wooden bowls, in which they make *kava*; ſome cocoa-nut ſhells, a few gourds, and a bundle or two of cloth.

However, the deficiency ſo apparent in the building of their houſes is amply compenſated in the conſtruction of their canoes, which diſplay much taſte and ingenuity. The double ones are made ſufficiently large to carry about fifty perſons, and ſail at a great rate. Upon them they generally fix a hut or ſhed for the reception of the maſter and his family. They are made of the bread-fruit tree, and the workmanſhip is extremely neat. They appear on the outſide as if they were compoſed of one ſolid piece; but, upon cloſer inſpection, they are found to conſiſt of a great number

number of pieces, which fit each other exactly, and by means of a ledge on the inside are secured together with cocoa-nut line. The single canoes are furnished with an out-rigger. The only tools which they make use of in the construction of these boats, are hatchets, or adzes, of a smooth black stone; augers made of shark's teeth; and rasps, composed of the rough skin of a fish, fastened on flat pieces of wood. The same tools are all they have for other works, except shells, which serve them for knives. Their cordage is made of the fibres of the cocoa-nut husk, which, though not above ten inches long, they plait about the size of a quill, to whatever length is required, and roll it up in balls; from which the ropes of a larger size are made, by twisting several of those together. Their fishing-lines are as strong and even as our best cord. Their small hooks consist entirely of pearl-shells; but the large ones are only covered with it on the back; and the points of both are, in general, of tortoise-shell. With the large hooks they catch albi cores, and bonnetos, by putting them to a bamboo-end, about twelve feet long, with a line of the same length. They have also numbers of small seines, some of which are of the most delicate texture.

Their pipes, or musical reeds, which resemble the *syrinx* of the ancients, have eight or ten pieces placed parallel to each other, most of which are of unequal lengths. Their flutes are made of a joint of bamboo, about eighteen inches long, and are closed at both ends, having a hole near each end, and four others; two of which, and only one of the first, are used by them in playing. They close the left nostril with the thumb of the left hand, and blow into the hole at one end with the other nostril. The fore-finger of the right hand is applied to the lowest hole on the right, and the middle finger of the left to the first hole on that side. In this manner, with only three notes, they produce a pleasing, though simple music.

Clubs curiously ornamented, spears, and darts, are their warlike weapons. They also make bows and arrows; but these are intended for amusement, such as shooting at birds, &c. and not for the purpose of war. Their stools, or rather pillows, are about two feet long, but only four or five inches in height, and near four in breadth, inclining downwards towards the middle, with four strong legs and circular feet; the whole composed of brown or black wood, neatly polished, and sometimes inlaid with ivory. They likewise inlay with ivory the handles of fly-flaps; and, with a shark's tooth, shape bones into figures of men, birds, &c.

Cocoa-nuts, plantains, bread-fruit, and yams, compose the greater part of their vegetable food. Their chief articles of animal food, are hogs, fish, and fowls; but the common people frequently eat rats. Their hogs, fowls, and turtle, seem to be only occasional dainties served for people of rank. Their food is, in general, dressed by baking; and they make, from different sorts of fruit, several dishes, which are very good. They sometimes boil their fish in the green leaves of the plaintain tree, which serve as a bag to hold both fish and water: having tied them up, they wrap them again in three or four other leaves, and place them upon stones heated for the purpose: when they are sufficiently done, they not only eat the fish, but drink the liquor or soup. They are not very cleanly either in their cookery, or their manner of eating. Their usual drink at their meals is water, or cocoa-nut milk, the *kava* being only their morning beverage. The food that is served up to the chiefs is generally laid upon plantain-leaves. The king, at his meals, is commonly attended upon by three or four of the natives, one of whom cuts large pieces of the fish, or of the joint, another afterwards divides it into mouthfuls, and the rest stand by with cocoa-nuts, and whatever else he may happen to want. The women are not excluded from taking their meals with the men; but there are certain ranks that are not allowed either to eat or drink together. This distinction begins with his majesty.

They rise at day-break, and retire to rest as soon as it becomes dark. They, for the most part, sleep also in the day time, when the weather is very hot. They are fond of associating together, in consequence of which, it is not uncommon to find several houses empty, and the possessors of them assembled in some other house, or upon some convenient spot in the neighbourhood, where they relax themselves by conversation and other amusements. Their private diversions chiefly consist of dancing, singing, and music. When two or three women snap their fingers, and sing in concert, it is called *oobai;* but when there are more, they form several parties, each of which sings in a different key, which constitutes an agreeable melody, and is termed *heeva*, or *haiva*. The songs are generally accompanied with the music of their flutes. The dances both of the men and women are performed with an ease and grace which are difficult to be described.

The nature of their marrages could not be ascertained, either in point of form, or obligation; it is certain, however, that the major part of the men content themselves with one wife. The chiefs, indeed, commonly have several women, but only one is considered in the light of mistress of the family.

These people display a striking instance of humanity in the manner in which they are affected by the loss of their friends and relations. Besides the *tooge*, and burnt circles and scars, they strike a shark's tooth into their heads till the blood flows considerably, beat their teeth with stones, and thrust spears not only through their cheeks into their mouths, but also into the inner parts of their thighs, and into their sides. The more painful operations, however, are only practised when they mourn for the deaths of those who were most nearly connected with them.

When one of them dies, he is wrapped up in mats and cloth, and then interred. The *fiatookas* seem to be appropriated to the chiefs and other persons of distinction, as their burial places; but the inferior people have no particular spot set apart for their interment. It is uncertain what part of the mourning ceremony follows immediately afterwards; but there is something besides the general one, which is continued for a considerable time. They seem to consider death as a great evil, to avert which they practise a very singular custom.

When captain Cook, during his second voyage, first visited these islands, he observed, that many of the natives had one or both of their little fingers cut off; of the reason of which mutilation, he could not then obtain a satisfactory account; but he was now informed, that they perform this operation when they are afflicted with some dangerous disorder, which they imagine may bring them to the grave. They suppose, that the little finger will be accepted of by the Deity, as a kind of propitiatory sacrifice sufficiently efficacious to procure their recovery. In cutting it off, they make use of a stone hatchet. There is scarcely one person in ten who is not thus mutilated; and they sometimes cut so close, as to encroach upon the bone of the hand which joins the amputated finger. It is also common for the lower class of people to cut off a joint of their little finger, on account of the sickness of the chiefs to whom they respectively belong.

They have apparently little conception of future punishment for sins committed in the present life. They believe, however, that they meet with just punishment upon earth; and therefore, put every method in practice to render their divinities propitious. They admit a plurality of deities, all of them inferior to *Kallafootonga*, who they say is a female, and the supreme author of most things, residing in the heavens, and directing the wind, rain, thunder, &c. They are of opinion, that when she is much displeased with them,

them, the productions of the earth are blaſted, many things conſumed by lightning, and themſelves afflicted with ſickneſs and death; but that when her anger abates, every thing is immediately reſtored to its former ſtate. Among their ſubordinate deities, they mention *Futtafaihe*, or *Footafooa*, who has the adminiſtration of the ſea, and its productions; *Toofooa-boolootoo*, god of the clouds and fog; *Talleteboo*, *Mattaba*, *Tareeava*, and others. The ſame ſyſtem of religion does not extend all over the Friendly Iſlands; the ſupreme deity of Hapaee, for inſtance, being called *Alo Alo*. They entertain very abſurd opinions relative to the power and various attributes of theſe beings, who they ſuppoſe have no further concern with them after death.

They have juſter ſentiments of the immortality and immateriality of the ſoul, which they call life, the living principle, or an *Otooa*, that is a divinity. They imagine, that, immediately after death, the ſouls of their chiefs are ſeparated from their bodies, and go to a delightful region called *Boolootoo*, the god of which is named *Gooleho*. By this *Gooleho*, they probably perſonify death. His country, according to their mythology, is the general repoſitory of the dead; and thoſe who are once conveyed thither, are no more ſubject to death, but feaſt on all the favourite productions of their native ſoil, with which this bliſsful abode is plentifully furniſhed. As for the ſouls of people of an inferior claſs, they are ſuppoſed by them to ſuffer a kind of tranſmigration; or are eaten up, they ſay, by a bird called *loata*, which walks on the graves with that intent. They do not worſhip any viſible part of the creation, or any things made by their own hands. They make no offerings of dogs, hogs, or fruit, unleſs emblematically. But there ſeems to be no reaſon to doubt of their offering up human ſacrifices. Their *fiatookas* are, in general, burying-grounds and places of worſhip: ſome of them, however, appear to be appropriated only to the former purpoſe: but theſe are ſmall, and greatly inferior to the reſt.

The Engliſh could derive but little information as to their mode and form of government. A ſubordination, reſembling the feudal ſyſtem of our anceſtors in Europe, is eſtabliſhed among them; but of its ſubdiviſions, and the conſtituent parts, we are ignorant. Though ſome of them aſſerted, that the king's power is unbounded, and that he has the abſolute diſpoſal of the lives and properties of his ſubjects; yet the few circumſtances that offered themſelves to our obſervation, contradicted, rather than confirmed, the idea of deſpotic ſway. Mareewagee, Feenou, and Old Toobou, acted each the part of a petty ſovereign, and ſometimes even counteracted the meaſures of the king. Nor was his court ſuperior in ſplendor to thoſe of Old Toobou and Mareewagee, who, next to his majeſty, were the moſt potent chiefs in theſe iſlands; and next after them, Feenou appeared to ſtand higheſt in rank and authority. But how independent ſoever of the king the principal men may be, the inferior people are totally ſubject to the will of the chiefs to whom they ſeverally belong.

Tongataboo is divided into a great number of diſtricts, each of which has its peculiar chiefs, who diſtributes juſtice, and decides diſputes, within his own territory. Moſt of theſe chieftains have eſtates in other iſlands, whence they procure ſupplies. The king, at ſtated times, receives the product of his diſtant domains at Tongataboo, which is not only the uſual place of his reſidence, but the abode of moſt perſons of diſtinction among theſe iſlands. Its inhabitants frequently call it the Land of Chiefs, and ſtigmatize the ſubordinate iſles with the appellation of Lands of Servants.

Their chiefs are ſtyled Lords of the earth, and alſo of the ſun and ſky; and great deference, not to ſay worſhip, is paid to them. The royal family aſ-

ſume the name of Futtafaihe, from the god diſtinguiſhed by that appellation, who is probably conſidered by them as their tutelar patron. The king's pecular title is ſimply *Tooee Tonga*. The order and decorum obſerved in his preſence, and likewiſe in that of the other chiefs, are admirable. Whenever he ſits down, all the attendants ſeat themſelves before him, forming a ſemicircle, and leaving a ſufficient ſpace between them and him, into which no one, unleſs he has particular buſineſs, preſumes to come. Nor is any one ſuffered to ſit or paſs behind him, or even near him, without his permiſſion. When a perſon wiſhes to ſpeak to his majeſty, he comes forward, and having ſeated himſelf before him, delivers in a few words what he has to ſay; then, after being favoured with an anſwer, retires. If the king ſpeaks to any one, the latter gives an anſwer from his ſeat, unleſs he has to receive an order; in which caſe he riſes from his place, and ſeats himſelf croſs-legged before his majeſty. To ſpeak to the king ſtanding, would here be conſidered as a great mark of unpolite behaviour.

None of the civilized nations have excelled them in implicit obedience to the commands of their chiefs, in decorum and order of behaviour, as well as in harmony and unanimity. Such a behaviour manifeſts itſelf in a remarkable manner, whenever their chiefs harangue a body of them aſſembled together, which frequently happens. The greateſt attention, and moſt profound ſilence are obſerved during the harangue; nor is there ever ſeen a ſingle inſtance of any one preſent ſhewing ſigns of being diſpleaſed, or ſeeming in the leaſt inclined to diſpute the declared will of the ſpeaker. It is a peculiar privilege annexed to the perſon of the king, not to be punctured, or circumciſed, or rather ſuperciſed, as his ſubjects are. Whenever he walks out, all who meet him muſt ſit down till he has paſſed. No perſon is ſuffered to be over his head; but, on the contrary, all muſt come under his feet.

The method of doing homage to their ſovereign and the other chiefs, is as follows: the perſon who is to pay obeiſance, ſquats down before the great perſonage, and bows the head down to the ſole of his foot, which he taps or touches with the under and upper ſide of the fingers of each hand; then riſing up, he retires. His majeſty cannot refuſe any one who is deſirous of paying him this homage, which is called by the natives *moe moea*; for the people frequently think proper to ſhew him theſe marks of ſubmiſſion when he is walking, and he is on theſe occaſions obliged to ſtop, and hold up one of his feet behind him, till they have performed this reſpectable ceremony. The hands, after having been thus applied, become, in ſome caſes, uſeleſs for a little time; for, till they are waſhed, they muſt not touch food of any ſort. This prohibition, in a country where water is far from being plentiful, would be attended with inconvenience, if a piece of any juicy plant, which they can immediately procure, being rubbed over the hands, did not ſerve for the purpoſe of purification. When the hands are in this ſituation, they term it *taboo rema*; the former word generally ſignifying forbidden, and the latter implying hand.—When the *taboo* is incurred, by doing homage to a perſon of rank, it may thus eaſily be waſhed off; but in ſeveral other caſes, it muſt continue for a certain poriod. Women, who have been *taboo rema*, are not fed by themſelves, but by others. The interdicted perſon, after the limited time has elapſed, waſhes herſelf in one of their baths, which are in general dirty ponds of brackiſh water. She then waits upon the ſovereign, and having paid the cuſtomary obeiſance, takes hold of his foot, which ſhe applies to her ſhoulders, breaſt, and other parts; he then embraces her on both ſhoulders, and ſhe immediately retires, purified from her uncleanneſs. If it be always neceſſary to have recourſe to his majeſty for this

purpoſe, it may be one reaſon of travelling from one iſland to another.

It may here be proper to obſerve, that divers ſignifications ſeem to be annexed to the word *taboo*. They call human ſacrifices *tangata taboo;* and when any particular thing is prohibited to be eaten, or made uſe of, they ſay it is *taboo*. If the king goes into a houſe belonging to one of his ſubjects, that will, in conſequence, become *taboo*, and can never be again inhabited by the owner of it; ſo that, wherever his majeſty travels, there are houſes peculiarly aſſigned for his accommodation. A certain perſon is appointed as an inſpector of all the produce of the iſland, who takes care that each individual ſhall cultivate and plant his quota, at the ſame directing what ſhall, and what ſhall not, be eaten. By ſo prudent a regulation, they take effectual precautions againſt a famine; ſufficient ground is employed in raiſing proviſions; and every article is ſecured from unneceſſary conſumption. By another good regulation, an officer is appointed to ſuperintend the police, whoſe buſineſs it is to puniſh all delinquents: he is alſo generaliſſimo, or commander in chief of the forces of the iſlands. If this commander ſhould act inconſiſtent with the duties of his office, or govern in ſuch a manner as may be injurious to the public welfare, he would, by the collective body of the people, be depoſed from his ſovereignty, and put to death. A monarch thus ſubject to controul and puniſhment for abuſe of power, cannot juſtly be deemed a deſpotic prince.

We might be led to ſuppoſe, on a review of theſe iſlands, and the remote diſtance at which ſome of them are ſituated from the ſeat of government, that many efforts would have been made to throw off the yoke of ſubjection; but ſuch a circumſtance never happens. One reaſon of their not being thus embroiled in domeſtic commotions may be this; that all the principal chiefs take up their reſidence at Tongataboo. They alſo ſecure the dependence of the other iſles, by the deciſive celerity of their operations; for if a ſeditious and popular man ſhould ſtart up in any of them, the commander is immediately diſpatched thither to put him to death, by which means they prevent any conſiderable inſurrection.

The different claſſes of their chiefs ſeem to be nearly as numerous as among us; but there are few, comparatively ſpeaking, that are lords of extenſive diſtricts of territory. It is ſaid, that when a perſon of property dies, all his poſſeſſions devolve on the ſovereign; but that it is cuſtomary to give them to the eldeſt ſon of the deceaſed, with this condition annexed, that he ſhould provide out of the eſtate for the other children. The crown is hereditary; and it is known, from a particular circumſtance, that the Futtafaihes have reigned, in a direct line, for the ſpace of at leaſt one hundred and thirty-five years, which have elapſed between our countrymen viſiting theſe iſlands, and Taſman's diſcovery of them.

Upon enquiring of them, whether any traditional account of the arrival of Taſman's ſhips had been preſerved among them till this time, it was found, that this hiſtory had been delivered down to them, from their anceſtors, with great accuracy: for they ſaid, that his two ſhips reſembled ours, and alſo mentioned the place where they had lain at anchor, their having continued but a few days, and their quitting that ſtation to go to Annamooka; and, for the purpoſe of informing us how long ago this affair had happened, they communicated to us the name of the Futtafaihe who reigned at that time, and thoſe who had ſucceeded him in the ſovereignty, down to Poulaho, who is the fifth monarch ſince that period.

Their rank of precedence ever appeared a matter of great difficulty to aſcertain. It was generally ſuppoſed that the preſent ſovereign of the Friendly Iſles had the higheſt rank of any perſon in his dominions. But it was found to be otherwiſe; for Latooliboloo and three women are ſuperior, in ſome reſpects, to Poulaho himſelf. Theſe great perſonages are diſtinguiſhed by the title of *Tammaha*, which implies a chief. The late king, father of Poulaho, left behind him a ſiſter of equal rank, and older than himſelf; ſhe, by a native of Feejee, had a ſon and two daughters; and theſe three perſons, as well as their mother, are of higher rank than the king. Endeavours were made to diſcover the reaſon of this pre-eminence of the *Tammahas*, but without effect. The mother, and one of her daughters, named Tooeela-Kaipa, reſided at Vavaoo. The other daughter, called Moungoulakaipa, and Latooliboloo, the ſon, dwelt at Tongataboo. Latooliboloo was ſuppoſed, by his countrymen, to be diſordered in his ſenſes.

The more ſpeculative part of our countrymen ſay, that the language of the natives of the Friendly Iſlands bears a ſtriking reſemblance to thoſe of New Zealand, of Otaheite, and the Society Iſles. The pronunciation of theſe people, differs, indeed, in many inſtances, from that both of Otaheite and New Zealand; but, notwithſtanding that, a great number of words are either very little changed, or exactly the ſame. The language, as ſpoken by the Friendly Iſlanders, is ſufficiently copious to expreſs all their ideas; and beſides being tolerably harmonious in common converſation, is eaſily adapted to the purpoſes of muſic. They have terms to ſignify numbers as far as an hundred thouſand, beyond which they either would not, or could not reckon.

The tides are more conſiderable at the Friendly Iſlands, than at any other of captain Cook's diſcoveries in this ocean, that are ſituate within either of the tropics. At Annamooka, the tide riſes and falls about ſix feet upon a perpendicular. At Tongataboo it riſes and falls four feet and three quarters on the full and change days, and three feet and a half at the quadratures.

The latitude of that part of Tongataboo, where our countrymen erected an obſervatory, and which was near the middle of the north ſide of the iſland, is, according to the moſt accurate obſervations, 21 deg. 8 min. 19 ſec. ſouth; and its longitude 184 deg. 55 min. 18 ſec. eaſt.

ROTTERDAM, CALLED BY THE NATIVES ANNAMOOKA.

Diſpoſition, Cuſtoms, and Manners peculiar to the Inhabitants.

TASMAN diſcovered this iſland in the ſame year with the former; it was alſo named by him. It lies in latitude 20 deg. 15 min. ſouth, and longitude 174 deg. 31 min. weſt. The ſhore conſiſts of a ſteep, rugged coral rock, about nine or ten feet high; but there are two ſandy beaches, which are defended from the ſea by a reef of the ſame kind of rock.—In the centre of the iſland is a ſalt water lake, in breadth about a mile and a half. On the riſing parts, and eſpecially towards the ſea, the ſoil is either of a blackiſh mould or reddiſh clay, though not a ſtream of water was to be found upon the iſland but what was brackiſh.

The perſons, diſpoſitions, dreſs, manners, cuſtoms, language, &c. of the inhabitants here, are almoſt the ſame as thoſe of the natives of Middleburgh, and indeed of the Friendly Iſlands in general, as before deſcribed. Upon the whole, the land appears to be well cultivated, and if ſome parts lie waſte, the deſign is evidently that they might recover that ſtrength which had been exhauſted by too frequent culture. The chief plantations were yams and plantains. Bread fruit and cocoa-trees are alſo interſperſed without regular order, but are chiefly found near the habitations of the natives. The iſland is in general covered with luxuriant trees and buſhes, but particularly thoſe parts towards the ſea and round the lake.

Theſe

Theſe iſlanders gave proof of that courteous diſpoſition from which their country is denominated, to all the ſtrangers they met from our veſſels, bowing their heads, and uſing the expreſſion, *lelei woa*, good friend, or ſome word to that import. They readily undertook to conduct into the receſſes of their country ſuch as applied to them, climbed the higheſt trees to procure them flowers, and took to the water, like ſpaniels, after birds that were ſhot: they pointed out the fineſt plants, and gave them their proper names; and whenever any intimation was given, that ſpecimens of a certain kind of plant were wanted, they would go to any diſtance to procure them.

They manage their canoes with the greateſt agility, and ſwim with ſurpriſing eaſe. Their common trailing canoes are neatly made, and curiouſly poliſhed. Theſe conſiſt of two, faſtened to a tranſverſe platform of planks, in the midſt of which they erect an hut, where they place their goods, their arms, and utenſils, and where they paſs great part of their time. They have alſo holes which give into the body of each canoe: their maſts are ſtraight poles, which can be ſtruck at pleaſure; and their ſails are very large and triangular, but not very proper to make way before the wind. Their cordage, in general, is excellent, and they have alſo contrived a very good ground tackle, conſiſting of a ſtrong rope, with large ſtones at the end, by means of which they come to an anchor.

From the enquiry of a great number of the natives, on the arrival of the veſſel in the iſland, it appeared, that the fame of theſe voyagers had already reached this ſpot. They ſupplied their European viſitors with plenty of fruit and roots. A few fowls, and one or two ſmall pigs, were all the animal food procured here.

No king, on the firſt viſit, was diſtinguiſhed amongſt theſe people, and their method of government was entirely unknown. A young dog and a bitch were left here, as they had no ſuch animal among them, and were the firſt of thoſe they ſaw. The people here are more afflicted with the leproſy, or ſome ſcrophulous diſorder, than at any of the other iſlands.

Captain Cook, reviſiting theſe iſlands in 1777, reſumed the ſame ſtation for anchorage as he had before occupied, and, as he thought, moſt probably in the ſame place where the firſt diſcoverer of this and ſome of the neighbouring iſlands anchored in 1643. The officers ſometimes amuſed themſelves in walking up the country, and ſhooting wild ducks, reſembling our widgeon, which are very numerous on the ſalt lake, as well as on the pool where water was procured. They found, on theſe excurſions, that the inhabitants frequently deſerted their houſes to repair to the trading place, without entertaining the leaſt ſuſpicion that ſtrangers would take away or deſtroy any property that belonged to them. From this circumſtance, it might be ſuppoſed, that moſt of the natives were ſometimes collected on the beach, and that there would be no great difficulty in forming an accurate computation of their number; but the continual reſort of viſitors from other iſlands rendered it impoſſible. However, as they never ſaw more than a thouſand perſons collected at one time, it may be reaſonably ſuppoſed, that there are about twice that number upon the iſland.

The natives, as upon a former occaſion, ſhewed their European viſitors every mark of civility. In the courſe of a few days they were viſited by a great chief from Tongataboo, or Amſterdam, whoſe name was Feenou, and to whom the commander was introduced as king of all the Friendly Iſles. He was alſo given to underſtand, that on his arrival, a canoe had been diſpatched to Tongataboo with the news; in conſequence of which this chief immediately paſſed over to Annamooka. When the Britiſh commander went to pay this great man a viſit, having firſt received a preſent of two fiſh from him, brought on board by one of his ſervants, he came up to him immediately on his landing. He appeared to be about thirty years of age, tall, but thin, and had more of the European features than had been ſeen before. Captain Cook, after the firſt ſalutation, aſked if he was the king; for notwithſtanding the information he had received, finding he was not the man he had remembered to have ſeen under that character during a former voyage, he began to entertain doubts. Taipa, a friendly chief, who had accompanied him ſince his laſt arrival, officiouſly anſwered for him, and mentioned many iſlands, of which he ſaid Feenou was the ſovereign. The monarch, and five or ſix of his attendants, having done the European viſitor the honour of accompanying him on board, he gave ſuitable preſents to them all, and having entertained them in ſuch a manner as he thought would be moſt agreeable, attended them on ſhore in the evening, and received a return for the preſents he had made.

A matter now fell out, the recital of which will convey ſome idea of the extent of the authority exerciſed here over the common people, very little of which was known before. While Feenou was on board the ſhip, an inferior chief, for what reaſon our people on ſhore did not know, ordered all the natives to retire from the poſt they occupied. Some of them having ventured to return, he took up a large ſtick and beat them moſt unmercifully. He ſtruck one man on the ſide of the face with ſo much violence, that the blood guſhed out of his mouth and noſtrils, and after laying ſome time motionleſs, he was removed from the place in convulſions. The perſon who had inflicted the blow, being told that he had killed the man, only laughed at it, and it was evident that he was not in the leaſt ſorry for what had happened. It was heard afterwards, however, that the poor ſufferer had been ſo fortunate as to recover.—One of the natives having ſtolen a large junk axe out of the ſhip on the firſt day of arrival, opportunity was taken of an invitation to apply to Feenou to exert his authority to get it reſtored; and ſuch was the effect of his mandate, that it was brought on board before the captain's departure.

On this ſecond viſit, the iſlanders gave frequent proofs of their expertneſs in theft. And it is remarked from experience, that even ſome of their chiefs did not think this profeſſion beneath them; for one of them was detected carrying out of the ſhip, concealed under his clothes, the bolt belonging to the ſpun-yarn winch, for which he was ſentenced by the commander to receive a dozen laſhes, and kept in confinement till he paid for his liberty. Their ſervants, or ſlaves, however, were ſtill employed in this dirty work, and it ſeems at the inſtigation of their maſters, who, nevertheleſs, when any of them happened to be caught in the act, ſo far from interceding for them, would adviſe the Europeans to kill them. As this was a puniſhment they did not chooſe to inflict, and flogging ſeemed to make no greater impreſſion on them, than it would have done on the main-maſt, a mode of treatment was deviſed which was thought to have had ſome effect. The delinquents were put under the hands of the barber, who completely ſhaved their heads, thus pointing them as objects of ridicule to their countrymen, and enabling our people to deprive them of future opportunities for a repetition of their rogueries by keeping them at a diſtance.

Feenou was ſo fond of aſſociating with his European friends, that he viſited them daily, and gave the ſtrongeſt proofs of his eſteem and reſpect. But the commander, finding that the iſland was exhauſted of almoſt every article of food that it afforded, determined to proceed directly to Tongataboo. Feenou, underſtanding his reſolution, importuned him ſtrongly to alter his plan, to which he expreſſed as much an averſion as if he had ſome particular intereſt to anſwer by diverting him from it. In preference to it, he

he warmly recommended an iſland, or rather a group of iſlands, called Hapaee, lying to the north-eaſt, where he aſſured him he might obtain a plentiful ſupply of every refreſhment in the eaſieſt manner; and to add weight to his advice, he engaged to attend his new friends thither in perſon. Arguments ſo founded could not fail of having full weight, and Hapaee was accordingly made choice of for the next ſtation. Indeed, as it had never been viſited by any European ſhips, the examination of it became an object of importance.

ISLES OF HAPAEE.

Various Forms, Ceremonies, and Entertainments.

TO the north and north-eaſt of Annamooka, and in the direct track to Hapaee, whither our voyagers were now bound, the ſea is ſprinkled with a great number of very ſmall iſles. As from the ſhoals and rocks adjoining to this group there was no aſſurance that there was a free or ſafe paſſage for large veſſels, though the natives ſailed through the intervals in their canoes, it was deemed expedient to go to the weſtward of the above iſlands; the courſe was framed N. N. W. towards Kao and Toofa, the two moſt weſterly iſlands in ſight, and remarkable for their great height. Theſe iſles lie ſcattered at unequal diſtances, and are in general nearly as high as Annamooka. Moſt of them are entirely clothed with trees; amongſt which are many cocoa-palms, and each forms a proſpect like a beautiful garden placed in the ſea.

When Hapaee was in ſight, our navigators could judge it to be low land, from the trees only appearing above the water. On a nearer view, they conld ſee it plainly forming three iſlands, almoſt of an equal ſize, and ſoon after a fourth to the ſouthward as large as the others. Each ſeemed to be about ſix or ſeven miles long, and of a ſimilar height and appearance. The northernmoſt of them is called Haanno; the next Foa, the third Lefooga, and the ſouthernmoſt Hoolaiva; but all four are included under the general name of Hapaee.

As ſoon as the European veſſels came to an anchor at Hapaee, they were viſited by the natives, and ſurrounded by a multitude of their canoes, filled alſo with them. They brought from the ſhore hogs, fowls, fruit, and roots. Feenou and Omai having come on board after it was light, in order to introduce the commander to the people of the iſland, he accompanied them on ſhore for that purpoſe, landing at the north part of Lefooga, a little to the right of the ſhip's ſtation. Being aſked how long he intended to ſtay, and replying five days, Taipa was ordered to proclaim to the people, as by Omai, his interpreter, he was given to underſtand, that they were all, both old and young, to look upon the viſitor before them as a friend, who intended to remain with them a few days; that, during his ſtay, they muſt not ſteal any thing, nor moleſt him any other way, and that it was expected they ſhould bring hogs, fowls, fruit, &c. to the ſhips, where they would receive in exchange for them a great variety of articles, which he enumerated. Taipa then took occaſion to ſignify to the commander that it was neceſſary he ſhould make a preſent to the chief of the iſland, whoſe name was Earoupa, in conſequence of which ſuch articles were preſented him as far exceeded his expectation. Feenou then ordered Earoupa to ſit by him, and to harangue the people as Taipa had done before him, and to the ſame purpoſe.

At this place the ſupply of proviſions was copious, for in the courſe of one day our people got by barter along ſide the ſhips about twenty ſmall hogs, beſides a large quantity of fruit and roots. The commander was informed, that on his firſt landing in the morning a man came off to the ſhips, and ordered every one of the natives to go on ſhore. Probably this was done with a view to have the whole body of the inhabitants preſent at the ceremony of his reception; for when that was over, multitudes of them returned again to the ſhip.

Feenou, attended by Omai, came ſoon after on board to require the preſence of the commander upon the iſland. In landing, he was conducted to the ſame place where he had been ſeated the day before, and where, ſeeing a large concourſe of people already aſſembled, he conjectured that ſomething more than ordinary was in agitation, but could obtain no information as to particulars. He had not been long ſeated before near an hundred of the natives appeared in ſight, and advanced laden with yams, bread-fruit, cocoa-nuts, and ſugar-canes. They depoſited their burdens in two heaps or piles upon the left hand. Soon after arrived a number of others bearing the ſame kind of articles, which were collected into two piles on the right; to theſe were tied two pigs and ſix fowls, and to thoſe upon the left hand, ſix pigs and two turtles. Earoupa ſeated himſelf before the ſeveral articles to the left, and another chief before thoſe on the right; they being, as was judged, the two chiefs who had collected them, by order of Feenou, who ſeemed to be as implicitly obeyed here as he had been at Annamooka; and, in conſequence of his commanding ſuperiority over the chiefs of Hapaee, had laid this tax upon them for the preſent occaſion.

When this munificent collection of proviſion was laid down in order, and diſpoſed to the beſt advantage, the bearers of it joined the multitude, who formed a large circle round the whole. Preſently a number of men entered the circle, armed with clubs made of green branches of the cocoa-nut tree. Theſe paraded about for a few minutes, and then retired, the one half to the one ſide, and the other half to the other ſide, ſeating themſelves before the ſpectators. Soon after they ſucceſſively entered the liſts, and entertained them with ſingle combats. One champion riſing up, and ſtepping forward from one ſide, challenged thoſe on the other ſide, by expreſſive geſtures more than by words, to ſend one of their body to oppoſe him. If the challenge was accepted, the two combatants put themſelves in proper attitudes, and then began the engagement, which continued till one or other owned himſelf conquered, or till their weapons were broken. As ſoon as each combat was over, the victor ſquatted himſelf down oppoſite to the chief, then roſe up and retired. At the ſame time ſome old men, who ſeemed to ſit as judges, gave their plaudits in a few words; and the multitude, eſpecially thoſe on the ſide to which the victor belonged, celebrated the glory he had acquired in two or three loud huzzas. During the intervals of ſuſpenſion from this entertainment, there were both wreſtling and boxing matches; the latter differed very little from the method practiſed in England.

But what moſt ſurpriſed our people was, to ſee two luſty wenches ſtep forth, and begin boxing without ceremony, and with as much art as the men. This conteſt, however, did not laſt above half a minute before one of them gave it up. The conquering heroine received the ſame applauſe from the ſpectators, which they beſtowed upon the ſucceſsful combatants of the other ſex. The Europeans expreſſed ſome diſlike at this entertainment, which, however, did not prevent two other females from entering the liſts. They ſeemed to be girls of ſpirit, and would certainly have given each other a good drubbing, if two old women had not interpoſed to part them. All the combats were exhibited in the midſt of at leaſt three thouſand people, and were conducted with the greateſt good humour on all ſides; though ſome of the champions, women as well as men, received blows which they muſt have felt for ſome time after.

As ſoon as the diverſions were ended, the chief gave the commander to underſtand, that the heaps

of proviſion on the right hand were a preſent to Omai, and thoſe on the left hand, being about two thirds of the whole quantity, were given to himſelf. He aſſured him, that a guard was needleſs, as not the ſmalleſt article would be taken away by the natives. So, indeed, it proved; for when the proviſions were removed on board, not a cocoa nut was miſſing. It was remarked, that this preſent of Fenou excelled any that had been made the commander by any of the ſovereigns of the various iſlands he had viſited in the Pacific Ocean. His liberality was compenſated by the beſtowal of ſuch commodities as were ſuppoſed to be moſt valuable in his eſtimation. This chief having expreſſed a deſire to ſee the marines go through their military exerciſe, they were accordingly ordered on ſhore from both ſhips.

After they had performed various evolutions, and fired ſeveral vollies to the gratification of the ſpectators; the chief entertained his viſitors, in his turn, with an exhibition, which, as acknowledged by all, was performed with dexterity and exactneſs, far ſurpaſſing the ſpecimen the Europeans had given of their military manœuvres. This was a dance performed by men, and in which no leſs than one hundred and five perſons bore their parts. Each of them had in his hand an inſtrument neatly made, in ſhape reſembling a paddle, of two feet and an half in length, with a ſmall handle and a thin blade, ſo that they were very light. With this inſtrument, they made many and various flouriſhes, each of which was accompanied with a different attitude of the body, or a different movement. At firſt, the performers ranged themſelves in three lines, and by various evolutions, each man changed his ſtation in ſuch a manner, that thoſe who had been in the rear came into the front. Nor did they remain long in the ſame poſition, but theſe changes were made by pretty quick tranſitions. At one time they extended themſelves in one line; they then formed into a ſemicircle; and, laſtly, into two ſquare columns. While this laſt movement was executing, one of them advanced, and performed an antic dance before the commander, with which the whole ended. It was the general opinion of the party preſent, that ſuch a performance would have met with univerſal applauſe upon an European ſtage; and it ſo far exceeded any attempt our people had made to entertain them, that they ſeem to plume themſelves upon their ſuperiority in this particular. They held none of our muſical inſtruments in the leaſt eſteem, except the drum. The French-horns in particular ſeemed to be held in great contempt, for neither here, or at any other of the iſlands, would they pay the leaſt attention to them.

To give the natives a more favourable opinion of Engliſh amuſements, and to have their minds fully impreſſed with a ſenſe of our ſuperior attainments, the commander directed ſome fire-works to be prepared, and after dark cauſed them to be played off in the preſence of Fenou, the other chief, and a vaſt concourſe of their people. They ſucceeded in general ſo well as to anſwer the end propoſed. The water and ſky-rockets, in particular, pleaſed and aſtoniſhed them exceedingly.

As a prelude to another entertainment of dances which Fenou had prepared for his gueſts, a band of muſic, or chorus of eighteen men, ſeated themſelves before them in the centre of the circle compoſed by the numerous ſpectators, the area of which was to be the ſcene of the exhibitions. Four or five of this band had pieces of large bamboo, from three to five or ſix feet long, each managed by one man, who held it nearly in a vertical poſition, the upper end open, but the other cloſed by one of the joints. With this cloſe end, the performers kept conſtantly ſtriking to the ground, though ſlowly, thus producing different notes, according to the different lengths of the inſtruments, but all of them of the hollow or baſe ſort; to counteract which, a perſon kept ſtriking, quickly and with two ſticks, a piece of the ſame ſubſtance, ſplit and laid along the ground, and by that producing a tone as acute as thoſe proceeding from the others were grave. The reſt of the band, as well as thoſe who performed on the bamboo, ſung a ſlow and ſoft air, which ſo tempered the harſher notes of the above inſtruments, that no by-ſtander, however accuſtomed to hear the moſt perfect modulations of ſweet ſounds, could avoid confeſſing the vaſt power and pleaſing effect of this ſimple harmony. After this concert had continued about a quarter of an hour, twenty women entered the circle. Moſt of them had upon their heads garlands of crimſon flowers of China roſe, or others; and many of them had ornamented their perſons with leaves of trees, cut with great nicety about the edges. They formed a circle round the chorus, turning their faces towards it, and began by ſinging a ſoft air, to which reſponſes were made by the chorus in the ſame tone, and theſe were repeated alternately. All this while the women accompanied their ſong with ſeveral very graceful motions of their hands towards their faces, and in other directions, at the ſame time making conſtantly a ſtep forward, and then back again with one foot, while the other was fixed.—They then turned their faces to the aſſembly, ſung ſome time, and retreated ſlowly in a body, to that part of the circle which was oppoſite to the ſpot where the principal ſpectators ſat. After this, one of them advanced from each ſide, meeting and paſſing each other in the front, and continuing their progreſs round till they came to the reſt. On which two advanced from each ſide, two of whom alſo paſſed each other, and returned as the former; but the other two remained, and to theſe came one from each ſide by intervals, till the whole number had again formed a circle about the chorus.

They now changed their manner of dancing to a quicker meaſure, in which they made a kind of half turn by leaping, and clapped their hands, and ſnapped their fingers, repeating ſome words in conjunction with the chorus. Towards the end, as the quickneſs of the muſic increaſed, their geſtures and attitudes were varied with wonderful vigour and dexterity, and ſome of their motions by our countrymen might be deemed indecent: though probably this part of the performance was not meant to convey any wanton ideas, but merely to diſplay the aſtoniſhing variety of their movements. Another exhibition followed, performed by fifteen men; and though ſome of them were old, time ſeemed to have robbed them of but little of their agility. They were diſpoſed in a kind of circle, divided at the front. Sometimes they ſung ſlowly, in concert with the chorus, making ſeveral graceful motions with their hands, but differing from thoſe of the women; at the ſame time inclining the body alternately to either ſide, by raiſing one leg outward, and reſting on the other; the arm of the ſame ſide being alſo ſtretched upwards. They then recited ſentences, which were anſwered by the chorus; and occaſionally increaſed the meaſure of the dance, by clapping the hands, and quickening the motions of the feet. Towards the concluſion, the rapidity of the muſic and dancing ſo much increaſed, that the different movements were hard to be diſtinguiſhed.

Twelve other men advanced after the concluſion of the dance, placing themſelves in double rows, fronting each other. On one ſide was ſtationed a kind of prompter, who repeated ſeveral ſentences, to which reſponſes were made by the performers and the chorus. They ſung and danced ſlowly; and gradually grew quicker, like thoſe whom they had ſucceeded.

The next that exhibited themſelves were nine women, who ſat down oppoſite the hut where the chief had placed himſelf. A man immediately roſe, and gave the firſt of theſe women a blow on the back with both his fiſts joined. He treated the ſecond and third in the ſame manner; but when he came to the fourth, he ſtruck her upon the breaſt. Upon ſeeing this, a perſon

inſtantly riſing from among the crowd, knocked him down with a blow on the head, and he was quietly carried away. But this did not excuſe the other five women from ſo extraordinary a diſcipline; for they were treated in the ſame manner by a perſon who ſucceeded him. When theſe nine women danced, their performance was twice diſapproved of, and they were obliged to repeat it again. There was no great difference between this dance and that of the firſt women, except that theſe ſometimes raiſed the body upon one leg, and then upon the other, alternately, by a ſort of double motion. Soon after a perſon entered, making ſome ludicrous remarks on what had been exhibited, which extorted a burſt of laughter from the crowd. The company had then a dance by the attendants of Fenou; they formed a double circle of twenty-four each round the chorus, and joined in a gentle ſoothing ſong, accompanied with motions of the head and hands. They alſo began with ſlow movements, which gradually became more and more rapid, and finally cloſed with ſeveral very ingenious tranſportations of the two circles.

The entertainments of this remarkable night concluded with a dance, in which the principal people preſent exhibited, and which was performed with ſo much ſpirit, and ſo great exactneſs, that they met with univerſal approbation. The native ſpectators, who, no doubt, were perfect judges whether the ſeveral performances were properly executed, could not withhold their applauſes of ſome particular parts, and even a ſtranger who never ſaw the diverſion before, felt at this time ſimilar ſatisfaction.

The place where theſe dances were performed, was an open ſpace amongſt the trees, juſt by the ſea, with lights at ſmall intervals placed round the inſide of the circle. The concourſe of people was pretty large, though not equal to the number aſſembled when the marines went through their exerciſe. Some gueſſed there might be about five thouſand perſons preſent on this occaſion.

The commander next day took a tour into the iſland of Lefooga, of which he was deſirous to obtain ſome knowledge, and found it to be in ſeveral reſpects ſuperior to Annamooka. The plantations were more numerous and more extenſive. In many places indeed, towards the ſea, eſpecially on the eaſt ſide, the country is ſtill waſte, which is owing probably to the ſandy ſoil, as it is much lower than Annamooka and its ſurrounding iſles. But towards the middle of the iſland the ſoil was better, and the marks of conſiderable population and of improved cultivation were every where ſeen. The party which went on the excurſion obſerved large ſpots covered with the paper mulberry-trees, and the plantations in general were well ſtocked with ſuch roots and fruits as are the natural produce of the iſland. To theſe ſome addition was made by our countrymen, in ſowing the ſeeds of Indian corn, melons, pumpkins, &c.

The iſland is not above ſeven miles long, and in ſome places not above two or three broad. The eaſt ſide of it, which is expoſed to the trade-wind, has a reef running to a conſiderable breadth from it, on which the ſea breaks with great violence. It is a continuation of this reef that joins Lefooga to Foa, which is not above half a mile diſtant, and at low water the natives can walk upon this reef, which is then partly dry, from one iſland to another. The ſhore itſelf is either a coral rock, ſix or ſeven feet high, or a ſandy beach; but higher than the weſt ſide, which in general is not more than three or four feet from the level of the ſea, with a ſandy beach its whole length.

A party in a walk happened to ſtep into a houſe where a woman was dreſſing the eyes of a young child who ſeemed blind, the eyes being much inflamed, and a film ſpread over them. The inſtruments ſhe uſed were two ſlender wooden probes, with which ſhe had bruſhed the eyes ſo as to make them bleed. It ſeems worth mentioning, that the natives of thoſe iſlands ſhould attempt an operation of this ſort, though our countrymen entered the houſe too late to deſcribe exactly how this female oculiſt applied the wretched tools ſhe had to work with. However, they ſaw a different operation go on in the ſame houſe, of which they were able to give a tolerable account. They there found another woman ſhaving a child's head with a ſhark's tooth, ſtuck into the end of a piece of ſtick. It was obſerved, that ſhe firſt wetted the hair with a rag dipped in water, applying her inſtrument to that part which had been previouſly ſoaked. The operation ſeemed to give no pain to the child, although the hair was taken off as cloſe as if one of our razors had been employed. A perſon of curioſity amongſt the party, encouraged by what he ſaw, ſoon after tried one of theſe ſingular inſtruments upon himſelf, and found it to be an excellent ſhift. The men of theſe iſlands, however, have recourſe to another contrivance when they ſhave their beards. They perform the operation, as before mentioned, with two ſhells, and ſome amongſt them ſeem to profeſs this trade. It was as common, according to the account of our voyagers, to ſee the ſailors go on ſhore to have their beards ſcraped off, after the faſhion of Hapaee, as it was to ſee their chiefs come on board to be ſhaved by our barbers.

An artificial mount was near the ſouth end of the iſland Lefooga. From the ſize of ſome trees that were growing upon it, and from other appearances, it was ſuppoſed to have been raiſed in remote times. At the bottom of this mount ſtood a ſtone, which muſt have been hewn out of coral rock; it was four feet broad, two and a half thick, and fourteen high, and our people were told by the natives preſent, that not above half its length appeared above ground. They called it *tangata areekee*, (tangata in their language is man, areekee, king) and ſaid that it had been ſet up and the mount raiſed by ſome of their forefathers, in memory of one of their kings; but how long ſince, they could not give information.

The party that landed at Hoolaiva did not find the leaſt mark of cultivation or habitation upon it, except a ſingle hut, the reſidence of a man employed to catch fiſh and turtle. Uninhabited as Hoolaiva is, an artificial mount, like that at the adjoining iſland, has been raiſed upon it as high as the ſurrounding trees. A large ſailing canoe here came under the commander's ſtern, in which was a perſon named Tuttafaihe, or Poulaho, or both, who, as the natives then on board informed our people, was king of Tongataboo, and was king of all the neighbouring iſlands that we had ſeen or heard of. The commander was ſurpriſed at having a ſtranger introduced to him under that dignified character, which he had been before aſſured belonged to another; but the natives perſiſted in their declaration, and for the firſt time confeſſed that Fenou was not the king, but only a ſubordinate chief, though of great power, as he was often ſent from Tongataboo to the other iſlands on warlike expeditions, or to decide differences.—However, as it was the intereſt as well as inclination of the commander to pay court to all the great men, without enquiring into the validity of their aſſumed titles, Poulaho was invited on board; nor was he an unwelcome gueſt, for he brought with him as a preſent two fat hogs, though not ſo fat as himſelf. If weight of body could give weight in rank or power, he was certainly the moſt eminent man in that reſpect who had been ſeen; for, though not very tall, he was very unwieldy, and almoſt ſhapeleſs with corpulence. He appeared to be a ſedate, ſenſible man, viewed the ſhip and the ſeveral new objects with uncommon attention, and aſked many pertinent queſtions.

Poulaho ſoon became as ſolicitous himſelf as his people were, to convince his new friends that he was king, and not Fenou, who had paſſed with them as ſuch:

ſuch: for he ſoon perceived they had ſome doubts about it, which Omai, from his attachment to Fenou, was not very deſirous of removing. Poulaho ſat down to table, ate little, drank leſs, and, on riſing, deſired the commander to accompany him on ſhore. This was accordingly complied with, after preſenting him with ſuch articles as he was obſerved to value moſt, and were even beyond his expectation to receive. This munificence was however amply compenſated both by preſents and honours, as ſoon as they reached the ſhore. The commander was placed at his ſide, while he received the ſeveral articles his people had got by trading on board the ſhips. At length he ordered every thing to be reſtored to the reſpective owners, except a glaſs bowl, with which he was ſo much pleaſed, that he reſerved it to himſelf.

The perſons who brought theſe things to him firſt ſquatted themſelves down before him, then depoſited their ſeveral purchaſes, and immediately roſe up and retired. The ſame reſpectful ceremony was obſerved in taking them away, and not one of them preſumed to ſpeak to him ſtanding. The commander ſtaid till ſeveral of his attendants left him, firſt paying him obedience, by bowing the head down to the ſoles of his feet, and touching or tapping the ſame with the upper and under ſide of the fingers of both hands.—The commander was charmed with the decorum that was obſerved, and declared that he had no where ſeen the like, even amongſt more civilized nations.

The king continued to heap favours on his new friend, and, in particular, preſented the commander with one of their caps, which were known to be valued at Otaheite, one of the places of their future deſtination. Theſe caps, or rather bonnets, are compoſed of the tail feathers of the tropic bird, with the red feathers of the parroquets wrought upon them, or jointly with them. After various courſes, hazards, and difficulties, they arrived and landed at Kotoo, in order to examine that iſland.

It is ſcarcely acceſſible by boats on account of the coral reefs that ſurround it. It is not more than a mile and a half, or two miles long, and not ſo broad. The north-weſt end of it is low, like the iſlands of Hapaee, but it riſes ſuddenly in the middle, and terminates in reddiſh clayey cliffs at the ſouth-eaſt end about thirty feet high. The ſoil in that quarter is of the ſame ſort as in the cliffs; but in the other parts, it is a looſe black mould. It produces the ſame fruits and roots which were found at the other iſlands, and is tolerably cultivated, but thinly inhabited.

CHAP. VII.

ISLANDS BETWEEN THE EQUATOR AND THE SOUTHERN TROPIC.

Their Situation, Productions, Manners of the Natives, and other Particulars.

AS ſome of theſe are comprehended under the liſt of the Friendly Iſlands, as ſuch they will be pointed out and firſt attended to.

From the beſt accounts, we may include not only the groupe at Hapaee, viſited by our late navigators, but thoſe diſcovered nearly under the ſame meridian to the north, as well as ſome others under the dominion of Tongataboo, which though not the largeſt, is the capital ſeat of government.

This archipelago muſt be very extenſive, for the natives reckoned a great number of iſlands; fifteen of them were ſaid to be very lofty.

The principal of thoſe ſeen on the laſt voyage have been deſcribed, viz. Eooa, Annamooka, Hapaee, and Tongataboo.

Plyſtart-Iſland was ſo called by Taſman who firſt ſaw it. The name ſignifies arrow-tail. This iſland lies in latitude 22 deg. 26 min. ſouth, and longitude 170 deg. 59 min. weſt; it is mountainous, barren, and about two or three miles in circumference.

Ammattafoa. From the appearance of a thick ſmoke ariſing from this iſland, and a fire iſſuing from it in the night, it was concluded that there was a volcano upon it, and this opinion was confirmed by information received from the natives that the appearances are conſtant. Near to this iſland is a high peak called Oghoa. They are both inhabited, ſeem barren, and are about twelve leagues diſtant from Annamooka.

It is ſuppoſed by captain Cook, that Prince William's Iſlands, diſcovered and ſo named by Taſman, are included in this liſt; and aſſigns as a reaſon, that while he lay at Hapaee, he received information from one of the natives, that at the diſtance of three or four days ſail from thence to the north-weſt, there was a cluſter of ſmall iſlands, and this account correſponds with that given in Taſman's voyage. From the beſt information our late navigators could obtain, the moſt conſiderable in this neighbourhood are Hamod, Vavaoo, and Feejee. Each of theſe was repreſented to them as larger than Tongataboo: our countrymen in their late voyages did not viſit them.

Hamoa lies two days ſail north-weſt from Vavaoo. It is ſaid to be the largeſt of all their iſlands; affords harbours and good water, and produces in abundance all the articles of refreſhment that are found at the places our people viſited. Poulaho frequently reſides upon this iſland; and the people here are in high eſtimation at Tongataboo.

Feejee lies in the direction of north-weſt by weſt, about three days ſail from Tongataboo. It abounds with hogs, dogs, fowls, and ſuch fruits and roots as are to be found in any of the others, and is much larger than Tongataboo; but not ſubject to its dominion, as the other iſlands of this archipelago are. Feejee and Tongataboo frequently engage in war againſt each other; and the inhabitants of the latter are often ſo much afraid of this enemy, that they bend the body forward, and cover the face with their hands, to expreſs the ſenſe of their own inferiority to the Feejee men. This is, indeed, no matter of ſurpriſe, for thoſe of Feejee have rendered themſelves formidable, by their dexterity in the uſe of bows and ſlings; but more ſo, by their ſavage practice of eating ſuch of their enemies as they kill in battle. Extreme hunger, ſome ſay, firſt occaſioned men to feed on human fleſh; but where could be the inducement for the Feejee people to continue it in the midſt of plenty? It is held in deteſtation by the inhabitants of Tongataboo, who ſeem to cultivate the friendſhip of their ſavage neighbours of Feejee through fear; though they, occaſionally, venture to ſkirmiſh with them on their own territory, and carry off large quantities of red feathers as trophies. When a profound peace reigns between the two iſlands, they have frequent intercourſe together; though, it is probable, they have not long been known to each other; or, it might be ſuppoſed, that Tongataboo, and its neighbouring iſlands, would, before this time, have been ſupplied with a breed of dogs, which are numerous at Feejee, and were not introduced at Tongataboo, when firſt viſited by our countrymen in 1773.

The colour of the natives of Feejee met with here, was a ſhade darker than any of the inhabitants of the other Friendly Iſlands. One of the natives was ſeen, who had his left ear ſlit, and the lobe ſo ſtretched, that it almoſt extended to his ſhoulder; which ſingularity had been obſerved at other iſlands in the South Seas during a former voyage. The Feejee men were much reverenced here; not only on account of their power

power and cruelty in war, but alſo for their ingenuity; for they greatly excelled the inhabitants of Tongataboo in workmanſhip. Specimens were ſhewn of their clubs and ſpears which were ingeniouſly carved. Some of their beautiful chequered cloth, variegated mats, earthen pots, and other articles, alſo diſplayed a ſuperiority in the execution.

Feejee, as before obſerved, is three days ſail from Tongataboo; theſe people having no other method of expreſſing the diſtance from iſland to iſland, but by mentioning the time required for the voyage in one of their canoes. That this might be aſcertained with ſome preciſion, captain Cook ſailed in one of their canoes, and by repeated trials with the log, found that ſhe went cloſe hauled, in a gentle gale, ſeven miles in an hour. He judged from this, they could ſail, with ſuch breezes as in general blow in their ſeas, ſeven or eight miles an hour on an average. Each day, however, is not to be reckoned at twenty-four hours; for when they talk of one day's ſail, they mean no more than from the morning to the evening, or ten or twelve hours at the moſt. From the morning of the firſt day till the evening of the ſecond, is, with them, two days ſail. In the day, they are guided by the ſun; and, in the night, by ſtars, When theſe are obſcured, they can only have recourſe to the points from whence the winds and waves come upon the veſſel. If, at that time, the winds and waves ſhould ſhift, they are quite bewildered, often miſſing their intended port, and ſometimes are never heard of more.

Traitors, or Keppel's Iſland, lying in 15 deg. 55 min. latitude; 175 deg. 3 min. longitude weſt, is three miles and a half in extent and two in breadth. It was ſeen by Le Mair in 1716, and by him named The Iſland of Traitors. When Captain Wallis arrived here, in the Dolphin, in 1765, he found a good landing place. The natives appear to be of a diſpoſition ſimilar to that of thoſe of the Friendly Iſlands in general, and reſemble them in the clothing and the amputation of the little fingers. At that time no hogs were ſeen upon this iſland, and the refreſhments procured were trifling.

The reaſon that captain Cook comprehends both this, and the following, called Boſcawen's Iſland, in the liſt, ariſes from the following circumſtances. Enquiring one day of Poulaho, the king, in what manner the inhabitants of Tongataboo had acquired the knowledge of iron, and from what quarter they had procured a ſmall iron tool, which he had ſeen amongſt them when he firſt viſited their iſland; he was informed they had received it from an iſland, which he called Neeootabootaboo. On a more minute enquiry, the king ſaid, that one of thoſe iſlanders ſold a club for five nails to ſome of the crew of a ſhip that had touched there, and that theſe five nails were afterwards ſent to Tongataboo. He added, that this was the firſt iron known amongſt them, ſo that what Taſman left of the metal, muſt have been worn out and forgotten long ago. On enquiring further, the principal facts appeared to be freſh in his memory; he ſaid there was but one ſhip, that ſhe did not come to anchor, but left the iſland after her boat had been on ſhore. From ſeveral particulars which he mentioned, it could not be many years ſince this had happened. It appeared, further, from his account, that there were two iſlands near each other, at which he had been himſelf. The one he deſcribed as high and peaked, like Kao, and he called it Kootahee; the other, where the people of the ſhip landed, called Neeootabootaboo, he repreſented as much lower. He added, that the natives of both were the ſame ſort of people with thoſe of Tongataboo; and built their canoes in the ſame manner; that their iſland had hogs and fowls, and in general the ſame vegetable productions. Upon the whole, it appeared evident to captain Cook, that the ſhips ſo pointedly referred to, in this converſation, could be no other than the Dolphin, the only ſhip from Europe, as far as could be learned, that had touched, of late years, at any iſland in this part of the Pacific Ocean, prior to his former viſit of the Friendly Iſlands.

Cocos, or Boſcawen's-Iſland. This iſland received the former name from Le Mair and Schouten, who firſt viſited it in 1716, and the latter from captain Wallis, who ſaw it the ſame voyage as he did the foregoing. It lies in latitude 15 deg. 50 min. ſouth, and longitude 175 deg. weſt. The natives of this, as well as Traitor's-Iſland, are of a ſavage diſpoſition. Their clothing conſiſts of ruſhes or mats; they have their hair in different forms, and are robuſt and well proportioned. The flaps of their ears are ſlit, and hang down almoſt to the ſhoulders. They wear whiſkers and a ſhort tuft under the chin, and their bodies are punctured or tattowed.

When the firſt Europeans arrived at this ſpot, one of the chiefs put off from the ſhore, in a canoe, covered with a mat in the form of a tent, and accompanied by a number of people in thirty canoes. As they approached Schouten's ſhip, the chief cried out three times with a loud voice, and at the fourth all the attendants joined him. He preſented the commander with a paper dreſs and a fine mat, for which he received due compenſation. Theſe people ſoon gave proofs of an irreſiſtible propenſity to theft, attempting to pilfer every thing they ſaw; they even tried to draw out the nails from the ſhip's ſide with their teeth; nay, ſome ſwam under the very keel, and ſtrove to draw the nails from thence, till being fired at they deſiſted. A vaſt number of them, however, next day put off from ſhore with ſome hogs, bananas, fowls, and cocoa nuts, of which they have plenty. When the chief, or Latow, as he is there called, gave the ſignal from his double canoe, there was a general ſhout, followed by a volley of ſtones thrown on board the ſhip. The chief, indeed, was ſo abſurd as to ſuppoſe that he could run down the ſhip with his canoe, and made the ridiculous attempt, in which he ſtruck the head of it to pieces. This exaſperated the ſavages, and they renewed the attack, but they were ſoon put to flight, by the diſcharge of ſmall arms and a few great guns.

Hervey-Iſland, ſo called by captain Cook, in honour of the earl of Briſtol, was diſcovered by him in 1773. It is ſituated low, in latitude 19 deg. 8 min. ſouth, longitude 158 deg. 4 min. weſt. On his laſt voyage, our people obſerved, on their approach, ſeveral canoes coming from the ſhore towards the ſhips, a circumſtance which occaſioned much ſurpriſe, as no traces or ſigns of inhabitants were ſeen when the iſland was firſt diſcovered. It might, indeed, be owing to a briſk gale that then blew, and prevented their canoes from coming out. Thoſe that came off, ſtopped at a ſhort diſtance from the veſſel: it was with difficulty they were prevailed on to come along ſide, but could not be induced, by any means, to come on board. They ſoon, however, began to evince their propenſity to theft, ſo prevalent in this part of the globe, in ſtealing oars, cutting away a net, containing meat, that hung over the ſtern of one of the ſhips, and other acts of a like nature. But it appeared that they had a knowledge of bartering, for they exchanged ſome fiſh for ſome of our ſmall nails, of which they were extravagantly fond, and called them *goore*. Pieces of paper, or any trifling article that was thrown to them, they caught with the greateſt avidity; and if what was thrown fell into the ſea, they immediately plunged in to ſwim after it.

The colour of the natives of Hervey-Iſland, is of a deep caſt, and ſeveral of them had a fierce ſavage aſpect, like the natives of New Zealand, though ſome were fairer. Their hair was long and black, either hanging looſe about their ſhoulders, or tied in a bunch on the top of the head. Some few, indeed, had it cropped ſhort, and in two or three of them, it was of a red

a red or browniſh colour. Their clothing was a narrow piece of mat, bound ſeveral times round the lower part of the body, and paſſing between the thighs. A fine cap of red feathers was ſeen lying in one of the canoes, and ſome amongſt them were ornamented with the ſhell of a pearl-oyſter, poliſhed and hung about the neck.

The boats that were ſent to reconnoitre the coaſt, could advance no further than the other edge of the reef, which was computed almoſt a quarter of a mile from the dry land. A number of the natives came upon the reef, armed with clubs and long pikes, meaning, as was ſuppoſed, to oppoſe the people's landing; though, at the ſame time, they threw cocoa-nuts to them, and requeſted them to come on ſhore. Notwithſtanding this ſeeming friendly treatment, the women were very active in bringing down a freſh ſupply of darts and ſpears.

Captain Cook diſcovered Palmerſton's-Iſland in 1774. It lies in latitude 18 deg. 4 min. ſouth, and longitude 163 deg. 10 min. weſt. This iſland conſiſts of a groupe of ſmall iſlets, about nine or ten in number, connected by a reef of coral rocks, and lying in a circular direction. It appeared from obſervation made by ſome of our people in going on ſhore upon the laſt voyage, that the iſland does not exceed a mile in circumference, and is not elevated above three feet beyond the level of the ſea. It conſiſts almoſt entirely of a coral ſand, with a ſmall mixture of blackiſh mould, which appeared to be produced from rotten vegetables.

The ſoil, poor as it is, however, is covered with ſhrubs and buſhes; a great number of man of war birds, tropic birds, and alſo two ſorts of boobies were perceived, which were then laying their eggs, and ſo exceedingly tame as to ſuffer themſelves to be taken off their neſts, which conſiſted only of a few ſticks looſely put together. Theſe tropic birds differ eſſentially from the common ſort, being of a beautiful white, ſlightly tinged with red, and having two long tail-feathers of a deepiſh crimſon. Our people killed a conſiderable number of each ſort, which, though not the moſt delicate kind of food, were highly acceptable to ſuch as had been a long time confined to a ſalt diet. There were plenty of red crabs creeping among the trees; and ſeveral fiſh caught, which, when the ſea retreated, had been left in holes upon the reef.

At one part of the reef, which bounds the lake within, almoſt even with the ſurface, there appeared a large bed of coral, which afforded a moſt enchanting proſpect. Its baſe, which was fixed to the ſhore, extended ſo far that it could not be ſeen, ſo that it appeared to be ſuſpended in the water. The ſea was then unruffled, and the refulgence of the ſun expoſed the various ſorts of coral, in the moſt beautiful order; ſome parts luxuriantly branching into the water; others appearing in vaſt variety of figures; and the whole greatly heightened by ſpangles of the richeſt colours, glowing from a number of large clams interſperſed in every part. Even this delightful ſcene was greatly improved by the multitude of fiſhes, whoſe colours were the moſt beautiful that can be imagined; blue, yellow, red, &c. far excelling any thing that can be produced by art. The richneſs of this view was greatly increaſed by their various forms; and the whole could not poſſibly be ſurveyed without a moſt pleaſing tranſport.

No traces could be diſcovered of inhabitants having been here, except a piece of a canoe that was found upon the beach; and probably that might have been drifted from ſome other iſland. Some ſmall brown rats were found on this iſland; a circumſtance, perhaps, not eaſily accounted for, unleſs the poſſibility of their being imported in the canoe, of which the remains were ſeen, be admitted.

An ample ſupply was found here for the ſubſiſtence of the cattle, conſiſting principally of tender branches of the wharra-tree, palm-tree, palm-cabbage, and young cocoa-nut trees. Amongſt the great number of fiſh found upon the reefs, were ſome beautiful large ſpotted eels, which would raiſe themſelves out of the water, and endeavour to bite their purſuers. There were alſo ſnappers, parrot-fiſh, and a brown ſpotted rock-fiſh, not larger than a haddock, ſo tame that it would remain fixed, and gaze at the people. If they had been really in want, a ſufficient ſupply might eaſily have been had. There were alſo ſome ſhell-fiſh; and when the tide flowed, ſeveral ſharks came with it, ſome of which were killed by our people; but their preſence rendered it, at that time, unſafe to walk in the water. Muſquetoes abound here.

The iſlets, comprehended under the name of Palmerſton's-Iſland, may be ſaid to be the ſummits of a reef of coral rock, covered only with a thin coat of ſand; though clothed with trees and plants, like the low grounds of the high iſlands of this ocean.

In their courſe to Annamooka, our late navigators paſſed the following places.

Savage-Iſland, diſcovered by captain Cook in 1774. It lies in latitude 19 deg. 1 min. ſouth, and longitude 169 deg. 37 min. weſt. On his firſt landing, the inhabitants diſcovered a moſt ſavage ferocity, and withſtood every poſſible intimation of good will. They gave ſuch evident tokens of hoſtile deſigns in darting a ſpear, which grazed the commander's ſhoulder, and other inſtances, that a party poſted on a rock, to ſecure a retreat in caſe of an attack, found it neceſſary to fire on the natives to reſcue him, and thoſe who were with him, from impending deſtruction. —From the general aſpect and conduct of theſe iſlanders, captain Cook was induced to call this ſpot Savage-Iſland. It is in circuit about ſeven leagues, of a round form, good height, and has deep water cloſe to its ſhores. As no ſoil was to be ſeen towards the coaſts, and the rocks alone ſupplied the trees with moiſture, the interior parts are ſuppoſed to be barren.

Eimeo, or Wallis's Duke of York's Iſland, was firſt diſcovered by captain Wallis in 1767. It was viſited by captain Cook in 1777. The harbour, which is called Taloo, is ſituated on the north ſide of the iſland. It runs between the hills about two miles ſouth, or ſouth by eaſt. For ſafety and ſoundneſs of bottom it is pronounced by our navigators equal to any harbour met with in this ocean, to which is added this peculiar convenience, that a veſſel can ſail both in and out with the reigning trade wind. A rivulet falls into it ſufficiently capacious to admit boats a quarter of a mile up, where the water was found perfectly freſh. The banks of the rivulet are covered with what the natives call the Pooroo tree, which is in no eſtimation, and ſolely uſed for firing. From theſe two cauſes wood and water abound here.—There is another harbour called Parowroah, about two miles to the eaſtward on the ſame ſide of the iſland. Though much larger within than Taloo, the opening in the reef lies to leeward of it, and is in no degree ſo wide. From theſe two defects the harbour of Taloo is evidently ſuperior. On the ſouth ſide of the iſland are one or two more harbours, but they are inconſiderable compared with thoſe above deſcribed.

The natives of the Duke of York's Iſland are a ſtout, robuſt, well-made people, of a light copper colour; none of them could be called black; they go entirely naked. The hair is woolly; but it is ſo managed by ſome ſort of greaſe or ointment, and a white or red powder with which they dreſs it, that it hangs on ſome like ſo many candle-wicks, or rather like the thrums of a new mop reverſed, or turned upſide down: they are generally as fully powdered as a beau dreſſed for an aſſembly; ſome have their hair of a yellow, ſun-burnt colour; others quite red,

as if powdered wholly with the true marechall; none are ſeen with the hair of its natural colour. This yellow or red appearance, we believe, may be occaſioned by an univerſal method of powdering, for the powder ſeems to be made from burnt ſhells or coral, and is really a kind of lime: they generally carry a ſmall gourd or box filled with it about them; and when they are hoſtilely diſpoſed, they frequently take a quantity of this powder into the hollow of the hand, from which, with a ſtrong blaſt from the mouth, they blow it before them; and at a ſmall diſtance it has exactly the appearance of firing gunpowder, and no doubt ſo meant as a token of defiance.

Their chief, upon hoſtile occaſions, powdered his body all over, ſo that it was no difficult matter to diſcover him; they alſo upon ſuch occaſions painted their faces red; ſome had marks upon their arms and ſhoulders, cauſed by ſcarifying thoſe parts in long ſtripes, and letting the ſore riſe above the ſurface of the ſkin. They frequently wore a bone or reed thruſt through the ſeptum of the noſe, and, like the natives of Lord Howe's Group, had alſo holes cut through the wings of the noſe, into which were fixed ſhort pieces of hollow reed, as ladies wear wires to keep the ears open when newly bored; into theſe hollows or rings they occaſionally ſtuck long pieces of reed, which are no doubt conſidered by them as ornamental. The men in general were well-looking people; but the women are remarkable for being of a dark hue, low of ſtature, and diſagreeable features.

Numbers of the natives came on board the European veſſels as ſoon as they had anchored, from mere curioſity, as appeared by their bringing out commodities for the purpoſe of traffic. Several canoes, however, arrived the next day from more remote quarters with an abundant ſupply of bread-fruit, cocoa-nuts, and a few hogs, which were exchanged for beads, nails, and hatchets.

Maheme, the chief of the iſland, accompanied by his wife, viſited the commander on board; but through extreme caution and deliberation, betrayed much diſtruſt. They were preſented with ſuch articles as appeared moſtly to engage their attention, which they took with them on ſhore, and returned with a hog in compenſation; but received an additional preſent to its full value. This chief was between forty and fifty years of age, and bald headed, which in theſe iſlands was rather ſingular at that time of life. He ſeemed deſirous of concealing this baldneſs, as he wore a turban, from whence it was inferred, that it was held diſgraceful; a very probable ſuppoſition, as one of the natives had his head ſhaved as a puniſhment for theft. This propenſity to pilfering prevailed here in common with the iſlanders in general, and the loſs of a goat on the part of the Europeans had nearly been attended with the moſt ſerious conſequences. The natives were guilty of great duplicity of conduct upon this occaſion. The chief retired to a remote part of the iſland; their replies were equivocal on demanding reſtoration of the animal, inſomuch that it was deemed expedient to ſend on ſhore an armed party which drove the natives before them. However, as aſſurance was given them of their ſafety, it put a ſtop to their flight. Perſiſting in their denial of any knowledge of the animal, ſix or eight of their houſes were ſet on fire, two or three canoes were conſumed, and a meſſenger was diſpatched to Maheme with a peremptory declaration, that on his refuſing immediate reſtoration of the goat, a ſingle canoe ſhould not be left on the iſland, nor ſhould hoſtilities ceaſe while the ſtolen animal continued in his poſſeſſion. Theſe means had the deſired effect; the goat was returned—and, it appeared from good intelligence, that it was brought from the very place where the inhabitants, but the day before, declared their total ignorance of the matter.

This iſland, in its produce, is nearly the ſame with that of thoſe adjoining. The country is hilly, has little low land except ſome vallies, and the flat border that almoſt ſurrounds the ſea. Theſe hills, though rocky, are generally covered almoſt to their tops with trees. At the bottom of Taloo harbour the ground gradually riſes to the foot of the hills, but the flat border on each ſide becomes quite ſteep at a very ſmall diſtance from the ſea. This gives it a romantic caſt, pleaſing to the view. In the low grounds the ſoil is of a yelloviſh ſtiff mould; on the lower hills it is blacker and looſer, and the ſtone that compoſes the hills is of a blueiſh colour, with ſome particles of glimma interſperſed. Near where the veſſels lay were two large ſtones, or rather rocks, concerning which the natives entertain ſome ſuperſtitious notions, conſidering them as brother and ſiſter, and holding them to be *Eatooas*, or Divinities brought thither by ſupernatural agency.

The iſland called O-Heteroa is thirteen miles in circumference, ſituated in latitude 22 deg. 27 min. ſouth, and longitude 150 deg. 47 min. weſt. Though more even and uniform, it is neither ſo populous or fertile as the adjacent iſlands. The inhabitants are not hoſpitable, nor have they any harbour for the accommodation of ſhipping. There is a bay on the weſtern ſide of the iſland; the bottom is foul and rocky; but the water is ſo clear that the bottom can be ſeen at the depth of 25 fathom, or 150 feet. The natives are of an hoſtile diſpoſition, and generally armed with lances near 20 feet long, made of a very hard wood, poliſhed and ſharpened at one end.—They differ much in the form of their dreſs from the other iſlanders, though the materials are the ſame. Some of them wear caps made of the large feathers of the tropic bird, and cover their bodies with ſtripes of different coloured cloth, as yellow, red, and brown. Their habit is a kind of ſhort jacket of cloth, which reaches to the knee. It is of one piece, and having a hole in the middle, with long ſtitches round it, is thereby rendered different from the dreſs of all the other iſlanders. Through this hole the head is put, and the whole being bound round the body by a piece of yellow cloth or ſaſh, that paſſes round the neck behind, is croſſed upon the breaſt, and collected round the waiſt like a belt, which paſſes over another belt of red cloth, ſo that they are repreſented as making a very gay and warlike appearance. They take ſingular pains in adorning their canoes, by the embelliſhments of carving, and ſome rows of white feathers hanging down from head to ſtern.

The Iſlands of Danger, were ſo called by commodore Byron, from the hazard to which a veſſel is expoſed from the rocks and broken ground between them, which being ſo low a ſhip may be cloſe in with them before they are ſeen. They are three in number, and their ſituation is differently laid down by commodore Byron and captain Cook, the former placing them in latitude 12 deg. 33 min. ſouth, longitude 167 deg. 47 min. weſt. The length of the moſt extenſive of theſe iſlands is about three leagues. From the extreme points runs out a reef upon which the ſea breaks to a tremendous height. Innumerable rocks and ſhoals ſtretch near two leagues into the ſea, on the north-weſt and weſt ſides, and are extremely dangerous. Theſe iſlands are populous, and appear fertile and beautiful; but they are ſecluded from inveſtigation by their very dangerous ſituation.

Byron's Duke of York's Iſland, was thus named by commodore Byron, who diſcovered it in 1765. It lies in latitude 8 deg. 41 min. ſouth, and longitude 173 deg. 3 min. weſt. It is a dreary ſpot, uninhabited; a dreadful ſea breaks upon almoſt every part of the coaſt, nor could ſoundings be any where found. The boats landed with great difficulty, and procured ſome cocoa-nuts, which greatly refreſhed the crew, amidſt a dearth of wholeſome food. The iſland appeared as if it never had been trodden by a human

human being before. Innumerable ſea-fowls were ſeen ſitting upon their neſts, built upon high trees; but ſo tame that they ſuffered themſelves to be knocked down without leaving their neſts. No other animal was ſeen but land crabs, with which the ground was covered.

Turtle-Iſland, ſo denominated by captain Cook, who firſt viſited it, from the number of turtles with which it abounded, lies in latitude 19 deg. 48 min. ſouth, and longitude 178 deg. 2 min. weſt.

When Queen Charlotte's Iſlands were firſt diſcovered by captain Carteret, ſeven of them were counted; but there was reaſon to ſuppoſe there were more diſperſed within the cluſter. The water here is excellent; but there is a dearth of wholeſome vegetables. The colour of the natives is black, their hair is woolly, and they go ſtark naked. A party ſent on ſhore upon this iſland by captain Wallis to procure proviſions, by their inſolent behaviour, brought upon themſelves the reſentment of the natives, and thereupon enſued a ſkirmiſh, in which the maſter of the ſhip, and three ſeamen were wounded by arrows, and afterwards died, while the Dolphin lay here. To protect the Engliſh on ſhore from the fury of the natives, grape ſhot was fired from the ſhip's guns, which ſo intimidated them, that they abandoned that part of the iſland, and left the people to fill water without annoyance. The commander was not acceſſary to the carnage, as the inſult given to the natives was contrary to his expreſs orders, and he was under an indiſpenſible neceſſity of procuring water by any means. The inhabitants are very nimble and vigorous, and of an amphibious compound, as they were in and out of their canoes every minute. Theſe iſlands lie in latitude 11 deg. longitude 164 deg. eaſt.

Byron's-Iſland, was ſo called from commodore Byron, who diſcovered it in 1765; it lies in 1 deg. 18 min. ſouth latitude, and 170 deg. 50 min. eaſt longitude. There being no part favourable for anchorage, the people could not go on ſhore, nor procure any refreſhments. It was ſuppoſed to be about four leagues in extent, and was evidently very populous, for as ſoon as the veſſels came in ſight, the natives aſſembled on the beach, to the number of above a thouſand, and more than ſixty canoes put off from the ſhore, made towards it, and ranged themſelves in a circle round it. Having gazed for ſome time, one of the people jumped out, ſwam to the ſhip, and ran up the ſide like a cat. Having ſtepped over the gunwale he ſat down upon it, burſt into a fit of exceſſive laughter, and ſtarting up ſuddenly, ran up and down the ſhip, ſeemingly deſirous of ſtealing whatever he could lay his hands on, but could not effect his deſign, as being ſtark naked it was impoſſible to conceal his booty. Much merriment was produced on the ſailors dreſſing him in a jacket and trowſers, as he then diſplayed all the droll geſticulations of an ape. He was ready enough to eat, with a moſt voracious appetite, ſome bread which was given him; and having played a number of antic tricks, leaped over in his new garb, and ſwam to his canoe.

The natives of this iſland are of good ſtature, proportion, and features. Their complexion is of a bright copper, and the mixture of cheerfulneſs and intrepidity, diſcoverable in their countenances, ſtrikes the beholder. They have long black hair; ſome had long beards, others only whiſkers, and others nothing more than a ſmall tuft at the point of the chin. They were all ſtark naked except ſome ornaments, which conſiſted of ſhells fancifully diſpoſed and ſtrung together, which they wore round their necks, wriſts, and waiſts. Their ears were perforated, but they had no ornaments in them, though it ſeemed as if they had worn very heavy ones, for their ears hung down almoſt to their ſhoulders, and ſome were ſplit quite through. A perſon amongſt them of apparent importance, had a ſtring of human teeth tied about his waiſt, which was ſuppoſed to be a badge of his valour, as he would not part with it upon any conſideration. Some were armed with a kind of ſpear very broad at the end, and ſtuck full of ſhark's teeth, which were as ſharp as a lancet. They were of a ſavage diſpoſition; for when our people ſhewed them ſome cocoa-nuts, and indicated, by ſigns, that they wanted more, inſtead of ſupplying them, they diſcovered a deſire of depriving them of thoſe few they had remaining; ſo that we could expect no friendſhip to be eſtabliſhed with them.

CHAP. VIII.

OF THE ISLANDS OF MANGEEA, WATEEOO, AND OTAKOOTAIA.

The Soil, Manners, Diſpoſition, Dreſs, and Cuſtoms of the Natives.

MANGEEA, or MANGYA, is ſituated in 21 deg. 59 min. ſouth latitude, and 201 deg. 53 min. eaſt longitude, and was diſcovered by captain Cook in March 1777. As an attempt to land from boats appeared impracticable, on account of the ſurf, and no bottom could be found for anchorage, till they came within a cable's length of the breakers, our late navigators were obliged to leave this iſland unviſited. However, thoſe parts of the coaſt that fell under obſervation are guarded by a reef of coral rock, againſt which a heavy ſurf is continually breaking.

This iſland is about five leagues in circumference; and though of a moderate and pretty equal height, may be ſeen in clear weather at the diſtance of ten leagues. In the interior parts it riſes into ſmall hills, whence there is an eaſy deſcent to the ſhore, which, in the ſouth-weſt part, is ſteep, though not very high, and has ſeveral excavations made by the daſhing of the waves againſt a browniſh ſand ſtone, of which it conſiſts. The deſcent here abounds with trees of a deep green, which ſeem to be all of one ſort, except neareſt the ſhore, where was obſerved a number of that ſpecies, found in the woods of New Zealand. The ſhore on the north-weſt part terminates in a ſandy beach, beyond which the land is broken into ſmall chaſms, and has a broad border of trees, which reſemble tall willows. Further upon the aſcent, the trees were of the deep green before mentioned. Some trees of the higher ſorts were thinly ſcattered on the hills, the other parts of which were either covered with ſomething like fern, or were bare, and of a reddiſh colour.

This iſland, upon the whole, has a pleaſing appearance, and might, by proper cultivation, be made a beautiful ſpot. From the numbers and aſpect of the natives, it is highly probable, that ſuch articles of proviſion as the iſland produces, are found in great abundance. Our countrymen were informed, that they had no hogs or dogs, though they had heard of both thoſe animals; but that they had plantains, taro, and bread-fruit. The only birds obſerved were ſome terns, noddies, white egg-birds, and one white heron.

As our people approached the ſhore, they ſaw many of the natives running along the beach, and, by the aſſiſtance of glaſſes, could perceive that they were armed with long ſpears and clubs, which they brandiſhed in the air with ſigns of threatening, but, as ſome ſuppoſed, with invitations to land. Moſt of them were naked, except having a kind of girdle, which was brought up between the thighs; but ſome of them wore about their ſhoulders pieces of cloth

cloth of various colours, white, ſtriped, or chequered; and almoſt all of them had about their heads a white wrapper, in ſome degree reſembling a turban. They were of a tawny complexion, robuſt, and about the middle ſize.

A man getting into a ſmall canoe, at a diſtant part of the beach, put off, as with a view of reaching the ſhip; but his courage failing, he quickly returned towards the ſhore. Another man ſoon after joined him in the canoe; and then both of them paddled towards it. They ſeemed, however, afraid to approach, till their apprehenſions were partly removed by Omai, who addreſſed them in a language they underſtood. Thus encouraged, they came near enough to receive nails and beads, which, being tied to ſome wood, were thrown into the canoe. They, however, put the wood aſide without untying the things from it, which might perhaps have proceeded from ſuperſtition; for Omai told our people, that when they obſerved them offering preſents, they requeſted ſomething for their *Eatooa*. On being aſked by Omai, whether they ever eat human fleſh, they replied in the negative, with equal abhorrence and indignation. One of them, named Mourooa, being queſtioned with regard to a ſcar on his forehead, ſaid, it was the conſequence of a wound he had received in fighting with the natives of an iſland lying towards the north-eaſt, the people of which ſometimes invaded them. They afterwards laid hands on a rope but would not venture on board, telling Omai, that their countrymen on ſhore had ſuggeſted to them this caution; and had likewiſe directed them to enquire when our ſhip came, and to learn the name of the captain. Their chief, they ſaid, was called Orooaeeka, the name of the iſland *Mangya* or *Mangeea*, to which they ſometimes added *nwoe*, *nai*, *naiwa*.

We perceived one of the natives to be rather corpulent; and, though not tall, well proportioned. As his perſon was agreeable, ſo was his diſpoſition; this appeared from ſome droll geſticulations, which indicated humour and good nature. He alſo made others of a ſerious kind, and repeated ſome words with an air of devotion, before he would venture to take hold of the rope at the ſtern of the ſhip. His complexion was nearly of the ſame caſt with that of the natives of the moſt ſouthern parts of Europe. His companion was not ſo handſome. They both had ſtrong, ſtraight, black hair, tied together on the top of their heads with a piece of white cloth. They had long beards; and the inſide of their arms, from the elbow to the ſhoulder, and ſome other parts, were tatooed or punctured. The lobes of their ears were ſlit to ſuch a length, that one of them ſtuck a knife and ſome beads that were given him in them. The ſame perſon had hung about his neck, by way of ornament, two poliſhed pearl ſhells, and a bunch of human hair, looſely twiſted together. They wore a kind of girdle, of a ſubſtance manufactured from the *morus papyrifera*, and glazed like thoſe uſed in the Friendly Iſlands. They had on their feet a ſort of ſandals, made of a graſſy ſubſtance interwoven, which were obſerved to be all worn by thoſe ſeen on the beach.

The canoe in which they came, was the only one of the natives ſeen; it was very narrow, and not above ten feet long, but ſtrong and neatly made. The lower part was of white wood, but the upper part black; and their paddles were made of wood of the ſame colour; theſe were broad at one end, and blunted, and about three feet long. The fore part had a flat board faſtened over it, which projected out, to prevent the water from getting in. It had an upright ſtern, five feet high, which terminated at top in a kind of fork. They paddled indifferently either end of the canoe forward.

While the Engliſh officers were employed in reconnoitring the coaſt in two boats, the natives thronged down upon the reef all armed. Mourooa, who was in the boat with captain Cook, thinking, perhaps, that this warlike appearance deterred them from landing, commanded his own people to retire. As many of them complied, it was imagined that he was a perſon of ſome conſequence. Several of them, inſtigated by curioſity, ſwam from the ſhore to the boats, and came on board them without reſerve. It was difficult to keep them out, and prevent their pilfering whatever they could lay hands upon. At length, when they obſerved our people returning to the ſhips, they all departed, except Mourooa, who, though not without manifeſt indication of fear, accompanied the commodore on board the Reſolution. The cattle and other new objects that he ſaw there, did not ſtrike him with much ſurpriſe; his mind, perhaps, being too much occupied about his own ſafety, to allow him to attend to other things. He ſeemed very uneaſy, gave but little new intelligence; and therefore, after he had continued a ſhort time on board, captain Cook ordered a boat to carry him towards the land. In his way out of the cabin, happening to ſtumble over one of the goats, he ſtopped, looked at the animal, and aſked Omai what bird it was; but not receiving an immediate anſwer from him, he put the ſame queſtion to ſome of the people who were upon deck. The boat having conveyed him near the ſurf, he leaped into the water, and ſwam aſhore. His countrymen, eager to learn what he had ſeen, flocked round him as ſoon as he had landed, in which ſituation they remained till our people loſt ſight of them.

Theſe iſlanders ſpeak a language reſembling that ſpoken at Otaheite, but their pronunciation is more guttural, and they have ſome words peculiar to themſelves. It was remarked, that they ſeemed to reſemble the natives of Otaheite in their perſons more than any other nation ſeen in theſe ſeas, having a ſmooth ſkin, and not being muſcular. Their general diſpoſition and method of living, as far as there were opportunities of judging, were ſuppoſed to be ſimilar. One houſe was obſerved near the beach. It was pleaſantly ſituated in a grove of trees, and appeared to be about thirty feet long, and ſeven or eight feet high, with an open end. Their mode of ſalutation is that of joining noſes, with the additional ceremony of taking the hand of the perſon whom they ſalute, and rubbing it with a degree of warmth upon their noſe and mouth.

Wateeoo was diſcovered alſo by captain Cook in 1777, is ſituated in latitude 20 deg. 1 min. ſouth, and longitude 201 deg. 45 min. eaſt. It is a beautiful ſpot, about ſix leagues in circuit, with a ſurface covered with verdure, and compoſed of hills and plains. The ſoil in ſome parts is light and ſandy, but on the riſing ground of a reddiſh caſt.

Soon after the arrival of the European veſſels, ſeveral of the natives put off from the ſhore in ſeveral canoes, and came alongſide of them. Their canoes are long and narrow, and ſupported with out-riggers; the head is flat above, but prow-like below, and the ſtern about four feet high. They ſeemed to have no idea of barter or traffic; as after having received ſome preſents of knives, beads, and other trifles, they gave our people ſome cocoa-nuts, in conſequence of having aſked for them, but not by way of exchange.—One of them with a little perſuaſion came on board, and others ſoon followed his example. They appeared to be perfectly free from all apprehenſion of danger. When introduced into the cabin, and conducted to other parts of the ſhip, though ſome objects ſeemed to ſurpriſe them, nothing could fix their attention. They were afraid to venture near the cows and horſes, of whoſe nature they could form no conception. As for the ſheep and goats, they gave the ſeamen to underſtand, that they knew them to be birds, a moſt aſtoniſhing proof of their ignorance, and total want of conception. Though the commodore beſtowed on his new friends what he ſuppoſed would

would be moſt acceptable, yet they ſeemed rather diſappointed.

Such of the natives as were ſeen in theſe canoes, were in general of the middle ſtature, and not unlike thoſe of Mangeea. Their hair either flowed looſe over their ſhoulders, or was tied on the crown of the head; and though in ſome it ſome it was frizzed, yet that, as well as the ſtraight ſort, was long. Some of the young men were handſome. Like the inhabitants of Mangeea, they wore girdles of glazed cloth, or fine matting, the ends of which were brought between their thighs. Their ears were bored, and they wore about their necks, by way of ornament, a ſort of broad graſs, ſtained with red, and ſtrung with berries of the night-ſhade. They were punctured or tatooed from the middle downwards, particularly upon their legs, which made them appear as if they wore boots. Their beards were long, and they had a kind of ſandals on their feet. They were frank and cheerful in their deportment, and very friendly and good natured.

Some cocoa-nuts and plantains, and a hog, were brought in ſome canoes, for which the natives demanded a dog in return, refuſing every other thing offered by way of exchange. Though one of the ſailors had a dog and a bitch, which were great nuiſances in the ſhip, and which might have ſerved to propagate a race of ſo uſeful an animal in this iſland, yet he could not be prevailed upon to part with them. However, to gratify them, Omai gave them a favourite dog he had brought from Great Britain; with which acquiſition they were highly ſatisfied. Now and then ſome of them brought a few cocoa-nuts to the ſhips, and exchanged them for whatever was offered.

The following account of tranſactions, which is very circumſtantial, and includes ſome obſervations on the iſland and its inhabitants, is preſented as a general diſplay.

"Some of our people rowed towards a ſandy beach, where a great number of the natives had aſſembled, and came to anchor at the diſtance of an hundred yards from the reef. Several of the iſlanders ſwam off, bringing cocoa-nuts with them; and Omai gave them to underſtand, that our people were deſirous of landing. Soon after two canoes came off; and to inſpire the natives with greater confidence, they reſolved to go unarmed The conductors of the canoes, watching with great attention the motion of the ſurf, landed them ſafely on the reef. A native took hold of each of them, with a view of ſupporting them in walking over the rugged rocks to the beach, where ſeveral others, holding in their hands the green boughs of a ſpecies of *mimoſa*, met them, and ſaluted them by the junction of noſes. They were conducted from the beach amidſt a vaſt multitude, who flocked round them with the moſt eager curioſity; and being led up an avenue of cocoa-palms, ſoon came to a number of men, arranged in two rows, and armed with clubs.

"Proceeding onward among theſe, they found a perſon who appeared to be a chief, ſitting croſs-legged on the ground, and cooling himſelf with a kind of triangular fan, made from the leaf of the cocoa-palm, with a poliſhed handle of black wood. He wore in his ears large bunches of beautiful feathers of a red colour; but had no other mark to diſtinguiſh him from the reſt of the people. Our countrymen having ſaluted him as he ſat, marched on among the men armed with clubs, and came to a ſecond chief, adorned like the former, and occupied like him in fanning himſelf. He was remarkable for his ſize and corpulence, though he did not appear to be above thirty years of age. They were conducted in the ſame manner to a third chief, who ſeemed older than the two former; he was alſo ſitting, and was ornamented with red feathers. After they had ſaluted him as they had done the others, he deſired them to ſit down; which they willingly conſented to, being greatly fatigued with walking, and with the extreme heat they felt amidſt the ſurrounding multitude. The people being ordered to ſeparate, they ſaw, at a ſmall diſtance, about twenty young women, adorned like the chiefs, with red feathers, engaged in a dance, which they performed to a ſlow and ſolemn air, ſung by them all. They roſe up, and walked forward to ſee theſe dancers, who, without paying them the ſmalleſt attention, ſtill continued their dance. They ſeemed to be directed by a man, who mentioned the ſeveral motions they were to make. They never changed the ſpot, as Europeans do in dancing, though their feet were not entirely at reſt: this exerciſe conſiſted chiefly in moving their fingers very nimbly, holding their hands at the ſame time near the face, and occaſionally clapping them together. Their dancing and ſinging were performed in the exacteſt concert. They were in general very ſtout, and of an olive complexion, with black hair flowing with ringlets down their necks. Their ſhape and limbs were elegantly formed; their dreſs conſiſted only of a piece of glazed cloth, tied round the waiſt, which ſcarcely reached ſo low as the knees. Their features were rather too full to conſtitute a perfect beauty. Their eyes were of a deep black, and their countenances expreſſed a great degree of modeſty and complacency.

"While the dance continued, a noiſe was heard by our countrymen, as if ſome horſes had been galloping towards them; and, on turning their eyes aſide, they ſaw the people armed with clubs, who had been deſired to entertain them, as they ſuppoſed, with an exhibition of their mode of fighting; which they now did, one party purſuing another which ran away.

"One of our people found that the natives pilfered ſeveral trifling things which were in his pocket; and on his complaining of this treatment to the chief, he juſtified their behaviour. From theſe circumſtances it was apprehended, that they deſigned to detain the party among them. In this ſituation he aſked for ſomething to eat; upon which they brought him ſome cocoa-nuts, bread-fruit, and a ſort of ſour pudding; and when he complained of the heat, occaſioned by the multitude of people, the chief himſelf condeſcended to fan him. To try whether their ſuſpicions were well founded or not, they attempted to get to the beach; but were ſoon ſtopped by ſome of the natives, who ſaid they muſt return to the place which they had left. On their coming up, they found Omai under the ſame apprehenſions; but he had, as he imagined, an additional motive of terror; for, having obſerved that they had dug a hole in the ground for an oven, which they were now heating, he could aſſign no other reaſon for it, than that they intended to roaſt and devour our party: he even went ſo far as to aſk them whether that was their intention, at which they were much ſurpriſed, aſking, in return, whether that cuſtom prevailed among us. Our party were continually in a crowd, who frequently deſired them to uncover parts of their ſkin, the ſight of which ſtruck the iſlanders with admiration. They at the ſame time rifled their pockets; and one of them ſnatched from an officer a bayonet which hung by his ſide. This being repreſented to one of the chiefs, he pretended to ſend a perſon in ſearch of it, but probably countenanced the theft; for Omai, ſoon after, had a dagger ſtolen from his ſide in the ſame manner.

"They now brought ſome green boughs as emblems of friendſhip, and, ſticking the ends of them in the ground, deſired that our party would hold them as they ſat, giving them to underſtand, that they muſt ſtay and eat with them. The ſight of a pig lying near the oven which they had prepared and heated, removed Omai's apprehenſions of being put into it himſelf, and made him think that it might be intended for the repaſt of him and his friends. The

chief alſo ſent of his people to provide food for the cattle, and they returned with a few plantain trees, which they conveyed to the boats. In the mean time our party made a ſecond attempt to get to the beach; but, on their arrival, they found themſelves watched by people who ſeemed to have been ſtationed there for that purpoſe; for, when one of them endeavoured to wade it upon the reef, a native dragged him back by his clothes. They alſo inſiſted upon his throwing down ſome pieces of coral that he had picked up, and, on his refuſal to comply, took them from him by force. Nor would they ſuffer him to retain ſome ſmall plants which he had gathered. They likewiſe took a fan from an officer, which, on his coming aſhore, he had received as a preſent.

"Finding that obedience to their will was the only method of procuring better treatment, our people returned to the place they had quitted; and the natives now promiſed, that, after they had partaken of a repaſt which had been prepared for them, they ſhould be furniſhed with a canoe to carry them off to their boats. Accordingly, the ſecond chief to whom they had been preſented, having ſeated himſelf on a low ſtool, and directed the multitude to form a large ring, made them ſit down by him. A number of cocoa-nuts were now brought with a quantity of baked plantains, and a piece of the pig that had been dreſſed was placed before each of them. Their fatigue, however, had taken away their appetites; but they ate a little to pleaſe their entertainers. It being now near ſun-ſet, the iſlanders ſent down to the beach the remainder of the proviſions that had been dreſſed, to be carried to the ſhips. Our people found a canoe prepared to put them off to their boats, which the natives did with great caution; but as they were puſhing the canoe into the ſurf, one of them ſnatched a bag out of her, which contained a pocket piſtol, but the owner calling out to the thief with marks of the higheſt diſpleaſure, he ſwam back to the canoe with the bag. The iſlanders then put them on board the boats, with the cocoa-nuts, plantains, and other proviſions; and they immediately rowed back to the ſhips.

"The reſtrained ſituation of the party gave them very little opportunity of obſerving the country: for they were ſeldom an hundred yards from the place where they had been introduced to the chiefs, and conſequently were confined to the ſurrounding objects. The firſt thing that attracted their notice was the number of people, which muſt have been at leaſt two thouſand. Except a few, thoſe who had come on board the ſhips were all of an inferior claſs; for a great number of thoſe ſeen on ſhore had a ſuperior dignity of demeanor, and their complexion was much whiter. In general, they had their hair, which was long and black, tied on the crown of the head. Many of the young men were perfect models in ſhape, and of a delicate complexion. The old men were, many of them, corpulent; and they, as well as the young, had a remarkable ſmoothneſs of ſkin. Their general dreſs conſiſted of a piece of cloth wrapped about the waiſt, but ſome had pieces of mats moſt curiouſly variegated with black and white, formed into a kind of jacket without ſleeves; while others wore conical caps made of the core of a cocoa nut, interwoven with beads. In their ears, which were pierced, they hung pieces of the membranous part of ſome plant, or ſtuck there ſome odoriferous flower. The chiefs, and other perſons of rank, had two little balls, with a common baſe, made of bone, which they hung round their necks with ſmall cord. Red feathers are here conſidered as a particular mark of diſtinction; for none but the chiefs, and the young women who danced, aſſumed them. Some of the men were punctured all over the ſides and back, and ſome of the women had the ſame ornament (if it deſerves that name) on their legs.

"The elderly women had their hair cropped ſhort, and many of them were cut all over the fore part of the body in oblique lines. The wife of a chief appeared with her child laid in a piece of red cloth, which had been preſented to her huſband; ſhe ſuckled the infant much after the manner of our women. Another chief introduced his daughter, who was young, beautiful, and modeſt. No perſonal deformities were obſerved in either ſex, except in a few individuals, who had ſcars of broad ulcers remaining on the face, and other parts. Their weapons were ſpears and clubs, the latter of which were generally about ſix feet long, made of a hard black wood neatly poliſhed. The ſpears were formed of the ſame wood ſimply pointed, and were in general twelve feet long; but ſome were ſo ſhort as to ſeem intended for darts.

"Our party continued all the day under the ſhade of various trees, where they preſerved their canoes from the ſun. They ſaw eight or ten of them, all double ones; that is, two ſingle ones faſtened together by rafters laſhed acroſs.

"Moſt of the trees obſerved were cocoa palms, ſome ſpecies of *bibiſcus*, a ſort of *euphorbia*, and many of the ſame kind as had been ſeen at Mangeea. The latter are tall and ſlender, reſembling a cypreſs, and are called by the natives *etoa*. Here was ſeen a ſpecies of *convolvulus*, and ſome treacle-muſtard. The ſoil, towards the ſea, is nothing more than a bank of coral, generally ſteep and rugged, which, though it has been for many centuries expoſed to the weather, has ſuffered no further change than becoming black on its ſurface.

"The party which landed upon this occaſion were gratified in no particular except that of curioſity in ſpeculation; for they did not procure any article that could be ranked among the grand objects in view. Omai was queſtioned by the natives concerning us, our country, our ſhips, and arms: in anſwer to which he told them, among many other particulars, that our country had ſhips as large as their iſland, on board of which were implements of war (deſcribing our guns) of ſuch dimenſions as to contain ſeveral people within them; one of which could demoliſh the iſland at one ſhot. As for the guns in our two ſhips, he acknowledged they were but ſmall in compariſon with the former; yet even theſe he ſaid could with great eaſe, at a conſiderable diſtance, deſtroy the iſland and all its inhabitants. On their enquiring by what means this could be done, Omai produced ſome cartridges from his pocket, and having ſubmitted to inſpection the balls, and the gunpowder by which they were to be ſet in motion, he diſpoſed the latter upon the ground, and, by means of a piece of lighted wood, ſet it on fire. The ſudden blaſt, the mingled flame and ſmoke, that inſtantaneouſly ſucceeded, filled the natives with ſuch aſtoniſhment, that they no longer doubted the formidable power of our weapons. Had it not been for the terrible ideas they entertained of the guns of our ſhips, from this ſpecimen of their mode of operation, it was imagined they would have detained the party on ſhore the whole night; for Omai aſſured them, that, if he and his friends did not return on board the ſame day, they might expect that the commodore would fire upon the iſland.

"But the Europeans were not the only ſtrangers upon this iſland, as was diſcovered by Omai's accompanying our countrymen on ſhore. He had ſcarcely landed on the beach, when he found among the crowd three of his own countrymen, natives of the Society Iſles. The mutual ſurpriſe and pleaſure in which they engaged in converſation may be eaſily imagined. Their ſtory is a very affecting one.—About twenty perſons, male and female, had embarked in a canoe at Otaheite, with an intention of croſſing over to Ulietea; but were prevented by contrary winds from reaching the latter, or returning to the former iſland. Their ſtock of proviſion being ſoon exhauſted,

exhauſted, they ſuffered inconceivable hardſhips.—They paſſed many days without ſuſtenance, in conſequence of which their number gradually diminiſhed, worn out by famine and fatigue. Only four men ſurvived, when their canoe was overſet. The deſtruction of this ſmall remnant now ſeemed inevitable; however, they continued hanging by the ſide of the veſſel, during ſome of the laſt days, till they providentially came in ſight of the inhabitants of this iſland, who ſent out canoes and brought them on ſhore. One of theſe four died. The other three were ſo well ſatisfied with the generous treatment they met with here, that they refuſed the offer made them by our party, at the requeſt of Omai, of taking them on board our ſhips, and reſtoring them to their native iſlands. They had arrived upon this coaſt at leaſt twelve years before. Their names were Tavee, Otirreroa, Orououte: the former was born at Huaheine, the ſecond at Ulietea, and the latter at Otaheite. This circumſtance will ſerve to explain, in a more ſatisfactory manner, than the conjectures of ſome ſpeculative reaſoners, how the detached parts of the world, and, in particular, the iſlands of the Pacific Ocean, may have been firſt peopled; thoſe eſpecially that lie at a conſiderable diſtance from each other, or from any inhabited continent.

"Several of the houſes of the natives were obſerved to be long and ſpacious. The produce of this iſland is nearly the ſame with that of Mangeea.

"According to Omai's report of what he learned from his three countrymen in the courſe of converſation, the manners of the people of Wateeoo, their general habits of life, and their method of treating ſtrangers, greatly reſemble thoſe at Otaheite, and its neighbouring iſlands. There is alſo a great ſimilarity between their religious opinions and ceremonies. From every circumſtance, indeed, it may be conſidered as indubitable, that the inhabitants of Wateeoo derive their deſcent from the ſame ſtock, which has ſo remarkably diffuſed itſelf over the immenſe extent of the Southern Ocean. Omai aſſured our people, that they dignified their iſland with the pompous appellation of *Wenooa no te Eatooa*, implying *a land of Gods;* eſteeming themſelves a kind of divinities, poſſeſſed with the ſpirit of the *Eatooa*. Their language was equally well underſtood by Omai, and by the two New Zealanders who were on board.

From divers particulars already mentioned, it appears that Wateeoo can be of little ſervice to any ſhip that wants refreſhment, unleſs in a caſe of the moſt abſolute neceſſity.

The natives being ignorant of the value of ſome of our commodities, might be induced to bring off fruits and hogs to a ſhip ſtanding off and on, or to boats lying off the reef, as the boats of our lateſt circumnavigators did. It is doubtful, however, if any freſh water could be procured; for though ſome was brought in cocoa-nut ſhells to the party who went on ſhore, they were told, that it was at a conſiderable diſtance; and probably it is not to be met with but in ſome ſtagnate pools, as no running ſtream was any where ſeen.

Otakootaia lies in latitude 19 deg. 15 min. ſouth, and longitude 201 deg. 37 min. eaſt. It was diſcovered by captain Cook in 1777. It is about three or four leagues diſtant from Wateeoo, and ſuppoſed not to exceed three miles in circuit.

The natives labour under a dearth of water. The only common trees found here were the cocoa palms, of which there were ſeveral cluſters, and great quantities of the *wharra* or pandanus. There were alſo the *calloplyllum*, *ſuriana*, with a few other ſhrubs, alſo a ſort of *bind-weed*, *treacle-muſtard*, a ſpecies of *ſpurge*, and the *metinda citri folia*.

The only bird ſeen among the trees was a beautiful cuckoo, of a cheſnut brown, variegated with black; but upon the ſhore was a ſmall ſort of curleu, blue and white herons, ſome egg-birds, and a great number of noddies. A lizard was caught running up a tree, and though ſmall, had a forbidding aſpect.—Many of another kind were likewiſe ſeen. Infinite numbers of a kind of moth elegantly ſpeckled with black, white, and red, ſwarmed on the buſhes towards the ſea. Other ſorts of moths and pretty butterflies were ſeen.

Though our countrymen ſaw no fixed inhabitants upon this iſland, they diſcovered a few empty huts, which proved that it had been at leaſt occaſionally viſited. Monuments, conſiſting of ſeveral large ſtones, were alſo erected under the ſhade of ſome trees: there were alſo ſome ſmaller ones, with which ſeveral places were encloſed, where it was thence inferred their dead had been buried. As many cockle ſhells were found very large, and of a particular kind, it was ſuppoſed that the iſland muſt have been viſited by people who ſometimes fed on ſhell-fiſh.

CHAP. IX.

NEW DISCOVERIES

BY ENGLISH NAVIGATORS, AND NOT YET SETTLED BY THE EUROPEANS.

INTRODUCTION.

THOUGH we are greatly indebted to the moderns, for the amazing progreſs they have made in Geography, yet we are ſtill far from knowing all the parts of our terraqueous globe, or of being made acquainted with the prodigious variety of the human ſpecies inhabiting the different countries of the earth. Terra del Fuego was believed to be the extremity of South America, till Magellan, in 1519, diſcovered the ſtreights which bear his name. It was then conſidered as an iſland; but ſucceeding navigators found that this alſo was a miſtake; and that, inſtead of being one, it conſiſts of ſeveral iſlands; but with regard to the nature of the country, or the diſpoſitions of the inhabitants, we had but very imperfect notions, till the Endeavour, a ſhip fitted out by the government in purſuit of natural knowledge, viſited Terra del Fuego in 1769. But before we give a particular account of that and other voyages, it will be neceſſary to give a compendious narrative of the ſeveral voyages and expeditions projected and accompliſhed by Britiſh navigators in the reign of King George III. for the diſcovery of a ſouthern continent.

In Auguſt 1766, the Dolphin was ſent out under the command of captain Wallis, with the Swallow, commanded by captain Carteret, at the expence of the Britiſh government, in order to make diſcoveries in the ſouthern hemiſphere. Theſe veſſels proceeded together, till they came within ſight of the South Sea, at the weſtern entrance of the Streight of Magellan, and returned from thence by different routes to England. Captain Wallis, on the 6th of June, 1767, diſcovered an iſland, about four miles long and three wide, to which he gave the name of Whitſun-Iſland, it being diſcovered on Whitſun-Eve. Its latitude is 19 deg. 26 min. S. and its longitude 137 deg. 56 min. W. The next day he diſcovered another iſland, to which he gave the appellation of Queen Charlotte's-Iſland; it is about ſix miles long, and one mile wide, and lies in latitude 19 deg. 18 min. S. and 138 deg. 1 min. W. He tells us, that the inhabitants of this iſland were of a middle ſtature, and dark complexion, with long black hair, which hung looſe over their ſhoulders. The men were well made, and the women handſome. Their clothing was a kind of coarſe cloth or matting, which was faſtened

faſtened about their middle, and ſeemed capable of being brought up round their ſhoulders. A few days afterwards he alſo diſcovered ſeveral other ſmall iſlands, to which he gave the names of Egmont-Iſland, Glouceſter-Iſland, Cumberland-Iſland, Oſnaburgh-Iſland, and Prince William Henry's-Iſland. On the 19th of the ſame month, he diſcovered the iſland of Otaheite; and after quitting that, he diſcovered, on the 28th of July 1767, another iſland, about ſix miles long, which he called Sir Charles Saunders's-Iſland; and on the 30th of the ſame month, another about ten miles long, and four broad, which he called Lord Howe's-Iſland. After having ſeen ſeveral other ſmall iſlands, he arrived at Batavia on the 30th of November, at the Cape of Good Hope on the 4th of February 1768, and on the 10th of May following his ſhip anchored ſafely in the Downs.

After captain Carteret, in the Swallow, had parted from captain Wallis, in the Dolphin, having paſſed through the Streight of Magellan, and made ſome ſtay at the iſland of Maſafuero, on the 2d of July 1767, he ſaw an iſland about five miles in circumference, to which he gave the name of Pitcairn's-Iſland; it is ſituated in lat. 25 deg. 2 min. ſouth, and in 133 deg. 21 min. weſt long. about 1000 leagues to the eaſtward of the continent of America. On the 11th of the ſame month he obſerved another ſmall iſland to which he gave the name of the Biſhop of Oſnaburgh's-Iſland. The next day he diſcovered two other ſmall iſlands, to which he gave the name of Queen Charlotte's-Iſlands; and alſo three others, which he named Gower's-Iſland, Simpſon's-Iſland, and Carteret-Iſland. On the 27th of the ſame month they diſcovered Sir Charles Hardy's-Iſland, which lies in lat. 4 deg. 50 min. ſouth, and the next day Winchelſea's-Iſland, diſtant about 10 leagues in the direction of ſouth by eaſt. He afterwards diſcovered ſeveral other iſlands, and then proceeding homewards round the Cape of Good Hope, he arrived, March 1769, in England.

The Royal Society, about the latter end of the year 1767, came to a reſolution, that it would be proper to ſend perſons into ſome part of the South Sea, to obſerve a tranſit of the planet Venus over the ſun's diſk, which, according to aſtronomical calculation, would happen in the year 1769; and that the iſlands named Marqueſas de Mendoza, or thoſe of Rotterdam or Amſterdam, were the propereſt places then known for making ſuch obſervations. In conſequence of theſe reſolutions, it was recommended to his majeſty, in a memorial from the ſociety, dated February 1768, that he would be pleaſed to order ſuch an obſervation to be made; whereupon his majeſty ſignified by the lords commiſſioners of the admiralty, his pleaſure that a ſhip ſhould be provided to carry ſuch obſervers as the ſociety ſhould think fit to the South Seas; and accordingly a bark of 370 tons was prepared for that purpoſe. It was called the Endeavour, and commanded by captain James Cook, who was ſoon after, by the Royal Society, appointed with Mr. Charles Green, a gentleman who had long been aſſiſtant to Dr. Bradley, at the Royal Obſervatory at Greenwich, to obſerve the tranſit. But while this veſſel was getting ready for her expedition, captain Wallis returned; and it having been recommended to him by lord Martin, when he went out, to fix on a proper place for this aſtronomical obſervation, he by letter dated on board the Dolphin, May 18, 1768, the day before he landed at Haſtings, mentioned Port Royal harbour, in the iſland of Otaheite; the Royal Society, therefore, by letter dated the beginning of June, in anſwer to an application from the admiralty, to be informed whither they would have their obſervers ſent, mentioned that place.

Captain Cook ſet out from Plymouth, in the Endeavour, on the 26th of Auguſt, 1768. He was accompanied in his voyage by Joſeph Banks, eſq. and Dr. Solander. They made no diſcovery till they got within the tropic, where they fell in with Lagoin-Iſland, Two Groups, Bird-Iſland, and Chain-Iſland; and they arrived at Otaheite on the 13th of April, 1769. During their ſtay at that iſland, they had an opportunity of making very accurate enquiries relative to its produce and inhabitants; and on the 4th of June the whole paſſage of the planet Venus over the ſun's diſk was obſerved by them with great advantage: the philoſophical tranſactions contain an ample account of the reſult of their obſervations. After captain Cook departed from Otaheite, he diſcovered and viſited the Society Iſlands and Oheteſoa, and thence proceeded to the ſouth till he arrived in the latitude of 40 deg. 22 min. and 147 deg. 29 min. weſt long. and afterwards made an accurate ſurvey of the coaſt of New Zealand. In November he diſcovered a chain of iſlands, which he called Barrier-Iſlands. He afterwards proceeded to New Holland, and from thence to New Guernſey; and in September 1770 arrived at the iſland of Savus, from whence he ſailed to Batavia, and from thence proceeding round the Cape of Good Hope, he arrived on the 12th of June 1771, in England.

In a ſhort time after captain Cook's return home in the Endeavour, it was reſolved to equip two ſhips, in order to make further diſcoveries in the ſouthern hemiſphere. Accordingly, the Reſolution, commanded by captain Cook, and the Adventure, by captain Tobias Furneaux, were appointed for that purpoſe; and, excluſive of excellent officers, and able ſeamen, ſeveral learned and ingenious gentlemen were engaged to aſſiſt in the undertaking. The two veſſels ſailed from Plymouth Sound on July 13, 1772, and on the 29th of the ſame month arrived at the iſland of Madeira. From thence they proceeded to the Cape of Good Hope, which they came to on the 10th of October following; and in February 1773, arrived at New Zealand, having ſought in vain for a ſouthern continent. In that month the Reſolution and Adventure ſeparated, in conſequence of a thick fog, but joined company again in Queen Charlotte's Sound, on the 18th of May following. In Auguſt, they arrived at Otaheite, and in December they diſcovered Hervey's-Iſland. On the 2d of October, they came to Middleburgh, one of the Friendly Iſlands; and about the cloſe of the month, the two ſhips ſeparated, and did not join company any more. Captain Cook, however, proceeded in the Reſolution, in order to make diſcoveries in the ſouthern polar regions, but was ſtopped in his progreſs by the ice, in the latitude of 71 deg. 10 min. ſouth, and 106 deg. 54 min. weſt long. He then proceeded to Eaſter-Iſland, where he arrived in March 1774, as he did alſo in the ſame month at the Marqueſas. He afterwards diſcovered four iſlands, which he named Palliſer's-Iſlands, and again ſteered for Otaheite, where he arrived on the 22d of April, and made ſome ſtay; and alſo viſited the neighbouring iſles. In Auguſt he came to the New Hebrides, ſome of which were firſt diſcovered by him. After quitting theſe iſlands, he ſteered to the ſouthward a few days, and diſcovered New Caledonia. Having ſurveyed the ſouth-weſt coaſt of this iſland, captain Cook again ſtood for New Zealand, in order to refreſh his crew, and put his ſhip into a condition to encounter the dangers attending the navigation in the high ſouthern latitudes. Directing his courſe to the ſouth and eaſt, after leaving New Zealand, till he arrived in the latitude of 55 deg. 6 min. ſouth, 138 deg. 56 min. weſt long. without meeting with any continent. This able navigator gave up all hopes of diſcovering any in that ocean; and therefore came to a reſolution to ſteer directly to the weſt entrance of the Streights of Magellan, with a view of coaſting and ſurveying the uttermoſt, or ſouth ſide of Terra del Fuego. Keeping accordingly in about the latitude of 53 or 55, and ſteering nearly eaſt, he arrived off the weſtern mouth of

of theſe ſtreights, without meeting with any thing remarkable in this new route. In January 1775, he diſcovered a large and dreary iſland, to which he gave the name of South Georgia. He afterwards perceived various capes, and elevated ſnow-clad coaſts, to the moſt extreme part of which he gave the name of the Southern Thule, as being the neareſt land to that pole which has been yet diſcovered. In February, he perceived Sandwich-land, and ſeveral iſlands covered with ſnow. He then proceeded round the Cape of Good Hope to England, where he arrived on the 30th of July 1775. Captain Furneaux had returned in the Adventure a year before, having ſailed round the Cape of Good Hope without making any remarkable diſcovery. Ten of his men, a boat's crew, had been murdered and eaten by ſome of the ſavages of New Zealand; ſo that this voyage afforded a melancholy proof, that cannibals really exiſt. Indeed, in the courſe of theſe voyages of diſcovery, other evidence of this diſputed matter too plainly appeared.

Another voyage was performed by captain Cook and captain Clarke, in the Reſolution and Diſcovery, in the years 1776, 1777, 1778, and 1779, in ſearch of a north-weſt paſſage between the continents of Aſia and America. After they had arrived at the Cape of Good Hope, they proceeded from thence to New Holland; and in their courſe, they diſcovered two iſlands, which captain Cook called Prince Edward's iſles. The largeſt, about fifteen leagues in circuit, is in lat. 46 deg. 53 min. ſouth, and 37 deg. 46 min. long. The other, about nine leagues in circuit, lat. 46 deg. 40 min. and long. 38 deg. 8 min. eaſt, both barren, and almoſt covered with ſnow. From thence they proceeded to New Zealand, and afterwards they viſited the Friendly and the Society Iſles. In January 1777, they arrived at the Sandwich Iſles, which are twelve in number, and are ſituated between 22 deg. 15 min. and 18 deg. 53 min. north lat. Captain Cook afterwards diſcovered King George's Sound, which is on the north-weſt coaſt of America, and is extenſive. That part of it where the ſhips under his command anchored, is in lat. 43 deg. 36 min. north, and long. 233 deg. 28 min. eaſt. On the 12th of May, they diſcovered Sandwich Sound, in lat. 59 deg. 54 min. north. The harbour in which the ſhips anchored, appeared to be almoſt ſurrounded with high land, which was covered with ſnow; and here they were viſited by ſome of the natives in their canoes. They afterwards proceeded to the Iſland of Unalaſchka, and after their departure from thence ſtill continued to trace the coaſt. They arrived on the 20th of Auguſt 1778, in lat. 70 deg. 54 min. and 194 deg. 55 min. long. where they found themſelves almoſt ſurrounded with ice, and the further they proceeded to the eaſtward, the cloſer the ice became compacted. This voyage afforded ſufficient evidence, that no practicable paſſage exiſts between the Atlantic and Pacific Oceans towards the north; and it alſo aſcertained the weſtern boundaries of the great continent of America. On their return, it unfortunately happened, that the celebrated and able navigator, captain Cook, was killed in an affray with the natives, of which event, a full detail will be given in its proper place. In his laſt voyage, he had explored the coaſt of America, from 42 deg. 27 min. to 70 deg. 40 min. 57 ſec. north. After his death, the command devolved on captain Clarke, who died at ſea on his return to the ſouthward, on the 22d day of Auguſt 1779. The two ſhips returned home by the Cape of Good Hope, and anchored at the Nore, on the 5th of October 1780.

Captain Cook, in the courſe of his voyage in the Reſolution, begun in 1772, had made the circuit of the Southern Ocean, in a high latitude, and had traverſed it in ſuch a manner, as to leave little room for indulging an idea of a ſouthern continent, except ſo near the pole, as to be out of the reach of navigation. It deſerved alſo to be remembered, in honour of that experienced commander, that, with a company of 118 men, he performed this voyage of three years and eighteen days, throughout all the climates, from 52 deg. north, to 71 deg. ſouth, with the loſs of only one man by ſickneſs; and this appears in a great meaſure to have ariſen from the great humanity of the commander, and his uncommon care and attention to adopt every method for preſerving the health of his men, and deviſing all proper means for removing thoſe diſeaſes which long voyages and different climates had ſubjected them to.

Having preſented the readers with this ſummary introduction, we ſhall treat of the iſles diſcovered in the courſe of theſe voyages, beginning with Otaheite, in the deſcription of which our readers may find both inſtruction and amuſement.

CHAP. X.

OTAHEITE, OR ST. GEORGE'S-ISLAND.

Its Situation and Extent. Captain Wallis anchors there. Endeavours to traffic with the Inhabitants. Natives aſſault and attack the Veſſel. Various Affrays and Reconcilements. The Captain takes Poſſeſſion of the Place in the Name of the King of England. Peace perfectly reſtored, and Traffic eſtabliſhed. Oberea, a Princeſs, comes on board. Her Friendſhip for Captain Wallis, and Sorrow at his Departure.

THE firſt diſcovery of this iſland is not perfectly known; it has however been viſited by ſeveral navigators, particularly by commodore Byron, and, laſtly, by captain Wallis, in the Dolphin, on the 19th of June 1767. It is ſituated in 17 deg. 30 min. ſouth lat. and 149 deg. 5 min. weſt long. It conſiſts of two peninſulas, joined by an iſthmus, and is ſurrounded by a reef of coral rocks, which form ſeveral excellent bays and harbours, where there is room and depth of water for almoſt any number of the largeſt ſhips. The length of the iſland is thirty miles. A border of low land almoſt ſurrounds each peninſula, and behind this border the land riſes in ridges that run up into the middle of the diviſions, and theſe form mountains that may be ſeen at ſixty leagues diſtance. But we ſhall now proceed to a detail of events in circumſtantial order.

After captain Wallis had paſſed ſeveral ſmall iſlands, he diſcovered a high ſpot of land in hazy weather, near which having anchored, when the fog cleared up, he took a view of the land, and conceived it to be worthy of his notice.

About this time, a number of canoes ſurrounded the veſſel, who ſeemed amazed at her conſtruction. Many invitations were given to the natives in the canoes to come on board, which they did, but not till after ſeveral branches of plantain had been thrown on the ſhip's deck, in token of peace and friendſhip. On their firſt eſſay, one of the ſtrangers being ſtruck down by a he-goat, leaped into the ſea, and his companions immediately followed. Theſe circumſtances impreſſed the Engliſh ſailors with a ſtrong idea of their timidity.

When this alarm was over, many of them came on board again, but could not be prevailed on to traffic, though they ſhewed great inclination to ſteal ſome articles; and one of them ſnatching a laced hat from an officer's head, jumped into the ſea, and ſwam clear off with it.

When the boats were afterwards ſent out in ſearch of anchorage, the iſlanders ſurrounding our people, a

gun was fired over their heads to intimidate them, when exhibiting ſigns of a hoſtile intention, a muſket was diſcharged, whereby an offender was wounded; and the conſequence was, that his party diſperſed in conſternation.

The veſſel now ſailing along the coaſt, and coming to an anchor occaſionally, the natives began to reſort on board, bringing fruit, fowl, and hogs, in exchange for nails, toys, &c. And with the men alſo came ſome women, whoſe behaviour was not the moſt modeſt, but very friendly, ſo that there was reaſon to conclude a commerce and amicable connexion eſtabliſhed, after having repelled ſome acts of hoſtility. But at this juncture, ſeveral canoes ſurrounded the ſhip, loaded with pebbles, which the iſlanders had been found very dextrous in ſlinging. The people in theſe canoes played on a ſort of flute, and blowed their ſhells, and in this manner they advanced to the ſound of muſic.

One of theſe canoes came forward, with a chief ſitting under an awning, who, being encouraged to come alongſide, gave an Engliſh ſailor a bunch of red and yellow feathers, as a preſent for the captain. This was accepted, and ſome things were preparing to be given him in return, when the canoe ſuddenly put off, and a branch of the cocoa-nut tree was thrown up in the air, as a ſignal for the commencement of hoſtilities, whereon vollies of ſtones were poured by the canoes from all quarters into the veſſel. The unwelcome ſalute was returned by a diſcharge of muſketry, and two of the ſhip's guns, which at firſt diſordered the iſlanders; but they rallied, and there were numbers ſeen ready to embark to ſupport the aſſailants. Notwithſtanding the cannon were brought to bear, they returned to the attack, and ſeveral of the ſeamen were wounded by their miſſiles. However, at length, a ſhot ſtriking a canoe that ſeemed to have a chief on board, the canoes rowed off with precipitation, and the people fled behind the hills for ſhelter.

Soon after this lieutenant Furneaux was ſent on ſhore with the boats well armed, and a party of marines, with orders to land his men under cover of the ſhip; the intent being to procure water from a place where they had received intelligence by a reconnoitring party, that ſome of the pureſt was to be obtained.

This officer having executed that part of his orders, proceeded to take poſſeſſion of the iſland in the name of the king of Great Britain, and diſplayed a broad pendant on a ſtaff ſet up on the occaſion. They now perceived an old man on the oppoſite ſide of the river, who was apparently terrified, and in a ſupplicating poſture. When ſigns were made for him to advance, he croſſed, and crawled on his hands and knees towards the lieutenant, who gave him ſigns of encouragement, but could not forbear likewiſe pointing at the ſtones with which the Indians uſed to annoy the ſhip. Several hatchets were then produced, and two water caſks filled, in order to renew the idea of bartering with the natives. Some trinkets were alſo preſented to this man, who danced round the flag-ſtaff to expreſs his joy; and this ceremony, returning again after the lieutenant embarked, he and ſeveral of the natives who came with him repeated, though at firſt they appeared to be frightened by the pendant's ſhaking in the wind.

The conſequence of this reconciliation was, that two large hogs having been laid before the flag-ſtaff, and danced round, were put into a canoe, which the old man brought as a preſent alongſide the veſſel. He would not accept of any thing, but pronounced a ſpeech, between the different parts of which he delivered, one by one, a number of plantain leaves, which ſeemed calculated to anſwer the ſame end as the belts of wampum delivered at their *talks* by the natives of North America.

†

Notwithſtanding all this, hoſtilities were renewed, and the flag-ſtaff was taken away; but when the offenders were fired at, they retired in confuſion.—Therefore, finally to convince them of the power of thoſe whom they ſeemed ſo raſhly diſpoſed to contend with, cannon were pointed, and fired firſt into the woods, and afterwards towards the hills, where numbers of the Otaheiteans were aſſembled, to their great terror and aſtoniſhment; beſides which, fifty of their canoes were deſtroyed. Theſe proceedings, together with the incident of ſome of them having ſeen the ſurgeon, when on ſhore, ſhoot three ducks flying, gave them ſuch an idea of the extent to which fire-arms would reach, and the execution done by them, that levelling a cannon, or only pointing a muſket, ſerved to diſperſe whole bodies of warriors.

Thus by degrees, partly by force, and partly by kindneſs, was friendſhip eſtabliſhed between our people and a ſet of men, who had diſplayed more courage in war than could have been rationally expected, from the fears ſhewn by individuals among them upon trifling occaſions. But ſuch paradoxes will ever appear among nations deſtitute of refinement, and ſuch are to be traced and ſolved only by thoſe who have read the book of human nature, and, combining the knowledge gained by books with that reſulting from experience, can thereby in ſome meaſure form a judgment of the motives that actuate communities, too often termed *ſavage*, becauſe they poſſeſs not our modern cultivation, which perhaps they might ignorantly deem a corruption of manners.

It ſhould appear from the ſequel, that the natives of Otaheite fought, not againſt the Engliſh in anger or malice, but from a ſuppoſition that they came with a deſign to invade or injure them; as nothing could be more friendly than their behaviour, when they were fully convinced to the contrary. The frequent overtures to barter commodities might not at firſt perhaps ſeem to them a ſufficient token of intended amity, but as a ſnare laid, which they rather wiſhed to avoid.

Soon after theſe tranſactions, a tall female, of a majeſtic deportment, and placid countenance, who ſeemed to have come from ſome diſtance, came on board his ſhip, where ſhe was well entertained, preſented with ſeveral trinkets, a looking-glaſs, and a blue mantle, which latter the captain himſelf tied on, and with theſe ſhe ſeemed greatly delighted; but in all her geſtures, ſtill retained her dignity.

It was afterwards aſſerted, that ſhe was no leſs than ſhe appeared. Her name was Oberea, and it was ſaid ſhe was queen at leaſt of that part of the iſland where captain Wallis landed.

She was viſited the next day by the captain, who was not yet entirely recovered from a late indiſpoſition that had confined him to his veſſel, and rendered him very weak; and on which account he was carried by her attendants to her own dwelling, as ſhe was prepared for the viſit. Numbers of perſons aſſembled on the occaſion were diſperſed, on a ſign from the queen; and when the gueſts entered the houſe, which was ſpaciouſly built, according to the manner of the country, the captain's coat, ſtockings, and ſhoes being taken off, in which ſhe herſelf aſſiſted, ſome young girls were introduced, who ſmoothed his ſkin, and chafed it ſoftly with their hands; the ſame was done by lieutenant Furneaux and the purſer, who attended him, and who had likewiſe been indiſpoſed; and they all found benefit from this gentle operation, which however was interrupted for a time, by the ſurgeon's taking off his wig, in order to cool himſelf. This appeared to the natives as a moſt extraordinary circumſtance, and excited their aſtoniſhment accordingly; but the girls ſoon returned to their employment.

The queen was ſo tender of her principal gueſt, that when ſhe walked out with him, ſhe laid hold of his

his arm, and lifted him like an infant over any dirt or water that happened to be in the way.

It appeared, that the Otaheiteans had no utenſils for boiling their food, and were entirely ignorant of the poſſibility of ſuch an operation, and of the effects of hot water. This was evident enough from a whimſical circumſtance that happened on board the ſhip, where the queen was one morning at breakfaſt with the captain. One of her attendants (apparently a perſon of no mean rank) obſerving that the tea-pot was filled by turning the cock of an urn that ſtood on the table, took it into his head to turn it alſo, and received the boiling water on his hand. In conſequence, being ſcalded, he roared out, and danced about the cabin with the moſt extravagant geſtures, and his companions ſtood ſtaring in aſtoniſhment, till the ſurgeon applied a lenient remedy to the part affected.

However, a perſon who was ſerviceable in bringing in proviſions, and had curiouſly obſerved the gunner boiling his pork when on ſhore, was put in poſſeſſion of an iron pot, and after that he always boiled his meat for himſelf and his aſſociates.

The queen was equally ſurpriſed and pleaſed at looking through a teleſcope which captain Wallis brought with him to her houſe, directing her view to various objects which were very familiar to her, but not perceptible to the naked eye, which, when the glaſs was removed, to her amazement ſhe ſtrove to trace in vain. She had at firſt admired the ſtructure, little gueſſing, as might well be conceived, the uſe of ſuch an inſtrument. Captain Wallis gave his royal hoſteſs two turkies, two geeſe, three guinea-hens, and a cat big with kitten; ſome looking glaſſes, china, linen, needles, thread, and ribbands, together with cutlery-ware, and other articles (among which various vegetables and garden ſeeds were not forgotten) in memorial of the preſents received from her, and her friendly behaviour.

When the time for his departure drew near, it was not without reluctance that the captain intimated this circumſtance to the queen, who received the tidings with real concern, an intercourſe of good offices having endeared them to each other. Trying the force of perſuaſion in vain to detain her gueſt, ſhe came on board the Dolphin, where ſhe remained till the anchor was weighed, and the veſſel under ſail; ſhe then received the laſt preſents he made her in ſolemn ſilence, when he bade farewel to Oberea, and the iſland of Otaheite.

CHAP. XI.

Captain Cook on his firſt Voyage viſits Otaheite. His Reception by the Natives. Alterations there. Tootahah found to be a Man in Power. A Fort erected. Various Thefts. Oberea again brought forward. Strange Adventure with her. A Wreſtling Match. A Chief's Honeſty not Proof againſt a Baſket of Nails. Obſervations of the Tranſit of Venus in thoſe Parts.

IT was on the 13th of April 1769, as we have already obſerved, that captain Cook, on his firſt voyage, fell in with Otaheite, and came to an anchor in Port-Royal harbour. The canoes of the natives immediately ſwarmed round the Endeavour, bringing with them fruits and other proviſions to exchange for various commodities. At the ſame time an old man came on board, who was known to many of the officers, who had been here before with captain Wallis. This man, who was called Owhaw, had a reſpectable appearance.

When captain Cook, Mr. Banks, and Dr. Solander went on ſhore, accompanied by the above-named Indian, together with a party of men, they were received with the greateſt joy and reſpect, by a vaſt number of the natives, who very thankfully accepted their preſents; and promiſing to conduct them to a more agreeable ſpot, led them for ſome miles through pleaſant groves of trees, intermixed with the huts of the natives; yet they ſaw no fowls and few hogs in their road. Things ſeemed to wear ſomewhat of a different appearance from what the officers who were with captain Wallis had before obſerved; and, according to their opinion, the queen's houſe had been removed.

They were now informed, that ſuch as they had ſeen before, were not any of the principal people of the iſland; but early the next morning ſome canoes appeared alongſide the ſhip, which contained perſons whoſe dreſs ſeemed to denote their being of diſtinction; and two of them who came on board, having fixed on Mr. Banks and captain Cook reſpectively as friends, invited them on ſhore to their dwellings; whither thoſe gentlemen went accordingly, accompanied by Dr. Solander and others. Soon after landing, they were conducted to a large houſe, and introduced to a middle-aged man, whoſe name they found to be Tootahah. He preſented Mr. Banks with a cock, a hen, and a piece of perfumed cloth, and received a ſuitable preſent in return. They afterwards viſited ſeveral other large houſes, where they were introduced to many females, who preſſed them to ſit down and ſtay, and behaved in a manner agreeably free and engaging. On their return, they were met by Tuborai Tamaide, another chief, with whom they dined, and proceeded to ſettle a treaty of peace and mutual intercourſe.

Nevertheleſs, the circumſtance of moſt of the hogs, and all the poultry ſeeming to have vaniſhed, cauſed the captain to ſuſpect, that theſe had been driven up the country: it was therefore reſolved to explore the woods, whilſt an officer was left with a party of marines to guard the tent.

It is to be obſerved, that as ſoon as the Endeavour reached Otaheite, captain Cook eſtabliſhed ſeveral very judicious rules and ordinances among his people, all tending to facilitate barter for proviſions, and preſerve peace and harmony between them and the natives, which thoſe who broke through were to be ſeverely puniſhed; and theſe, with other precautions that had been taken, were deemed ſufficient, with a people ſo friendly, to ſecure tranquillity. But where the cuſtoms and manners of nations are ſo different as thoſe of England and Otaheite, it muſt needs be that diſputes will frequently ariſe, and ſometimes on mere trifling occaſions.

While this party were purſuing their deſign, they heard two pieces fired, which they knew muſt be diſcharged by the guard left at the tent, a circumſtance not at all pleaſing at ſuch a juncture. However, Owhaw diſperſed all the Indians, three excepted, who gave every poſſible token of fidelity.

It is natural to ſuppoſe, that the captain and his companions were anxious to know what had paſſed at the tent during the time of their abſence; and on the ſtricteſt enquiry, they found the following circumſtance had occaſioned the alarm. One of the natives, whoſe propenſity to theft was unconquerable, had ſnatched a centinel's muſket out of his hand, in conſequence of which, by order of a young midſhipman who commanded the guard, they fired, but none were ſlain or wounded except the aggreſſor, who was purſued and killed as ſoon as overtaken. As it was apprehended that the matter would excite ſome reſentment in the iſlanders, but few of whom appeared the next morning, and none of thoſe few were inclined to come on board the ſhip, ſhe was brought cloſer in ſhore, and ſo moored, that her broadſide was brought to bear on a ſpot which had been pitched on for the erection of a little temporary fortification, equally calculated for defence and convenience. Mr. Buchan,

who

who was Mr. Banks's landſcape painter, died the next day, univerſally regretted.

The anger of the natives ſeemed ſoon to have ſubſided, and our people remained quiet enough on ſhore, except their being annoyed by flies, which, to the working parties there, ſeemed the moſt troubleſome of enemies.

Tuborai Tamaide reſolving to build a houſe near the Engliſh fort, brought the materials with him, and invited Mr. Banks to a place in the woods where he ſometimes reſided, entertained him with a diſh of ſomewhat that had the appearance of wheat flour, but when ſtirred about with cocoa-nut milk, formed a jelly of an agreeable ſavour, not unlike what is called *Blanc-Mange* in Europe. He alſo gave this gentleman two garments, one made of ſcarlet cloth, the other of fine matting. It was not long afterwards that the ſame chief, who was a frequent gueſt to Mr. Banks on board, preferred a complaint againſt the ſhip's butcher for having brutally threatened to cut his wife's throat, becauſe ſhe would not let him have one of the ſtone axes, or adzes, which they ſubſtitute for iron in this iſland, in return only for a ſingle nail; a flagrant violation of juſtice and good order, and a breach of thoſe rules which the captain had reſolved ſhould be attended to while the veſſel ſtaid at Otaheite. The conſequence was, that the offender was flogged in ſight of the Indians; and he went through the whole of the puniſhment, notwithſtanding they themſelves interceded for him, and that even with tears and exclamations of ſorrow, after they had ſeen the firſt laſh given. This ſtrictneſs of diſcipline being certainly as well timed as neceſſary, did honour to the juſtice and policy of the commander.

It was remarkable, that captain Cook having produced an iron adze, made in imitation of one of thoſe ſtone inſtruments juſt mentioned, Tootahah, to whom it was only ſhewed as a curioſity, laid hold of it, and could not be ſatisfied till he was permitted to take it away, though an offer was made him to ſelect any article in its ſtead out of numbers contained in all the cheſts that could be conveniently opened before him.

On ſeveral of the natives bringing their axes to be ground, all of which, it was ſcarcely doubted, had been left there by captain Wallis or ſome of his people; a French one was diſcovered among the reſt. It appeared that the Otaheiteans were indebted for this to M. de Bougainville, who had viſited the iſland in 1768.

About this time ſome coldneſs was occaſioned by the following incident. Mr. Banks's gun was ſuddenly taken out of his hand by Tuborai Tamaide, one day when he ſeemed employed only in curiouſly obſerving it. The Indian alſo pulled the trigger, though the piece only flaſhed in the pan. This was an offence not ſo heinous in itſelf as it might tend to prove inconvenient in its conſequences. It is unneceſſary to obſerve, that in our expeditions to theſe places, the knowledge of fire-arms furniſhes almoſt the whole of the ſecurity of the few againſt the many; and experience has continually evinced how ſoon a ſudden miſtake, and fatal reſentment may be kindled in the boſoms of thoſe who ſeem moſt friendly among the uncultivated nations. Conſiderations of this nature appear to have influenced Mr. Banks, in giving a moſt ſevere reprimand for this preſumption to one favourite Indian acquaintance, who was not inſenſible either of the rebuke, or the cauſe of its ſharpneſs, as he demonſtrated by his behaviour; but, that of one of his female attendants was truly extraordinary on this occaſion. She broke forth into tears, wounded herſelf with a ſhark's tooth, and exhibited before the offended party a number of extravagant geſtures, refuſing to anſwer ſuch queſtions as were aſked; and yet after all this, ſhe carefully took up the certain pieces of cloth, which ſhe had placed to receive her blood, and having thrown them into the ſea, bathed herſelf in the river, and returned with a cheerful countenance.

The ſame chief's wife came one morning to ſolicit Mr. Banks's attendance on her huſband, whom ſhe repreſented as being in a moſt deplorable ſtate, occaſioned by having ſwallowed ſomething very deadly, that was given him by one of the Endeavour's people. Mr. Banks went accordingly, found the perſon in queſtion extremely ſick indeed. On his arrival, he perceived that the Indian had already been vomiting, which ſaved the trouble of preſcribing an emetic. It appeared likewiſe that he had thrown up a leaf which thoſe around him affirmed to contain the poiſon; and indeed this, which was only a leaf of tobacco, proved to be all the poiſon that the ſick chief had ſwallowed. The cauſe of the diſorder being thus explained, the patient, who, while Mr. Banks examined the leaf, ſeemed in doubt whether he ſhould live or die, was now only ordered to drink plentifully of cocoa-nut milk, in conſequence of which ſimple and agreeable remedy he ſoon became as well and cheerful as ever.

In the mean time, Oberea, who ſeemed to have been loſt, was luckily diſcovered at Mr. Banks's tent by the gunner, who recognized in her the ſame perſon that had been ſo friendly to captain Wallis (with whom this officer ſailed in the Dolphin) and was ſet down as queen of the iſland. She was tall and majeſtic, as has been already obſerved, her eyes had great expreſſion in them, her ſkin was white, and ſhe appeared to have been what might properly be termed handſome; but being now paſt forty, ſhe was rather on the decline. She was conducted on board the ſhip, where ſhe was preſented, amongſt other matters, with a doll, which greatly delighted her. But this circumſtance being obſerved by Tootahah, who, though not king, ſeemed to be inveſted with the authority of a regent, he would not be ſatisfied without a preſent of the ſame ſort. And dolls now grew ſo much in faſhion, that for a while they were preferred even to axes, till time and juſt reflexion cauſed the iſlanders once again to ſet a due value on the latter, as being ſo uſeful and neceſſary. Temporary faſhions, however, were found to prevail in many more inſtances, even among theſe children of ſimple nature.

There was a circumſtance relative to Oberea, which at firſt greatly ſurpriſed Mr. Banks; namely, that one morning being informed ſhe was aſleep under the awning of her canoe, when going to awake her, he found ſhe was in bed with a young man, whoſe name was Obadee; but it was ſoon underſtood that a commerce of this kind was frequent with the ladies of Otaheite, and ſo familiarized were they to it, that no ſecrecy was obſerved in the matter.

About this time the natives exerciſing ſome of their uſual dexterity, the aſtronomical quadrant was miſſing, though for the whole night a centinel had been placed within a few yards of the place where it was lodged. But a proper application being made to Tubourai Tamaide, he found out the thief, and the inſtrument, which luckily had received no damage, was with ſome trouble recovered.

In captain Cook's abſence, who had gone to ſupport Mr. Banks and Mr. Green, while they were travelling up the country, in ſearch of the quadrant, an embargo having been laid on the canoes in the bay, by that commander's order, occaſioned a diſturbance: for one of theſe attempting to depart, a boat was ſent out to detain her, on which the Indians, among whom was Tootahah, leaped into the ſea. When this chief was taken up ſwimming, the lieutenant confined him in the fort, which was now quite finiſhed and fortified, and the captain found it ſurrounded by a number of the natives when he returned from his excurſion.

He

He cauſed the priſoner, who had expected nothing but death, to be releaſed; yet the affair raiſed great murmurings among his countrymen, who pretended that he had been beaten and ill uſed, but no proofs appeared of ſuch treatment. Yet the markets were but ill ſupplied, which was doubtleſs owing to the circumſtance juſt mentioned.

Theſe were matters however, which, from the friendly diſpoſition of the natives, their gueſts conceived might be well ſettled; and, in particular, they endeavoured to conciliate the affections of the chief whoſe confinement had occaſioned the diſpute. And in fact, little was done in the principal matter, which regarded proviſions, till that was accompliſhed; nor was this brought about without ſome difficulty. Tootahah had left ſome hogs behind him, which he demanded; but it was thought moſt proper not to ſend them, becauſe his preſence was deemed neceſſary for the deſired reconciliation. This was at laſt happily effected, Meſſrs. Banks and Solander taking a journey to the chief's reſidence, which was at ſeventy miles diſtance. From what had paſſed, they had ſome ideas of finding diſguſtful treatment from the people; but in this they were agreeably diſappointed: for they heard nothing but ſhouts, which in their language expreſſed that Tootahah was a friend to the Engliſh.

As this chief, not receiving the hogs he left, had demanded an axe and a ſhirt in return for them, theſe articles were brought and given to him, together with a garment of broad cloath; and he ſeemed well pleaſed with the additional preſent. He was found ſitting under a tree, with many old men ſtanding about him, who afterwards were conducted to the court-yard of his houſe, where a ſpectacle was prepared for their entertainment. It was a wreſtling match, which was conducted in the following order.

Several combatants, to the number of ten or twelve, entering on an area which was left void for that purpoſe, after having challenged, engaged each other, the principal object of each being to overthrow his adverſary by dint of ſtrength. For this purpoſe they cloſed, and ſeized each other by the hand or any part of the body, as opportunity offered; thus grappling till he who had the beſt hold, or was the moſt powerful man, threw his antagoniſt. If this could be done by either party, in about the ſpace of a minute, the conqueror received the plaudits of the old men, and three huzzas; if not, they generally parted, either by the intervention of their friends or by mutual conſent, and in this manner one engagement ſucceeded another. A man who was provided with a ſtick, and who had firſt made way for the Engliſh by exerciſing it pretty ſmartly, kept the ring, and preſerved order among the populace.

While this was going forward others performed a dance, but neither of theſe parties ſeemed at all diſpoſed to take notice of what was going forward elſewhere; their own ſport and the wiſhed applauſes of the audience, being all that engroſſed their attention. When it was known that this reconciliation had been brought to bear, and that Tubourai Tamaide was gone on board the Endeavour, proviſions, which had hitherto been with-held, were brought in great plenty.

But ſome more extraordinary ſpectacles than that of the wreſtling match were ſoon after exhibited before Mr. Banks and others, of which we have the following account.

"As the gentleman was ſitting in his chair, ſome ladies of the iſland, who were ſtrangers, advanced in proceſſion, the reſt of the Indians forming a lane to let them paſs in order. Coming up to Mr. Banks, they preſented him with ſome plants and parrots' feathers. Tupia, who officiated as maſter of the ceremonies, received ſeveral branches, brought at ſix different times, and laid them down in the boat. Nine bundles of cloth were alſo afterwards brought and divided into three parcels.—What followed, appeared the moſt extraordinary part of the ceremony, which was, that one of the women, called Ooratoo, who ſeemed to be the principal actreſs in the ceremony, ſtepped on one of the parcels, and pulled her clothes up as high as her waiſt, turning round three times with an air of unaffected ſimplicity. This ſhe repeated with the two other parcels; and then theſe females advancing, ſaluted Mr. Banks, who made them ſuitable preſents. And on the Sunday following, (after divine ſervice had been performed) the day was concluded with an act of open lewdneſs between a young fellow and a girl about twelve years of age, of which Oberea and ſome females of the firſt rank thought fit not only to be ſpectators, but alſo to give it their countenance and applauſe."

It was ſomewhat extraordinary that an inclination to theft prevailed ſo ſtrongly among the natives of Otaheite, as to taint their chiefs and perſons ſuppoſed to be of the greateſt integrity among them. Tubourai Tamaide, of whom Mr. Banks had entertained a high opinion, could not reſiſt the temptation offered by a baſket of nails being left in the corner of his tent. On being taxed, he confeſſed that he had ſtolen four of them, but he was much more inclined to frame excuſes, than to make reſtitution. He ſaid, the things ſtolen were at Eparre; however he produced one of the nails, and, on reſtoring the reſt, was to be forgiven; but, inſtead of doing this, he withdrew, and when he was ſeen about ten days afterwards, it was in vain that all perſuaſions were uſed to induce him return this apparently trifling portion of property; and perceiving himſelf treated with reſerve, he again withdrew in his uſual manner.

A viſit was determined on by Captain Cook, Mr. Banks, and Dr. Solander, to Tootahah, who had lately twice changed his place of reſidence, and now lived about ſix miles diſtant from his former dwelling. He was found ſitting under a tree, with a number of people round him, as was his uſual cuſtom; and when the gueſts had made their preſents, they were invited to paſs the night there. But there was a proſpect of ſome inconvenience, as more people were aſſembled than the houſes and canoe could contain. Oberea, however, being there with her train of attendants, Mr. Banks accepted of a place in her canoe, where he retired to reſt accordingly. But, though Oberea herſelf had the charge of that gentleman's clothes, yet he loſt them together with his piſtols, his powder horn, and other articles. She got up, indeed, and Tootahah being rouſed, who lay in the next canoe, they went in ſearch of the thief; but their endeavours proved fruitleſs. Mr. Banks being a ſecond time rouſed by ſome muſic, as he afterwards obſerved lights at a ſmall diſtance, roſe, and went to ſeek for his companions. Accordingly he found where Captain Cook and the reſt of the gentlemen lay, to whom he related his misfortune; but they had a ſtory in ſome meaſure to match his: for they informed him that they had loſt their ſtockings and jackets, and it appeared that Dr. Solander was the only one who was not robbed among them. Mr. Banks, who had at firſt been left in his waiſtcoat and breeches, had made a temporary ſhift with ſome garments which he borrowed of Oberea, in which he cut an odd figure; but the clothes, and other matters that had been ſtolen from him, were never afterwards heard of.

Preparations having been made for viewing the tranſit of Venus, two parties were ſent out to make obſervations from different ſpots. The parties ſent out had good ſucceſs in the purſuit of their undertaking, though they differed as to the time of the contact. The following was Mr. Green's account of that phænomenon.

	Morning.		
The firſt external contact - -	9	25	4
The firſt internal contact, or total immerſion - - - -	9	44	4
	Afternoon.		
The ſecond internal contact, or beginning of the emerſion - -	3	14	8
The ſecond external contact, or total emerſion - - - - -	3	32	10

The latitude of the obſervatory, was 170 deg. 29 min. 13 ſec. ſouth; long. 149 deg. 32 min. 30 ſec. weſt from Greenwich.

We have already obſerved, that there were two parties. Thoſe who went towards the Iſland of Emayo, after rowing the greater part of the night previous to the tranſit, hailed a canoe, and were informed by the Indians of a place that they judged proper for an obſervatory.

Mr. Banks left them as ſoon as it was light, and ſaw the ſun emerge from an unclouded horizon, whence he drew favourable prognoſtics for the buſineſs of the day. He went to obtain freſh proviſions on the iſland; and the following is an account of this ſhort expedition:

"As he was trading with the natives, Tarrao, who was the king of the place, came to viſit him, bringing his ſiſter Nuna with him. As it was cuſtomary for the people of thoſe places, at their conferences, to be ſeated, Mr. Banks ſpread his turban of Indian cloth, on which they all ſat down. Then ſome bread-fruit and cocoa-nuts, together with a hog and a dog were brought as the king's preſent; and his gueſt, in return, ſent for a ſhirt, an adze, and ſome beads, which the ſovereign of Emayo received with apparent ſatisfaction. Tubourai Tamaide, and Tomio (ſaid to be related to Tarrao) alſo gave him a long nail, and left a ſhirt as a preſent for Nuna. The king, his ſiſter, and three beautiful young women, their attendants, afterwards went with Mr. Banks to the obſervatory, where he ſhewed them the planet Venus paſſing over the ſun's diſk; at the ſame time acquainting them, that to view it in this ſituation, was the cauſe of his undertaking a voyage to thoſe remoter parts."

The people at Emayo ſeemed to reſemble thoſe of Otaheite, and appeared to be acquainted with the nature of trading articles.

Some of the ſhip's company having broke into the ſtore room while the officers and gentlemen were employed in viewing the tranſit, a number of ſpike-nails were ſtolen from thence. The perſon who was found out in this theft, had but few in poſſeſſion; however, he was ordered to receive two dozen of laſhes. Some examples of this kind were neceſſary, becauſe the ſeamen knowing what value was put on ſuch commodities on ſhore, where the property of men, and the favours of women were alike to be purchaſed with them; if theſe thoughtleſs beings had not been reſtrained, it is probable, and indeed partly appeared from their conduct, that they would have left but few nails, and little iron-work that they could poſſibly remove in or about the veſſel.

CHAP. XII.

Celebration of King George's Birth-Day at Otaheite. Mr. Banks acts a Part in an extraordinary Funeral Solemnity. Various Diſputes amicably ſettled. Journey to a different Part of the Iſland. Tupia, an Indian, reſolves to embark with Captain Cook. Two Mariners are brought back. The Veſſels depart from the Iſland.

THE two parties that went out to obſerve the tranſit of Venus on the 3d of June, being ſtill abſent on the 4th, it was reſolved to defer the celebration of his Majeſty's birth-day till the 5th of June. It was then kept, many of the Indian chiefs being invited to the entertainment provided, and drinking the King of Great-Britain's health by the name of *Kihiargo* (their beſt imitation of *King George*) upon the occaſion.

An old female of ſome diſtinction dying about this time, gave the Engliſh an opportunity of obſerving the manner in which the iſlanders diſpoſe of a corpſe, which they do not bury directly, but place on a bier, till it is corrupted, and then the ceremony of interment is uſed with the bones. The morais were alſo found at length to ſerve as places of religious worſhip; but of theſe we ſhall treat at large hereafter. We ſhall here only give an account of the funeral rites, as performed after the deceaſe of the perſon above-mentioned, in which Mr. Banks bore a principal part, becauſe he was informed that he could not be admitted as a ſpectator on any other condition. The ceremony was thus conducted:

"This gentleman went in the evening where the body was depoſited, and was there met by the relations of the deceaſed, and joined by ſeveral other perſons. Tubourai Tamaide was the principal mourner, dreſſed in a whimſical, though, as ſome thought, not an ungraceful manner. To conform to the Indian cuſtom, he was obliged for the time to quit his uſual dreſs, and wear nothing but a ſmall piece of cloth tied round his middle, and ſuffer his fleſh to be blacked over with charcoal and water, as were the bodies of ſeveral others, among whom were ſome females that were not any more covered than himſelf. The proceſſion having begun, the chief mourner repeated ſomething that was ſuppoſed to be a prayer, when he came up to the body, and repeated the ſame when he came to his own houſe. They afterwards went on by permiſſion towards the fort. It is uſual for the reſt of the Indians, as much as poſſible, to ſhun theſe proceſſions. Paſſing on from the fort along the ſhore, they croſſed the river, paſſing ſeveral houſes which, for the time, were deſerted; and, during the reſt of the proceſſion, which laſted for half an hour, not an Indian was to be ſeen. The office which Mr. Banks filled called *Niniveh*, and there were two others in the ſame character. Theſe approached the chief mourners, when none of the reſt of the natives were to be ſeen, exclaiming "Imatata!" Then thoſe who had aſſiſted at the ceremony reſumed their former dreſs, after having firſt performed ablution in the river."

Mr. Banks, who certainly underwent no ſmall inconvenience in adapting himſelf for theſe rites, received great applauſe from Tubourai Tamaide, for the propriety wherewith, it ſeems, he ſupported his part in a ceremony of which he muſt be ſuppoſed to entertain but an imperfect conception.

Tubourai Tamaide and Mr. Gore having challenged each other to a ſhooting match, the Indian brought his bow and arrows to decide the matter; but, before they were prepared for the conteſt, it was diſcovered that each had miſtaken his antagoniſt's meaning; for the Indian meant only to try who could ſhoot furtheſt, but Mr. Gore deſigned to level at a mark. As ſoon as this was found out, the challenge conſequently came to nothing. Nevertheleſs, for the honour of Otaheite, and to ſhew how ſkilful he was, Tubourai kneeled down and ſhot an unfeathered arrow (dropping the bow as ſoon as it was diſcharged) which held its courſe for near the ſixth part of a mile.

As many things had ſtill continued to be conveyed away by ſome of the light-fingered iſlanders, an iron coal-rake for the oven being ſtolen in the night of the 14th of June; and as the centinels had received orders not to fire on the natives, even if they ſhould be detected in theft, Captain Cook reſolved in his mind what expedient it would be beſt to adopt, in order, if poſſible, entirely to ſuppreſs theſe practices; and,

and, in conſequence, he tried the following expedient. Twenty of their double canoes containing cargoes of fiſh, being juſt arrived, he ſeized them, and cauſed notice to be given, that unleſs, not only the coal-rake, but alſo all the other articles that had been taken away, were returned, theſe veſſels, ſo valuable to them, ſhould certainly be burnt.

All the effect produced by this menace, was the reſtitution of the coal-rake; but the other things were kept by thoſe who ſtole them: and as captain Cook's humanity would not permit him to let the innocent ſuffer for the guilty, in the end he gave up the cargoes of the veſſels.

But there was another circumſtance which was near raiſing a moſt ſerious diſpute between the Engliſh and the iſlanders, as originating from a matter of which the former were moſt tenacious. A boat being ſent out to procure ballaſt, as the officer could not immediately find what he wanted, he began to pull down one of the ſepulchral monuments. This action was looked upon as ſuch a piece of ſacrilege, that the people, enraged, roſe in oppoſition. But happily Mr. Banks, receiving intelligence of the circumſtance, repaired to the ſpot, and brought about a reconciliation, and ſettled the matter in diſpute, by ſending the boats to the river ſide, where there were plenty of ſtones to be had without any hazard of offending.

Captain Cook and Mr. Banks having formed a deſign of ſailing round the iſland, ſet out on the morning of the 16th of June for this purpoſe. When they came to a large bay, their deſign of croſſing it was mentioned to their Indian guide, whoſe name was Tilubaola: he at firſt refuſed to croſs it, and likewiſe endeavoured to perſuade the Engliſh gentlemen to lay aſide their intention, ſaying, "That country was inhabited by people that were not ſubjects to Tootahah, and who would deſtroy them all." Nevertheleſs, when he found them reſolved to proceed, he at laſt ventured to accompany them.

After ſpending the night at the houſe of Oratora, a friendly lady, they departed, and landed the next day in the diſtrict of a chief, named Mairatata, and whoſe father was called Pahuirede. There was ſomething which might be thought not very promiſing in thoſe appellations, the former ſignifying, "The burying-place of men," and the latter, "The ſtealer of boats," in the language of the iſlanders.

It may not be amiſs here to obſerve, that the inhabitants of that part of the country which had become familiar to the Engliſh, though very backward in learning to pronounce the names of their gueſts, were yet ready enough in giving them others. They called captain Cook, Toote; Mr. Hicks, Hate; and the Maſter, Bobo; Mr. Gore they named Toarro; Dr. Solander, Torano; Mr. Banks, Taſſane; Mr. Green, Eterree; Mr. Parkinſon, Patani; Mr. Sporing, Polini, &c. Now three or four at moſt of theſe names may be allowed imitations of the Engliſh ones, but the others ſeem ſo different, that they may be ſet down as appellations of ſignificance, and occaſioned by ſomething relative to the perſon, ſituation, or actions of the party. What ſeems to ſupport this conjecture, is its having been particularly remarked, that they called Mr. Monkhouſe, who commanded the guard that ſhot the man for taking the muſket, as before related, by a name which ſignifies *dead* or *deadly*, in their language, as having cauſed the death of one of their countrymen.

Amongſt a crowd of the natives that came round them, the Engliſh gentlemen recognized only two perſons; the reſt being abſolute ſtrangers to them. However, they proceeded (the whole party conſiſting of four only) till they came to a part of the country governed by one Waheatua; and met that chief, together with an agreeable woman, about twenty-two, called Toudidde, who appeared to fill the ſame rank here as Oberea did in another quarter of the iſland. Their journey here lay chiefly through a country fertile enough, as it appeared, in every thing but bread-fruit, and where there were numbers of morais, or burying places, neat, and adorned with various carvings. Being fatigued, they went on board their boat, and in the evening of this day they landed on an iſland which was called Ootareite, and got ſome refreſhment at the only houſe they could then diſcover. But they found a good harbour in the ſouthern part of the iſland, and, after landing again in different places, were met by Mathiabo, the chief, of whom they purchaſed a hog, for a glaſs bottle. Here they remarked ſeveral human jaw-bones, ſeemingly freſh (and which had not loſt any of the teeth) faſtened on a board of a ſemicircular figure, but could not obtain any ſatisfactory account concerning them.

Having been piloted over certain ſhoals, and turning to the N. W. ſide of Otaheite, where a bay anſwering to that on the S. E. forms the iſthmus, they were invited on ſhore by ſeveral beautiful women, and, accepting the invitation, ſupped at the houſe of a chief, named Wiverou, in company with Mathiabo, which latter, on retiring to reſt, borrowed Mr. Banks's cloak, to ſerve as a coverlet, and made no ſcruple of taking it away with him the next morning. But this mean action being diſcovered, when he heard that the injured party was coming in ſearch of him, he ſent a perſon back with the property. However, the gentlemen at their return, finding the houſe deſerted, and their boat miſſing, which it appeared had been driven away by the tide, conſidering the ſmallneſs of their party, and that they had not a ſpare ball, or charge of powder, they were not without apprehenſions leſt the Indians might take ſome undue advantage of their ſituation; but were agreeably diſappointed to find themſelves treated in the moſt civil and friendly manner.

A chief named Omae was building a houſe at Tiarrabou, the laſt diſtrict in which the travellers landed, and would have given a hog in exchange for a hatchet, but as they had not one left, he would not trade for nails; however, at laſt, both a hatchet and a nail were promiſed on his ſending the beaſt to the port. At this place they ſaw one of the Indian Eutuas, a figure reſembling a man, made of wicker work, near ſeven feet high, covered with black and white feathers, and which had protuberances that they called Tata Ete, or little men, on his head.

Being come to the diſtrict called Paporra, where Oberea governed, they landed there, but finding that ſhe was gone with intent to viſit them at the fort, they ſlept at her houſe, where they were entertained by her father. In this neighbourhood, Mr. Banks ſaw a vaſt pyramid of ſtone work, with a flight of ſteps on each ſide. It appeared to be near fifty feet high, was about 270 feet in length, and about one third as wide, and they found it was intended for the morai of Oamo and Oberea. The foundation was of rock ſtones, the ſteps were of coral, and the upper part conſiſted of round pebbles, all of the ſame ſize, and ſquared with the greateſt exactneſs, which muſt have been an almoſt immenſe labour for the builders, who were deſtitute of the proper implements, when this fabric was raiſed. At the top, in the centre, was a bird carved in wood, and near it a fiſh in ſtone. Part of one ſide of a court or ſquare was conſtituted by this pyramid, the ſides of which were almoſt equal. The whole was encloſed with a wall, and paved with flat ſtones, and exhibited the appearance of a firm and compact building. Another paved ſquare was ſeen at a little diſtance, in which were ſeveral ewattas or altars, on which it appeared that they placed their offerings, when ceremony or inclination led them to acts of devotion. Returning to Port Royal harbour, after an accurate ſurvey, they determined the circumference of Otaheite to be about 100 miles, both peninſulas included.

While

While captain Cook was preparing for his departure, two young marines thought proper to depart from the fort, and were not to be found the next morning; and notice was then given, that the veſſel would ſail on that or the enſuing day. However, the captain, rather than he would come to a rupture with the Indians juſt on quitting them, was willing to ſtay a little longer. But having waited in vain, when an enquiry was made, he was plainly given to underſtand, that theſe men had fled to the mountains, and did not intend ever to come back again, as they had choſen wives for themſelves on the iſland. But as it was not reaſonable to ſuppoſe the commander would loſe his men in ſuch a manner, he intimated to thoſe chiefs who were then in the fort with the women (among which latter were Oberea and Fornia) that they muſt all be conſidered as priſoners, till the fugitives, whom it had been repreſented as impoſſible to take, ſhould be returned. An officer being ſent for Tootahah, brought him without any alarm on board the ſhip, whither when night came on, thoſe who had been confined in the fort were alſo conveyed; a circumſtance that excited ſome diſagreeable apprehenſions among them, eſpecially the women, whom captain Cook eſcorted with others to the veſſel.

When one of the deſerters was brought back, he related, that the partner of his flight, and two of thoſe that had been ſent to recover them, would be detained till Tootahah was ſet at liberty; who was immediately informed of this, and told, that it was expected he ſhould ſend proper orders, and ſome of his people, to aſſiſt a party diſpatched in the long boat to effect a reſcue. To this the Indian chief made no objections.

The deſign ſucceeded, and the men returned, though at firſt without the arms they had with them when they ſet out; but theſe alſo being afterwards reſtored, the captain ſet his hoſtages at liberty.

Tupia, an Indian, who was frequent in his intercourſe with the Engliſh, had often expreſſed a ſtrong deſire of going with them whenever they ſhould leave the iſland. He ſtill perſiſted in his reſolution; and as he was a prieſt, had ſome ideas of navigation, and was once a ſort of miniſter to Oberea, it was thought proper to admit him on board, as alſo his ſervant Taiijota, at his earneſt requeſt.

When the time for departure approached, captain Cook going to obtain a drawing of the morai which Tootahah had at Eparre, was met there by Oberea and Others, and all in good humour. Tupia, who had taken leave of his friends, and given them ſome tokens of remembrance, came back with the captain and his train; the principal perſons came likewiſe on board, the veſſel was ſurrounded with canoes full of the common people, and all animoſities being forgotten, the good-natured people of Otaheite ſhed tears at the departure of their gueſts. Tupia was much moved; but he uſed every effort to ſuppreſs the feelings natural to ſuch a one on leaving his country. He went with Mr. Banks to the maſt-head, from whence, waving his hand, he took his laſt farewel, and departed with captain Cook, who had ſtaid three months at this iſland.

CHAP. XIII.

State of Otaheite on Captain Cook's ſecond Viſit. Revolution there. Otoo, a timid Prince, King of the whole Iſland. Friendly Conference with Waheatow. The King viſited on ſhore, and entertained on Board. Stratagem of one of the Natives defeated. Ships depart. Omai, a native of Bolabola, ſails with Captain Furneaux for England.

AFTER having narrowly eſcaped the danger of ſhipwreck on a tremendous rock, captain Cook, in his ſecond voyage of diſcovery, in the Reſolution, having alſo with him the Adventure, captain Furneaux, came to Otaheite, and anchored in Oaitipiha Bay on the 18th of Auguſt, 1773. Several of the natives were about, and even on board the ſhips, while they were in the utmoſt peril of deſtruction, yet they appeared quite inſenſible of the ſituation of the voyagers, and came and went without any ſeeming concern, a circumſtance which was thought not a little ſingular. It was evening before they aſked after Tupia, and they were ſatisfied when they heard the cauſe of his death.

There was now ſome difficulty in obtaining hogs, though theſe animals were ſeen on ſhore in great numbers, it being aſſerted, that they belonged to the chief Waheatow.

At this time a man, ſuppoſed to be a principal perſon, came on board with many of his friends, and received ſome preſents; but both he and they being detected in ſeveral thefts, they were all turned out of the ſhip, and the captain ordered two muſkets to be fired over his canoe after he had embarked, which affrighted the pretended chief ſo much, that he quitted it and jumped into the water. A boat being diſpatched for the canoe, the crew were pelted with ſtones from the ſhore. A cannon, loaded with ball, was therefore fired along the coaſt; and the captain going off in another boat, they ſoon obtained the object in queſtion. However, the Engliſh and the Indians becoming friends again, the captured veſſel was ſoon reſtored.

Mr. Banks and ſeveral people were now aſked for, who had been at Otaheite on captain Cook's firſt voyage; and the natives alſo informed their gueſts, that there had been a battle ſince the Endeavour's departure, in which both Tubourai Tamaide, and Tootahah, the regent, were ſlain. That a prince, named Otoo, now governed in his ſtead, and peace was fully eſtabliſhed on the iſland.

When Waheatow came into the neighbourhood, being deſirous to ſee captain Cook, the latter went accordingly, accompanied by captain Furneaux, ſome gentlemen, and ſeveral of the natives, and met him advancing, with a numerous train, at the diſtance of about a mile from the landing-place, who halted, when he perceived the company. He well recollected the captain, whom he placed on the ſame ſeat with himſelf, and enquired after ſome of the Engliſh that he had ſeen at Otaheite in 1769, at which time this chief was called Teraee, he having aſſumed his father's name after his deceaſe. He received many preſents from the captain, ſeemed concerned when he was told the veſſel would ſail the next day, and promiſed that the Engliſh ſhould be ſupplied with plenty of hogs, if they would ſtay longer. He could not be gratified in this particular, but his gueſts remained with him all the morning. This chief gave them two hogs at parting, and more were got at the trading places; ſo that freſh pork was ſerved up to the crews of both the ſhips; beſides that a lieutenant who was left on ſhore for the purpoſe, followed and brought eight pigs on board the veſſels, after they had departed (being plentifully ſupplied by the canoes attending them with fruits, which relieved the ſick) for Matavai-Bay in the ſame iſland.

Arriving there on the 25th of the month, the deck was preſently crowded with natives (moſt of whom knew captain Cook) before the ſhips could come to an anchor; and the new king, Otoo, waited with a great crowd on ſhore; but when the captain was going to pay him a viſit, he underſtood that this timid prince had ſuddenly retired to Oparree in a fort of panic. It was not poſſible to aſſign or gueſs at any rational grounds for ſuch a behaviour, ſince the people in general were happy in ſeeing this gallant officer; and as they well knew he never attempted to exert his force againſt them without ſufficient provocation. Notwithſtanding this, the captain ſet out for

for Oparree, accompanied by captain Furneaux, Marituta, his wife, and other perſons; and they were all conducted to the king, who ſat, attended by numbers, in the old patriarchal faſhion common here, under the ſpreading branches of a tree. Several preſents being made him and his attendants, ſome pieces of cloth were offered on their part; but they were given to underſtand, that as all they had received was intended only in token of friendſhip, nothing would be accepted in return. Otoo was well made, of an agreeable perſon, ſix feet high, and about 30 years of age. All his ſubjects were uncovered before him. He promiſed to ſend ſome hogs, but ſeemed backward in engaging himſelf to come on board one of the ſhips, becauſe, as he acknowledged, he was afraid of what he would have had more reaſon to fear at a diſtance, the great guns; but in uncultivated minds there is no accounting for prejudices.

However, he got the better of his fears ſo far as to pay the Engliſh a viſit, after much perſuaſion, coming on board, accompanied by his younger brother, his ſiſters, and attendants, all of whom received preſents, which they carried back to Oparree, after they had breakfaſted. When captain Cook landed with his company, the mother of Tootahah laid hold of his hand, and burſt into a flood of tears, exclaiming, that her ſon, his friend Tootahah, was no more; and this humane man muſt have melted in ſympathetic ſorrow, had not the king ſeparated them; and it was not without difficulty he was prevailed on to give his conſent that they ſhould meet again.

This prince, to whom captain Furneaux gave a he and ſhe-goat, having found that the great guns were not likely to do him any harm, took courage, and honoured the Engliſh a ſecond time with his preſence, bringing a hog, ſome fruits, and cloth to captain Cook; and then going on board the Adventure, complimented captain Furneaux with ſimilar preſents, for all which he received a ſuitable return; and his ſiſter was dreſſed out by captain Cook in a very agreeable manner. When he thought proper to depart, he was entertained with bagpipes and dancing, which latter was pretty cloſely imitated by ſome of his own attendants. His majeſty of Otaheite promiſed alſo to pay his Engliſh friends a third viſit; but as this was only on condition that they ſhould firſt wait on him, both the captains made an excurſion to Oparree, and preſented him with ſome articles which he had never ſeen before. One of the gifts was a broad ſword, which ſo much affrighted him, that at firſt he had deſired it might be taken away. With much perſuaſion, however, he was prevailed on for a little time to wear it by his ſide. After this, they repaired to the theatre, where they were entertained with a piece, conſiſting of comedy and dance. The ſubject they could not well find out; though they heard frequent mention of captain Cook's name during the performance.

When this diverſion was over, the king deſired his gueſts to depart, and loaded them with fruit and fiſh. He ſent more fruit and fiſh the next morning. Captain Cook preſented him with three Cape ſheep, as it was his laſt viſit. With this preſent he was well pleaſed, though he had not much reaſon to be ſo, as they were all weathers; this he was made acquainted with. Tootahah's mother again preſented herſelf to captain Cook; but could not look upon him without ſhedding many tears. Having determined to leave the iſland, the king ſeemed much affected when captain Cook told him of his reſolution. They embraced each other ſeveral times and departed. The lieutenant returning, who had been ſent for the hogs promiſed, there came with him Pottatou (the chief of the diſtrict of Attahounou) with his wife, to pay captain Cook a viſit, and made him a preſent of two hogs and ſome fiſh. The lieutenant got likewiſe two more hogs. As the wind was weſterly, they were obliged to diſmiſs their friends ſooner than they wiſhed; but they were well ſatisfied with their reception.

Captain Wallis had planted ſeveral ſorts of garden-ſeed and divers kinds of fruits, of which there were no remains when captain Cook left the iſland on the former voyage. On his arrival in 1773, he found none of the various ſeeds, that had been ſown by Europeans, had ſucceeded except pumpkins, and for theſe the natives had not, as may be well ſuppoſed, the leaſt eſteem. While the ſhips ſtaid at Otaheite, Tervah, a ſenſible old chief, invited two of the gentlemen into his canoe, in which they accompanied him and his wife to the place of their reſidence. In their paſſage the old man aſked a variety of queſtions relative to the nature and conſtitution of the country, from whence theſe wonderful ſtrangers came. He concluded that Mr. Banks, whom he had ſeen a few years before, could be no leſs than the king's brother, and that captain Cook was high admiral. The information that was given him, was received with the greateſt marks of ſurpriſe and attention; but when he was told, that in England there were neither bread-fruit nor cocoa-nut trees, he ſeemed to think meanly of it, notwithſtanding all its other advantages.

A ſhort time before the ſhips got under ſail, a young man, whoſe name was Pores, came on board the Reſolution, and requeſted the commander to take him with him, which, as it was apprehended he might be of occaſional ſervice, was complied with. Many others offered themſelves, but were refuſed. The only terms propoſed by this youth were an axe and a ſpike-nail for his father, who was then on board. He had them accordingly, and they parted juſt as the veſſel was getting under ſail, without the leaſt apparent natural affection. This raiſed a doubt as to their conſanguinity; which was confirmed by a canoe conducted by two more coming alongſide as they were ſtanding out of the bay, and demanding the young man in the name of Otoo, who was not then in that neighbourhood.

As the perſon in queſtion ſeemed at firſt undetermined in his own choice, whether he ſhould go or ſtay, an offer was made to ſend him back, if the axe and ſpike-nail were returned; but the man who demanded him, declared they were not on ſhore, and, waving their claim, departed.

In the year 1767 and 1768, the iſland of Otaheite, as it were, ſwarmed with hogs and fowls; but at this time it was ſo ill ſupplied with theſe animals, that hardly any thing would tempt the owners to part with them; and the little ſtock they had, ſeemed to be at the diſpoſal of their kings. When the veſſels lay at Oaitipiha-Bay, in the kingdom of Tiarrabou, or leſſer Peninſula, our people were given to underſtand, as we have obſerved, that every hog and fowl belonged to Waheatow; and that all the kingdom of Opoureonu, or the greater Peninſula, belonged to Otoo.

While at this iſland, they got only twenty-four hogs in ſeventeen days, half of which came from the kings themſelves, and the other half they were inclined to think were ſold by their permiſſion. They attributed the ſcarcity of hogs to two cauſes; firſt, to the great number of theſe animals which had been conſumed, and carried away for ſtock, by the ſhips that had touched here of late years; ſecondly, to the frequent wars between the two kingdoms. Two, they knew, had commenced ſince the year 1767; but now peace reigned among them, though they did not ſeem to entertain a cordial friendſhip for each other. Our people could not learn the occaſion of the late war, nor who were victorious in the conflict; but they learnt, that in the laſt battle, which terminated the diſpute, numbers were killed on both ſides. On the part of Opoureonu, Tootahah, their very good friend, was killed, and ſeveral other chiefs.

Captain Furneaux, in September 1773, agreed to receive on board his ſhip a young man named Omai, a native of Ulietea, one of the Society Iſlands, where he had ſome property, of which he was diſpoſſeſſed by the people of Bolabola. The two ſhips ſeparating in a ſtorm a few months afterwards, the voyage of the Adventure was brought to a much earlier concluſion than that of the Reſolution; for ſhe arrived at Spithead in July following.

Captain Cook did not at firſt think Omai a proper perſon to bring to England; but, upon his arrival, he changed his opinion, and declared, that he much doubted whether any others of the natives would have given more general ſatisfaction by his behaviour amongſt our people; being of opinion that the qualities of his head and heart did honour to human nature; and he was deſcribed, perhaps rather too partially, as being endued with a great ſhare of underſtanding, quick parts, and honeſt principles, which rendered him acceptable to the beſt company, and a proper degree of pride, which induced him to avoid the company of perſons of inferior rank; and it was ſaid, that though, doubtleſs, he had paſſions in common with others of the ſame age, he had judgment enough not to indulge them to an exceſs. His principal patrons whilſt in England were the earl of Sandwich, Mr. Banks, and Dr. Solander. His noble patron, then firſt lord of the admiralty, introduced him to his majeſty at Kew, and during his ſtay in England he received many favours; and his taſte for pleaſure, whatever ſhare he poſſeſſed of it, was certainly amply gratified; though perhaps more care was taken to ſatisfy him, and alſo render him pleaſing to others, than to cultivate more ſolid talents, and thoroughly enlighten his mind. Something of this kind appears likely, at leaſt, from the ſequel of his adventures, as far as they have come to our knowledge.

CHAP. XIV.

Captain Cook on his third and laſt Voyage, arrives with Omai at Otaheite. Viſited by the Natives. Account of the Spaniards having landed on the Iſland. Great Joy there on the Captain's Arrival, who introduces Omai to the King. A Banquet and dramatic Entertainment. Manner of embalming the Bodies of Perſons of Diſtinction. Deſcription of the Houſe built by the Spaniards. Departure of the Veſſels. Obſervations on Omai's Conduct at Otaheite.

CAPTAIN COOK, ſailing on his third and laſt voyage, for diſcoveries in the Pacific Ocean, &c. with Omai on board, came to Otaheite, and ſteered for Oaitipiha-Bay, on the 12th of Auguſt, 1777.

On approaching the land, the veſſels were attended by ſeveral canoes, but as theſe did not appear to contain any perſons of diſtinction, no notice was taken of them; nor did thoſe on board ſeem to know that Omai was their countryman; but at length a chief, called Ootee, whom the captain had known before, with ſome others, recognized Omai; among theſe was his brother-in-law. There was nothing ſtriking, however, in the meeting of theſe two perſons, till Omai, conducting his relation into the cabin, made him a preſent of ſome red feathers. As ſoon as this was known, Ootee, who before ſcarcely thought it worth while to ſpeak to him, now deſired they might exchange names, and become friends (which was confirmed by a preſent) according to the cuſtom of the country. This might ſerve as a ſpecimen of what was to be expected; and it was a pity that the traveller, thus happily returned, who wanted not for proper advice, did not conduct himſelf accordingly.

The Reſolution and Diſcovery ſtanding for the bay, where they did not come to an anchor till the 13th, at nine in the morning, were ſurrounded by a number of canoes, the news of Omai's being on board, and of the red feathers, having been ſufficiently circulated; but as numbers on board were poſſeſſed of this article, it appeared, that ſo precarious and fluctuating was the ſtate of traffic and barter, that a quantity of feathers, which might be taken from the body of a tom-tit, would, early in the morning, have purchaſed a hog of forty or fifty pounds weight; they decreaſed above five hundred per cent. in value in a few hours: however, the balance, even then, was conſiderably in favour of our people, and red feathers ſtill preſerved a ſuperiority over every other commodity.

The officers were now informed by the natives who came off to them, that ſince captain Cook had been at this iſland in 1774, two ſhips had been twice in this bay, and had left animals there reſembling thoſe they had on board; but on a minute enquiry into particulars, they were found to conſiſt only of hogs, dogs, goats, a bull, and the male of another animal, which the natives ſo imperfectly deſcribed, that they could not conjecture what it was. Theſe ſhips, they ſaid, had come from a place called Reema, which was ſuppoſed to be Lima, the capital of Peru, and that theſe late viſitors were conſequently Spaniards. They added, that the firſt time they arrived, they built a houſe, and left behind them two prieſts, a boy or ſervant, and a fourth perſon whom they called Mateema, much ſpoken of at this time, taking away with them, when they ſailed, four of the natives: that about ten months after, the ſame ſhips returned, bringing back only two of the natives, the other two having died at Lima; and that, after a ſhort ſtay, they took away the people they had left, but that the houſe they had erected was then ſtanding.

Not long after the ſhips had anchored in the bay, Omai's ſiſter came on board, in order to congratulate him on his return. It was pleaſing to obſerve, that their meeting was marked with expreſſions of the tendereſt affection, more eaſily conceived than deſcribed.

Captain Cook having received a meſſage from Waheiadooa, Prince of Tiarraboo, notifying his arrival, and requeſting he would come aſhore to meet him, Omai and the captain prepared to make him a viſit in form. Omai, on this occaſion, took ſome pains to dreſs himſelf, not after the manner of the Engliſh, nor that of Otaheite, or Tongataboo, or in the dreſs of any other country; but in a ſtrange medley of all the habiliments and ornaments of which he was poſſeſſed. Thus equipped, on landing, they firſt paid a viſit to Etary, an old chief, who being carried on an hand-barrow, accompanied them to a large building, where he was ſet down. Omai ſeated himſelf on one ſide, and the captain on the other. The young chief ſoon after arrived, attended by his mother and ſeveral principal men, who all ſeated themſelves oppoſite to their viſitors. One who ſat near the captain made a ſhort ſpeech, conſiſting of ſeparate ſentences, part of which was dictated by thoſe about him. Another, on the oppoſite ſide, near the chief, ſpoke next; Etary after him, and then Omai. The ſubjects of theſe orations were, captain Cook's arrival. The Reſolution took her old ſtation in Matavai-Bay.

The moſt extravagant ſigns of joy were diſplayed by the natives of Otaheite on the arrival of the Engliſh, ſome of the ceremonies attending which, namely, women's beating their breaſts, and people's wounding themſelves with ſhark's teeth, could not but appear ſtrange, and even diſguſting to Europeans. In the mean time, there was ſcarcely a child that could liſp the word Toote (captain Cook's appella-

tion

tion among them) who was ſilent, or did not give ſome tokens of ſharing in the general ſatisfaction; yet in their ſubſequent dealings, they ſhewed ſufficiently, as uſual, that a mercenary diſpoſition prevailed among them.

Otoo, the king of the iſland, accompanied by a great number of the natives, in their canoes, came from Oparree ſoon after the arrival of the Engliſh; and having landed on Matavai-Point, ſent a meſſenger on board, intimating his deſire to ſee captain Cook there. The captain accordingly went on ſhore, attended by Omai, and ſome of the officers. They found a vaſt multitude of people aſſembled on this occaſion, in the midſt of whom was the king, with his father, his two brothers, and three ſiſters. The captain ſaluted Otoo, and was followed by Omai, who kneeled and embraced his legs. Though Omai had prepared himſelf for this ceremony, by dreſſing himſelf in his beſt apparel, and behaved with great reſpect and modeſty, yet very little notice was taken of him. He made the king a preſent of two yards of gold cloth, and a large taſſel of red feathers; and the captain gave him a gold-laced hat, a ſuit of fine linen, ſome tools, a quantity of red feathers, and one of the bonnets worn at the Friendly Iſlands.

Afterwards the king and all the royal family accompanied captain Cook on board, followed by ſeveral canoes plentifully laden with all kinds of proviſions. Each family owned a part, ſo that the captain had a preſent from every one of them; and each received from him a ſeparate preſent in return. Not long after the king's mother came on board, bringing with her ſome proviſions and cloth, which ſhe divided between the captain and Omai. Though the latter was but little noticed at firſt by his countrymen, they no ſooner gained information of his wealth, than they began to court his friendſhip. Captain Cook encouraged this as far as lay in his power, being deſirous of fixing him with Otoo, and intended to leave all the European animals at this iſland, as he thought Omai would be able to give the natives ſome inſtructions with regard to their uſe and management.

Soon after the ſhips were moored, captain Cook, with Omai, took an airing on horſeback, to the great aſtoniſhment of the inhabitants, many hundreds of whom followed him with loud acclamations. Omai, to excite their admiration the more, was dreſſed capa-pee in a ſuit of armour, and was mounted and capariſoned with his ſword and pike, like St. George going to kill the dragon, whom he very nearly repreſented; only that Omai had piſtols in his holſters, of which the bold ſaint knew not the uſe. Omai, however, made good uſe of his arms; for when the crowd became clamorous and troubleſome, he every now and then pulled out a piſtol, and fired it over them, which never failed to diſperſe them.

While the veſſels lay in Matavai-Harbour, the commanders, with the principal officers and gentlemen, embarked on board the pinnaces, which, on this occaſion, were decked in all the magnificence that ſilken ſtreamers, embroidered enſigns, and other gorgeous decorations could diſplay, to pay a viſit to the king at Oparree. Omai, to ſurpriſe them the more, was cloathed in a captain's uniform, and could hardly be diſtinguiſhed from a Britiſh officer.

From Matavai to Oparree, is about ſix miles. When the party arrived at the landing-place, they were received by the marines then under arms. As ſoon as the company were diſembarked, the whole band of muſic ſtruck up a military march, and the proceſſion began. The road from the beach to the entrance of the palace (about half a mile) was lined on both ſides with natives from all parts, expecting to ſee Omai on horſeback, as the account of his appearance on the other ſide of the iſland had already reached the inhabitants on this. The whole court were likewiſe aſſembled, and the king, with his ſiſters, on the approach of captain Cook, came forth to meet him. As he was perfectly known by them, their firſt ſalutations were friendly, according to their known cuſtoms; and when theſe were over, proper attention was paid to every gentleman in company, and that too with a politeneſs quite unexpected by thoſe who had never before been on this iſland.

As ſoon as the company had entered the palace, and were ſeated, ſome diſcourſe paſſed between the king and captain Cook; after which Omai was preſented to his majeſty, and paid him the uſual homage of a ſubject to a ſovereign of that country, which conſiſts of little more than being uncovered before him, and then entered into a familiar converſation on the ſubject of his travels.

Otoo, impatient to hear his ſtory, aſked him many queſtions before he gave him time to anſwer one. He inquired about the King of England, his place of reſidence, his court, his attendants, his warriors, his ſhips of war, his morai, the extent of his poſſeſſions, &c. &c. Omai did not fail to magnify the grandeur of the great king. He repreſented the ſplendor of his court, by the brilliancy of the ſtars in the firmament; the extent of his dominions, by the vaſt expanſe of heaven; the greatneſs of his power, by the thunder that ſhakes the earth. He ſaid, this monarch had three hundred thouſand warriors every day at his command, and more than double that number of ſailors. That his ſhips of war exceeded thoſe at Matavai in magnitude, in the ſame proportion as thoſe exceeded the ſmall canoes at Oparree.

The king, aſtoniſhed, interrupted him: he aſked where people could be had to navigate ſo many ſhips? and if there were, how could proviſions be got for ſuch a multitude? Omai aſſured him, that in one city only there were more people than were contained in the whole group of iſlands; that the country was full of large populous cities; notwithſtanding which, proviſions were ſo plentiful, that for a few pieces of yellow metal, like thoſe of which he had ſeen many (meaning the medals given by captain Cook to the chiefs) the Great King could purchaſe a quantity of proviſions ſufficient for the maintenance of a ſailor for a whole year. That in the country of the Great King, there were more than an hundred different kings of four-footed animals, from the ſize of a rat, to that of a ſtage erected on an ordinary canoe; and that all theſe propagated very faſt.

He added, that the ſhips of war, in Pretanne, were furniſhed with poo-poos (guns) each of which would receive the largeſt poo-poo his majeſty had yet ſeen, within it; that ſome carried a hundred and more of thoſe poo-poos, with ſuitable accommodations for a thouſand fighting men, and ſtowage for all kinds of cordage and warlike ſtores, beſides proviſions and water for a thouſand days; that they were ſometimes abroad as long, fighting with the enemies of the Great King; that they carried with them frequently, in theſe expeditions, poo-poos that would hold a ſmall hog, and which threw hollow globes of iron, of vaſt bigneſs, filled with fire and all manner of combuſtibles, and implements of deſtruction, to a great diſtance; a few of which, were they to be thrown among the fleet of Otaheite, would ſet them on fire, and deſtroy the whole navy, were they ever ſo numerous.

The king ſeemed more aſtoniſhed than delighted at this narration, and ſuddenly left Omai, to join the company that were in converſation with captain Cook. By this time dinner was nearly ready, and, as ſoon as the company were properly ſeated, was brought in by as many tow-tows as there were perſons to dine; beſides theſe, the king, the two commanders, and Omai, had each of them ſeveral perſons of ſuperior rank to attend them. The dinner conſiſted of fiſh and fowl of various kinds, dreſſed after their manner; barbecued pigs, ſtewed yams, and fruit of the

the moſt delicious flavour, all ſerved with eaſe and regularity.

The gueſts were conducted to the theatre, where a company of players were in readineſs to perform a dramatical entertainment.

The drama was regularly divided into three acts: the firſt conſiſted of dancing and dumb-ſhew; the ſecond of comedy, which, to thoſe who underſtood the language, was very laughable; for Omai, and the natives, appeared highly diverted the whole time; the laſt was a muſical piece, in which the young princeſſes were the ſole performers. Between the acts, ſome feats of arms were exhibited, by combatants with lances and clubs. One made the attack, the other ſtood upon the defenſive. He who made the attack, brandiſhed his lance, and either threw, puſhed, or uſed it inſtead of his club. He who was upon the defenſive, ſtuck the point of his lance in the ground, in an oblique direction, ſo that the upper part roſe above his head; and by obſerving the eye of his evemy, parried his blows, or his ſtrokes, by the motion of his lance, and it was rare that he was hurt by the club. If his antagoniſt ſtruck at his legs, he ſhewed his agility by jumping over the club; and if at his head, he was no leſs nimble in crouching under it. Their dexterity conſiſted chiefly in the defence, otherwiſe the combat might have been fatal, which always ended in good humour.

Theſe entertainments, which generally laſted about four hours, were really diverting. In the hornpipe, they excelled the Europeans, for they added contortions of the face and muſcles to the nimbleneſs of the foot, that were inimitable. Their comedy ſeemed to conſiſt of ſome ſimple ſtory, made laughable by the manner of delivery, ſomewhat in the ſtyle of the merry-andrews formerly at the fairs in England.

As night came on, the commanders took their leave, after inviting the king and his attendants to dine on board the Reſolution. They were conducted to the water-ſide, in the ſame manner as they approached the palace, and were attended by the king and royal family. The next morning Omai's mother, and ſeveral of his relations arrived; but their interview was not like that between him and his ſiſter, for the old lady wounded herſelf with ſhark's teeth, which appeared but an odd idea of joy to the voyagers.

Our people had brought from the other iſlands ſeveral ſhaddock-trees, which they planted here, and there appeared to them a probability of their ſucceeding, unleſs their growth ſhould be checked by the ſame idle curioſity which deſtroyed a vine planted at Oaitipiha by the Spaniards. Many of the natives aſſembled to taſte the firſt fruits it produced; but being ſtill ſour, they conſidered it little better than poiſon, and trod it under foot.

The captain attending Otoo to his father's, he ſaw ſeveral people employed in dreſſing two girls with fine cloth, after a very ſingular faſhion. There were ſeveral pieces, one end of each was held over the heads of the girls, while the remainder was wrapped round their bodies under the arm-pits. The upper ends were then let fall, and hung in folds to the ground, over the other, ſo as to bear ſome reſemblance to a circular hoop-petticoat: laſtly, round the ſides of all were wrapped ſeveral pieces of cloth, of various colours, which conſiderably increaſed the ſize, it being five or ſix yards in circuit; and the weight of this ſingular attire was as much as the poor girls could ſupport. To each were hung two taames, or breaſt-plates, in order to eſtabliſh the whole, and give it a pictureſque appearance. Thus equipped, they were taken on board, together with ſeveral hogs, and a quantity of fruit, the whole being a preſent to the Engliſh commander from Otoo's father.

Thoſe who are dreſſed in this manner, are called atee; but this ceremony is never performed, except when large preſents of cloth are to be made. It never was ſeen practiſed upon any other occaſion; but both captain Cook and captain Clerke, who ſailed under his command, had cloth preſented to them afterwards wrapped round the bearers in the ſame manner.

Captain Cook, going to ſee an embalmed corpſe, near the reſidence of Otoo; on inquiry, it was found to be the remains of Tee, a chief well known to him, when he laſt viſited this iſland. It was lying in an elegant toopapaoo, in all reſpects ſimilar to that at Oaitipiha, in which the remains of Waheiatow, the elder, were depoſited. The body was found uncovered within the toopapaoo, and wrapped up in cloth. At the captain's deſire, the perſon who had the care of it, brought it out and placed it upon a kind of bier, ſo as to exhibit a perfect view of it. The attendants then ornamented the place with mats and cloth, diſpoſed in ſuch a manner as to produce a pleaſing effect. The body was entire in every part; putrefaction ſeemed hardly to be begun, and not the leaſt diſagreeable ſmell proceeded from it, though this was one of the hotteſt climates, and Tee had been dead above four months. There was, indeed, a ſhrinking of the muſcular parts and eyes, but the hair and nails were in their original ſtate, and the ſeveral joints were pliable. The deceaſed are thus preſerved, by drawing out the inteſtines, and other viſcera, after which the whole cavity is ſtuffed with cloth; that when any moiſture appeared, it was immediately dried up, and the body rubbed all over with perfumed cocoa-nut oil, which, frequently repeated, preſerved them ſeveral months; after which they mouldered away gradually. Omai told them, that the bodies of all their great men, who die a natural death, are thus preſerved, and expoſed to public inſpection.

We muſt not omit to mention here, that captain Cook having heard ſo much of the ſtrangers who viſited Otaheite, and the houſe they had erected, was reſolved to ſurvey this edifice, of which the reader will take the following deſcription:

"It ſtood near the beach, and was compriſed of wooden materials, ſuch as ſeemed to have been brought thither ready prepared, the planks being all numbered; and it conſiſted of two ſmall rooms, in the innermoſt of which were a bedſtead, a table, and a bench: ſome old hats and other trifles were alſo left there; and of theſe the natives appeared particularly careful, as well as of the building itſelf, which was preſerved from the injuries of the weather by a ſort of ſhed they had erected over it. Around it were a number of ſcuttles, as if intended for air-holes, though there might be a deſign of rendering them ſerviceable for firing muſkets from, if occaſion required it; and the whole ſtructure ſeemed to captain Cook to indicate a deeper plan than the natives were aware of. At a little diſtance ſtood a wooden croſs, on the tranſverſe part of which was inſcribed, *Chriſtus vincit*, and on the perpendicular, *Carolus III. imperat*, 1774. This latter circumſtance being noticed by the captain, he preſerved the memory of the viſits of the Engliſh, by inſcribing *Georgius Tertius, rex, annis* 1767, 1769, 1773, 1774, & 1777. Near the foot of the croſs, was the Spaniſh commodore's grave, who died on the iſland."

As it appeared, that whatever might be the views of the Spaniards, they had ſpared no pains in endeavouring to gain the friendſhip of the iſlanders, who ſpoke of them with the greateſt-reſpect; ſo captain Cook thought proper to caution them how they truſted their new friends, if ever they ſhould pay them another viſit. And he afterwards heard, in the courſe of a conference with the natives, that the Spaniards had deſired, the Engliſh ſhould never more be admitted into Oaitipiha-Harbour, as they aſſerted, that all was *their* property. But the iſlanders added, in a ſoothing manner, "that they were ſo far from entertaining

entertaining a thought of complying with this injunction, that they came to ſurrender to the Engliſh the province of Tiaraboo, and every thing in it."

Many of the ſailors being very deſirous to ſtay at Otaheite, Otoo intereſted himſelf in their behalf, and endeavoured to prevail on captain Cook to grant their requeſt; but he rejected peremptorily every application of that kind, though often repeated; nor would he ſuffer any of the natives to enter on board, though many would have gladly accompanied the Europeans wherever they intended to ſail, and that too after they were aſſured, that they never intended to viſit their country any more. Some of the women alſo would have followed their Ehoonoas, or Britiſh huſbands, could they have been permitted; but the commander was equally averſe to the taking any of the natives away, as to the leaving his own people behind.

When the king found he could not obtain his wiſhes in this reſpect, he applied to captain Cook for another favour, which was, to allow our carpenters to make him a cheſt, or preſs, to ſecure the treaſures he had accumulated in preſents: he even begged that a bed might be placed in it, where he intended to ſleep. This requeſt the captain readily granted; and while the workmen were employed in making this uncommon piece of furniture, they were plentifully ſupplied with barbecued hog, and ſuch dainties as the country afforded, ſo that they thought themſelves amply compenſated for their pains. Captain Cook accompanied Otoo to Oparree; and before he left it took a ſurvey of the cattle and poultry which he had conſigned to his friend's care. Every thing was in a promiſing way, and properly attended to. Two of the geeſe, and two of the ducks, were ſitting; but the pea-hen and turkey-hen had neither of them begun to lay. He took four goats from Otoo, two of which he intended to leave at Ulietea, and to reſerve two for the uſe of any other iſlands he might touch at in his paſſage to the north. The captain was informed by Otoo, that he had a canoe, which he deſired he would take with him as a preſent from the Earee of Otaheite, to the Eareerahie of Pretanne. The captain was highly pleaſed with Otoo for this mark of his gratitude. At firſt, he ſuppoſed it to be a model of one of their veſſels of war, but it proved to be a ſmall ivahah, about ſixteen feet long. It was double, and probably had been built for the purpoſe, and was decorated with carved work, like their canoes in general. It being inconvenient to take it on board, the captain could only thank him for his good intention; but the king would have been much better pleaſed if his preſent could have been accepted.

By the following manœuvre of this prince, it will appear, that the people of this iſland do not want for addreſs in bringing about their purpoſes. Among other things which the captain had at different times given Otoo, was a ſpying-glaſs: having been two or three days poſſeſſed of this glaſs, he, perhaps, grew tired of it, or diſcovered that it could not be of any uſe to him; he therefore carried it privately to captain Clerke, telling him, that he had got a preſent for him, in return for his friendſhip, which he ſuppoſed would be agreeable: "But, ſays Otoo, Toote muſt not be informed of this, becauſe he wanted it, and I refuſed to let him have it." Accordingly he put the glaſs into captain Clerke's hands, aſſuring him, at the ſame time, that he came honeſtly by it. Captain Clerke, at firſt, wiſhed to be excuſed from accepting it; but Otoo inſiſted that he ſhould, and left it with him. A few days after, he reminded captain Clerke of the glaſs; who, though he did not wiſh to have it, was yet deſirous of obliging Otoo; and thinking a few axes would be more acceptable, produced four, and offered them in exchange. Otoo immediately exclaimed, "Toote offered me five for it." Well, ſays captain Clerke, if that be the caſe, you ſhall not be a loſer by your friendſhip for me; there are ſix axes for you. He readily accepted them, but again artfully deſired that captain Cook might not be made acquainted with the tranſaction, which he knew could not redound to his own honour.

The Engliſh were detained here ſome time longer than they expected, during which the ſhips were crowded with friends, and ſurrounded with canoes, for none of them would quit the place till they departed. At length, the wind came round to the eaſt, and they weighed anchor. When the Reſolution and Diſcovery were under ſail, to oblige Otoo, and to gratify the curioſity of his people, ſeveral guns were fired, after which all friends, except his majeſty, and two or three more, took leave of their viſitors with ſuch lively marks of ſorrow and affection, as ſufficiently teſtified how much they regretted their departure. Otoo being deſirous of ſeeing the Reſolution ſail, ſhe made a ſtretch out to ſea, and then in again immediately, when the king took his laſt farewel, and went aſhore in his canoe. It was ſtrictly enjoined the captain by Otoo, to requeſt, in his name, the Eareerahie of Pretanne (meaning the King of England) to ſend him by the next ſhip ſome red feathers, and the birds which produced them; alſo axes, half a dozen muſkets, powder and ſhot, and by no means to forget horſes. Before the Engliſh left the iſland, captain Cook was much preſſed to join Otoo's forces in an expedition againſt Emayo, where ſome years ſince, they ſaid, a chief had been murdered, whom the inhabitants of the laſt-mentioned place had deſired thoſe of Otaheite to ſend them for a king. A fleet indeed had ſailed before againſt theſe people, but had returned without achieving any thing; and and therefore another attack was reſolved on. The captain anſwered, that he could not think of engaging in hoſtilities againſt thoſe who had not given him any offence, and predicted the miſcarriage of the expedition, on account of their offering a human ſacrifice to inſure its ſucceſs.

Otoo left the moſt valuable preſents he had received, in the captain's poſſeſſion, till the day before they ſailed, the king declaring that they could be no where ſo ſafe. From the acquiſition of new riches, the inducements to pilfering muſt certainly have increaſed, and the chiefs were ſenſible of this, from their being ſo exceeding deſirous of having cheſts. The few that the Spaniards had left among them were highly prized, and they were continually aſking for others from our people. Locks and bolts were not conſidered as a ſufficient ſecurity, ſo that a cheſt muſt be large enough for two people to ſleep upon, and conſequently guard it in the night. Yet, in the midſt of all this inſecurity of property, it is no leſs ſtrange than true, that no laws were made, or even ſuggeſted, to ſuppreſs ſuch a growing evil; no reaſon for which can be aſſigned, but the weak one, that cuſtom had appeared to authoriſe theſe ſhameful depredations.

On account of the incapacity of theſe people to calculate the time of paſt events, it could never be learned, to a certainty, when the Spaniards landed on the iſland. The live ſtock they left here, conſiſted of one bull, ſome goats, hogs, and dogs, and the male of another animal, which, according to information, was a ram, at that time at Bolabola. The hogs being large, had already much improved the breed originally found upon the iſland. Goats were alſo plentiful, there being hardly a chief without them.

The dogs that the Spaniards put aſhore, were of two or three ſorts: had they all been hanged, inſtead of being left upon the iſland, it would have been better for the natives. A young ram fell a victim to one of theſe animals.

Four Spaniards remained on ſhore when their ſhips left the iſland, two of whom were prieſts, one a ſervant, and the other was much careſſed among the natives, who diſtinguiſhed him by the name of Ma-

teema. He ſeemed to have ſo far ſtudied their language, as to have been able to ſpeak it, and to have been indefatigable in impreſſing on the minds of the Otaheiteans exalted ideas of the greatneſs of the Spaniſh nation, and inducing them to think meanly of the Engliſh.

It is hard to conceive, what were the views of the prieſts; they could not relate to religion; for the natives ſaid, they never converſed with them, either on this or any other ſubject. The prieſts reſided the whole time at Oaitipiha; but Mateema roved about continually, viſiting many parts of the iſland. After he and his companions had ſtaid ten months, two ſhips arriving at Otaheite, took them on board, and ſailed in five days. Whatever deſigns the Spaniards might have on this iſland, their haſty departure ſhewed they had now laid them aſide. However, they endeavoured to make the natives believe, that they intended to return, and would bring them all kinds of animals, and men and women, who were to ſettle on the iſland.

As captain Cook had received a viſit from one of the two natives of this iſland who had been taken to Lima by the Spaniards, it is ſomewhat remarkable that he never ſaw him afterwards, eſpecially as the captain received him with uncommon civility. It was imagined that Omai, from motives of jealouſy, had kept him from the captain, he being a traveller, who, in ſome degree, might vie with himſelf. Captain Clerke, who had ſeen the other man, ſpoke of him as an inconſiderable character; and his own countrymen entertained the ſame opinion of him. In ſhort, thoſe two adventurers ſeemed to be held in little or no eſteem.

In the mean time, Omai himſelf, who had been fortunate enough to return with ſo many more advantages, was far from improving them as might have been expected. He exhibited little indeed of dignity, but much of a puerile vanity: ſlighting the advice of his beſt friends, he, like many Europeans, ſeemed to delight only in that ſort of ſociety where he expected to be deemed the head of the company. By ſuch means, he loſt the friendſhip of all the principal perſons in the country, who preſently found, that they could not get from any perſon in either of the ſhips ſuch gifts as Omai beſtowed on the lower orders of the people. This conduct naturally loſt him the favour of Otoo, and of thoſe with whom he ſhould have been careful to cultivate an acquaintance. His ſiſter and his brother-in-law likewiſe very unkindly joined a ſelect body, that ſeemed to have laid a ſcheme for plundering him, which they would have done completely, but for the interference of captain Cook, who took the moſt uſeful articles this traveller had under his care, and forbad theſe greedy relations to appear at Huaheine all the time he continued at the Society-Iſlands, whither he intended directing his courſe after leaving Otaheite, according to the plan of his voyage.

But before we purſue the captain's track any further, we ſhall here preſent the reader with a ſummary view of the moſt remarkable cuſtoms and manners of the natives of Otaheite, and ſuch other particulars as we could not have introduced ſo properly before, without breaking in upon the thread of our narrative.

CHAP. XV.

Soil, Perſons, Dwellings, Habits, Diſpoſition, and various Cuſtoms of the Inhabitants of Otaheite. Their Food and Manner of Eating. Birds and Beaſts peculiar to the Iſland.

THE inhabitants of Otaheite have the happineſs to be ſituate on an iſland, which, though within the tropics, may be reckoned as one of the moſt healthy in the world. M. Bougainville, who viſited this place, as we have already mentioned, takes notice, that the greateſt part of his ſailors who were ſent on ſhore for the cure of diſorders occaſioned by heat, ſalt proviſions, and other cauſes incidental to long voyages, here regained their ſtrength, finding the land fertile, and the warmth of the ſea tempered with the pureſt air.

The ſoil, which is of a blackiſh colour, is watered by a number of rivulets. On the borders of the valley through which the river flows, there are ſeveral houſes with walled gardens, and plenty of fowls and hogs. Channels are cut in many places to conduct the water from the hills to the plantations. Streams meander through various windings, and ſtupendous mountains overhang the vallies. Towards the ſea, the view is delightful, the ſides of the hills being covered with trees, and the vallies with graſs. No under-wood was found beneath the trees, neither on the ſides or bottoms of the hills, but there was plenty of good graſs. Many fine ſprings guſh from the borders of the mountains, all of which are covered with wood on the ſides, and fern on the ſummits. Sugar-cane grows without cultivation on the high land, as alſo turmeric and ginger.

This iſland, known by the general name of OTAHEITE, forms two diſtinct kingdoms, which are united by a narrow neck of land. The largeſt of theſe is called by the natives *Tiarrabou*, or *Otaheite-Nue*; the ſmaller *Opoureonu*, or *Otaheite-Ete*.

It is ſurrounded by a reef of coral rocks, forming ſeveral bays, among which the principal is Port-Royal, called by the natives Matavai. The country affords a beautiful proſpect. It riſes in ridges, forming mountains in the middle of the iſland, that may be ſeen at the diſtance of ſixty miles. Towards the ſea, it is level, and covered with fruit-trees of divers kinds, but particularly the cocoa-nut. In this part are the houſes of the inhabitants, which do not form villages, being ranged along the whole border, at about fifty yards diſtance from each other.

The vegetable productions of this iſland are as various as numerous in their reſpective ſpecies. There are bread-fruit, cocoa-nuts, bananas of many ſorts, ſweet potatoes, plantains, yams, a delicious fruit known here by the name of *jambu*, ſugar-cane, the paper-mulberry, ginger, turmeric, and ſeveral ſorts of figs, all of which the ſoil produces ſpontaneouſly, or with very little culture. They have the *ava-ava*, from which they extract the intoxicating liquor already deſcribed in the other iſlands. A moſt extraordinary tree here received the name of *Barringtonia*. The leaves are of a moſt beautiful white, tipped with a bright crimſon. It is called *huddoo* by the natives, who affirm, that its fruit, which is a large nut, being bruiſed, mixed with ſhell-fiſh, and ſtrewed in the ſea, has an effect ſo intoxicating upon the fiſh, that they will come to the ſurface of the water, and ſuffer themſelves to be taken with hands. There are other plants of a ſimilar quality in theſe climates, particularly one called *tubbe*, which grows on another iſland, and intoxicates fiſh in the ſame manner as the *barringtonia* or *huddoo*. It is remarked from obſervation, that the fiſh caught by means of theſe intoxicating plants, were neither nauſeous or unwholeſome. There are alſo the *wharra*, *pandanus*, and a ſort of ſhady trees, covered with a dark green foliage, bearing what they call golden apples, which reſemble, in flavour and juicineſs, the anana, or pine.

The people of Otaheite are robuſt, well proportioned, comely, and alert. With reſpect to ſtature, the men in general are from five feet ſeven to five feet ten inches. The talleſt man ſeen by captain Wallis, meaſured ſix feet three inches and an half; and Otoo, King of Otaheite, is deſcribed by captain Cook as reaching that ſtature. Monſieur de Bougainville ſays, they would, in point of form, be moſt excellent

excellent models for painting an Hercules or a Mars. The ſtandard of the women in general is near three inches ſhorter. Their noſes are generally rather flat, though in other reſpects they are handſome and agreeable, having delicate ſkins, eyes fully expreſſive, and teeth beautifully white and even. Their hair is for the moſt part black, though ſome, in contradiſtinction from the natives of Aſia, Africa, and America, in general, have it brown, red, or flaxen; the children of both ſexes in particular have that of the latter colour. The complexion of the men is tawny, though that of thoſe who go upon the water is reddiſh. The women are of a fine clear olive colour, or what we call a brunette. The men wear their beards in various forms, plucking out a great part. Contrary to the cuſtom of moſt other nations, the women of this country cut their hair ſhort, whereas the men wear it long, ſometimes hanging looſe upon their ſhoulders, and at other times, tied in a knot on the crown of the head, in which they ſtick the feathers of birds of various colours. Like the Chineſe, the principal men of the iſland ſuffer the nails of their fingers to grow very long as a badge of honour, and as an indication of their not being ſubject to any ſervile employment. The nail of the middle-finger on the right-hand, was obſerved to be ſhort; but the reaſon of that peculiarity could not be learned. Their mien and deportment are perfectly graceful.

Tattowing or puncturing is in general practiſed here with both ſexes, and performed in the ſame manner as at the other iſlands in theſe ſeas already deſcribed. They uſually undergo this operation at the age of about ten or twelve years, and in different parts of the body; but thoſe which ſuffer moſt ſeverely, are the breech and the loins, which are marked with arches, carried one above another a conſiderable way up the back.

Mr. Banks, who accompanied captain Cook, was preſent at the operation of tattowing performed on the poſteriors of a girl between twelve and thirteen years of age. The inſtrument uſed had twenty teeth, and at each ſtroke, which was repeated every moment, iſſued an ichor or ſerum tinged with blood. The girl bore the pain with great reſolution for ſome minutes, till at length it became ſo intolerable, that ſhe burſt out into violent exclamations; but the operator, notwithſtanding the moſt earneſt entreaties to deſiſt, was inexorable, whilſt two women who attended upon the occaſion, both chid and beat her for ſtruggling. The operator had continued for the ſpace of a quarter of an hour, in which only one ſide was tattowed, the other having undergone the ſame ceremony ſome time before, and the arches upon the loins, which they deem the moſt ornamental, was yet to be made.

Their dreſs conſiſts of cloth and matting of various kinds; the firſt they wear in fine, the latter in foul weather. Two pieces of this cloth or matting compoſe the dreſs; one of them having a hole in the middle to put the head through, the long ends hang before and behind; the other pieces, which are between four and five yards long, and about one broad, they wrap round the body in an eaſy manner. The men's dreſs differs from the women's in this inſtance, that in one part of the garment, inſtead of falling below the knees, it is brought between the legs. This dreſs is worn by all ranks of people; but that of the better ſort of women, conſiſts of a great quantity of materials. In the heat of the day, both ſexes wear only a piece of cloth tied round the waiſt. They have ſmall bonnets made of cocoa-nut leaves or matting, conſtructed, in a few minutes, to ſhade their faces from the ſun. The ornaments of both ſexes conſiſt of feathers, flowers, ſhells, and pearls, but the latter are more worn by the women. Boys and girls go naked, the former till they are ſeven or eight years old, and the latter till they are five or ſix. Their clothes are in general ſtrongly perfumed. They have a cuſtom in many hot countries of anointing their hair with cocoa-nut oil, the ſmell of which is very agreeable.

The chief uſes for which the houſes of the inhabitants of Otaheite are deſigned, are to ſleep in, or to avoid rain; as in fair weather, they eat in the open air, under the ſhade of trees. They are at beſt but ſheds, and in general without diviſion or apartments. The roof reſembles our thatched houſes, and conſiſts of two flat ſides, inclining to each other. The floor is covered with hay, over which they ſpread mats. The ſize of the houſes is proportioned to the number of the family, and the ſeveral departments adapted for the convenience of the different ranks. The maſter and his wife repoſe in the middle; round them the married people; next the unmarried females; then, at ſome diſtance, the unmarried men; then the ſervants at the extremity of the ſhed, but, in fair weather, in the open air. The houſes of the chiefs differ in ſome particulars, having more convenient apartments conſtructed for privacy. Some are ſo formed as to be carried in canoes; they are very ſmall, and encloſed with leaves of the cocoa-nut, but the air nevertheleſs penetrates; theſe are deſigned only for the accommodation of the great.

With reſpect to the diſpoſition and temper of theſe iſlanders, it has been remarked, that their paſſions are violent, and ſubject to frequent tranſitions from one extreme to another, eſpecially after the ſucceſſion of grief and rapture. As they ſeem abſorbed in luxury, it is natural to ſuppoſe them unable to endure pain in an acute degree; but it will appear otherwiſe, when obſerved, that the women undergo the moſt excruciating tortures from their own hands on the death of relations, as will hereafter be deſcribed. They point out particular friends, by taking off a part of their clothing and putting it on them. Their treatment of our countrymen, after prejudices ariſing from novelty had ſubſided, was generous and courteous. If an engaging look from a native was returned by a ſmile from any of our countrymen, they would avail themſelves of the opportunity to prefer the requeſt of a bead, or ſome other bauble; but maintained an evenneſs of temper whether granted or denied. When the frequency and importunity of their ſolicitations became ſubjects for the diſplay of ſarcaſm amongſt our people, they would only carry it off with an hearty laugh. Novelty was the leading topic of their converſation; their intercourſe with ſtrangers, and the information they derived, and obſervations they made, were ſubjects reſerved for the entertainment and diverſion of each other. Though they always expreſſed emotions at the exploſion of gunpowder, they overcame, by degrees, their former dread and apprehenſion.

Their mode of paying obeiſance to ſtrangers or ſuperiors, at a firſt meeting, is by uncovering themſelves to the middle; and they have a common phraſe when any one ſneezes, implying, "May the Good Genius awake you!" or, "May not the Evil Genius lull you aſleep!"

Though they poſſeſs many good qualities, they partake, as we have ſeen, of the propenſity to theft, that characteriſes the inhabitants of the South-Sea iſlands in general. The terrible apprehenſions of the effects of fire-arms, as upon every occaſion, ſeldom failed of producing reſtitution.

One of the natives having the dexterity to croſs the river unperceived, and ſteal a hatchet, the gunner of the Dolphin, who was commanding officer of a watering party on ſhore, ſignified by ſigns to an old man who was appointed to ſuperintend commerce on the part of the Indians, the offence committed, and drew out ſome of his people, as if he would have gone into the woods in queſt of the delinquent. The old man, intimidated by this ſpecious preparation, gave the officer to underſtand he would prevent the execution of his deſign, by reſtoring the article miſſed;

and

and ſetting off immediately, returned in a very ſhort time with the article ſtolen. The gunner inſiſting on the thief being produced, it was complied with, though with apparent reluctance; and being known to be an old offender, he was ſent priſoner on board. The captain, however, only puniſhed him with apprehenſion, and then diſmiſſed and ſent him on ſhore. He was received on his return by his countrymen with loudeſt acclamations, and carried off in triumph by them into the woods. Conſcious, however, of the lenity of the gunner, he expreſſed his gratitude by preſenting him with a roaſted hog, and ſome bread-fruit.

Another trait of the diſpoſition of theſe people is, that they have not an idea of any thing being indecent, and tranſgreſs the rules of modeſty, without the leaſt ſenſe of ſhame, or notion of impropriety. Notwithſtanding this diſpoſition, the wives here owe their huſbands a blind ſubmiſſion, nor does the paſſion of jealouſy prevail amongſt them in the leaſt degree.

The ſagacity of theſe people in foretelling the weather, particularly the quarter from whence the wind will blow, is very extraordinary. In their long voyages, they ſteer by the ſun in the day, and in the night by the ſtars, all of which they diſtinguiſh ſeparately by names, and know in what part of the heavens they will appear in any of the months during which they are viſible in their horizon. They can alſo determine with preciſion the times of their annual appearing or diſappearing.

Vegetables compoſe the chief part of the diet of the common people of this iſland, whilſt thoſe of exalted rank feed on the fleſh of hogs, dogs, and fowls, and gormandize to an exceſs. Amongſt the articles of vegetable food, are the bread-fruit, bananas, plantains, yams, apples, and a ſour fruit, which though not pleaſant in itſelf, affords an agreeable reliſh to roaſted bread-fruit, with which it is frequently beaten up. The bread-fruit, which is the chief ſupport of theſe people, is attended with no other trouble after the tree is planted, than that of climbing to gather its produce. When the fruit is not in ſeaſon, its deficiency is ſupplied with cocoa-nuts, bananas, and plantains.

A very common diſh, is a pudding compoſed of bread-fruit, plantains, taro, and pandanus-nuts, each raſped, ſcraped, or beat up very fine, and baked by itſelf. A quantity of the juice of cocoa-nut kernels is put into a large tray or wooden veſſel, in which the other articles from the oven are put, together with ſome hot ſtones, in order to make the contents ſimmer. Three or four perſons are employed in ſtirring up the ſeveral ingredients, till they are perfectly incorporated, and the juice of the cocoa-nut turns to oil; and, at laſt, the whole maſs is nearly of the conſiſtency of a haſty-pudding. Some of theſe puddings are excellent, and few that we make in England eqal to them.

They ſubſtitute, inſtead of the bread-fruit, a kind of paſte made of cocoa-nuts, bananas, and plantains, which they gather before the bread-fruit is perfectly ripe, and lay in heaps, covering it cloſely with leaves. It then ferments, after which the core is extracted, and the fruit put into a hole dug in the earth, which is lined with graſs. This is alſo covered with leaves, and preſſed down with a weight of ſtones. This occaſions a great fermentation; when the fruit becomes ſour, it is then baked and eaten. It will keep a conſiderable time before it is baked, and afterwards. The paſte ſo made, is called Maline. Different diſhes are made of the bread-fruit itſelf.

Their method of killing ſuch animals as are intended for food, is by ſuffocation; ſtopping the mouth and noſe with their hands. This done, they ſinge off the hair, by holding the animal over a fire, and ſcraping him with a ſhell. They then cut him up with the ſame inſtrument, take out, waſh the entrails, and put them into cocoa-nut ſhells, together with the blood. Such dogs as are deſigned for food, are fed wholly upon vegetables; and ſome of our countrymen who have taſted the fleſh of that animal thus fed, have declared it to be little inferior to lamb.

In dreſſing their food, they obſerve the following proceſs. Firſt, the fire is kindled by rubbing one piece of dry wood upon the ſide of another. Then digging a pit about half a foot deep, and two or three yards in circumference, they pave the bottom with large pebble-ſtones, which they lay down very ſmooth and even, and kindle a fire in it with dry wood, leaves, and the huſks of cocoa-nuts. They take out the embers when the ſtones are ſufficiently heated, and, after raking up the aſhes on every ſide, cover the ſtones with a layer of cocoa-nut leaves, and wrap up the animal that is to be dreſſed in the leaves of the plantain. If it is a large hog, they ſplit it; but if a ſmall one, they wrap it up whole. Having placed it in the pit, and covered it with hot embers, they lay upon them bread-fruit and yams, which are alſo wrapped in the leaves of the plantain. Over theſe they frequently ſpread the remainder of the embers, mixing among them ſome of the hot ſtones, with more cocoa-nuts among them, and then cloſe up all with earth, ſo that the heat is kept in. The oven is kept thus cloſed a longer or ſhorter time, according to the ſize of the meat that is dreſſing.

The uſual ſauce to their food is ſalt-water: thoſe who live near the ſea, have it furniſhed as it is wanted; thoſe at a diſtance keep it in large bamboos. The kernels of the cocoa-nut furniſh them with another ſauce, which, made into paſte, ſomething of the conſiſtence of butter, are beaten up with ſalt water, that has a very ſtrong flavour, and, at firſt, ſeems nauſeous, but after being uſed ſome time, is much reliſhed. Till viſited by the Engliſh, they were quite unacquainted with the method of boiling, having no veſſels that will bear fire.

The females here are totally excluded from men's ſociety whilſt at their meals. Such indeed was their prejudice in favour of this cuſtom, that they expreſſed their diſguſt even at their viſitants eating in the ſociety of women, and of the ſame food. And the women were ſo accuſtomed to this mode of ſeparation, that the Europeans could never prevail with them to partake with them at their table when they were dining in company. When any of them has been occaſionally alone with a woman, ſhe has ſometimes eaten; but not only expreſſed the greateſt reluctance, but extorted the ſtrongeſt promiſes of ſecrecy. Even brothers and ſiſters among them have their ſeparate baſkets of proviſions, and ſeparate apparatus for their meals. The women have their food ſeparately prepared by boys for this purpoſe.

They uſually eat under the ſhade of a ſpreading tree; their table-cloth is compoſed of broad canvas, ſpread in great abundance. If a perſon of rank, he is attended by a number of ſervants, who ſeat themſelves round him. Before he begins his meal, he waſhes his mouth and hands very clean, and repeats this practice ſeveral times while he is eating. He peels off the rind of the bread-fruit with his fingers and nails. He never eats apples before they are pared, to do which, a ſmall ſhell, of a kind that is to be picked up every where, is toſſed to him by one of the attendants. Whilſt he is eating, he frequently drinks a ſmall quantity of ſalt-water, either out of a cocoa-nut ſhell which is placed by him, or out of the hand. If he eats fiſh, it is dreſſed and wrapped up in canvas; the fiſh being broken into a cocoa-nut of ſalt-water, he feeds himſelf by taking up a piece with the fingers of one hand, and bringing with it as much of the ſalt-water as he can retain in the hollow of his palm. When he dines on fleſh, a piece of bamboo is toſſed to him to ſerve as a knife; having ſplit it tranſverſely with his nail, it becomes fit for uſe, and with this he divides the fleſh. He crams a great

quantity

quantity into his mouth at a time, and ends his repaſt by ſipping ſome bread-fruit pounded and mixed with water, till it is brought to the conſiſtency of an unbaked cuſtard. He then waſhes his mouth and hands; at the ſame time, the attendants cloſe the cocoa-nut ſhells that have been uſed, and place every thing that is left in a kind of baſket.

Such is their averſion to feeding themſelves, that one of the chiefs, on a viſit on board an European veſſel, would have gone without his dinner, if one of the ſervants had not fed him. Some of the Engliſh had an opportunity of obſerving a ſingular inſtance of gluttony. Arriving, upon an excurſion, at a neat houſe, they ſaw a very corpulent man, who ſeemed to be a chief of the diſtrict, lolling at his eaſe, while two ſervants were preparing his deſert, by beating up with water ſome bread-fruit and bananas in a large wooden bowl, and mixing with them a quantity of fermented ſour paſte; while this was doing, a woman who ſat near him, crammed into his throat, by handfuls, the remains of a large baked fiſh and ſome bread-fruit, which he ſwallowed moſt voraciouſly. He had a heavy phlegmatic countenance, which ſeemed to indicate, that all his enjoyment centered in the gratification of his appetite, or, in other words, that he wiſhed to live merely to gormandize.

The people of Otaheite appear to have an averſion to ſtrong liquors, their chief drink being water, or milk of the cocoa-nut. If any of them had drank too freely with the ſeamen, they ever after refuſed the liquor which had produced that effect. They have the intoxicating plant called *ava-ava*, but they uſe the liquor from it with great moderation.—Sometimes they chew the root, and ſometimes eat it wholly.

One of our people made particular enquiry concerning the nature of the perfume-root, with which the natives perfume their clothes and oils. An Indian, more communicative than the reſt, pointed out to him ſeveral plants, which are ſometimes uſed as ſubſtitutes; but he would not, or could not point out the real plants. According to the accounts received afterwards, there are no leſs than fourteen different plants uſed in the preparation of perfume, from which it appears, that theſe people were particularly fond of a compound of ſmells.

Diſeaſes in general do not prevail ſo much in this iſland as in many others. The natives, however, are ſubject to leprous complaints, which appear in cutaneous eruptions. Some had ulcers in different parts of their bodies, but they were ſo little regarded, that no application was made to cure them. They are ſometimes afflicted with cholics and coughs, and thoſe who live luxurioufly are liable to the attack of a diſorder ſimilar to the gout. It is affirmed by Monſieur de Bougainville's ſurgeon, that many had evident marks of the ſmall-pox.

The crew of the French ſhip that viſited this iſland a ſhort time after captain Wallis had left it, are ſaid to have entailed the venereal diſeaſe upon the natives. Above half of captain Cook's people, in 1769, had contracted it during a ſtay of three months. The natives diſtinguiſhed it by a name implying rottenneſs, but of a more extenſive ſignification. They deſcribed the ſufferings which the firſt victims to its rage endured in the moſt moving terms; and aſſured our people, that it cauſed the hair and nails to rot off, and the fleſh to rot from the bones; that it excited ſuch dread and horror among the inhabitants, that, fearing infection, the afflicted were abandoned by their neareſt relations, and ſuffered to periſh in extreme miſery. But they ſeem ſince to have found out a ſpecific remedy for it, as none were ſeen labouring under the dreadful ſymptoms before mentioned upon future viſits.

The management of the ſick belongs to the prieſts, whoſe method of cure generally conſiſts in pronouncing a ſet form of words, after which the leaves of the cocoa-tree plant are applied to the fingers and toes of the ſick; ſo that nature is left to conflict with the diſeaſe without the aſſiſtance of art.—Without medical knowledge, they appear to poſſeſs conſiderable ſkill in ſurgery, which they diſplayed while the Dolphin lay in Port Royal harbour. One of the crew, who, on ſhore, happened to run a large ſplinter into his foot, and the ſurgeon not being at hand, one of his comrades endeavoured to take it out with a pen-knife; but, after giving the man great pain, he was obliged to deſiſt. An old native, of a friendly, ſocial diſpoſition, happening to be preſent, called a man of his country from the other ſide of the river, who, having examined the lacerated foot, fetched a ſhell from the beach, which he broke to a point with his teeth, and with this inſtrument laid open the wound, and extracted the ſplinter.—While this operation was performing, the old man went a little way into a wood, and returned with ſome gum, which he applied to the wound with a piece of clean cloth that was wrapped round him, and in the ſpace of two days it was perfectly healed. The ſurgeon of the ſhip procured ſome of this gum, which was produced by the apple tree, and uſed it as a vulnerary balſam with great ſucceſs. Captain Cook ſaw many of the natives with dreadful ſcars, and, amongſt the reſt, one man, whoſe face was almoſt entirely deſtroyed, his noſe-bone included was quite flat, and one cheek and one eye were ſo beaten in, that the hollow would almoſt receive a man's fiſt, yet no ulcer remained.

Among the birds found on this iſland, are ſmall paroquets, very remarkable on account of the mixture of blue and red on their feathers. There is another ſort of a greeniſh colour, with a few red ſpots; theſe were frequently ſeen tame in the houſes of the natives, who valued them for their red feathers. Here is a king-fiſher, of a dark green, with a collar of the ſame hue round his white throat; a large cuckoo, and a blue heron. There are ſmall birds of various kinds, which harbour in the ſhade of the bread-fruit, and other trees. Contrary to the commonly-received notion, that birds in warm climates are not remarkable for their ſong, theſe have a very agreeable note.

The domeſtic poultry here are cocks and hens, exactly like thoſe in Europe. There are beſides wild ducks, alſo turtle-doves, and large pigeons, of a dark blue plumage, and excellent taſte.

The only quadrupeds in the iſland are hogs, dogs, and rats. The natives are ſaid to have a ſcrupulous regard for the latter, and that they will by no means kill them. But captain Cook, in 1773, turned a number of cats on the iſland, from which, it is reaſonable to ſuppoſe, the number of theſe favoured vermin muſt be reduced.

On comparing various accounts, it appears, that muſquitos and flies infeſt the iſland; but this ſeems to be only at certain ſeaſons, and in particular places. Here we found neither frogs, toads, ſcorpions, centipedes, or any kind of ſerpent. The moſt troubleſome inſect was the ant, of which there were but few.

They have fiſh in great variety, and of excellent flavour. Their principal employment is to catch, and their principal luxury to eat, them.

They make ropes and lines, and thereby provide themſelves with fiſhing-nets, of the bark of a tree, which ſupplies the want of hemp: of the fibres of the cocoa-nut they make thread, with which they faſten the different parts of their canvas, and ſubſerve other purpoſes. Their fiſhing-lines are made from the bark of a nettle which grows on the mountains, and is called *crawa;* they are capable of holding any kind of fiſh. Their hooks are made of mother-of-pearl, to which they fix a tuft of hair made to reſemble a fiſh. Inſtead of being bearded, the point turns inwards. They have a kind of ſeine, made of a coarſe broad graſs, the blades of which are like flags. Theſe they twiſt

twiſt and tie together in a looſe manner, till the neck, which is about as wide as a large ſack, is from ſixty to eighty fathoms long. This ſeine they haul in ſhoal, ſmooth water, and its own weight keeps it ſo cloſe to the ground, that ſcarcely a ſingle fiſh can eſcape. They have harpoons made of cane, and pointed with hard wood, with which they can ſtrike fiſh more effectually than an European can with one loaded with iron. They have no method, however, of ſecuring a fiſh when they have only pierced it with their harpoon, as the inſtrument is not faſtened to a line. Pieces of coral are uſed as files to form mother-of-pearl and other hard ſhells into the ſhape required.

CHAP. XVI.

Language, Manufactures, Succeſſion, Manner of embalming the Dead, Dances, Muſical Inſtruments, Government, Cuſtoms, Human Sacrifices, and Manner of treating the Bodies of the Chiefs that fall in Battle at Otaheite.

WITH regard to the language of theſe iſlanders, we are not ſufficiently acquainted with it to ſpeak of its extent; however, by ſuch ſpecimens as have been ſeen, it appears to be rather expreſſive than copious; few wants commonly producing few words amongſt all the children of Adam; dialects of this language, however, are found to be uſed at moſt of the ſouthern iſlands.

The principal manufacture of Otaheite is cloth; of this there are three ſorts, all which are made out of the bark of different trees; namely, the mulberry, the bread-fruit, and a tree which bears ſome reſemblance to the Weſt Indian wild fig-tree. The firſt of theſe produces the fineſt, which is ſeldom worn but by thoſe of the firſt rank. The next ſort is made of the bread-fruit tree; and the laſt, of that which reſembles the wild fig-tree. But this laſt ſort, though the coarſeſt, is ſcarcer than either of the other two, which are manufactured only in ſmall quantities, as the ſame manner is uſed in manufacturing all theſe cloths in general.

They ſoak the bark of the tree for two or three days in water; then take it out, and ſeparate the inner from the external coat, by ſcraping it with a ſhell, after which it is ſpread out on plantain-leaves, placing two or three layers over one another, care being taken to make it of an equal thickneſs in every part. In this ſtate it continues till it is almoſt dry, when it adheres ſo firmly, that it may be taken from the ground without breaking. After this proceſs, it is laid on a ſmooth board, and beaten with an inſtrument made for the purpoſe, of the compact heavy wood called Etoa. The inſtrument is about fourteen inches long, and about ſeven in circumference; it is of a quadrangular ſhape, and each of the four ſides is marked with longitudinal grooves or furrows, differing in this inſtance, that there is a regular gradation in the width and depth of the grooves on each of the ſides; the coarſer ſide not containing more than ten of theſe furrows, while the fineſt is furniſhed with above fifty. It is with that ſide of the mallet, where the grooves are deepeſt and wideſt, that they begin to beat their cloth, and, proceeding regularly, finiſh with that which has the greateſt number. By this beating, the cloth is extended in a manner ſimilar to the gold that is formed into leaves by the hammer; and it is alſo marked with ſmall channels, reſembling thoſe which are viſible on paper, but rather deeper; it is in general beat very thin, but when they want it thicker than common, they take two or three pieces, and paſte them together with a kind of glue, prepared from the root called Pea. This cloth becomes exceeding white by bleaching, and is dyed of a red, yellow, brown, or black colour; the firſt is exceeding beautiful, and equal, if not ſuperior, to any in Europe. They make the red colour from the mixture of the juices of two vegetables, neither of which uſed ſeparately has this effect.

The whole proceſs of making cloth is performed by women, who are dreſſed in old dirty rags of this cloth, and have very hard hands. They prepare a red dye, which is made by mixing the yellow juice of a ſmall ſpecies of fig, called by the natives *mattee*, with the greeniſh juice of a ſort of fern, or of ſeveral plants which produce a bright crimſon, and this the women rub with their hands if the whole piece is to be uniformly of the ſame colour; or they make uſe of a bamboo-reed, if it is to be marked or ſprinkled with different patterns. This colour fades very ſoon, and becomes of a dirty red, beſides being liable to be ſpoiled by rain, or other accidents. The cloth, however, which is dyed, or rather ſtained with it, is highly valued by the natives, and worn only by perſons of rank among them. Their matting manufacture is alſo very conſiderable: it conſtitutes a great part of their employment, and may be ſaid, in its produce, to excel any in Europe. The materials they work up for this purpoſe are ruſhes, graſs, the bark of trees, and the leaves of a plant they call *wharraw*. The uſes to which they apply their matting are various: on that of the canvas kind, they ſleep in the night, and ſit in the day. The fine ſort they convert into upper garments in rainy weather, as their cloth is ſoon wetted through.

They are very dextrous at baſket and wicker-work; both men and women are employed at it, and they make them of many different patterns.

A dramatic haiva, or play, conſiſts of dancing, and a kind of comedy, or rather farce. The performers are of both ſexes. The muſic on this occaſion conſiſts of drums only: it laſts about two hours, ſometimes longer, and upon the whole is generally well conducted.

One of their dances is called *Timoredee*, which is performed by eight or ten young girls, and conſiſts of looſe attitudes and geſtures, in which they are trained from their infancy. Their motions are ſo very regular, as ſcarcely to be excelled by the beſt performers upon any of the ſtages of Europe.

Their principal muſical inſtruments are the flute and the drum. Their flutes have only two ſtops, and therefore ſound no more than four notes by half-tones. They are ſounded like our German-flute, only the performer, inſtead of applying it to the mouth, blows it with one noſtril, ſtopping the other with his thumb. They are made of a hollow bamboo, about a foot long. To the ſtops they apply the fore-finger of the left-hand, and the middle-finger of the right. While theſe inſtruments are ſounding, others ſing and keep time to them. The drum is made of a hollow block of wood, of a cylindrical form, ſolid at one end, and covered at the other with a ſhark's ſkin. They are beaten with their hands inſtead of ſticks. Their ſkill extends to turning of two drums of different notes into concord: they can likewiſe bring their flutes into uniſon. Their ſongs are generally extemporary, and in rhime.

They have the exerciſe of throwing the lance, not at a mark, but for diſtance. The weapon is about nine feet long; the mark is the bowl of the plantain, and the diſtance about twenty yards.

The form of government in Otaheite, though rather unſettled, and in ſome degree apparently uncertain, bears a reſemblance, in point of ſubordination, to the early ſtate of all the nations in Europe when under the feudal ſyſtem. The people are divided into four ranks or claſſes, viz. *Earee Rahie*, ſignifying king, or ſuperior governor; *Earee*, anſwering to the title of baron, *Manahouni*, to that of vaſſal: and *Towtow*, to that of villain, according to the old law term amongſt us. Under the latter is included the loweſt order of the people.

The

The iſland is divided into what our countrymen termed the Greater and Leſſer Peninſula, generally governed by two independent kings: but captain Cook, however, left Otoo in the ſituation of monarch of the whole iſland; yet there was a dependent prince of the ſmaller Peninſula. *Earierahie*, great king, or emperor, is their higheſt title. *Earie*, is applied to a petty king, or a conſiderable chief, though ſometimes the monarch is content with that title.

As children in this country ſucceed to the title and authority of their fathers as ſoon as they are born, the ſovereignty of the king of courſe ceaſes as ſoon as he has a ſon born. It is ſo likewiſe with the *Earee*, or baron, as the ſon ſucceeds to the titles and honours of his father as ſoon as he is born. He is indeed reduced to the rank of a private man, all marks of reſpect being transferred to the ſon. But here it is proper to obſerve, with reſpect to the former, that a regent is choſen, and the father generally retains his power under that title, till the ſon becomes of age; and as to the latter, that the eſtates remain in his poſſeſſion, and under the management of the father, to the ſame period.

The ſubordination of the Towtows, or lower claſs, deſerves attention. Though employed in feeding the animals for their luxurious chiefs, they are not ſuffered to taſte a morſel of their food. They undergo, without daring to repine, the ſevereſt chaſtiſements, if through the unavoidable means of a concourſe, they preſs upon or incommode the king, or any chief, in his progreſs; and this ſubordination is preſerved without any formal power veſted in the king to enforce it. He does not appear to have any military force, either to awe his ſubjects into obedience, or ſuppreſs a ſpecies of rebellion. He has no body or life-guard; the barons who attend his perſon do not go armed; ſo that the diſtinction of rank that is maintained here, muſt be attributed to the placid and complacent diſpoſition of the people in general.

Notwithſtanding this diſtinction of rank, and its conſequent ſubordination, the neceſſaries of life are within the reach of every individual, at the expence of very moderate labour; and if the higher claſs poſſeſs excluſively ſome articles of luxury, as pork, fiſh, fowls, and cloth, there are no objects here ſo extremely deſtitute and wretched, as thoſe which too often ſhock the humane beholder in more civilized ſtates.

The conduct of theſe people does not appear to be under the reſtriction of any ſtated form of government. From divers cauſes, very few actions among them are deemed criminal. They have no idea of the uſe of money; though adultery is held criminal, yet as concubinage with unmarried women is exempt from that imputation, it takes off from the temptation to it. Beſides, in a country where there is very little, or none at all of that delicacy prevalent in more enlightened or civilized parts of the world, a predilection for any one woman is not liable to be attended with any ſerious conſequences.

Adultery, however, is ſometimes puniſhed with death from the hands of the injured party, when under the influence of a paſſion naturally excited by ſuch a cauſe; though in general the women, if detected, only undergo a ſevere beating, and the gallant paſſes unnoticed.

The chief defect here, is truſting executive juſtice to the lawleſs bounds of the injured party, who inflicts puniſhment as judge and executioner on the delinquent at his own will, without any reſtriction. The chiefs, however, in acts of flagrant violation of juſtice and humanity, ſometimes interpoſe.

A ſort of liveries diſtinguiſh the ſervants of the higher claſs. They wear their ſaſhes higher or lower in proportion to the rank of their maſters. The ſervants of the chiefs are diſtinguiſhed by the ſaſh being faſtened cloſe under the arm; thoſe of the inferior rank of nobility by its going round the loins. One circumſtance which does honour to their ſyſtem of government is, the obtaining immediate information of any deſign that is formed. As a proof of this it is obſerved, that one of the water caſks being ſtolen from an European veſſel in the night; the tranſaction next morning was univerſally known among the Indians, though, it was evident, the theft was committed in a diſtant part of the iſland. By the ſame means the Europeans were appriſed of a ſimilar intent the following night; ſo that in conſequence of placing a centinel over the caſks, the thief who came accordingly was diſappointed of his booty.

Several parts of the iſland were private property, deſcending to the heir of the poſſeſſor at his death, and that deſcent appeared to fall indiſcriminately to man or woman.

The number of the inhabitants of one diſtrict of the iſland was eſtimated at 2400, women and children included.

Captain Cook, on a certain occaſion, receiving information from Otoo the king, that the war canoes of ſeveral of his diſtricts were about to undergo a general review, went in his boat to take a ſurvey of it. Their war canoes, which are with ſtages whereon they fight, amount to about 60 in number; and there are nearly as many more of a ſmaller ſize. The captain was ready to have attended them to Oparree; but the chiefs reſolved that they would not move till the next day. This happened to be a fortunate delay; as it afforded him an opportunity of getting ſome ſight into their manner of fighting. He therefore deſired Otoo to give orders, that ſome of them ſhould go through the neceſſary manœuvres. Two of them were accordingly ordered into the bay; in one of which were the king, captain Cook, and an officer, and one of the iſlanders went on board another.

As ſoon as they had got ſufficient ſea room, they faced and advanced, and retreated by turns as quick as their rowers could paddle. In the mean time, the warriors on the ſtages flouriſhed their weapons, and played a variety of antic tricks, which could anſwer no other purpoſe than that of rouſing their paſſions, to prepare them for the onſet. The king ſtood by the ſide of the ſtages, giving the neceſſary orders when to advance, and when to retreat. Great judgment and a quick eye ſeems to be neceſſary in this department, to ſeize every advantage, and to avoid every diſadvantage. At length the two canoes cloſed ſtage to ſtage; and after a ſevere though ſhort conflict, all the troops on Otoo's ſtage were ſuppoſed to be killed, and the oppoſite party boarded them; when inſtantly Otoo and the paddlers in the canoe, leaped into the ſea, as if reduced to the neceſſity of preſerving their lives by ſwimming. But they ſometimes laſh the two veſſels together head to head, and fight till all the warriors on one ſide or the other are killed; yet this cloſe combat is never practiſed, except when the contending parties are determined to conquer, or die. Indeed, in this inſtance, one or the other muſt infallibly happen; for they never give quarter unleſs it be to reſerve their priſoners for a more cruel death the following day. All the power and ſtrength of theſe iſlands lie in their navies.

A general encounter on land was never heard of; and all their deciſive actions are on the water. When the time and place of battle are fixed by both parties, the preceding day and night are ſpent in feaſting and diverſions. When the day dawns, they launch the canoes, make every neceſſary preparation, and with the day begin the battle; the fate of which, in general, decides the diſpute. The vanquiſhed endeavour to ſave themſelves by a precipitate flight; and thoſe who reach the ſhore fly with their friends to the mountains; for the victors, before their fury abates, ſpare neither the aged, women, or children. They aſſemble the next day at the morai, to return thanks

thanks to the Eatooa for the victory, and offer there the ſlain and the priſoners as ſacrifices. A treaty is then ſet on foot; and the conquerors obtain uſually their own terms; whereby large diſtricts of land, and even whole iſlands, ſometimes change their proprietors and maſters.

One of our moſt celebrated navigators acknowledged, that their naval armaments exceeded every idea he had formed of the power of this ſmall iſland. The ſame remark was made of their dock yards, in which were large canoes, ſome lately built, and others building; two of which were the largeſt ever ſeen in that ſea, or any where elſe under that name: and it muſt be confeſſed, that the power and conſequence of the iſland never appeared to ſuch advantage as when, upon another occaſion, the fleet of war canoes was aſſembled. The amount of thoſe collected was 159 of the largeſt, beſides 70 ſmaller ones. The concourſe of people was more ſurpriſing than the number of canoes; for, upon a moderate computation, they could not contain leſs than fifteen hundred warriors, and four thouſand rowers or paddlers. Our countrymen were given to underſtand, that this formidable fleet was only the naval force of a ſingle diſtrict, and that all the others could furniſh a naval armament in proportion to their number and ſize. The officers were dreſſed in their war habits, which conſiſted of a great quantity of cloth, turbans, breaſt-plates, and helmets, ſome of the latter were of ſuch a ſize as greatly to encumber the wearer. Their whole dreſs appeared rather calculated for ſhow than uſe, and not adapted to the purpoſe deſigned. The veſſels being decorated with flags, ſtreamers, &c. made upon the whole a noble appearance.

Two kinds of canoes are here in uſe, one they call Ivahahs, the other Pahies; the former ſerve for ſhort voyages at ſea, and the latter for long ones. Theſe boats do not differ either in ſhape or ſize, but they are in no degree proportionate, being from ſixty to ſeventy feet in length, and not more than the thirtieth part in breadth. Some are employed in going from one iſland to another, and others uſed for fiſhing. There is alſo the Ivahah, which ſerves for war; theſe are by far the longeſt, and the head and ſtern are conſiderably above the body. Theſe Ivahahs are faſtened together ſide by ſide when they go to ſea, at the diſtance of a few feet, by ſtrong wooden poles, which are laid acroſs them and joined to each ſide. A ſtage or platform is raiſed on the fore part, about ten or twelve feet long, upon which ſtand the fighting men, whoſe miſſile weapons are ſlings and ſpears. Beneath theſe ſtages the rowers ſit, who ſupply the place of thoſe who are wounded. The fiſhing Ivahahs are from thirty or forty to ten feet in length, and thoſe for travelling have a ſmall houſe fixed on board, which is faſtened upon the fore part, for the better accommodation of perſons of rank, who occupy them both day and night. The Pahies differ alſo in ſize, being from ſixty to ſeventy feet long, they are alſo very narrow, and are ſometimes uſed for fighting, but chiefly for long voyages. In going from one iſland to another they are out ſometimes a month, and often at ſea a fortnight or twenty days; and if they had convenience to ſtow more proviſions, they could ſtay out much longer. Theſe veſſels are very uſeful in landing, and putting off from the ſhore in a ſurf, for by their great length and high ſtern they landed dry, when the Engliſh boats could ſcarcely land at all.

The chief parts or pieces of theſe veſſels are formed ſeparately without either ſaw, chiſſel, or any other iron tool, which renders their fabrication more ſurpriſing and worthy obſervation. Theſe parts being prepared, the keel is fixed upon blocks, and the planks are ſupported with props, till they are ſewed or joined together with ſtrong plaited thongs, which are paſſed ſeveral times through holes bored with a chiſſel of bone, ſuch as they commonly make uſe of, and when finiſhed they are ſufficiently tight without calking.

Their inſtruments of war are clubs, ſpears, and ſtones. They uſe their ſlings with great dexterity. They have likewiſe bows and arrows; but the arrows are of no other uſe than merely to bring down a bird, being headed only with a ſtone, and none of them pointed. Their targets are of a ſemicircular form, made of wicker work and plaited ſtrings of the cocoa-nut fibres, covered with gloſſy bluiſh green feathers, and ornamented with ſharks' teeth curiouſly diſplayed.

The tools which theſe people make uſe of for building houſes, conſtructing canoes, hewing ſtones, and for cleaving, carving, and poliſhing timber, conſiſt of nothing more than an adze of ſtone, and a chiſſel of bone, moſt commonly that of a man's arm; and for a file or poliſher, they make uſe of a raſp of coral and coral ſand. The blades of their adzes are extremely rough, but not very hard; they make them of various ſizes, thoſe for felling wood weigh ſix or ſeven pounds, and others which are uſed for carving, only a few ounces; they are obliged every minute to ſharpen them on a ſtone, which is always kept near them for that purpoſe. The moſt difficult taſk they meet with in the uſe of theſe tools, is the felling of a tree, which employs a great number of hands for ſeveral days together. The tree which is in general uſe is called Aoi, the ſtem of which is ſtraight and tall. Some of the ſmaller boats are made of the bread-fruit tree, which is wrought without much difficulty, being of a light ſpongy nature. Inſtead of planes they uſe their adzes with great dexterity. Their canoes are all ſhaped with the hand, the Indians not being acquainted with the method of warping a plank.

They are remarkable ſwimmers. It is related that on a part of the ſhore where a tremendouſly high ſurf broke, inſomuch that no European boat could live, and the beſt ſwimmer in Europe could not preſerve himſelf from drowning, if by any accident he had been expoſed to its fury, ten or eleven Indians were ſwimming here for their amuſement. If a ſurf broke near them, they dived under it and roſe again on the other ſide. They availed themſelves greatly of the ſtern of an old canoe, which they took before them and ſwam out with it as far as the outermoſt beach, when two or three getting into it and turning the ſquare end to the breaking wave, were driven towards the ſhore with incredible rapidity, ſometimes almoſt to the beach; but generally the wave broke over them before they got half way, in which caſe they dived and roſe on the other ſide with the canoe in their hands, and ſwimming out with it again, were again driven back. During this arduous effort, none of the ſwimmers attempted to come on ſhore, but ſeemed to enjoy the ſport in the higheſt degree. A bead intended to have been dropped into a canoe, having accidentally fallen into the ſea, a little boy about ſix years old jumped immediately overboard, and, diving after it, recovered his jewel. Our officers, to encourage the child, dropped more beads, which excited the deſire of a number of both ſexes of the natives to amuſe the ſtrangers with their feats in the water; they dived, and not only brought up ſeveral beads ſcattered at once, but likewiſe large nails, which from their weight deſcended quickly to a conſiderable depth. Swimming ſeems to be familiar to both ſexes from the earlieſt childhood, and the pliancy of their limbs and eaſy poſitions in the water were moſt amazing, and ſeemed to indicate that they were a kind of amphibious creatures.

Among many articles of traffic, feathers became of the higheſt value with the women, and of courſe objects which attracted their particular attention. They ſtiled them *Oora*, and they ſeem to have been prized equal to jewels in Europe.

The

The moſt attractive were thoſe called *ooravine*, which grow on the hand of the green parroquet, and the natives ſoon became judges competent to diſtinguiſh the ſuperior from the inferior ſorts. Our people endeavoured to impoſe dyed feathers upon them for thoſe of a genuine colour; but all their arts of deception were abortive. The rage for the poſſeſſion of feathers became boundleſs, and they were the wages of the females favours in general; nor did even huſbands ſeem to diſcountenance them in throwing out allurements to our countrymen to obtain poſſeſſion of them. To ſuch a degree of phrenzy did their deſire for this article prevail, that a ſingle little feather was preferred to a bead or a nail, and a very ſmall piece of cloth cloſely covered with them was received with a rapture of delight equal to any that could be excited in the mind of an European on the preſentation of a diamond of the firſt magnitude. Their warriors exchanged their very helmets for red feathers, and the ſailors purchaſed targets innumerable with them.

Their curious and ſingular mourning dreſſes, which formerly had been prized ſo highly, were diſpoſed of when feathers became the objects of barter. Captain Cook preſented one of theſe mourning dreſſes to the Britiſh Muſeum.

The iſlanders alſo at this time diſcovered great inclination for baſkets, clubs, and painted cloth, and were exceſſively taken with the mats of Tongataboo, though, in general, they reſemble thoſe of their own manufacture. Our people, however, availed themſelves of this diſpoſition, and impoſed on them, under another name, the very mats they had formerly purchaſed at Otaheite, and they had more ſucceſs in this deception, than in the impoſition of dyed feathers.

The natives here live to an advanced age, without being much incommoded by infirmities, retain their intellectual powers, and preſerve their teeth to the laſt. Monſ. de Bougainville, the French navigator often referred to, deſcribes an old man, who had no other trait of age than that venerable one which is imprinted on a fine figure. Silver locks and a white beard adorned his head. His body was nervous and his fleſh ſolid. He had neither wrinkles or any other tokens of decrepitude. This man, however, ſo reſpectable in appearance, ſeemed averſe to the ſociety of ſtrangers: he was totally regardleſs of their careſſes, and gave no indications of fear, aſtoniſhment, or curioſity. Thoſe objects that excited the rapture of the multitude had no charms for him; he accounted them baubles: from which conſideration it appeared that his mind was as ſound and unimpaired as his body.

The ſame navigator relates, that his people found upon this iſland five or ſix men of moſt ſingular appearance. Their ſkins were of a dead white like the noſe of a white horſe, ſcurfy, covered with a kind of down, and of a hue that could not admit of being termed complexion. The hair on their heads, eyebrows, and beards, were of the ſame dead white: they had eyes reſembling thoſe of a ferret, and were remarkably near ſighted. They were, upon the whole, conſidered as being of no particular race of mankind, nor did they appear to propagate beings ſimilar to themſelves.

In this iſland marriages do not come under the cognizance or ſanction of the prieſts, being merely ſecular contracts, abſtracted from any ſolemn tie, or formal ceremony. But if the prieſts are deprived of the benefits that might reſult from marriages, if under the liſt of their functions, they are amply compenſated by an excluſive right to perform the ceremony of tattowing, which being univerſally adopted, muſt be very lucrative, and furniſh them with all the luxuries of life. The males in general undergo a kind of circumciſion, which they intimate as done from a principle of cleanlineſs: however, it is deemed a foul diſgrace not to ſubmit to it. The performance of this ceremony is likewiſe the excluſive right of the prieſts.

As to their religion, it is very myſterious; and as the language adapted to it was different from that which was ſpoken on other occaſions, our voyagers were not able to gain much knowledge of it. All the information they could obtain in regard to this particular was, that the natives imagined every thing in the creation to proceed from the conjunction of two perſons. One of theſe (which they conſider as the firſt) they call Taroataihetoomo, and the other Tapapa; and the year which they call Tettowmatatayo, they ſuppoſe to be the daughter of theſe two. They alſo imagine an inferior ſort of deities, known by the name of Eatooas, two of whom, they ſay, formerly inhabited the earth, and they ſuppoſe that the firſt man and woman deſcended from them. The Supreme Being they ſtyle, "The Cauſer of Earthquakes;" but more frequently addreſs their prayers to Tane, whom they conceive to be a ſon of the firſt progenitors of nature. They believe in the exiſtence of the ſoul in a ſeparate ſtate, and ſuppoſe that there are two ſituations differing in the degrees of happineſs, which they conſider as receptacles for different ranks, but not as places of rewards and puniſhments. Their notion is, that the chiefs and principal people will have the preference to thoſe of lower ranks; for as to their actions they cannot conceive them to influence their future ſtate, as they believe the deity takes no cognizance of them.

As Monſieur Bougainville had firmly aſſerted, on the teſtimony of a native, whom he took with him to France, that human ſacrifices conſtitute a part of the religious ceremonies of the people of Otaheite; therefore, captain Cook, deſirous of having further information concerning ſo intereſting a matter, went to a morai, or place of worſhip (which we ſhall deſcribe in courſe) accompanied by captain Furneaux of the Adventure, having with them a ſeaman who ſpoke the language tolerably well, and ſeveral of the natives. Obſerving in the morai a kind of bier with a ſhed erected over it, on which lay a corpſe and ſome proviſions, inquiry was made if the plantains were for the Eatooa or Divinity, and if they ſacrificed to him hogs, dogs, fowls, &c. To all this a native replied in the affirmative. On inquiry being made whether they ſacrificed men to the Eatooa, the anſwer was *taato eno*, "bad man," firſt *tiparrhy*, beating them till they were dead. When the queſtion was put, If good men were put to death in this manner? the reply was in the negative. Being aſked whether Towtows, that is, men of the loweſt claſs, were ever thus ſacrificed, if good men? a native replied in the negative, repeating the words *taato eno*, or bad men. It appeared, from what could be gathered upon this occaſion, that men, for certain crimes, were condemned to be ſacrificed to the Deity, provided they did not poſſeſs any property to purchaſe their redemption.

The following is a circumſtantial accout of the ſacrifice at which captain Cook was preſent. Having aſked permiſſion to be a ſpectator, which was readily granted, he repaired to Attahooroo, where the ceremony was to be performed. Being arrived there with many others, Otoo deſired that the ſailors might be ordered to continue in the boat; and that the perſons preſent would take off their hats as ſoon as they ſhould come to the morai. To this they immediately proceeded, followed by numbers of men and ſome boys; but not one woman was preſent. They found four prieſts with their aſſiſtants waiting for them, and on their arrival the ceremonies commenced. The dead body or ſacrifice was in a ſmall canoe that lay on the beach fronting the morai. Two of the prieſts, with ſeveral of their attendants, were ſitting by the canoe that lay on the beach; the others at the morai. The company ſtopped at the

 diſtance

diſtance of 20 or 30 paces from the prieſts. Here Otoo placed himſelf; the European viſitors and a few others ſtanding by him, while the bulk of the people were removed to a greater diſtance. The ceremonies now commenced. One of the aſſiſtants of the prieſts brought a young plantain tree, and laid it down before the king. Another approached, bearing a ſmall tuft of red feathers, twiſted on ſome fibres of the cocoa-nut huſk, with which he touched one of Otoo's feet, and afterwards retired with it to his companions. One of the prieſts who were ſeated at the morai then began a long prayer, and at particular times ſent down young plantain trees, which were placed upon the ſacrifice. During this prayer, one of the natives who ſtood by the officiating prieſt, held in his hands two bundles, in one of which, as was afterwards found, was the royal maro; and the other, if it may be allowed the expreſſion, the ark of the Eatooa. The prayer being finiſhed, the prieſts at the morai, with their aſſiſtants, went and ſat down by thoſe who were upon the beach, carrying the two bundles with them. They here renewed their prayers; during which the plantain-trees were taken, one by one, at various times, from off the dead body, which, being wrapped up in cocoa-leaves and ſmall branches, was now taken out of the canoe and laid upon the beach. The prieſts placed themſelves round it, ſome ſtanding, and others ſitting; and one or more of them repeated ſentences for about ten minutes. The body was now ſtripped of the leaves and branches, and placed parallel with the ſea-ſhore. Then one of the prieſts ſtanding at the feet of the corpſe, pronounced a long prayer, in which he was joined occaſionally by others, each of them holding a tuft of red feathers in his hand. While this prayer was repeating, ſome hair was pulled off the head of the intended ſacrifice, and the left eye was taken out; both which being wrapped in a green leaf, were preſented to the king, who, however, did not touch them, but gave to the man who brought them to him the tuft of red feathers which he had received from Towha, who was related to the king and chief of the diſtrict of Tettaha. This, with the eye and hair, were taken to the prieſts. Not long after this the king ſent them another bunch of feathers.

In the courſe of this laſt ceremony, a king-fiſher making a noiſe, Omai ſaid to captain Cook, "That is the Eatooa;" and he ſeemed to conſider it is a favourable prognoſtic. The corpſe was then carried a little way, and laid under a tree, near which were fixed three thin pieces of wood, neatly carved in various figures. The bundles of cloth were placed on a part of the morai; and the tufts of red feathers were laid at the feet of the dead body, round which the prieſts ſtationed themſelves; and our people were at this time permitted to go as near as they pleaſed. He who ſeemed to be the chief prieſt ſpoke for about a quarter of an hour, with different tones and geſtures; ſometimes appearing to expoſtulate with the deceaſed, at other times aſking ſeveral queſtions; then making various demands, as if the dead body had power himſelf, or intereſt with the deity, to engage him to grant ſuch requeſt; among which, he deſired him particularly to deliver Eimeo, Maheine its chief, the women, hogs, and other things of the iſland into their hands; which was, indeed, the expreſs object of the ſacrifice. He then prayed near half an hour, in a whining tone, and two other prieſts joined in the prayer, in the courſe of which one of them plucked ſome more hair from the head of the corpſe, and put it upon one of the bundles. The high prieſt now prayed alone, holding in his hand the feathers received from Towha. Having finiſhed, he gave them to another prieſt, who prayed in like manner: then all the tufts of feathers were placed upon the bundles of cloth, which concluded the ceremony at this place. The dead body was now carried to the moſt conſpicuous part of the morai, with the feathers, and the two bundles of cloth, while the drums beat ſlowly. The feathers and bundles were laid againſt a pile of ſtones, and the body at the foot of them. The prieſts having again ſeated themſelves round the corpſe, renewed their prayers, while ſome of their aſſiſtants dug a hole about the depth of two feet, into which they threw the victim, and covered it over with ſtones and earth. While they were depoſiting the body in the grave, a boy ſqueaked aloud, upon which Omai told the captain, it was the Eatooa. In the mean time, a fire having been made, a lean dog, half ſtarved, was produced, and killed by twiſting the neck. The hair was then ſinged off, and the entrails being taken out, they were thrown into the fire, and left there to be conſumed; but the kidney, heart, and liver, were baked on heated ſtones. The carcaſe, after having been rubbed over with the blood of the animal, was, with the liver, &c. laid down before the prieſts, who were ſeated round the grave praying. They, for ſome time, uttered ejaculations over the dog, while two men, at intervals, beat very loud on two drums; and a boy ſcreamed in a loud ſhrill voice three times. This, they ſaid, was to invite the Eatooa to feaſt on the banquet, that they had prepared for him. When the prieſts had finiſhed their prayers, the body, heart, liver, &c. of the dog, were placed on a whatta, or ſcaffold, about ſix feet in height, on which lay the remains of two other dogs, and of two pigs, that had been lately ſacrificed. The prieſts and their attendants now gave a ſhout, and this proclaimed the ceremonies ended for the preſent.

As it grew towards evening, the Engliſh were conducted to a houſe belonging to Patatou, where they were entertained and lodged for the night. Having been informed, that the religious rites were to be renewed the next day, they could not quit the place while any thing remained to be ſeen.

Early in the morning they repaired to the ſcene of action; and ſoon afterwards a pig was ſacrificed, and laid upon the ſame ſcaffold with the others. About eight o'clock Otoo took our party to the morai, where the prieſt and a great multitude of people were by this time aſſembled. The two bundles occupied the place where they had been depoſited the preceding evening; the two drums were in the front of the morai, and the prieſts were ſtationed beyond them. The king placed himſelf between the drums, and deſired captain Cook to ſtand by him. The ceremony commenced with bringing a young plantain tree, and laying it at the king's feet. A prayer was then repeated by the prieſts, holding in their hands ſeveral tufts of red, and a plume of oſtrich feathers; which the commodore had preſented to Otoo on his firſt arrival.

When the prieſts had ended the prayer, they changed their ſtation, and placed themſelves between our party and the morai. One of them, the ſame who had performed the principal part the preceding day, began another prayer, which continued near half an hour. During the prayer, the tufts of red feathers were put, one by one, upon the ark of the Eatooa. Not long after, four pigs were produced, one of which was killed immediately, and the three others were taken to a neighbouring ſtye.

The maro with which the natives inveſt their kings, was contained in one of the bundles. When taken out of the cloth, it was ſpread on the ground at full length before the prieſts. It is a girdle about fifteen feet in length, and one foot and a quarter in breadth, and is probably put on in the ſame manner as the common maro, or piece of cloth, uſed by theſe iſlanders to wrap round the waiſt. It was ornamented with yellow and red feathers; but principally with the former. One end of it was bordered with eight pieces, about the ſize and figure of a horſe-ſhoe, whoſe edges were fringed with black feathers; the

the other end was forked, having the points of various lengths. The feathers were ranged in two rows, in ſquare compartments, and produced a pleaſing effect. They had been firſt fixed upon ſome of the cloth of the iſland, and then ſewed to the upper part of the pendant, which captain Wallis had left flying on ſhore, the firſt time of his arrival at Matavai. The prieſts pronounced a long prayer, relative to this part of the ceremony; and after it was ended, the badge of royalty was folded up with great care, and put into the cloth. The other bundle, already mentioned under the name of the ark, was next opened at one end; but our party were not permitted to approach near enough to examine its myſterious contents. The intelligence they obtained reſpecting its contents was, that the Eatooa (or rather, what is ſuppoſed to repreſent him) was concealed therein.

The twiſted fibres of the huſk of the cocoa-nut compoſe the ſacred repoſitory, and its figure is nearly circular, with one end conſiderably thicker than the other. The pig that had been killed, was by this time cleaned, and its entrails taken out. Theſe happened to have many of thoſe convulſive motions which frequently appear, in different parts, when an animal is killed; and this was conſidered as a very favourable omen. After having been expoſed for ſome time, the entrails were carried and laid down before the prieſts, one of whom cloſely inſpected them, turning them for this purpoſe gently with a ſtick. Having been ſufficiently examined, they were thrown into the fire. The ſacrificed pig, and its liver, heart, &c. were now put upon the ſcaffold where the dog had been depoſited; and then all the feathers, except the oſtrich-plume, being encloſed in the ark, an end was put to the whole ſolemnity.

Four double canoes remained upon the beach all the time, before the place of ſacrifice. A ſmall platform, covered with palm leaves, faſtened in myſterious knots, was fixed on the fore-part of each of thoſe canoes; and this alſo is called a morai. Some plantains, cocoa-nuts, bread-fruit, fiſh, and other articles, lay upon each of theſe naval morais. The natives ſaid, that they belonged to the Eatooa, and that they were to attend the fleet ſent out againſt Eumaio.

The unfortunate victim offered on this occaſion was, to appearance, a middle-aged man, and one of the loweſt claſs of the people; but it did not appear that they had fixed upon him on account of his having committed any particular crime that deſerved death. It is certain, however, that they uſually ſelect ſuch guilty perſons for ſacrifices, or elſe vagabonds, who have no viſible way of procuring an honeſt livelihood. Having examined the body of the unhappy ſufferer, now offered up as the object of theſe people's adoration, our party obſerved, that it was bloody about the head, and much bruiſed upon the right temple, which denoted the manner in which he had been killed; and they were informed, that he had been knocked on the head with a ſtone. The wretches who are devoted on theſe occaſions, are never previouſly appriſed of their fate. Whenever any one of the principal chiefs conceives a human ſacrifice neceſſary, on any great emergency, he fixes upon the victim, and then diſpatches ſome of his truſty ſervants, who fall upon him ſuddenly, and either ſtone him to death, or beat out his brains with a club. The king is then acquainted with it, whoſe preſence is ſaid to be abſolutely neceſſary at the ſolemn rites that follow; and, indeed, in the late performance, Otoo bore a capital part. The ſolemnity itſelf is called Poore Eree, or the prayer of the chief: and the victim is termed Taata-taboo, or conſecrated man. The morai, where the late ſacrifice was offered, is always appropriated for the burial of the king of the whole iſland, and likewiſe of his family, and ſome other perſons of diſtinguiſhed rank. It differs little, except in extent, from the common morais. Its principal part is a large oblong pile of ſtones, about thirteen feet in height, and contracted towards the top, with a quadrangular area on each ſide, looſely paved with pebbles, under which the bones of the chiefs are depoſited. Towards the end neareſt the ſea, is the place of ſacrifice, where is a very large whatta, or ſcaffold, on which the offerings of fruits and other vegetables are placed; but the animals are laid on a ſmaller one, and the human ſacrifices are interred under the pavement. There are ſeveral reliques ſcattered about this place; ſuch as ſmall ſtones raiſed in ſeveral parts of the pavement; ſome with bits of cloth faſtened round them; others entirely covered with it; and upon the ſide of the large pile fronting the area, are a great number of pieces of carved wood, in which their gods are ſuppoſed to reſide occaſionally.

There is an heap of ſtones at one end of the large ſcaffold, with a ſort of platform on one ſide. On this are depoſited all the ſkulls of the human ſacrifices, which are taken up after they have remained under ground for ſome months. Juſt above them many of the carved pieces of wood are placed; and here the Maro, and the other bundle, ſuppoſed to contain the god Ooro, were laid during the celebration of the late ſolemn rites.

This barbarous cuſtom of offering human ſacrifices moſt probably prevails in all or moſt of the iſlands of the Pacific Ocean, however diſtant from each other ſome of them may be. And though it may be ſuppoſed, that not more than one perſon is offered at one time, either at Otaheite, or other iſlands, yet theſe occaſions, in all probability, occur ſo frequently, as to make a terrible havock of the human ſpecies; for no leſs than forty-nine ſkulls of former victims, were counted lying before the morai at Attahooroo; and as none of thoſe ſkulls appeared to have ſuffered any conſiderable change or decay from the weather, it may be inferred, that only a ſhort time had elapſed ſince the victims to whom they belonged had been offered.

Yet this horrible ſolemnity appeared not to impreſs any awe for their deity, ſuch as they ſuppoſed him, nor any veneration for religion, upon the minds of the ſpectators; as this was far from being the caſe on the late occaſion; for though a vaſt multitude had aſſembled at the morai, they ſhewed very little reverence for what was tranſacting: and Omai happening to arrive after the ceremonies had begun, many of the iſlanders thronged round him, and were engaged for the remaining part of the time in making him recount ſome of his adventures; to which they liſtened with great eagerneſs of attention, regardleſs of the ſolemn offices which their prieſts were then performing. Indeed, the prieſts themſelves, except the one who ſuſtained the drincipal part, either from their being familiarized to ſuch objects, or from their repoſing no great degree of confidence in the efficacy of their religious inſtitutions, maintained very little of that ſolemnity, ſo neceſſary to give, even to acts of real devotion, their proper effect.

Their habit was but an ordinary one; they converſed together with great familiarity; and the only attempt they made to preſerve decorum, was by exerting their authority, to prevent the populace from encroaching on the ſpot, and to ſuffer our party, as ſtrangers, to come forward. They were, however, very candid in the anſwers which they gave to any interrogatories that were put to them, with regard to this inhuman inſtitution. Being aſked, what was the deſign of it? they replied, that it was an ancient cuſtom, and highly pleaſing to their god, who came and fed upon the ſacrifices; in conſequence of which, he granted their petitions. It was then objected, that he certainly did not feed on theſe, as he was neither ſeen to do it, nor were the bodies of the ſacrificed animals ſoon conſumed; and that as to the corpſe

corpſe of a human victim, they prevented his feeding on that by interring it. In anſwer to theſe objections, they obſerved, that he came in the night, inviſibly, and fed only on the ſoul, or immaterial part, which (as theſe people ſay) remains about the place of ſacrifice, till the carcaſe of the victim is wholly waſted by putrefaction.

Beſides this, among other ſavage cuſtoms, they adopt that of cutting out the jaw-bones of their enemies ſlain in battle, which they carry about with them as trophies; and they, in ſome meaſure, offer, up their bodies to the Eatooa: for after an engagement, in which they have come off victorious, they collect all the dead, and bring them to the morai, where, with great form and ceremony, they dig a large hole, and bury them all in it, as ſo many offerings to their divinities. But they treat in a different manner their own chiefs that fall in battle. A late king, Tootaha, Tubourai Tamaide, and another chief, who were ſlain in an engagement with thoſe of Tiaraboo, were brought to the morai at Attahooroo; at which place the prieſts cut out their bowels before the great altar; and their dead bodies were afterwards interred in three different places near the great pile of ſtones above-mentioned; and the common men who loſt their lives in the battle, were all buried in one hole, at the foot of the ſame pile. This was performed the day after the battle, with much pomp and formality, amidſt a numerous concourſe of people, as a thankſgiving offered to the deity, for the victory they had obtained the preceding day. The vanquiſhed, in the mean time, had taken refuge in the mountains, where they remained upwards of a week, till the fury of the victors began to abate. A treaty was then ſet on foot, by which it was agreed, that Otoo ſhould be proclaimed king of the whole iſland; and the ſolemnity of inveſting him with the maro, or badge of royalty, was performed at the ſame morai, with great magnificence.

As the natives call their places of interment Morais, ſo likewiſe they do their places of worſhip. They approach theſe morais with awe and reverence; not, as it ſhould ſeem, becauſe they eſteem any thing there ſacred, but becauſe they there worſhip an inviſible being, for whom they entertain the profoundeſt reſpect, although not excited by the hope of reward, or the dread of puniſhment. They hold theſe cemeteries, or places of worſhip, ſo venerable, that the chiefs themſelves, and their wives, on paſſing them, take their upper garments from their ſhoulders. The manner in which they bury their dead, and expreſs their ſorrow for the loſs of relatives and friends departed, is thus deſcribed by the lateſt and moſt intelligent obſervers.

The corpſe was placed in the open air, till the bones became quite dry. A ſhed was erected near the reſidence of the deceaſed; one end was left quite open; the other end and the two ſides were partly encloſed with a ſort of wicker-work. The bier was a frame of wood, like that on which the ſeamen's beds, called cots, are placed, with a matted bottom, and ſupported by four poſts, at the height of above four feet from the ground. The body was covered firſt with a mat, and then with white cloth. By the ſide of it lay a wooden mace, one of the implements of war, and near the head of it cocoa-nut ſhells; at the other end a bunch of green leaves with ſome dried twigs, all tied together, were ſtuck in the ground, by which lay a ſtone as big as a cocoa-nut. Near theſe lay one of the young plantain leaves that are uſed for emblems of peace, and cloſe by it a ſtone axe. At the open end of the ſhed alſo hung a great number of palm nuts, in ſeveral ſtrings; and without the ſhed was ſtuck up in the ground a ſtem of a plantain tree, about ſix feet high, upon the top of which was placed a cocoa-nut ſhell full of freſh water: againſt the ſide of one of theſe poſts hung a ſmall bag containing ſome bread-fruit ready roaſted. The food thus placed by the corpſe was deſigned as an offering to their deities.

Round about the ſpot where the body is placed they ſtrew ſmall pieces of cloth, on which the tears and blood of the mourners have been ſhed; for in their paroxyſms of grief, it is an univerſal cuſtom to wound themſelves with a ſhark's tooth.

The mourning that is worn here is an head-dreſs of feathers, the colour of which is conſecrated to death, and a veil over the face. The dreſs is called *Eeva*. The whole country is ſaid to appear thus on the death of their king. The mourning for fathers is very long. The women mourn for their huſbands; but not the huſbands for their wives.

The iſland producing no commodities that can be converted to the purpoſe of foreign traffic, the main benefit that can accrue from a knowledge of it is the ſupplying of ſhips with refreſhments in paſſing through the South-Seas: and certainly it might be rendered competently ſubſervient to that deſirable purpoſe, as ſuch European productions, both animal and vegetable, as are conducive to the ſame, might be abundantly cultivated in ſo favourable a climate, which muſt alike benefit the voyagers and the inhabitants of Otaheite.

CHAP. XVII.

SOCIETY-ISLANDS.

Situation, Number, and Extent. Their Soil and Productions. Various Incidents. Omai ſettled at Huaheine. Ship's Departure.

THE SOCIETY-ISLANDS, ſo called in honour of the Royal-Society, form a group of ſix in number, called Huaheine, Ulietea, Bolabola, Otaha, Tubai, and Morona. They are ſituate between 16 deg. 19 min. north, and 16 deg. 55 min. ſouth latitude, and between 150 deg. 57 min. and 152 deg. of weſt longitude, and were diſcovered by captain Cook, in the year 1769.

After the commander left Otaheite, in the Endeavour, having Tupia on board, he came in ſight of Huaheine, lying in latitude 160 deg. 43 min. ſouth, and 150 deg. 52 min. weſt longitude. It is divided into two peninſulas connected by an iſthmus, which however is overflowed at high water. The appearance of the country is ſomewhat like that of Otaheite; but it ſeems to have ſuffered ſome ſhocks from volcanoes.

Though ſeveral canoes made up towards the Endeavour, as ſhe approached, yet none of the Indians would come along-ſide, till they received encouragement from Tupia, in whom they placed ſo much confidence, and who ſo far removed their fear, that the king and queen came on board. Almoſt every thing theſe people ſaw in the veſſel, excited their aſtoniſhment; but it was remarked, that they made no inquiries after any other objects, than ſuch as immediately preſented themſelves to their view, appearing to be entirely ſatisfied with what was ſhewn them, though they might reaſonably have ſuppoſed that a building of ſuch utility and extent as the ſhip, muſt have afforded many curioſities. The ceremony of exchanging names, generally conſidered as a mark of friendſhip in theſe iſlands, paſſed between the king, whoſe name was Oree, and captain Cook.

Anchoring in a ſmall but fine harbour, captain Cook went on ſhore, accompanied by Mr. Banks and ſome other gentlemen, with Tupia and the king. Various ceremonies then paſſed between the king and our people, which were conſidered as a kind of ratification of a treaty between the Engliſh and the king of Huaheine.

The

The level part of this iſland is very fertile, and abounds with bread-fruit and cocoa-nut trees; and its productions are more forward than thoſe at Otaheite. The mountains here, and in the Society-Iſlands in general, continually attract the vapours from the atmoſphere, and many rivulets deſcend from the broken rocks into the plain, ſo that they are ſupplied with plenty of water.

The iſlanders take great pains with the cultivation of their cloth-tree, having drains made through beds of earth to draw off the water, and the ſides neatly built up with ſtones; and in the drains they plant the *arum*, which yields the yam they call *tatoo*.

When the commander left this iſland, he preſented the king with a ſmall plate of pewter, on which was inſcribed, "His Britannic Majeſty's ſhip Endeavour, lieutenant Cook, commander, 16th July, 1769."

Many of the younger men of the natives, during the ſtay of the ſhip at this iſland, voluntarily offered to take their paſſage with the commander for England. From the whole he ſingled out one, called by ſome, Oedidee, by others, Mahine. This youth was a native of Bolabola, and a near relation of O-Poony, the king of that iſland, and conqueror of ſeveral adjacent ones. He is diſcribed as poſſeſſing mental and perſonal accompliſhments, which endeared him to the people in general on board the ſhip.

Arriving in 62 degrees ſouth latitude, Mahine expreſſed his ſurpriſe at ſeveral little ſnow and hail ſhowers on the preceding days, ſuch phænomena being utterly unknown in his country. The appearance of white ſtones, which melted in his hand, was altogether miraculous in his eyes; and though pains were taken to explain to him that cold was the cauſe of their formation, his ideas on that ſubject did not ſeem to be very clear. A very heavy fall of ſnow ſurpriſed him more than ever; and after long conſideration of its ſingular qualities, he ſaid he would call it white rain when he got back to his own country. In fine, it was with difficulty he was perſuaded to believe that ſnow and ice were only freſh water, till he was ſhewn ſome congealed in a caſk on the deck. He ſtill, however, declared that he would call this 'the white land,' by way of diſtinguiſhing it from all the reſt.

He had collected a number of little ſlender twigs, which he carefully tied in a bundle, and made uſe of inſtead of a journal: for every iſland he had ſeen and viſited after his departure from the Society-Iſlands, he had ſelected a little twig, ſo that his collection, by this time, amounted to about nine or ten, of which he remembered the names perfectly well, in the ſame order as he had ſeen them; and the white land, or *whennua teatea*, was the laſt. He inquired frequently how many other countries they ſhould meet with in their way to England, and formed a ſeparate bundle of them, which he ſtudied with equal care.

Having croſſed the antarctic circle, where the ſun ſcarce ſunk below the horizon, Mahine was ſtruck with the greateſt aſtoniſhment at this appearance, and could ſcarcely believe his ſenſes; all the endeavours uſed to explain it to him miſcarried, and he aſſured the gentlemen, that he deſpaired of finding belief among his countrymen, when he ſhould go back to recount the wonders of congealed rain, and of perpetual day.

The approach of winter led captain Cook once more to ſeek the refreſhments of milder climes, and therefore determining on a viſit to theſe iſlands, he made Otaheite in his paſſage, where Mahine met with ſeveral of his relations, and married the daughter of a chief of the diſtrict of Matavia. The ceremony performed on this occaſion was not obſerved by any of the ſhip's company, who could convey any kind of idea of it: only a petty officer, who was preſent, reported, that a number of ceremonies were performed which were extremely curious, but could not relate any one of them, ſo that this intereſting particular, reſpecting the manners of theſe people, remains entirely unknown. Mahine embarked with captain Cook, leaving, as ſuppoſed, his new-married wife behind him..

He would willingly have proceeded for England, had he had the leaſt hopes given him of ever returning to his native home; but, as captain Cook could not promiſe, or even ſuppoſe, that more Engliſh ſhips would be ſent to theſe iſlands, Mahine choſe to remain in his native country; but he left the ſhip with regret, fully demonſtrative of the eſteem he bore to the Engliſh.

The greateſt anguiſh appeared in this young man's breaſt when he went away. He looked up at the ſhip, burſt into tears, and then ſunk down into the canoe. Juſt as he was going out of the ſhip, he made a requeſt to captain Cook, with which he complied, and then gave him a certificate of the time he had been on board, and recommended him to the notice of thoſe who might touch there after him.

When captain Cook viſited this iſland on his ſecond voyage with the Reſolution and Adventure under his command, the former anchored in twenty-four fathoms water, but the latter got on ſhore on the north ſide of the channel, though ſhe was happily got off again without receiving any damage. The natives received our people with the utmoſt cordiality.

Captain Cook was informed that Oree was ſtill alive, and waited to ſee him. The commanders, with others, went to the place appointed for the interview. The chief had carefully preſerved the piece of pewter, with an inſcription on it, which captain Cook had preſented him with in 1769, together with a piece of counterfeit Engliſh coin, which, with a few beads, were all in the ſame bag the captain made for them; theſe the chief ſent on board. This part of the ceremony being over, our party were deſired by their guide to decorate three young plantain trees with nails, looking-glaſſes, beads, medals, &c. With theſe in their hands they landed, and were conducted through the multitude. They were directed to ſit down a few paces before the chief, and the plantains were laid one by one before him. They were told that one was for the Deity, another for the king, and a third for friendſhip. This being done, the king came to captain Cook, fell on his neck, and kiſſed him. A great effuſion of tears fell down the venerable cheeks of this old man, which appeared ſuch as ſpoke the language of the heart. Preſents were made to all his attendants and friends. Captain Cook regarded him as a father, and therefore preſented him with the moſt valuable articles he had.

Going on ſhore after breakfaſt, the commander heard that one of the inhabitants had been very inſolent and troubleſome. The man was ſhewn to him, equipped in his war habit, with a club in each hand. The captain took theſe from him, as he perceived him bent on miſchief, broke them before his face, and obliged him to retire. Being informed that this man was a chief, he became a little ſuſpicious of him, and ſent for a guard. About this time a gentleman had gone out to collect plants alone; two men aſſaulted him, and ſtripped him of every thing but his trowſers; luckily they did him no harm, though they ſtruck him ſeveral times with his own hanger. They made off when they had done this, and another of the natives brought a piece of cloth to cover him. This gentleman preſently appeared at the trading-place, where a number of the natives were aſſembled, who fled at ſeeing him. Captain Cook perſuaded ſome of them to return, aſſuring them that none ſhould ſuffer who were innocent.

When the king heard this complaint, he and his companions wept bitterly; and as ſoon as his grief was aſſuaged, he made a long harangue to the people that had returned, telling them the baſeneſs of ſuch actions, when the captain and his crew had always behaved ſo well to them. He then took a very particular account of all the things the gentleman had loſt, and promiſed they ſhould be returned, if it was in his power to find them. After this, he deſired captain Cook to follow him to the boat, but the people being apprehenſive of his ſafety, uſed every argument to diſſuade him from it. It is impoſſible to deſcribe the grief they expreſſed in the entreaties they uſed; every face wes bedewed with tears, and every mouth was filled with the moſt diſſuaſive arguments. Oree was deaf to them all, and inſiſted on going with the captain; when they both were in the boat, he deſired it might be put off. The only perſon who did not oppoſe his going, was his ſiſter, and ſhe ſhewed a magnanimity of ſpirit equal to her brother.

Peace was now perfectly re-eſtabliſhed, proviſions poured in from all quarters, the gentleman's coat and hanger were returned, and thus ended theſe troubleſome tranſactions.

The captains Cook and Furneaux went to pay their farewel to Oree, and preſented him with things both valuable and uſeful. They alſo left him a copper-plate with this inſcription, "Anchored here his Britannic Majeſty's ſhips Reſolution and Adventure, September, 1773." Having traded for ſuch things as were wanted, they took their leave, which was very affectionate. On returning to the ſhips, they were crowded with canoes filled with hogs, fowls, &c. Soon after they were on board, the king came and informed them that the robbers were taken, and deſired them to go on ſhore in order to behold their exemplary puniſhment. This they would have done, but were prevented by the Adventure's being out of the harbour, and the Reſolution under ſail. Oree ſtaid with them till they were near two miles out at ſea, and then, after taking another affectionate leave, parted. During their ſhort ſtay at the ſmall but fertile iſland of Huaheine, they procured upwards of 300 hogs, beſides fowls and fruit in great abundance.

The Reſolution and Diſcovery, on captain Cook's third voyage, anchored on the 12th of October, 1777, at the northern entrance of Owharre harbour, ſituated on the weſt ſide of this iſland. Omai, in his canoe, entered the harbour juſt before them, but did not land; and though many of his countrymen crowded to ſee him, he did not take much notice of them. Great numbers alſo came off to the ſhips, inſomuch that they were greatly incommoded by them.

The next morning, all the principal people of the iſland repaired to the European ſhips, agreeable to the wiſhes of the commodore, as it was now time to ſettle Omai, and he ſuppoſed that the preſence of theſe chiefs would enable him to effect it in a ſatisfactory manner. But Omai now ſeemed inclined to eſtabliſh himſelf at Ulietea; and if he and captain Cook could have agreed with reſpect to the mode of accompliſhing that deſign, the latter would have conſented to adopt it. His father had been deprived by the inhabitants of Bolabola, when they ſubdued Ulietea, of ſome land in that iſland; and the captain hoped he ſhould be able to get it reſtored to the ſon without difficulty. For this purpoſe, it was neceſſary that Omai ſhould be upon friendly terms with thoſe who had become maſters of the iſland; but he would not liſten to any ſuch propoſal, and imagined that the captain would make uſe of force to reinſtate him in his forfeited lands.

This prepoſſeſſion preventing his being fixed at Ulietea, the captain began to conſider Huaheine as the more proper place, and therefore determined to avail himſelf of the preſence of the chief men of that iſland, and propoſe the affair to them.

The ſhips were no leſs crowded with hogs, than with chiefs, the former being poured in faſter than the butchers and ſalters could diſpatch them. Indeed, for ſeveral days after arrival, ſome hundreds, great and ſmall, were brought on board; and, if any were refuſed, they were thrown into the boats and left behind.

The captain prepared to make a viſit in form to Taireetareea, the Earee rahie, or then reigning king of the iſland. Omai, who was to accompany him, dreſſed himſelf very properly on the occaſion, and provided a handſome preſent, for the chief himſelf, and another for his Eatooa. Their landing drew moſt of the viſitors from the ſhips, ſo that the concourſe of people became very great.

When the king appeared, his preſence might have been diſpenſed with, as his age did not exceed ten years. Omai, who ſtood at a little diſtance from the circle of great men, began with making his offerings to the gods, which conſiſted of cloth, red feathers, &c. Another offering ſucceeded, which was to be given to the gods by the young chief; and after that, ſeveral other tufts of red feathers were preſented. The different articles were laid before the prieſt, being each of them delivered with a kind of prayer, which was ſpoken by one of Omai's friends, though in a great meaſure dictated by himſelf. In theſe prayers he did not forget his friends in England, nor thoſe who had conducted him ſafe back to his native country. The Earee rahie of Pretanne (king of Great-Britain) the Earl of Sandwich, Toote (captain Cook) Tatee (captain Clerke) were mentioned in every one of them. Theſe offerings and prayers being ended, the prieſt took each of the articles in order, and, after repeating a concluding prayer, ſent every one of them to the morai.

After the performance of theſe religious rites, Omai ſeated himſelf by the captain, who beſtowed a preſent on the young prince, and received another in return. Some arrangements were then agreed upon, relative to the mode of carrying on the intercourſe between our people and the natives. The eſtabliſhment of Omai was then propoſed to this aſſembly of chiefs. They were informed, that the Engliſh had conveyed him into their country, where he was well received by the great king of Pretanne, and his Earees; and had been treated, during his whole ſtay, with all the marks of regard and affection; that he had been brought back again, enriched with a variety of articles, which, it was hoped, would be highly beneficial to his countrymen; and that, beſides the two horſes which were to continue with him, many other new and uſeful animals had been left at Otaheite, which would ſpeedily multiply, and furniſh a ſufficient number for the uſe of all the neighbouring iſlands. They were then given to underſtand, it was the commodore's earneſt requeſt, that they would give his friend Omai, a piece of land, upon which he might build a houſe, and raiſe proviſions for himſelf and family; adding, that if he could not obtain this at Huaheine, either by donation or purchaſe, he was reſolved to carry him to Ulietea, and ſettle him there.

This concluſion ſeemed moſt to gain the approbation of all the chiefs; and the reaſon was obvious. Omai had flattered himſelf, that the captain would uſe force in reſtoring him to his father's poſſeſſions in Ulietea; and he had vaunted himſelf on this ſubject among ſome chiefs, at this meeting, who now expected that they ſhould be aſſiſted by our people in an invaſion of Ulietea, and driving the Bolabolans out of that iſland.

But as it was proper that they ſhould be undeceived in this particular, the captain, with this view, ſignified to them, in the moſt deciſive manner, that he would neither give them any aſſiſtance in ſuch an enterprize,

enterprize, nor even ſuffer it to be put in execution, while he remained in their ſeas; and that, if Omai eſtabliſhed himſelf in Ulietea, he ſhould be introduced as a friend, and not forced upon the people of Bolabola as their conqueror. This declaration gave a new turn to the ſentiments of the council; one of whom expreſſed himſelf to this effect: that the whole iſland of Huaheine, and whatever it contained, were captain Cook's, and therefore he might diſpoſe of what portion he pleaſed to his friend: but, though Omai ſeemed much pleaſed at hearing this, he deſired them to mark out the ſpot, and likewiſe the exact quantity of land, which they intended to grant for the ſettlement. Upon this, ſome chiefs, who had retired from the aſſembly, were ſent for, and after a ſhort conſultation the commodore's requeſt was unanimouſly complied with, and the ground immediately fixed upon, adjoining to the houſe where the preſent meeting was held. It extended along the ſhore of the arbour near two hundred yards; its depth, to the bottom of the hill, was ſomewhat more; and a proportionate part of the hill was comprehended in the grant.

Captain Cook rode with Omai on horſeback, to give him an air of conſequence, followed by the natives, who, attracted by the novelty of the ſight, flocked from the moſt remote parts of the iſland to be ſpectators.

The affair being ſettled between the commodore and the chief, the carpenters and calkers were ordered on ſhore to erect a houſe for Omai, wherein he might ſecure the various European commodities that he had in his poſſeſſion: at the ſame time others of our people were employed in making a garden for his uſe, planting vines, ſhaddocks, melons, pine-apples, and the ſeeds of various kinds of vegetables; all which were in a flouriſhing ſtate before their departure from the iſland.

Omai began now to pay a ſerious attention to his own affairs, and heartily repented of his ill-judged prodigality at Otaheite. He was now the only rich man in the kingdom; and maſter of an accumulated quantity of a ſpecies of treaſure, which his countrymen could not create by any art or induſtry of their own. It was natural, therefore, to imagine, that while all were deſirous of ſharing this envied wealth, all would be ready to join in attempts to ſtrip its ſole proprietor. As the moſt likely means of preventing this, captain Cook adviſed him to diſtribute ſome of his moveables among two or three of the principal chiefs; who, on being thus gratified, might be induced to favour him with their patronage, and ſhield him from the injuries of others. Omai promiſed to follow this advice, and before our people ſailed, this prudent ſtep was taken. The captain, however, not confiding wholly in the operations of gratitude, had recourſe to the more forcible and effectual motive of intimidation, taking every opportunity of notifying to the inhabitants that it was his intention to make another viſit to their iſland, after having been abſent the uſual time; and that if he did not find his friend in the ſame ſtate of ſecurity in which he ſhould leave him at preſent, all thoſe who had been his enemies might expect to become the objects of his reſentment.

The intercourſe of trade and friendly offices between the Engliſh and the inhabitants of Huaheine was interrupted; for, in the evening, one of them found means to get into Mr. Bayley's obſervatory, and carry off a ſextant unobſerved. Captain Cook was no ſooner informed of this theft, than he went aſhore, and deſired Omai to apply to the chiefs to procure reſtitution. He accordingly made application to them, but they took no ſteps towards recovering the inſtrument, being more attentive to a beeva that was then exhibiting, till the captain ordered the performers to deſiſt. Being now convinced he was in earneſt, they began to make ſome inquiry after the delinquent, who was ſitting in the midſt of them, with ſuch marks of unconcern, that the captain was in great doubt of his being guilty, particularly as he denied it. Omai aſſuring him this was the perſon, he was ſent on board the Reſolution, and put in irons. This raiſed a great diſturbance among the iſlanders, and the whole body fled with precipitation. The priſoner being examined by Omai, was with ſome difficulty brought to confeſs where he had concealed the ſextant, and it was brought back unhurt the next morning. After this, the natives recovered from their conſternation, and began to gather about the Engliſh as uſual.

As the thief appeared to be a ſhameleſs villain, the commodore puniſhed him with greater ſeverity than he had ever done any former culprit; for, beſides having his head and beard ſhaved, he ordered both his ears to be cut off, and his eye-brows to be flayed, than which no puniſhment could have ſubjected him to greater diſgrace. In this bleeding condition he was ſent on ſhore, and expoſed as a ſpectacle to intimidate the people from meddling with what was not their own. The natives looked with horror upon the man, and it was eaſy to perceive that this act gave them general diſguſt: even Omai was affected, though he endeavoured to juſtify it, by telling his friends, that if ſuch a crime had been committed in the country where he had been, the thief would have been ſentenced to loſe his life. But, how well ſoever he might carry off the matter, he dreaded the conſequences to himſelf, which, in part, appeared a few days afterwards.

A report being ſpread that one of our goats had been ſtolen by the before-mentioned thief; and though, upon examination, every thing was found ſafe in that quarter, yet it appeared that he had deſtroyed and carried off from the grounds of Omai ſeveral vines and cabbage plants; that he had publicly threatened to put him to death, and to ſet fire to his houſe as ſoon as his European friends ſhould quit this place. To prevent his doing any further miſchief, the captain ordered him to be ſeized, and confined again on board the ſhip, with a view of carrying him off the iſland; and this intention ſeemed to give general ſatisfaction to all the chiefs. He was a native of Bolabola; but there were too many of the people here ready to co-operate with him in all his deſigns.

Their Earee rahie was but a child; and it was not obſerved that there was an individual, or any ſet of men, who held the reins of government for him; ſo that whenever any miſunderſtanding occurred between the Engliſh and the natives, they never knew properly to whom it was neceſſary to apply, in order to effect an accommodation, or procure redreſs. Early in the morning, five days after his impriſonment, the Bolabola-man found means to eſcape from his confinement, and out of the ſhip, carrying with him the ſhackle of the bilboo-bolt that had been put about his leg, which was taken from him as ſoon as he arrived on ſhore, by one of the chiefs, and given to Omai, who went with all expedition on board the ſhip, to inform the captain, that his mortal enemy was again let looſe upon him.

Indeed our people were pleaſed at hearing that the delinquent who eſcaped had gone over to Ulietea; but it was thought by ſome he only intended to conceal himſelf till their departure, when he would revenge the ſuppoſed indignity by open or ſecret attacks upon Omai, whoſe houſe being nearly finiſhed, many of his moveables were carried on ſhore. Among other articles was a box of toys, which greatly pleaſed the gazing multitude; but as to his plates, diſhes, drinking mugs, glaſſes, &c. ſcarce one of his countrymen would even look at them. Omai himſelf began to think, that they would be of no ſervice to him; that a baked hog was more ſavory than a boiled one; that a plantain leaf made as good a diſh or

plate

plate as pewter; that a cocoa-nut ſhell was as convenient a goblet as one of our mugs. He therefore diſpoſed of moſt of thoſe articles of Engliſh furniture among the crew of the ſhips; and received from them in return, hatchets, and other implements, which had a more intrinſic value in this part of the world. Among the numerous preſents beſtowed upon him in England, fireworks had not been omitted; ſome of which were now exhibited, before a great number of people, who beheld them with a mixture of pleaſure and fear. Thoſe that remained were put in order, and left with Omai, on the iſland.

Preparations were now made for departure from Huaheine, and every thing taken off from the ſhore except a goat big with kid, a horſe and a mare, which were left in the poſſeſſion of Omai, who was now to be finally ſeparated from his Engliſh friends. They gave him alſo a boar and two ſows of the Engliſh breed; and he had two ſows of his own. The horſe had covered the mare at Otaheite; ſo that the introduction of a breed of horſes into theſe iſlands has probably ſucceeded by this valuable preſent.

Omai's European weapons conſiſted of a fowling-piece, two pair of piſtols, ſeveral ſwords, cutlaſſes, a muſket, bayonet, and a cartouch box. After he had got on ſhore whatever belonged to him, he frequently invited the two captains, and moſt of the officers of both ſhips, to dine with him; on which occaſions his table was plentifully ſpread with the beſt proviſions that the iſland could afford. He went through the fatigues of the day better than could have been expected from the deſpondency that appeared in his countenance, when firſt the company began to aſſemble. Perhaps his awkward ſituation, between half Indian and half European preparation, might contribute not a little to embarraſs him; for having never before made an entertainment himſelf, though he had been a partaker at many, both in England and in the iſlands, he was yet at a loſs to conduct himſelf properly to ſo many gueſts, all of them ſuperior to himſelf in point of rank, though he might be ſaid to be ſuperior, in point of fortune, to moſt of the chiefs at his table.

Nothing, however, was wanting to impreſs the inhabitants with an opinion of his conſequence. The drums, trumpets, bagpipes, hautboys, flutes, violins, in ſhort, the whole band of muſic attended, and took it by turns to play while dinner was getting ready; and when the company were ſeated, the whole band joined in full concert, to the admiration of crowds of the inhabitants, who were aſſembled round the houſe on this occaſion.

The dinner conſiſted, as uſual, of the various productions of the iſland, barbecued hogs, fowls dreſſed, ſome after the manner of the country, and ſome after the Engliſh faſhion, with plenty of wine and other liquors, with which two or three of the chiefs made very free. When the dinner was over, heivas and fire-works ſucceeded; and when night approached, the multitudes that attended as ſpectators, diſperſed without the leaſt diſorder.

Before they ſet ſail, the commodore cauſed the following inſcription to be cut in the front of Omai's houſe:

Georgius tertius, Rex, 2 Novembris, 1777.
Naves { *Reſolution, Jac. Cook, Pr.*
{ *Diſcovery, Car. Clerke, Pr.*

Having thus executed his main deſign, he took advantage of an eaſterly breeze, and ſailed out of Owharre harbour. Our people had procured more than 400 hogs on this iſland.

It was agreed upon, that immediately after the departure of the ſhips, Omai ſhould erect a ſpacious houſe, after the faſhion of his own country; and the chiefs of the iſland promiſed to contribute their aſſiſtance. Many of the natives continued on board till the veſſels were under ſail; when the captain, to gratify their curioſity, ordered five of the great guns to be fired. They then all departed except Omai, who remained till the ſhips went out to ſea.

He then went on ſhore in a boat, and took a very affectionate and final leave of the captain, never to ſee him more. On this occaſion he gave him his laſt inſtructions how to act, directing him to ſend his boat to Ulietea, to acquaint him with the behaviour of the chiefs in the abſence of the ſhips, which he was to ſignify by particular and private tokens. He had endeavoured to prevail on captain Cook to let him return to England, which made his parting with him and our officers the more affecting. If tears could have prevailed on the commander to let him return, Omai's eyes were never dry; and if the tendereſt ſupplications of a dutiful ſon to an obdurate father could have made any impreſſions, Omai hung round his neck in all the ſeeming agony of a child trying to melt the heart of a reluctant parent. He twined his arms round him with the ardour of inviolable friendſhip, till captain Cook, unable any longer to contain himſelf, broke from and retired to his cabin, to indulge that natural ſympathy which he could not reſiſt, leaving Omai to dry up his tears, and compoſe himſelf on the quarter deck.

Having then bid farewel, he was accompanied by lieutenant King in the boat, who informed captain Cook he had wept all the time he was going on ſhore. It was hoped that he would exert his endeavours to bring to perfection the various fruits and vegetables that were planted by his Engliſh friends. Indeed the principal advantage theſe iſlands are likely to receive from the travels of Omai, will probably ariſe from the animals that have been left upon them; which, perhaps, they never would have obtained, if he had not come over to England. When theſe multiply, Otaheite, and the Society-Iſles, will equal any places in the known world, with reſpect to proviſions. Omai's return, and the ſubſtantial proofs he had diſplayed of Britiſh liberality, encouraged many to offer themſelves as volunteers on an expedition to England.

ULIETEA, which we come next to treat of, is about 20 leagues in circumference. When captain Cook, Mr. Banks, and others went on ſhore, accompanied by Tupia, they were received by the natives in the moſt courteous manner; reports concerning them having been tranſmitted from Otaheite. After ſome ceremonies had paſſed, captain Cook took poſſeſſion of this and the adjacent iſlands, in the name of the king of Great-Britain.

The country has extenſive plains and high hills, the ſoil on the top of which was found to be a kind of ſtone marle. On the ſides were ſome ſcattered flints, and a few pieces of a ſpongy ſtone *lava*, of a whitiſh colour, which ſeemed to contain ſome remains of iron; it was conjectured that great quantities of that metal might be lodged in the mountainous parts of the iſland. Its vegetable productions are chiefly plantains, cocoa-nuts, and yams: thoſe of the animal kind, hogs and fowls; but the latter articles do not abound.

There is great ſimilarity in perſon, manners, and cuſtoms between the natives of this and the iſlands adjacent. Ulietea, however, was diſtinguiſhed from the reſt, by a remarkable morai, which the natives called Tapodeloatea. The walls, which were about eight feet, were raiſed of coral ſtones, ſome extremely large. The whole encloſed an area, of about 25 yards ſquare, which was filled up with ſmaller ſtones. Upon an altar, at a ſmall diſtance from this encloſure, was depoſited as a ſacrifice, a hog, very nicely waſhed, weighing about fourſcore pounds.

Several ſtructures dedicated to the deities were placed about here. Theſe ſtructures are a kind of cheſt or ark, the lid of which is fixed on with art,

and

and neatly thatched with palm-nut leaves. Each of them was fixed on two poles, the uſe of which ſeemed to be to remove it from place to place.

On the firſt arrival of captain Cook here, he received a preſent of conſiderable value from Opooney, the king of Bolabola, who was then at the iſland of Otaha. In return for the compliment, the commander, principal officers, &c. determined to pay him a viſit; when, behold, to their aſtoniſhment, this triumphant conqueror appeared to be nothing more than a man, tottering with the decrepitude of age, incapable of the common functions of life, and in a word a mere lumpiſh maſs.

Three extraordinary perſons were ſeen at this iſland; two of them were as brother and ſiſter: the former meaſured ſix feet four inches, and the ſiſter younger than him, five feet ten inches and an half. The third was a chief named Herea, a native of Bolabola. He was the moſt corpulent man in any of the South-Sea iſlands. He meaſured round the waiſt no leſs than 54 inches; one of his thighs was 31 inches and 3-quarters in girth. His hair was likewiſe remarkable; for it hung down in long black wavey treſſes to the ſmall of his back, and in ſuch quantities, that it increaſed the apparent bulk of his head conſiderably.

When captain Cook anchored here, on his ſecond voyage, he was viſited by Oreo, the chief, who brought with him a handſome preſent. A party of them went on ſhore to make him a return, and as they entered the houſe, were met by five old women, who were lamenting on ſome incident, and had cut their faces in a ſhocking manner. This was not the worſt part of the ſtory, for they were obliged to ſubmit to their embraces, and got themſelves covered with blood. After the ceremony was over, they waſhed themſelves, and appeared as cheerful as any other perſon.

Soon after, intelligence was received, that two of the Diſcovery's people, a midſhipman and a gunner's mate, had made their eſcape in a canoe, and landed on an adjoining iſland, with a view to continue their courſe to Otaheite, as ſoon as they had furniſhed themſelves with proviſions for the voyage. They were no ſooner miſſed, and report made to captain Cook, than he ordered all the boats to be manned, and a purſuit to commence with all poſſible expedition; at the ſame time confining the king, his two ſons, and two of the principal chiefs of the iſland, on board the Diſcovery, till the fugitives ſhould be taken and reſtored.

This he did, no doubt, to intereſt the people of the iſland in the purſuit, and to prevent their aſſiſting the deſerters in making their eſcape. He alſo promiſed a reward of large axes, looking-glaſſes, and other articles of conſiderable value, to any of the natives, who ſhould be inſtrumental in apprehending and bringing them back. To enforce his orders he cauſed all the veſſels to be ſeized, and threatened deſtruction to the country if his men ſhould be withheld. He even menaced the king and the young princes with death, if they were not brought back within a certain time. This might ſeem hard uſage, yet it had its effect: as without this ſteady reſolute proceeding, the deſerters would never have been recovered.

The ſhip's boats went day after day to all the adjoining iſlands, without being able to learn the leaſt trace of them; and this they continued, till having ſearched every iſland within the diſtance of two days' ſail, they were at length obliged to give over any further ſearch as fruitleſs.

At length, after fourteen days abſence, ſome Indians came on board, and acquainted captain Cook that the fugitives were found, and that in a few days they would be brought back; deſiring, at the ſame time, the releaſe of the priſoners, as a condition without which they would again be ſet at large. But captain Cook paid no regard to this information. On the contrary, he renewed his threatenings, which he ſaid he would inſtantly order to be carried into execution, if the men were not delivered up.

The very day following, about five in the evening, a number of canoes were ſeen at a diſtance, making towards the ſhips, and as they approached nearer, they were heard to ſing and rejoice as if they had ſucceeded in finding what they went in ſearch of. About ſix they came ſo nigh, that they could diſcern, with glaſſes, the deſerters faſtened together. They were no ſooner brought on board, than the royal priſoners were releaſed, to the unſpeakable joy of all but the two fugitives, who were under great apprehenſions for their lives; their puniſhment, however, was not ſo ſevere as might have been expected.

When captain Cook, on his third voyage, entered the harbour of Ulietea, in the Reſolution, having the Diſcovery, captain Clerke, under his command, the natives ſurrounded the ſhips in their canoes, for the purpoſe of exchanging their commodities for thoſe of our people.

A few days after their arrival, a centinel on ſhore, named John Harriſon, deſerted, taking with him his muſket and accoutrements. As ſoon as intelligence was gained which way he was gone, a party was detached in ſearch of him; but they returned in the evening without ſucceſs. The next day the captain applied to the chief concerning this affair, who promiſed to ſend a party of the iſlanders after the fugitive, and gave hopes that he ſhould be brought back in the courſe of that day. This, however, did not happen; and there was reaſon to imagine, that Oreo the chief had taken no ſteps to find him.

A conſiderable number of the natives were at this time about the ſhips, and ſeveral thefts committed, the conſequences of which being apprehended by them, very few came on board the next morning. Oreo himſelf caught the alarm, and fled with his whole family. Captain Cook conſidered this as a good opportunity to inſiſt upon their delivering up the deſerter; and having heard he was at a place called Hamoa, ſituate on the other ſide of the iſland, he repaired thither with two armed boats, attended by a native. In their way, they met with the chief, who embarked with them. The captain, with a few of his men, landing about a mile from the ſpot, marched up to it with great expedition, leſt the ſight of the boats ſhould give the alarm, and allow the offender ſufficient time to eſcape to the mountains. This precaution was found unneceſſary; for the natives of that part of the iſland having obtained information of the captain's approach, were prepared to deliver the deſerter. He was found with his muſket lying before him, ſeated between two women, who, the inſtant that the captain entered the houſe, roſe up to plead in his vindication.

As ſuch proceedings deſerved to be diſcouraged, the captain, with a ſtern look, bid them be gone; upon which they burſt into tears, and retired. Paha, the chief of the diſtrict, now came with a ſucking pig, and a plantain-tree, which he was on the point of preſenting to capt. Cook, as a peace-offering, who rejected it; and having ordered the chief to quit his preſence, embarked with the deſerter in one of the boats, and returned to the ſhips. After this, harmony was ſpeedily reſtored. The delinquent made no other excuſe for his conduct, than that the natives had enticed him away; which, perhaps, was in a great meaſure true, as Paha, and the two women above-mentioned, had been at the ſhip the day before his deſertion. As he had remained on his poſt till within a few minutes of the time in which he was to have been relieved by another, the puniſhment he received was not very ſevere.

About a fortnight after they arrived at Ulietea, Omai, according to inſtruction given him by captain Cook, diſpatched two of his people in a canoe, with intelligence,

intelligence; that he continued undiſturbed at Huaheine, and that every thing ſucceeded with him, except that his goat had died in kidding. This information was accompanied with a requeſt, that the captain would ſend him another, and alſo two axes. Pleaſed with this additional opportunity of ſerving him, the captain ſent back the meſſengers to Huaheine, with the two axes, and a male and female kid to his friend.

The circumſtance attending the deſertion of theſe people, and particularly the confinement of the chiefs, induced the natives to meditate an attempt for their relief, which had it not been prevented, might have involved our people in ſtill greater diſtreſs. Captain Cook being on ſhore, abreaſt of the ſhip, obſerved all their canoes, in and about the harbour, began to move off. He inquired, in vain, for the cauſe of this; till information was received from the Diſcovery, that a body of the iſlanders had ſeized captain Clerke and lieutenant Gore, as they were walking at a ſmall diſtance from the ſhips.

The commodore, ſtruck with the boldneſs of this ſcheme of retaliation, which ſeemed to counteract him in his own way, inſtantly commanded his people to arm; and in a few minutes, a ſtrong party, under the conduct of Mr. King, was ſent to the reſcue of the two gentlemen. At the ſame time, two armed boats were diſpatched to intercept the flying canoes in their retreat to the ſhore. Theſe detachments had ſcarcely gone out of ſight, when intelligence arrived, which proved the information erroneous, ſo that they were immediately, in conſequence of this, called in. However, it appeared from ſeveral corroborating particulars, that the natives had actually formed the deſign of ſeizing captain Clerke; and the following day it became no ſecret.

But the principal part, at firſt, of the plan of their operations was, to have ſecured the perſon of captain Cook. He was accuſtomed to bathe every morning in the freſh water; on which occaſions he frequently went alone, unarmed. Expecting him to go this evening, as uſual, they had reſolved upon ſeizing him, and captain Clerke likewiſe, if he had accompanied him. But the commander, after confining the chief's family, had taken care not to put himſelf in their power; and had cautioned captain Clerke and the officers not to go any conſiderable diſtance from the ſhips.

In the courſe of the afternoon, Oreo aſked the commodore, three or four times, if he would not go to the bathing place; till at length finding that he could not be prevailed upon, he retired, with his people, notwithſtanding many entreaties to the contrary. Having no ſuſpicion at this time of their deſign, captain Cook imagined that a ſudden panic had ſeized them, which would be ſoon over. Being diſappointed with reſpect to him, they fixed upon thoſe whom they thought more in their power.

It was a fortunate circumſtance that they did not ſucceed in their deſign, and that no miſchief was done on the occaſion; no muſkets being fired except two or three to ſtop the canoes; to which firing, perhaps, captain Clerke and Mr. Gore owed their ſafety; but Mr. King aſcribed this to the captain's walking with a piſtol in his hand, which, he ſays, he once fired; at which time a party of the iſlanders, armed with clubs, were marching towards them, but diſperſed on hearing the report of the muſkets. This conſpiracy was firſt diſcovered by a girl, who had been brought from Huaheine by one of our officers. Happening to overhear ſome of the Ulieteans ſay, they would ſeize captain Clerke and Mr. Gore, ſhe immediately ran to acquaint the firſt of our people that ſhe met with of the deſign. Thoſe who had been truſted with the execution of the plan threatened to put her to death, as ſoon as the ſhips ſhould quit Ulietea, for diſappointing them. Being aware of this, it was ſo contrived, that the girl's friends ſhould come a day or two afterwards, and take her out of the ſhip, to convey her to a place where ſhe might remain concealed till an opportunity ſhould offer for her eſcaping to Huaheine.

This iſland of Ulietea differs eſſentially from the reſt of the Society-Iſlands in one particular inſtance, which is, that the women have more liberty here, and are not reſtrained from eating in company with the men.

Bolabola is ſituated about four leagues diſtant from Otaha; ſurrounded by a reef of coral rocks, and ſeveral ſmall iſlands, in compaſs together about eight leagues, and made up of one forked peak, with ſeven low iſlands round it.

The harbour of Bolabola, called Oteevanooa, on the weſt ſide of the iſland, is very capacious, and though our countrymen did not enter it, they had the ſatisfaction of being informed, by perſons employed for that purpoſe, that it was a very proper place for the reception of ſhips. There are many iſlets or ſmall iſlands that ſurround it, which add to the number of its inhabitants, and the amount of its vegetable productions.

The principal reaſon that induced captain Cook to touch at this iſland on his voyage was, to procure one of the anchors which had been loſt at Otaheite by Monſieur de Bougainville, which, he was informed, had been afterwards found by the natives there, and ſent by them to Opoony, the chief of Bolabola. It was not on account of the want of anchors that he was anxious to get poſſeſſion of it; but the people having parted with all the hatchets and other iron tools and implements, in purchaſing refreſhments, they were now obliged to create a freſh aſſortment of trading articles, by making them out of the ſpare iron they could find on board, and even the greateſt part of that had been already expended. Captain Cook, therefore, ſuppoſed Monſ. de Bougainville's anchor would, in a great meaſure, ſupply the want of that uſeful material, and he did not entertain a doubt but Opoony might be induced to part with it.

Oreo, accompanied by ſix or eight others from Ulietea, attended the commodore to Bolabola; and, indeed, moſt of the natives, except the chief, would gladly have taken their paſſage to England.

On his landing, the commodore was introduced to Opoony, ſurrounded by a vaſt concourſe of people. The neceſſary formality of compliments being over, he requeſted the chief to give him the anchor; and by way of inducement produced the preſent he intended for him. It conſiſted of a linen night-gown, ſome gauze handkerchiefs, a ſhirt, a looking-glaſs, ſome beads and toys, and ſix axes. Opoony, however, refuſed to accept the preſent till the commodore had received the anchor; and ordered three perſons to go and deliver it to him, with directions to receive from him what he thought proper in return. With theſe meſſengers perſons deputed ſet out in boats for a neighbouring iſland, where the anchor had been depoſited; but it was neither ſo large or ſo perfect as was expected. By the mark that was upon it, it appeared to have originally weighed 700 pounds; but it now wanted the two palms, the ring, and part of the ſhank. The reaſon of Opoony's refuſing captain Cook's preſent was now apparent; he, doubtleſs, ſuppoſed that the anchor, in its then ſtate, was ſo much inferior to its former value, that, when he ſaw it he would be diſpleaſed. The commodore, notwithſtanding, took the anchor as he found it, and ſent the whole of the preſent which he at firſt intended.

It might at firſt ſeem ſurpriſing that Bolabola ſhould become ſo reſponſible. The reaſon will be ſeen by the following ſhort narrative.

Ulietea and Otaha had long been friendly; or, as the natives emphatically expreſs it, they were conſidered

ſidered as two brothers, whoſe views and intereſts were the ſame. The iſland of Huaheine was alſo admitted as a friend, but not in ſo eminent a degree. Like a traitor, Otaha leagued with Bolabola, jointly to attack Ulietea, whoſe people required the aſſiſtance of their friends in Huaheine againſt theſe united powers. The inhabitants of Bolabola were encouraged by a pretended propheteſs, who predicted their ſucceſs. The canoes of Bolabola attacked thoſe of Ulietea and Huaheine: the encounter laſted long, they being laſhed ſtrongly together with ropes; and, notwithſtanding the prediction, the Bolabola fleet would have been vanquiſhed, had not that of Otaha arrived at the critical moment. The fortune of the day was now turned; victory declared in favour of the Bolabolans; and their enemies were totally defeated. Two days after the conquerors invaded Huaheine, which they ſubdued, it being weakly defended, as moſt of its warriors were then abſent. Many of its fugitives, however, having got to Otaheite, there related their melancholy tale. This ſo affected thoſe of their own country and of Ulietea, whom they found in that iſland, that they obtained their aſſiſtance. They were furniſhed with only ten fighting canoes; with which inconſiderable force they effected a landing at Huaheine in the night; and, taking the Bolabola men by ſurprize, killed many of them, and diſperſed the reſt. Thus were they again, by one bold effort, poſſeſſed of their own iſland, which at this day remains independent, and is governed by its own chiefs. When the combined fleets of Ulietea and Huaheine were defeated, the men of Bolabola were applied to by their new allies of Otaha to be allowed an equal ſhare of the conqueſts. This being refuſed, the alliance broke; and, during the ſubſequent war, Otaha was conquered as well as Ulietea, both of which remain ſubject to Bolabola; the chiefs by whom they are governed being only deputies to Opoony the king of the iſland. In the reduction of the two iſlands five battles were fought at different places, and great numbers fell in the conteſt.

Since the conqueſt of Ulietea and Otaha, the Bolabola men are conſidered as invincible; and their fame is ſo far extended, that, even at Otaheite, if not dreaded, they are reſpected for their valour. It is aſſerted, they never fly from an enemy, and that they are victorious againſt an equal number of the other iſlanders. Indeed, the eſtimation in which the people of Bolabola are held at Otaheite may be gathered from M. de Bouganville's anchor having been ſent to their ſovereign. The intention of tranſporting the Spaniſh bull to their iſland muſt be aſcribed to the ſame cauſe. They alſo had a third European curioſity brought to Otaheite by the Spaniards. This animal had been ſo imperfectly deſcribed by the natives, that our voyagers had been much puzzled to conjecture what it could be. When captain Clerke's deſerters, however, were brought back from Bolabola, they ſaid the animal had been ſhewn to them, and that it was a ram. In conſequence of this intelligence, captain Cook, when he landed to meet Opoony, took an ewe with him in the boat, of the Cape of Good-Hope breed, whereby a foundation might be laid for a breed of ſheep at Bolabola. He alſo left with Oreo, at Ulietea, two goats, and an Engliſh boar and ſow: ſo that the race of hogs will be conſiderably improved, in a few years, not only at Otaheite, but alſo at all the neighbouring iſlands; and they will, perhaps, be ſtocked with many valuable European animals. When this is really the caſe, theſe iſlands will be unrivalled in abundance and variety of refreſhments for the ſupply of future navigators. Even in their preſent ſtate they are hardly to be excelled. When the inhabitants are not diſturbed by inteſtine broils, which had been the caſe for ſeveral years paſt, their productions are numerous and plentiful.

The following is the mode of ſalting pork, uſed by captain Cook in his voyages.

In the evening the hogs were killed, and, when cleanſed, were cut up, after which the bones were taken out. The meat was ſalted while hot, and laid in ſuch a manner as to permit the juices to drain from it, till the next morning: it was then ſalted again, put into a caſk, and covered with pickle. It remained in this ſituation four or five days, when it was taken out, and carefully examined; and if any of it appeared to be in the leaſt tainted, which ſometimes happened, it was ſeparated from the reſt, which was repacked, headed up, and filled with good pickle. It was again examined in about eight or ten days time, but there appeared no neceſſity for it, as it was generally found to be all thoroughly cured. Bay and white ſalt mixed together anſwers the beſt, though either of them will do alone. Great care was taken that none of the large blood-veſſels remained in the meat; and that not too much ſhould be packed together at the firſt ſalting, leſt thoſe pieces which are in the middle ſhould heat, and hinder the ſalt from penetrating them. In tropical climates, meat ought not to be ſalted in rainy and ſultry weather.

Otaha bears a ſtrong reſemblance to thoſe iſlands adjacent. It is not populous. The harbour on the eaſt ſide was found ſafe and convenient, with good anchorage. This iſland is ſituated within about two miles of Ulietea; but as both are encloſed in one reef of coral rocks, there is no paſſage for ſhipping between them.

Like the inhabitants of every part of this ſpot, they received our countrymen who landed from the boat on their coaſt with all tokens of courteſy, and uſed the ſame honorary compliments to them as they did to their kings, to Mr. Banks, and Dr. Solander.

The iſland of Tubai produces nothing but cocoa-nuts, and is ſaid to be inhabited only by three families. But as the coaſt abounds with fiſh, the ſhore is frequently viſited by the people of the adjacent iſlands.

Moroua, or Mawrua, is a ſmall iſland ſurrounded with a reef of rocks, and has no harbour for ſhipping. It has ſome few inhabitants, and produces the ſame articles with thoſe adjacent. In the midſt of it is an high round hill, which may be ſeen at the diſtance of ten leagues, for which only it is remarkable.

The people of the Society-Iſlands are in general ſtout and well made, and many of them tall. They are not of ſo dark a complexion as thoſe of Otaheite, and the women are in general as handſome, and nearly of the ſame colour as Europeans.

They are exceeding indolent, and have very little curioſity. Dogs, in ſpite of their ſtupidity, are in great favour with all the women. Here was ſeen a middle aged woman, whoſe breaſts were full of milk, offering them to a little puppy that had been trained up to ſuck them: the ſight diſguſted thoſe who ſaw it to ſuch a degree that they could not forbear expreſſing their diſlike of it; but the woman only ſmiled at them, and ſaid, that ſhe ſuffered little pigs to do the ſame: it appeared afterwards that this woman had loſt her child.

The veneration of the inhabitants for certain kinds of birds is evident from the following circumſtance. On a ſhooting party our people happened to kill ſeveral king-fiſhers; and juſt as they had brought down one of thoſe birds, they met Oreo and his family walking with captain Cook; the chief juſt then took no notice of the bird, but his fair daughter lamented the death of her Eatooa; her mother, and moſt of the women, ſeemed alſo grieved at its fate; and on ſtepping into the boat, Oreo himſelf deſired them, with a very ſerious air, not to kill the king-fiſhers and the herons, allowing them at the ſame time,

time, the liberty of killing any other ſorts of birds. It is to be remembered that Omai, at the ſacrifice, called the king-fiſher an *Eatooa;* ſo that bird appears to be thought ſacred.

Great quantities of the root called *ava ava* are cultivated in theſe iſlands, with which the natives make their intoxicating liquor. This is no other than the pepper plant. It ſeems, however, that drunkenneſs here is puniſhed, like all other exceſſes, with diſeaſes; the old men who make a practice of hard-drinking are lean, and covered with a ſcaly or ſcabby ſkin, have red eyes, and red blotches on all parts of their bodies: they acknowledge theſe evils to ariſe from intemperance, and perhaps thoſe leprous diſorders that ſome were ſeen to be afflicted with at Otaheite are produced by taking large potions of this liquor.

Their entertainments of a public nature conſiſt of dancing, and a kind of dramatic exhibition; which dramatic exhibitions, as well as feſtive entertainments, from their ſingularity, are worthy of attention.

A party of our people were preſent at Ulietea, where a performance was exhibited, called by the natives *Mididdij Marramy;* which ſignifies, "the child is coming." It concluded with a repreſentation of a woman in labour, acted by a ſet of great brawny fellows, one of whom ſeemed to bring forth a great ſtrapping boy about ſix feet high, who ran about the ſtage, dragging after him a large wiſp of ſtraw, which hung by a ſtring from his middle. Captain Cook obſerved, that the moment they got hold of the fellow, they flattened or preſſed his noſe, from whence he concludes, that their new born infants are ſo treated, which accounts for the natives in general having flat noſes.

The only actreſs at Oreo's theatre was his daughter Poyadua, a pretty brown girl, at whoſe ſhrine many offerings were made by her numerous votaries on theſe occaſions.

Another dramatic exhibition was preſented to our people at Huaheine: the piece repreſented a girl running away from her parents, and ſeemed to be levelled at a female paſſenger whom they had brought from Otaheite, who happened to be preſent at the repreſentation. It had ſuch an impreſſion upon the girl, that ſhe could ſcarcely be perſuaded to ſee the piece out, or to refrain from tears while acting. It concluded with the reception ſhe was ſuppoſed to meet with from her friends at her return, which was made out to be unfavourable. Thus it appears that theſe people introduce extempore pieces on occaſion, and it is moſt probable, that this was meant as a ſatire upon the girl, and to diſcourage others from acting in the ſame manner.

Oreo likewiſe gave a public dinner to the captains Cook and Furneaux, ſeveral of the officers of both ſhips, and the paſſengers. On this occaſion a great part of the ſpacious houſe was ſpread with large quantities of leaves, which ſerved for a table cloth, round which the viſitants ſeated themſelves, together with the principal people of the iſland. Soon after, one of the ſervants, or towtows, brought a hog ſmoking on his ſhoulders, which was roaſted whole, and wrapped in a large bundle of plantain leaves; this he threw upon the floor, round which the company was ſeated. Another ſmaller hog was carried in the ſame manner, and both ſo hot as hardly to be touched: the table, or rather floor, was garniſhed about with hot bread-fruit and plantains, with a quantity of cocoa-nuts for drink. Each man being ready with his knife in his hand, the hogs were preſently cut to pieces, and the European part of the company agreed, that they taſted better than an Engliſh barbecue: the equal degree of heat with which it ſtews under ground, had preſerved and concentrated all its juices; the fat was not luſcious and ſurfeiting, and the ſkin, inſtead of being very hard, which is the caſe of roaſted pork with us, was as tender as any other part. One of theſe hogs weighed between 50 and 60 pounds, and the other about half as much, yet all the parts were equally done. The chief, his ſon, and ſome others of his male friends, partook of this repaſt with their gueſts: the men ate with great liking; but all the women were ſtationed behind, and were not admitted as ſharers in the feaſt.

It is the cuſtom in theſe iſlands for the chiefs to have burial places erected while they are yet alive, which doubtleſs occaſioned Oreo's inquiring of captain Cook (when he could not obtain his promiſe to return in departing from Ulietea in his ſecond voyage) the name of his morai, or burying-place. Hence it appears that theſe people could not give a greater proof of their affection to their Engliſh friends, than in expreſſing a deſire to remember them even beyond the period of their lives.

The religion of the inhabitants of the Society-Iſlands appeared to conſiſt in having a diverſity of gods peculiar to each iſland. But they believe, in general, every man to have a ſeparate being within himſelf, named *Tee*, which acts in conſequence of the impreſſion of the ſenſes, and combines ideas into thoughts, which they call *parou no te oboo*, which literally ſignifies "words in the belly." This mind they ſuppoſe to have an exiſtence after the diſſolution of the body, and that the man in that ſtate feaſts on bread-fruit and pork, which need no preparation from the fire.

Beſides their greater divinities, they have a number of inferior ones, ſome of whom they ſuppoſe to be inimical to mankind. The high prieſt of the iſland is called Tahowarahai; to him the Eatooa, or god, is ſuppoſed to deſcend, and hold converſe with him, whilſt he remains inviſible to the people that ſurround him. Offerings are made to the greater deities, of hogs and poultry roaſted, and of all kinds of eatables; but the inferior, and particularly the malevolent ſpirits, are only revered by a kind of hiſſing.

In theſe iſlands the prieſts continue in office for life, and the dignity is hereditary. The high prieſt is always an Earee, who has the higheſt rank next to the king. They are conſulted upon many important occaſions; partake largely of the good things of the country, and, in ſhort, have found means to make themſelves neceſſary. Beſides the prieſts, there are in every diſtrict teachers, or *tata-o-rerrors*, who inſtruct the people in aſtronomy and the navigation of thoſe ſeas, which however is very imperfect.

CHAP. XVIII.

THE MARQUESAS.

General Deſcription of them.

ALVARA MENDANA, a Spaniard, is accounted the firſt diſcoverer of the Marqueſas; and they were ſo denominated in honour of the Marquis of Cannette, in 1595, then Viceroy of Peru. Their particular names are, La Magdalena, S. Pedro, La Dominica, Santo Chriſtina, and Hood's-Iſland. Mendana had only ſeen the four firſt; and the laſt was diſcovered by captain Cook, in 1794. It lies to the north-weſt of the reſt, in 9 deg. 26 min. ſouth, and 138 deg. of W. longitude, and five leagues and a half diſtant from the Eaſtern point of S. Magdalena. The five Marqueſas Iſles take up about one degree of latitude, and near half a degree of longitude. The people here are ruled by a chief, whoſe dignity ſeems principally to conſiſt in a ſuperiority of dreſs.

Captain Cook relates, that the inhabitants of theſe iſlands excel, in general, all the natious of the South-Seas,

Seas, in ſymmetry of form, and regularity of features. He mentions, in particular, that not one diſproportioned perſon was ſeen upon the iſland of Chriſtina; but that all were robuſt, well made, and active. Their countenances were open and lively. The men are about five feet ſix inches in ſtature; their hair is of divers colours, but none red. It is moſtly worn ſhort, unleſs it he a bunch tied in a knot on each ſide of the crown. Their complexion, naturally tawny, is rendered almoſt black by punctures over the whole body. Their only covering was a ſmall piece of cloth round the waiſt and loins.

The women were inferior to the men in ſtature, but well proportioned. Their general complexion was brown. They were ſome of them punctured, and their body dreſs was a ſingle piece of cloth made of the mulberry bark, which covered them from the ſhoulders to the knees. They uſe a head-dreſs, a kind of broad fillet, curiouſly made of the fibres of the huſks of cocoa-nuts. This fillet is interſperſed with mother-of-pearl and tortoiſe-ſhells, wrought into curious figures, and diſplayed in divers forms. To the fillet is fixed the tail feathers of tropic birds, which, ſtanding upright when it is tied on, the whole together makes a very brilliant appearance. They wear a kind of ruff, or necklace, made of light wood; the outer and upper ſides covered with ſmall peas, fixed on with gum. They have alſo ſome bunches of human hair faſtened to a ſtring, and tied round the legs and arms; but no one perſon is ever decorated with all theſe ornaments. They were none of them held in eſtimation like the human hair, the bunches of which, it is probable, were worn in remembrance of their deceaſed relations, and therefore looked upon with a degree of veneration; or, they might have been the ſpoils of their enemies, worn as badges of conqueſt. They had a kind of fan to cool themſelves in hot weather, formed of a tough bark or graſs, very firmly and curiouſly plaited, and frequently whitened with ſhell lime. Some had large feathered leaves of a kind of palm, which anſwered the purpoſe of an umbrella.

When the king viſited captain Cook, he was completely decorated with all theſe ornaments, and the only one ever ſeen ſo dreſſed. He complimented the captain with ſome preſents, and gave him to underſtand the ſuperiority of his rank. Their extraordinary ornaments are necklaces and amulets made of ſhells. They had all their ears pierced, though none were ſeen with ear-rings.

Their habitations, which are in the valleys and on the ſides of the hills near the plantations, reſemble, in form, thoſe of Otaheite, but are much meaner, and covered with leaves of the bread-fruit tree. They are built, in general, on a ſquare or oblong pavement of ſtone, raiſed ſome height above the level of the ground. They have alſo a pavement near their houſes for the purpoſe of ſitting to eat, regale, and amuſe themſelves. Our people, by the help of glaſſes, could diſcern, along the uppermoſt edge of a mountain, a row of ſtakes or paliſades cloſely connected together, like a fortification, which ſeemed to reſemble the Hippahs of New Zealand.

The only quadrupeds ſeen here were hogs and rats. But there were fowls, and many ſmall birds in the woods, that warbled moſt melodiouſly. Notwithſtanding theſe iſlands produce fowls, hogs, and the waters, at certain times, fiſh in abundance, the inhabitants ſubſiſt chiefly on vegetable food. As cocoa-nuts do not abound, pure water is their drink in ordinary.

In the articles of eating and cookery, they are not cleanly. Pork and fowls are dreſſed in an oven of hot ſtones: but fruit and roots they roaſt on the fire; and after taking off the rind and ſkin, put them into a platter or trough, with water, out of which captain Cook affirms, he ſaw both men and hogs eat at the ſame time.

It appears that theſe iſlands are ſimilar in their origin, and the nature of their minerals, to the Society-Iſlands, the greater part of which ſeem to have been the burning mountains.

The Marqueſans diſcovered the ſame timidity on the approach of ſtrangers, in common with the natives of the ſouthern climes; nor could be induced for ſome time, to come on board the ſhips, by any ſigns of friendſhip, that could be made them. They ventured indeed to come along-ſide, and offered ſome pepper-roots, which were fixed on the ſhrouds, as tokens of reciprocal friendſhip. The exchange of nails for fiſh and bread-fruit, in great perfection, was highly ſalutary, as well as gratifying to the whole ſhip's company, who, for the courſe of nineteen weeks, had ſubſiſted on ſalt proviſions, which having then been two years on board, were neither agreeable in flavour, nor of a nutritive quality. The canoes retired a little after ſun-ſet, according to the general cuſtom of the natives of the South-Sea iſlands, who cannot be prevailed on to keep awake a ſingle night, by the moſt attracting novelty.

Thoſe parts of theſe iſlands which are capable of cultivation are very populous; but as they are in general mountainous, and have many inacceſſible rocks, it is doubted whether the whole group contain fifty thouſand inhabitants.

Intercourſe had not been long held between our people and the natives, before it was evident they were more diſpoſed to receive than to give; for having taken a nail in exchange for ſome bread-fruit, they with-held the article ſo purchaſed, till captain Cook had recourſe to the ordinary means of firing a muſket over their heads, and thus terrified them into fair dealing. Nor were theſe iſlanders exempt from that propenſity to theft, which characterizes the nations of the South Seas. Soon after they had courage enough to venture on board, one of them ſtole an iron ſtanchion from the gangway, with which he ſprang into the ſea, and notwithſtanding its weight, ſwam with it to his canoe, and was making to the ſhore with all ſpeed. A muſket was fired over his head to frighten him back, but to no effect; he ſtill continued to make off with his booty. The whiſtling of another ball over his head was as ineffectual. An officer, leſs patient of ſuch an injury than reaſon and humanity ſhould have taught him to be, levelled at him, and ſhot him through the head. Captain Cook had given orders to fire *over* the canoe, but not to kill any one. He was in a boat, and came up with the canoe ſoon after. There were two men in her; one ſat bailing out the blood and water, in a kind of hyſteric laugh; the other, a youth of about fourteen or fifteen years of age, who afterwards proved to be the ſon of the deceaſed, fixed his eyes on the dead body, with a ſerious and dejected countenance. This act of ſeverity, however, did not eſtrange the iſlanders from the ſhip, and a traffic was carried on to the ſatisfaction of both parties. Bread-fruit, bananas, plantains, and ſome hogs, were given in exchange for ſmall nails, knives, and pieces of Amſterdam cloth. Red feathers of the Amſterdam iſland were greatly eſteemed here.

Captain Cook, accompanied with the gentlemen of the ſhip, in their walks about the country, came accidentally to the houſe which had been the habitation of the man who had been ſhot; there they found his ſon, who fled at their approach: they inquired for his female relations, and were told that they remained at the top of the mountain, to weep and mourn for the dead. But though they were then among the relations of a man who had been killed by them, not the leaſt tokens of animoſity or revenge were diſcernible among the natives.

On ſeeing a ſailor corrected by the boatſwain's mate, they exclaimed, "He beats his brother," which ariſes from their idea of all one country being in effect of one and the ſame family.

CHAP. XIX.

Deſcription of the ISLANDS *termed*, "*The* LOW ISLANDS *in the* SOUTH-WEST."

THESE iſlands, which form a group, connected by a reef of coral rocks, and lie ſcattered, in general, between the latitude of 14 deg. 28 min. ſouth, and the longitude of 138 deg. and 56 min. weſt, are the following; King George's, Diſappointment, Palliſer, Dog, Queen Charlotte's, Lagoon, Thumb-Cap, Bow, The Groups, Bird, Chain, Oſnaburg, and Pitcairn Iſlands. Of theſe we ſhall treat in their reſpective order.

King George's Iſlands are two in number; they were firſt diſcovered by commodore Byron, in 1765. When the Engliſh firſt went on ſhore, they found many huts deſerted by the natives, the dogs being the only tenants; and thoſe animals, terrified by the appearance of ſtrangers, kept a continual howling all the time they continued on ſhore. The hovels, though very mean and low, were ſituated in a charming ſpot, amidſt a grove of lofty trees, ſome of which were the cocoa, and others of a ſpecies unknown. The natives ſeemed to derive the neceſſaries of life, in general, from the cocoa-nut tree, as it ſupplied them not only with food, but ſails, cordage, and timber.

The cocoa-palm may well be deemed the ſtaple of life, as it produces every eſſential requiſite for the ſupport of many nations on the globe. Every part of it is converted to ſome uſeful purpoſe: as for inſtance; the nuts, whilſt green, contain a liquor pleaſant to the palate, and of a quality ſo ſingularly cooling, that it allays thirſt, and affords refreſhment in a hot climate, beyond any other production. When in due progreſs the kernel forms, it is at firſt of the ſubſtance of a rich cream; and afterwards growing firm and oily, like an almond, becomes equally balſamic and nouriſhing. The oil extracted from it is adapted to divers purpoſes, and particularly that of anointing the hair, and frequently the whole body. Cups are made of the hard ſhell; and a variety of cordage, elaſtic and durable, from the fibrous coating around it. Several articles of Indian houſehold furniture, and divers kinds of ornaments, are fabricated of theſe materials. The long feathered leaves or branches, which ſpread from the top of the ſtem, are convenient coverings for their houſes; and thoſe, when plaited, make excellent baſkets for proviſions. A cloth ſufficient for covering the body in a hot climate is made of the inner bark: and the very ſtem itſelf, when grown too old to bear, may be uſed in the conſtruction of a hut, or the maſt of a canoe. All theſe very eſſential benefits are derived from this one production. The ſhore of this iſland was covered with coral, and the ſhells of very large pearl oyſters.

Commodore Byron has given the following account of the natives, their cuſtoms, &c. "The women wear a piece of cloth hanging from the waiſt down to the knee; and the men were naked. Near their houſes were buildings of a different kind, which were ſuppoſed to be burying-places. Theſe were ſituated under lofty trees; the ſides and tops were of ſtone; and, in their figure, they ſometimes reſembled the ſquare tombs with a flat top, which are in our country church-yards. Near theſe buildings were found many neat boxes, full of human bones: and upon the branches of the trees which ſhaded them hung a great number of the heads and bones of turtle, and a variety of fiſh, encloſed in a kind of baſket-work of reeds; on examining which, nothing appeared to remain but the ſkin and the teeth: the bones and entrails ſeemed to have been extracted, and the muſcular fleſh dried away."

†

Captain Cook, who gives a more ample and ſatisfactory account of them, ſailed between theſe two iſlands in April 1774: he ſays they lie nearly eaſt and weſt. The iſland to the eaſtward is called by the natives *Tiookea*; it is ſomething of an oval ſhape, and about ten leagues in circuit. The inhabitants of this iſland, and probably of all the low ones, are of a much darker colour than thoſe of the higher iſlands, and of an hoſtile diſpoſition. Their origin is doubtleſs one and the ſame; but being dependent on the ſea for a ſubſiſtence, and from their way of life expoſed to the ſun and weather, their colour is darker, and their bodies become more hardy and robuſt. The figure of a fiſh is punctured or marked on their bodies. A lieutenant, with two boats well armed, were ſent on ſhore; two gentlemen were of the party; they landed without any oppoſition from the natives. As ſoon as they came one ſhore, the iſlanders embraced them by touching noſes, a mode of civility uſed in New Zealand, which is ſome hundred leagues diſtance, and the chief place beſides this where the cuſtom has been obſerved to prevail.

The naturaliſts found here various plants, and particularly a ſcurvy-graſs. The natives ſhewed them that they bruiſed this plant, mixed it with ſhell-fiſh, and threw it into the ſea, whenever they perceived a ſhoal of fiſh, which, intoxicated by it, were caught on the ſurface of the water without trouble. The ſoil is but barren, the foundation conſiſting of coral, very little elevated above the ſurface of the water. The officer of the boats perceiving the Indians collecting into a body, having diſtributed preſents to thoſe who ſurrounded him, ſoon prepared to go, deſirous of avoiding any affray. The collected body crowded about the boats, and ſeemed doubtful whether they ſhould detain our people, or ſuffer them to depart. At length, however, they aſſiſted them in puſhing off the boats. Some of the moſt turbulent threw ſtones into the water, and ſeemed to glory as if they had driven them off. Captain Cook, from this circumſtance, found it expedient to give orders for firing four or five cannon ſhot into the ſea, cloſe by the ſhore, and over the heads of the Indians, as they were ſeated along the beach, to ſhew them that they were entirely at the mercy of their viſitors. Notwithſtanding all this, the party brought off to the ſhip five dogs, with which the iſland ſeemed to be plentifully ſupplied. Theſe they purchaſed with ſmall nails, and ſome ripe bananas, which latter they brought from the Marqueſas. The dogs had fine long hair, and were of a white colour.

The other iſland, which is inconſiderable, is ſituated two leagues to the weſtward of Tiookea, is four leagues in length, and from five to three miles in breadth.

The Iſlands of Diſappointment, were firſt diſcovered by commodore Byron, in 1765, and ſo named from the ſhores affording no anchorage for his ſhips, on which account he was obliged to quit them, without landing or procuring any refreſhments for his crew, who were then languiſhing with ſickneſs. They are a cluſter of ſmall iſlands, and lie in latitude 14 deg. 10 min. ſouth; longitude 141 deg. 6 min. weſt. They are inhabited by indians, who appeared on the beach with ſpears in their hands, that were at leaſt ſixteen feet long. They every where diſcovered hoſtile intentions and ſeemed by ſigns to threaten the people in the boat with death, if they came on ſhore. There are cocoa trees in great abundance, and the ſhore abounds with turtle.

Palliſer-Iſlands, were diſcovered by captain Cook, in April, 1774; they lie in 15 deg. 26 min. ſouth; and 14 deg. 20 min. weſt, and are four in number: the largeſt is ſeven miles long, and not above two broad. The greateſt diſtance of one from the other is not above ſix leagues. People, huts, canoes, and places erected for drying fiſh, were ſeen here. The natives were armed with lone ſpikes.

Dog-

Dog-Iſland, 15 deg. 12 min. ſouth, was diſcovered by Le Mair and Schouten, April 1616, who gave it that name from having ſeen three Spaniſh dogs on the iſland.

Queen Charlotte's Iſland, 19 deg. 18 min. ſouth; 138 deg. 4 min. weſt; was firſt diſcovered by captain Wallis, in the Dolphin, in 1767, who took poſſeſſion of it in the name of King George the Third. Here is good water, and plenty of cocoa-nuts, palm-nuts, and ſcurvy-graſs. The inhabitants are of a middle ſtature, and dark complexion, with long hair hanging looſe over their ſhoulders: the men well made, and the women handſome. Their clothing is a kind of coarſe cloth, or matting, which they faſten about their middle.

Lagoon-Iſland, 18 deg. 47 min. ſouth; 139 deg. 28 min. weſt; is of an oval form, with a lake in the middle, which occupies much the greateſt part of it. The whole iſland is covered with trees of different verdure. It is inhabited by a race of Indians, tall, of a copper colour, with long black hair. Their weapons are poles, or ſpikes, which reach twice as high as themſelves. Their habitations were ſeen under ſome clumps of palm trees, which formed very beautiful groves. This iſland was diſcovered by captain Cook, April 1769.

Thumb-Cap lies about ſeven leages north-weſt of Lagoon-Iſland: it is a low, woody iſland, of a circular form, and not much above a mile in compaſs. There was no appearance of inhabitants: the land was covered with verdure.

Bow-Iſland, ſo called by captain Cook, in 1769, on account of its ſingular figure, being ſhaped exactly like a bow; the arch and curve of which is land, and the ſpace between them water. The curve is a flat beach, without any ſigns of vegetation, having nothing upon it but heaps of ſea-weed. It appeared to be narrow, and about three or four leagues in length. The horns, or extremities of the bow, were two large tufts of cocoa-nut trees, of different height and figure. From the ſmoke ſeen in different parts the iſland appeared to be inhabited.

The Groups are long, narrow ſtrips of land, ranging in all directions; ſome of them ten miles or upwards in length, but none more than a quarter of a mile in breadth. Trees of various kinds, particularly the cocoa-nut, abound here. The people appeared to be well made, of a brown complexion; moſt of them carried in their hands a ſlender pole, about fourteen feet long, pointed like a ſpear: they had likewiſe ſomething ſhaped like a paddle, about four feet long. Their canoes were of different ſizes; ſome ſo ſmall, as to carry no more than three men; others had ſix or ſeven; and ſome of their boats hoiſted a ſail.

Bird-Iſland, ſo called by captain Cook, from the great number of birds that were ſeen on it, is ſuppoſed to be about four miles in circumference. It is low, with a piece of water in the middle. No inhabitants appeared.

Chain-Iſland ſeemed about five leagues long, in the direction of north-weſt and ſouth-eaſt, and about five miles broad. It appeared to be a double range of woody iſlands, joined together by reefs, ſo as to compoſe one iſland in the form of an ellipſis, or oval, with a lake in the middle. The trees are large, and from the ſmoke that iſſued from the woods it ſeemed to be inhabited.

Oſnaburg-Iſland, called by the natives Maitea, was firſt diſcovered by Captain Wallis in 1767. It is an high round iſland, not above a league in circuit; in ſome parts covered with trees, in others a naked rock, and is 44 leagues diſtant from Chain-Iſland, weſt by ſouth.

Pitcarin-Iſland was diſcovered by Captain Carteret. Captain Cook was very near it in Auguſt 1773, but could not fall in with it.

Beſides theſe, which we have deſcribed from the moſt authentic accounts, Captain Wallis alſo ſaw five other iſlands, which he named *Whitſunday*, *Egmont*, *Glouceſter*, *Cumberland*, and *Prince William-Henry*; and in Auguſt 1773, Captain Cook fell in with five others, which he named *Reſolution*, *Doubtful*, *Furneaux*, *Adventure*, and *Chane*. Some of the moſt weſtwardly of theſe ſcattered iſlands were ſeen by M. de Bougainville, and called *Les quatre Facardins*, and *Iſles des Lanciers*. That navigator very properly calls this cluſter of low, overflowed iſlands, *The dangerous Archipelago*.

Toobouai-Iſland, diſcovered by captain Cook in 1777, is to the ſouthward of this group. It is ſituated in latitude 23 deg. 25 min. ſouth, longitude 218 deg. 37 min. eaſt. The ſpot, at firſt view, appeared like ſeveral diſtinct iſlands, but on nearer approach it was found to be connected, and to form but one iſland. It is guarded by a reef of coral rock, extending in ſome places a mile from the land, with an high ſurf breaking upon it. Our people obſerved from the ſhips the natives walking or running along ſhore, and then ſaw two canoes launched, in which were about a dozen men making towards them. Stopping ſuddenly when they came near the ſhips, Omai, according to cuſtom, was deſired to uſe his endeavours to prevail on them to come nearer, but all his efforts proved ineffectual. Thoſe in the canoes, however, indicated by ſigns a ſtrong deſire for our people to go on ſhore, and thoſe on the beach diſplayed ſomething white, which was conſidered as an intimation to the ſame purport; and the landing might have been effected with eaſe and ſafety, as there was good anchorage without the reef, and an opening in it free from ſurf. But as no refreſhments were wanting, and captain Cook was deſirous of availing himſelf of a fair wind for the proſecution of his voyage, after divers ineffectual attempts to prevail on the natives to come near the veſſel, and hold intercourſe, he left them, and ſtood to the northward.

The greateſt extent of this iſland, in any direction, is not above five or ſix miles. There are hills in it of conſiderable height. At the foot of theſe is a narrow border of flat land, extending almoſt round it, with a white-ſand beach. The hills, except a few rocky cliffs, were covered with herbage. According to the information our people derived from the men in the canoes, the iſland abounds with the ſame animal and vegetable productions as were found in its vicinity.

Such of the natives who were ſeen in the canoes were copper-coloured: ſome wearing their hair (which was ſtraight and black) flowing about the ſhoulders, and others having it tied in a bunch on the crown of the head. Their faces were rather round and full, and expreſſed a ferocity of diſpoſition. All the covering of thoſe in the canoes was a piece of narrow ſtuff wrapped round the waiſt, and paſſing between the thighs; but ſome upon the beach were obſerved to be completely dreſſed in white. Several in the canoes wore ornaments of pearl ſhells about their necks: one in particular continued a conſiderable time blowing a large conch-ſhell in a long tone without any variation; but what it portended, our people could not determine. The men in the canoes, finding the captain's reſolution to depart, ſtood up, and repeated ſomething aloud, though it was not known whether it expreſſed hoſtile or friendly deſigns. They had, however no weapons with them; nor could it be diſcovered by the glaſſes, that they on ſhore were armed, as might have been reaſonably ſuppoſed.

CHAP.

CHAP. XX.

EASTER-ISLAND.

Soil, Situation, Inhabitants, Animal and Vegetable Productions.

CAPTAIN COOK obſerves, that the view of this iſland from the eaſt anſwered the geographical deſcription given of it: Davis's Land. Admiral Roggewein touched at it in 1722, and gave it the name of Eaſter-Iſland: but the accounts given of it by the writers of his voyage, appear rather fabulous than authentic; at leaſt they by no means agree with the ſtate in which it was found by thoſe Britiſh navigators who laſt viſited it.

This iſland was called by the natives by a variety of names, as *Wachù*, *Tamarehi*, *Whyhue*, and *Teapy*. It ſeems that the Spaniards had viſited it in 1769, and given it the appellation of the Iſland of St. Carlos. Some ſigns of this viſit were ſeen among the natives, and, in particular, ſeveral articles of wearing apparel, which were of European manufacture. It is ſituated in latitude 27 deg. 30 min. ſouth; and longitude 109 deg. 46 min. weſt; and is about ten or twelve leagues in circuit.

Soon after the Reſolution, captain Cook, made the iſland, the maſter being ſent out in a boat to ſound the coaſt, one of the natives ſwam off to her, and inſiſted on coming aboard the ſhip. The firſt thing he did was, to meaſure the length of the ſhip, by fathoming her from the taffarel to the ſtem; and as he counted the fathoms, it was obſerved by our people, that he called the numbers by the ſame names that they do at Otaheite; nevertheleſs, his language was nearly unintelligible to all of them.

When captain Cook went on ſhore, accompanied by a party, to ſee what the iſland was likely to afford, they landed at the beach, where ſome hundreds of the natives were aſſembled; and who were ſo impatient to ſee them, that many of them ſwam off to meet the boats.

Not one of them had ſo much as a ſtick, or weapon of any ſort in his hand. After diſtributing a few trinkets among them, our people made ſigns for ſomething to eat, on which they brought down a few potatoes, plantains, and ſugar-canes, and exchanged them for nails, looking-glaſſes, and pieces of cloth.

Near the place where they landed were ſome tall ſtatutes. The country appeared quite barren, and without wood. There were, nevertheleſs, ſeveral plantations of potatoes, plantains, and ſugar-canes. They alſo ſaw ſome fowls, and found a well of brackiſh water.

The captain was obliged to content himſelf with remaining at the landing-place among the natives, as he was not yet quite recovered from a bilious cholic, which had been ſo violent as to confine him to his bed. It was ſeveral days before the moſt dangerous ſymptoms of his diſorder were removed; during which time, the ſurgeon was to him not only a ſkilful phyſician, but an affectionate adviſer. When he began to recover, a favourite dog fell a ſacrifice to his diſordered ſtomach. They had no other freſh meat whatever on board; and the captain could eat of this fleſh, and of broth made of it, when he could taſte nothing elſe. Thus he received nouriſhment and ſtrength from food, which would have made moſt people in Europe ſick. So true it is, that neceſſity is governed by no law.

The ſoil of this iſland is in general a dry, hard clay; but towards the higheſt part of the ſouth end it is a fine red earth, ſeemed much better, bore a longer graſs, and was not covered with ſtones, as in the other parts. The moſt remarkable curioſity here, is a number of gigantic ſtatutes, of which, however, very few remain entire. Theſe ſtatutes are placed on the ſea-coaſt. On the eaſt ſide of the iſland were ſeen the ruins of three platforms of ſtonework, on each of which had ſtood four of theſe large ſtatutes; but they were all fallen down from two of them; and one from the third: they were broken or defaced by the fall. One of which had fallen, being meaſured, was fifteen feet it length, and ſix broad over the ſhoulders. Each ſtatue had on its head a large cylindric ſtone, of a red colour, wrought perfectly round. Others were found that meaſured near twenty-ſeven feet, and upwards of eight feet over the ſhoulders: and ſtill a larger one was ſeen ſtanding, the ſhade of which was ſufficient to ſhelter all the party, conſiſting of near thirty perſons, from the rays of the ſun. The workmanſhip was rude, but not bad, nor were the features of the face ill formed; the ears were long, according to the diſtortion practiſed in the country; and the bodies had hardly any thing of a human figure about them. Yet as theſe iſlanders, wholly unacquainted with any mechanical power, could raiſe ſuch ſtupendous figures, and afterwards place the cylindric ſtones upon their head, it muſt be allowed to be conſidered as admirable!

The party, on their further progreſs, came to a more fertile part of the iſland, interſperſed with plantations, and not ſo much encumbered with ſtones as thoſe they had ſeen before; but they could find no water, except what the natives twice or thrice brought them, which, though brackiſh and ſtinking, was rendered acceptable, by the extremity of their thirſt. They alſo paſſed ſome huts, the owners of which met them with roaſted potatoes and ſugar-canes, and placing themſelves ahead of the party (for they marched in a line, in order to have the benefit of the path) gave one to each man as he paſſed by. But at the very time ſome were relieving the thirſty and hungry, there were others who endeavoured to ſteal from them the very things which had been given them. At laſt, to prevent worſe conſequences, they were obliged to fire a load of ſmall ſhot at one, who was ſo audacious as to ſnatch the bag which contained every thing they carried with them. The ſhot hit him on the back, on which he dropped the bag, ran a little way, and then fell: but he afterwards got up and walked, and what became of him they knew not, nor whether he was much wounded. This affair occaſioned ſome delay, and drew the natives together. They preſently ſaw the man who had hitherto led the way, and one or two more, coming running towards them; but inſtead of ſtopping when they came up, they continued to run round them, repeating, in a kind of manner, a few words, until they ſet forwards again. Then their old guide hoiſted his flag, leading the way as before; and none ever attempted to ſteal from them the whole day afterwards.

They met with a well at the eaſt end of the iſland, the water of which was perfectly freſh, being conſiderably above the level of the ſea; but it was dirty, owing to a cuſtom of the natives, who never go to drink without waſhing themſelves all over as ſoon as they have done: and if ever ſo many of them are together, the firſt leaps right into the middle of the hole, drinks, and waſhes himſelf without the leaſt ceremony; after which another takes his place, and does the ſame.

No quadrupeds were ſeen upon this iſland except black rats, which are common to all the iſlands of the South-Seas. It appeared that the iſlanders eat theſe rats; for our people ſaw a man with ſome dead ones in his hand, and ſeemed unwilling to part with them, giving them to underſtand, they were for food. There were a few domeſtic fowls, ſmall, but well taſted: and two or three noddies were ſeen, which were ſo tame as to ſettle on the ſhoulders of the natives.

The

The coaſt did not appear to abound with fiſh, at leaſt our people could catch none with hook and line; and they ſaw but very little among the natives.

This country produces only a few ſhrubs, the leaf and ſeeds of one of which (called by the natives *Torremedo)* was not much unlike that of the common *Vetch:* the ſeeds had a diſagreeable bitter taſte, and are conſidered by the natives as poiſonous: the wood is of a reddiſh colour, hard and heavy, but crooked, and exceeding ſix or ſeven feet in height: and not a tree was ſeen on the whole iſland that exceeded the height of ten feet. Another ſmall ſhrub was ſeen here, whoſe wood is white and brittle, and, as well as its leaf, to the eye ſomewhat reſembles the aſh. There are alſo ſome of the Otaheitean cloth plant, but dwarfiſh and weak, being from two to four feet high. They are planted in rows among very large rocks, where the rains have waſhed a little ſoil together. Here are ſugar-canes, bananas, and yams, which thrive to admiration, conſidering the ſtony quality of the ground. The ſugar-canes were about nine or ten feet high, and contained a very ſweet juice, which the inhabitants very hoſpitably preſented to their gueſts, whenever they aſked for ſomething to drink. Theſe are ſaid to be ſweeter than thoſe at Otaheite. The whole number of plants growing on this iſland does not exceed twenty ſpecies.

Here are potatoes of a gold-yellow colour, as ſweet as carrots: theſe were found nouriſhing, and antiſcorbutic. Here is likewiſe a ſpecies of nightſhade, which is made uſe of at Otaheite, and the other iſlands, as a vulnerary medicine, and is probably cultivated here for the ſame purpoſe. As a proof of the induſtry of the natives, the graſs, which commonly ſprings up among the ſtones, on the uncultivated ſoil, is carefully plucked up, and ſpread over their plantations as a manure, or to preſerve them in ſome meaſure from the parching beams of the ſun.

The natives of this iſland are in general ſlender, briſk, and active, have good features, and countenances not diſagreeable. Their colour is of a cheſnut brown; their hair black, curling, and remarkably ſtrong; that on the head, as well as on the face, is cut ſhort. The men for the moſt part are in a manner naked, wearing nothing but a ſlip of cloth betwixt their legs, each end of which is faſtened to a cord or belt they wear round the waiſt. The cloth from Otaheite, as indeed any ſort, was much valued by theſe people. The men have punctures on their bodies, which is common, as to all the South-Sea iſlands. The greateſt ſingularity is the ſize of their ears, the lobe or extremity of which is ſo ſtretched out, as almoſt to reſt on the ſhoulder, and is pierced by a very large hole, through which three or four fingers might be thruſt with eaſe. The chief ornaments for their ears are the white down of feathers, and rings, which they wear in the inſide of the hole, made of the leaf of the ſugar-cane, which is very elaſtic, and rolled up like a watch-ſpring. Some were ſeen covered with a kind of bright cloth, of an orange colour, and theſe were ſuppoſed to be chiefs.

One of the natives who came on board the ſhip had a belt round his middle, from whence a kind of net-work deſcended before, but too thin to anſwer the purpoſe of a concealment. A ſtring was tied about his neck, and a flat bone, ſomething ſhaped like a tongue, and about five inches long, was faſtened to it, and hung down on the breaſt, which he gave our people to underſtand was the bone of a porpoiſe. He was preſented with nails, medals, and ſtrings of beads, all of which he deſired to have tied round his head.

At firſt he ſhewed ſigns of fear and diffidence, aſking in a dialect of the language generally uſed in the South-Seas, and which was ſomewhat underſtood by many on board, whether they would kill him as an enemy? On being aſſured of good treatment, he became perfectly unconcerned, and at eaſe, and talked of nothing but dancing.

The women of this iſland are ſmall, ſlender limbed, and have punctures on the face, reſembling the patches ſometimes in faſhion among European ladies. They paint their whole face with a reddiſh brown ruddle, over which they lay a bright orange colour, extracted from the turmeric root; or they variegate their faces with ſtrokes of white-ſhell lime; which led an obſerver to remark, that the art of painting is not confined to thoſe ladies who have an opportunity of imitating French faſhions. All the women were clad in ſcanty pieces of cloth; one piece wrapped round their loins, and another over their ſhoulders, made complete dreſs. Both ſexes have thin, but not ſavage features. The women wear their hair long, and ſometimes tied on the crown of their head.

The violent action of the ſun upon their heads, has led them to contrive various coverings for that part. Their head-dreſs is a round fillet adorned with feathers, and a ſtraw bonnet, ſomething like a Scotch one; the former worn by the men, the latter by the women. Many of the men wore a ring about two inches thick, of graſs, ſtrong and curiouſly plated, and fitted cloſe round the head. This was covered with the long feathers of the man-of-war bird. Others had huge buſhy caps of brown gull's feathers, which were almoſt as large as the full-bottomed wigs of European lawyers; beſides which, ſome wear a ſingle hoop of wood, round which the long white feathers of the gannet hung nodding. In colour, features, and language, the inhabitants of Eaſter-Iſland bear ſuch affinity to the people of the more weſtern iſlands, that there can be no doubt of their having had the ſame origin.

According to the beſt calculation that could be made, the number of inhabitants in this iſland were not above ſeven hundred, and of theſe the females bore no proportion in number to the males. The females were either few in number, or elſe moſt of them abſtained, or were reſtrained from appearing while the veſſel lay here; yet the men ſhewed no ſigns of a jealous diſpoſition, nor the women any ſcruples of appearing in public: in fact, they ſeemed to be neither reſerved or chaſte. But as all the women who were ſeen were liberal of their favours, it is more than probable that all the married and modeſt had concealed themſelves from their impetuous viſitants, in ſome diſtant parts of the iſland; and what further ſtrengthens this ſuppoſition is, that heaps of ſtones were ſeen piled up in little hillocks, which had one ſteep perpendicular ſide, where a hole went under ground. Theſe iſlanders, in common with thoſe of the South-Seas, ſoon gave proofs of their propenſity to theft, as before obſerved. It was with difficulty the ſhip's crew could keep their hats on their heads, and hardly poſſible to keep any thing in their pockets. One thief was fired at with ſmall ſhot, which wounded him ſo that he fell ſoon after he had thrown down the fatal acquiſition.

Such mildneſs and good-nature appear in the diſpoſition of theſe people, as prompt them to behave as kindly and hoſpitably as their barren country will permit them. A party who had rambled up the iſland, and were returning to the ſhip, paſſed a native who was digging potatoes in the field; they no ſooner complained to him of great thirſt, than he ran immediately to a large plantation of ſugar-canes, and brought out a load of the beſt and juicieſt on his back, for their refreſhment. Their diſpoſition is far from being warlike, although they have weapons of defence.

Potatoes, bananas, yams, ſugar-canes, and about fifty fowls, were the only proviſions obtained here; in exchange for which, the natives received, with

great pleaſure, empty cocoa-ſhells, which had been procured upon other South-Sea iſlands. The cloth made at Otaheite, and European cloth, bore the next degree of eſteem, and iron-ware held the loweſt place. Moſt of the natives, on receiving a cocoa-nut, a piece of cloth, or a nail, in the way of barter, ran away immediately, as if apprehenſive leſt the other ſhould repent his bargain, and inſiſt on a re-exchange. Their eagerneſs for cloth led them to part with their caps, head-dreſſes, necklaces, ornaments for the ears, and ſeveral human figures, made out of narrow pieces of wood, about eighteen inches or two feet long, and wrought in a much neater and more proportionate manner, than could have been expected from ſuch a forlorn race. They repreſented men and women. The features were not pleaſing, and the whole figure was much too long to be natural; but, notwithſtanding, there was ſomething characteriſtic in them, which beſpoke a taſte for the arts. The wood of which they were made was finely poliſhed, cloſe grained, and of a dark brown: nor can it be explained how ſuch toys could come into their poſſeſſion, as nothing could be found on the iſland, after the niceſt ſcrutiny, which produced this kind of wood, it being the perfume wood of Otaheite. A very ſingular figure thus carved, with long nails, and fingers bent downwards, was brought to England, and preſented to the Britiſh Muſeum.

Their houſes are low, miſerable huts, conſtructed by ſetting ſticks upright in the ground, at ſix or eight feet diſtance, then bending them towards each other, and tying them together at the top, forming thereby a kind of Gothic arch. The longeſt ſticks are placed in the middle, and ſhorter ones each way, and at leſs diſtance aſunder; by which means the building is higheſt and broadeſt in the middle, and lower and narrower towards each end. To theſe are tied others horizontally, and the whole is thatched over with leaves of ſugar-cane. The door-way is in the middle of one ſide, formed like a porch, and ſo low and narrow as juſt to admit a man to enter upon all fours.

The weapons of theſe iſlanders are ſhort wooden clubs, and ſpears about ſix feet long, crooked, and armed at one end with pieces of flint. They have likewiſe a weapon made of wood, like the patoo-patoo of New-Zealand.

Not more than three or four canoes were ſeen belonging to the whole iſland, and theſe very mean, and badly conſtructed. From the ſmall number and ſlightneſs of their boats, it may be ſuppoſed, that they procure very little of their ſubſiſtence from fiſhing, and particularly as no mention is made of any fiſhing implements ſeen here.

During the ſhort time that the Reſolution lay at Eaſter-Iſland, a circumſtance occurred which plainly proved that the natives had no idea of private property. A field of ſweet potatoes furniſhed a deſirable article of trafic to the ſhip's company. Several of the natives dug up theſe roots, and exchanged them with the officers for what they moſt valued. After they had employed themſelves in this manner for ſome hours, another native arrived, who with great fury drove the intruders away, and himſelf alone dug up the roots, and ſold them in the manner that the others had done; from which circumſtance it was inferred very naturally, that this man was the owner of the field, whom the others had robbed of the fruits of his labour, being tempted to commit the treſpaſs, by the ready market to which they brought their plunder.

They have a king, whom they ſtile *aree*, or *hareekee*: he is deſcribed as a middle-aged man, rather tall, his face and whole body ſtrongly punctured. He wore a piece of cloth made of the mulberry bark, quilted with threads of graſs, and ſtained yellow with turmeric. On his head he had a cap of long ſhining black feathers, which might be called a diadem. No great degree of homage was obſerved to be paid to him by the people; and from the poverty of the country, his ſubjects can afford to ſhew but few diſtinctions to their monarch.

Of the religion of theſe people, our navigators declare themſelves entirely ignorant.

CHAP. XXI.

NEW GUINEA, NEW BRITAIN, NEW IRELAND, NEW HANOVER, AND OTHER SMALL ISLANDS.

Account of their Situation, Inhabitants, Produce, &c.

NEW-GUINEA.

THIS iſland was firſt viſited by an European ſhip in 1529. It was called by Saavedra, a Portugueſe, who diſcovered the north-weſt part of it, Terra de Papuas, or Papos, as was the ſouth-weſt part of it New Guinea, by Van Schouten, a Dutch diſcoverer. The eaſtern part of it was ſtyled by a French navigator, Louiſiade. Dampier touched here; and after him admiral Roggewein. Captain Cook made the coaſt of this iſland in September, 1770, in latitude 6 deg. 15 min. ſouth; longitude 130 deg. eaſt. But his ſurvey of the iſland could be but tranſient; for perceiving when he landed with a party of our people, that the Indians were reſolutely bent on hoſtilities, it was generally agreed upon, to prevent the deſtruction of thoſe people, as they had no intention to invade their country, to return to the boat. They are ſaid by captain Cook to make the ſame perſonal appearance as the New Hollanders; and the country in general is by him deſcribed, as reſembling the South-Sea iſlands, New Zealand, and New Holland, in its vegetable productions. Indeed, New Guinea was ſuppoſed to be connected with New Holland, until captain Cook diſcovered the ſtreight which ſeparates them. The following is the only particular circumſtance relative to the people of this iſland, mentioned in captain Cook's account.

"When our people got on board the boat, they rowed along the ſhore, and the number of Indians aſſembled ſeemed be to between ſixty and an hundred. All the while they were ſhouting defiance, and throwing ſomething out of their hands, which burnt exactly like gun-powder, but made no report. What theſe fires were, or for what purpoſe intended, could not be gueſſed at. Thoſe who diſcharged them, had in their hand a ſhort piece of ſtick, poſſibly a hollow cane, which they ſwung ſideways from them, and immediately fire and ſmoke iſſued, exactly reſembling the diſcharge of a muſket, and of longer duration. This wonderful phænomenon was obſerved from the ſhip, and the deception was ſo great, that the people on board thought they had fire-arms: and even in the boat, if they had not been ſo near as that they muſt have heard the report, if there had been any, they ſhould have thought they had been firing vollies. After looking at them attentively ſome time, without taking any notice of their flaſhing and vociferation, the ſailors fired ſome muſkets over their heads. Upon hearing the balls rattle among the trees, they walked leiſurely away, and the boat returned to the ſhip. Upon examining ſome weapons which the natives had thrown, they were found to be light darts, about four feet long, very ill made, of a reed or bamboo-cane, and pointed with hard wood, in which there were many barbs. They were diſcharged with great force; for at ſixty yards diſtance they went beyond the party; but in what manner they were thrown could not be exactly ſeen. But the general opinion was, that they were thrown

 with

with a ſtick, in the manner practiſed by the New Hollanders."

Captain Foreſt viſited it in 1775. As the Tartar galley, belonging to the Eaſt-India Company, then under his command, ſtood on towards Dory harbour, two of the natives of Papua came on board, and appeared perfectly complacent. Their hair was buſhed out to an incredible extent. To render it as bulky as poſſible, it was combed in a direction ſtraight from the head, which is ſometimes ornamented with feathers. The left ears of the women were perforated, and adorned with ſmall braſs rings.

Coming to an anchor, our countrymen had an opportunity of taking a view of one of the capital manſions of theſe people, ſituated on the bank. Theſe were erected on poſts, fixed ſeveral yards below low-water mark, for the convenience of the tenants, who occupied divers diſtinct parts of the manſion, that contained many families. In this country, the married people, unmarried women, and children, live in the larger tenements; and the bachelors by themſelves in the ſmaller.

The men wore a thin ſtuff, produced from the cocoa-nut tree, tied about the middle, and taken up behind between the thighs. That of the women was a coarſe blue ſtuff, worn round the middle, and tucked up behind like the men's. The boys and girls went naked. Laborious offices here ſeemed to fall to the lot of the women, while the men idly ſauntered about. The natives follow the diverſion of hunting the wild hog, which they called Ben, with a kind of fox-looking dogs they called Naf. Among ſmall iſlands, the wild hogs often ſwim in a ſtring from one iſland to another; the hog behind, leaning his ſnout on thoſe before; ſo that the ſportſmen kill them with eaſe.

The coaſt of the promontory of Dory is deſcribed as extending about thirteen or fourteen leagues; the height not extreme, and the riſe gradual. The country abounds with lofty trees, whoſe branches afford the traveller an agreeable ſhade. There are many rivulets of freſh water; and, ſcattered in particular tracks, good herbage.

The country abounds with hogs; and there are albecores, and other kinds of fiſh.

The birds of paradiſe, which ſo much excite the curioſity of ſpeculatiſts, are ſaid to be have been firſt found by the Portugueſe on the Iſland of Gilolo, the Papuſas Iſlands, and on New Guinea. They were denominated *paſſaros de ſol*, i. e. "birds of the ſun." By ſome they were called *manuco Deivata*, "the bird of God." Captain Foreſt was informed at an iſland called Linty, on this coaſt (the ſmall iſlands on which are numberleſs) that the birds of paradiſe come thither at certain ſeaſons in flocks, and that ſettling on trees, they are caught with bird-lime, after which their bodies are dried with the feathers on, as they are ſeen in Europe. It appeared further, that the account of theſe birds having no legs, being conſtantly on the wing, and living on the air, which gave riſe to the cuſtom of cutting off their legs when offered to ſale, was without foundation. The natives kill them as ſoon as taken. They have formidable bills, and defend themſelves with great reſolution. But what they ſubſiſt on has not been yet diſcovered. There are ſix diſtinct ſpecies of theſe birds; and they have afforded great ſcope for the ſpeculation of naturaliſts.

Neither goats nor fowls were found in Dory. All the refreſhment that could be procured on ſhore was the fleſh of the wild hog, ſome ſpecies of fiſh and vegetables excepted. The quadrupeds ſeen were hogs, dogs, and wild cats.

The nutmeg-tree was found at different iſlands on this coaſt, but when cut down, it appeared that the fruit was not ripe. Our people were informed by the natives, that there were many ſuch trees about the country; but they did not diſcover any knowledge of their worth and importance, though they ſeemed to ſet a due value upon other productions. They acknowledged that quantities of nutmegs were collected at certain places, but for what uſe could not be learnt. The natives, indeed, did not ſeem inclined to gratify the curioſity of our people, as to this and other particulars.

The Dutch derive ſuch a ſource of wealth from the nutmeg-tree, that they are jealous leſt any foreign power ſhould deprive them of ſo profitable a monopoly; and being apprehenſive that the Chineſe, from being ſo near, ſhould eſtabliſh a trade with the natives for this uſeful commodity, they have prevented them by an agreement from coming to this place, though a trade might be ſo advantageouſly carried on between the parties. They even ſend out people yearly to deſtroy all the nutmeg-trees, wherever they can find them: but it being the natural produce of this part of the country, it will grow, in ſpite of their utmoſt efforts to prevent it.

The value of iron amongſt theſe people is ſuch, that for the conſideration of receiving an axe or a chopping-knife, the receiver ſubjects his lands or his labour to a continual tax of ſome article or other for its uſe.

The natives, and eſpecially the females, ſeemed to be of a muſical turn. Some of them being aſked by one of our people to ſing, ſhe gave proofs of a good voice and ear; as did others upon future occaſions. Their mode of courting is rather extraordinary. The lover comes freely to the manſion of the favourite female, and without ceremony places himſelf by her. The old folks at a diſtance are then ſaid often to call out, "Well, have you agreed?" If the parties agree before witneſſes, a cock, procured with great difficulty, is killed, and thus ends the ceremony.

The tenements in which they dwell are poorly furniſhed; and as they cook in each ſeparate apartment, and have no chimney, the ſmoke iſſues out at every part of the roof; ſo that at a diſtance the whole roof ſeems to ſmoke. They are very expert with the bow. Some of their arrows are ſix feet long. The former is made of bamboo, and the ſtring of ſplit ratan. They carry on a conſiderable traffic with the Chineſe, of whom they purchaſe their iron tools, beads, plates, baſons, &c. They trade alſo in ſlaves, ambergris, tortoiſeſhell, ſmall pearls, and divers kinds of birds, and particularly the bird of paradiſe.

The inhabitants here are in general repreſented as numerous, fierce, and hoſtile, as appeared from their behaviour when viſited by captain Cook. The people of New Guinea are frequently invaded and carried into ſlavery by the Mahometans of the Molucca iſlands adjacent.

New Britain was once ſuppoſed to be connected with New Guinea, until Dampier diſcovered it to be divided by a ſtreight. Its moſt northern point is in 4 deg. ſouth latitude, and it extends to 6 deg. 30 min. ſouth. Dampier gave its moſt eaſtern point the name of Cape Orford: it lies in 151 deg. 34 min. eaſt longitude: the weſtern limits had not then been accurately ſurveyed. Dampier likewiſe gave names to ſeveral ſmall iſlands which he ſaw in paſſing between New Guinea and New Britain. From four of theſe, volcanoes were obſerved emitting ſmoke and fire. The country appeared to be high land, mixed with vallies, every where abounding with large and ſtately trees, and well inhabited by a ſtrong race of people of a very dark complexion. M. Bougainville repreſents the natives of this iſland as entirely black, with frizzled woolly hair, which ſome of them powdered white, having pretty long beards and white ornaments round their arms in form of bracelets; their nudities but indifferently covered with leaves of trees; in their perſons they are tall, active, and robuſt. He obſerves, that they kept at ſome diſtance

diſtance from the ſhips, and diſcovered a diſpoſition alternately inclined to war and traffic. No European has ever yet had any friendly intercourſe with the inhabitants of this iſland.

Dampier ſailed round the north coaſt of New Ireland, and ſuppoſed it to be a part of New Britain. That navigator called the moſt ſouthern point of it Cape St. George, which, together with Cape Orford in New Britain, were thought to be the two points that formed a deep bay, which he called St. George's Bay. But captain Carteret, who ſailed round it in 1767, found it to terminate in a narrow channel, to which he gave the name of St. George's Channel. This iſland is a long narrow ſlip of land lying north-weſt and ſouth-eaſt, in extent about eighty leagues. The harbour, called by captain Carteret Engliſh Cove, lies in lat. 5 deg. ſouth, long. 157 deg. 19 min. eaſt. There is another harbour about four leagues to weſtward, which he named Carteret-Harbour.

The crew of the Swallow, who at that time were in general periſhing with ſickneſs, obtained relief from ſome cocoa-nuts found upon this iſland, as they did alſo from ſome rock oyſters and cockles they procured from the rocks at low water. The upper part of the tree which bears the cocoa-nut is called the cabbage. This is a white, criſp, juicy ſubſtance: it taſtes ſomewhat like a cheſnut, but when boiled is ſuperior to the beſt parſnip, and is, perhaps, the moſt powerful antiſcorbutic in the world. For every one of theſe cabbages that were obtained, they were forced to cut down a tree, which was done with great regret; but this depredation on the parent ſtock was unavoidable. Theſe almoſt-expiring navigators likewiſe received great refreſhment from the fruit of a tall tree that reſembles a plum, and particularly that which in the Weſt-Indies is called the Jamaica Plum.

The ſhore about this place is rocky, and the country high and mountainous, but covered with trees of various kinds, ſome of which are of an enormous growth. Among others, the nutmeg-tree was found in great plenty. Captain Carteret gathered a few of the nuts, but they were not ripe. They did not appear to be the beſt ſort, but he imputes that to their growing wild, and being too much in the ſhade of taller trees. The woods abound with pigeons, doves, rooks, parrots, and a large bird with a black plumage, which makes a noiſe ſomewhat like the barking of a dog.

The only quadrupeds ſeen in this iſland by the crew of the Swallow were two of a ſmall ſize, which were ſuppoſed to be dogs; they were very wild, and ran with great ſwiftneſs: here were ſeen centipedes, ſcorpions, and a few ſerpents of different kinds, but no people. They fell in, however, with ſeveral deſerted habitations, and by the ſhells that were ſcattered about them, and ſeemed not to have been long taken out of the water, and ſome ſticks half burnt, the natives were ſuppoſed to have juſt left the place when they arrived. Captain Carteret was in ſo enfeebled a ſtate of body as to be prevented from attending circumſtantially to a deſcription of the country. However, in Engliſh Cove he took poſſeſſion of it for his Britannic majeſty, and nailed upon a high tree a piece of board faced with lead, on which was engraved an Engliſh union, with the name of the ſhip and her commander, the name of the cove, and the time of their coming in and going out of it. M. de Bourgainville touched here about a year after, and gave it the name of Port Praſlin. He found part of captain Carteret's inſcription, which ſeemed to have been taken down and defaced by the natives.

In this iſland there were ſome wild boars, large pigeons of beautiful plumage, turtle doves, parrots, and crown birds. Ants ſwarmed about the thatch-palm and cabbage-trees. The country appeared mountainous; the ſoil light, yet producing ſeveral kinds of fine timber trees; the pepper-tree is ſaid to be common. Here was found a very extraordinary inſect about three inches long; almoſt every part of its body was of ſuch a texture as to appear like a leaf, even when cloſely viewed. Each of its wings forms one half of a leaf, and when the two are cloſed together, it appears like an entire leaf. The under ſide of its body reſembles a leaf of a more dead colour than the upper one. It has ſix legs, of which the upper joints are likewiſe ſimilar to parts of leaves. Several ſhocks of an earthquake were felt here, which laſted about two minutes, and were very diſtinctly noticed on board, as well as on ſhore. Here was a prodigious caſcade precipitated through vaſt rocks, which diverſify the fall of water.

Sandwich-Iſland lies in the weſtern part of St. George's Channel, on which coaſt the Swallow anchored. Soon after ten canoes put off from New Ireland, with about one hundred and fifty men on board: they exchanged ſome trifles, but none of them would venture up the ſide of the ſhip. They preferred iron to every thing elſe, although none of it was manufactured except nails; there being no cutlery ware on board. One of their canoes was not leſs than ninety feet long, being very little ſhorter than the ſhip, notwithſtanding which, it was formed of a ſingle tree. It had ſome carved ornaments about it, and was rowed or paddled by thirty-three men. There was no appearance of ſails. The Indians were black and woolly-headed like negroes, without their flat noſes and thick lips. They were all ſtark naked, except ornaments of ſhells about their legs and arms. Their hair, as well as their beards, was profuſely covered with a white powder. They were armed with ſpears, and long ſticks or poles, like the quarter ſtaff. As they kept a watchful eye upon the ſhip's guns, it is probable they were not wholly unacquainted with the effect of fire-arms. They had fiſhing nets with them, which, as well as their cordage, ſeemed to be very well made. After they had continued this intercourſe for ſome time, a breeze ſprung up, and they returned to the ſhore.

The Swallow having reached the weſtern point of New Ireland, a fine large iſland preſented itſelf, to which captain Carteret gave the name of

New Hanover, to the weſtward of New Ireland; it was ſo called by captain Carteret. The land is high, and finely covered with trees, among which are many plantations, and the whole has a beautiful appearance. About eight leagues to the weſtward, appeared ſix or ſeven ſmall iſlands, which received the name of the Duke of Portland's Iſlands.

Admiralty-Iſlands lie in about 2 deg. 18 min. ſouth latitude; and 146 deg. 44 min. eaſt longitude. There are between twenty and thirty iſlands ſaid to be ſcattered about here, one of which is very extenſive. Captain Carteret, who firſt diſcovered them, was prevented touching at them, although their appearance was very inviting, on account of the condition of his ſhip; and as he was entirely unprovided with ſuch articles of barter as ſuited the Indian trade.

Theſe iſlands abound with vegetable productions of various kinds; and the natives ſeemed to be very numerous. Captain Carteret was of opinion that they produced ſpices, as he found the nutmeg-tree upon a ſoil comparitively rocky and barren, upon the coaſt of New Ireland.

Chriſtmas-Iſland was diſcovered by captain Cook, on the 24th of December, 1777, and called by him Chriſtmas-Iſland, from the ſhip's companies having kept that feſtival there. It lies in latitude 1 deg. 58 min. north; longitude 202 deg. 28 min. eaſt. Its form is ſemicircular, and, like moſt other iſles in this ocean, it is ſurrounded by a reef of coral rocks, extending but a little diſtance from the ſhore: and further out than this reef, on the weſtern ſide, is a bank

 of

of ſand, which extends a mile into the ſea. There is good anchorage on this bank, between eighteen and thirty fathoms. The ſoil of this iſland is in ſome places light and blackiſh, compoſed of ſand, the dung of birds, and rotten vegetables. In other parts, it is formed of broken coral ſtones, decayed ſhells, and other marine productions. Theſe are depoſited in long narrow ridges, parallel with the ſea coaſt, and muſt have been thrown up by the waves. This ſeems to prove that the iſland has been produced by different acceſſions from the ſea, and is in a ſtate of augmentation; the broken pieces of coral, and likewiſe many of the ſhells, being too large and heavy, to have been brought from the beach by any birds, to the places where our navigators found them lying.

No freſh water could be found in the whole iſland, though our people frequently dug for it. They met with ſeveral ponds of ſalt water, which having no viſible communication with the ſea, were ſuppoſed to have been filled by the water filtrating through the ſand, during the time of high tides. Not the ſmalleſt trace of any human footſtep could be diſcerned by our people, who went on ſhore for the purpoſe of obſerving an eclipſe of the ſun, which happened on the 30th of December; and alſo for the catching of turtle. Indeed, ſhould any human being be accidentally driven upon the iſland, or left there, they could ſcarcely be able to prolong their exiſtence; for though there are birds and fiſh in abundance, there are no viſible means of allaying thirſt, nor any vegetable that would ſerve as a ſubſtitute for bread, or correct the bad effects of ſalt diet. Very little fruit was found on the few cocoa-nut trees upon the iſland, and that little, not good.

In ſome parts were obſerved a few low trees, beſides ſeveral ſmall ſhrubs and plants, which grew in a very languid manner. There was a kind of purſlain, a ſpecies of ſida, or Indian mallow, with two ſorts of graſs. Under theſe trees ſat vaſt numbers of a new ſpecies of egg-bird, black above, and white below, having a white arch on the forehead. Theſe birds are ſomewhat larger than the common noddy: their eggs are bluiſh, and ſpeckled with black. There were likewiſe many common boobies, a ſort reſembling a gannet, and a chocolate coloured ſpecies with a white belly. Man-of-war birds, curlews, plovers, tropic birds, petrels, &c. were alſo ſeen here. There were ſmall rats, numbers of land crabs, and lizards.

On this iſland there was ſo much fiſh that ſome of the crew brought on board as many as weighed upwards of two hundred pounds, from a grappling near the ſhore. A great quantity were alſo taken with the hook and line, principally conſiſting of cavallias, ſnappers, and a few rock-fiſh of two ſpecies, one with whitiſh ſtreaks ſcattered about, and the other with numerous blue ſpots.

There was procured for both ſhips, about three hundred turtles, which weighed one with another about ninety pounds: they were all of the green ſort, and perhaps not inferior in goodneſs to any in the world.

When the party that was employed in catching turtle returned on board, a ſailor that belonged to the Diſcovery had been miſſing two days. At firſt there were two men who had loſt their way; but happening to diſagree with reſpect to the track that was moſt likely to bring them to their companions, they had ſeparated, and one of them found means to rejoin the party, after an abſence of twenty-four hours, during which he had experienced great diſtreſs. There being, as before obſerved, no freſh water upon the iſland, and not one cocoa-nut tree in that part of it where he was ſtraggling, in order to allay his thirſt, he had recourſe to the extraordinary expedient of drinking the blood of a turtle, which he had killed for that purpoſe. His method of refreſhing himſelf, when fatigued, was equally ſingular, though he ſaid he felt the good effects of it. He undreſſed himſelf and lay down in the ſhallow water on the beach for ſome time. It was matter of aſtoniſhment how theſe two men loſt their way: the land over which their journey lay, from the ſea coaſt to the place where the boats were ſtationed, did not exceed three miles acroſs; nor was there any thing that could obſtruct their view, for the country was level, with a few ſhrubs diſperſed about it; and from many parts, the maſts of the veſſels could be eaſily diſcerned. This, however, ſeemed to be a rule of direction which they did not think of; nor did they recollect in what part of the iſland the ſhips lay at anchor; and they were totally at a loſs how to get back to them, or the party from which they had ſo careleſſly ſtrayed. A party was detached in ſearch of the other man, and they ſoon had the good fortune to find their loſt companion. The diſtreſs of this man muſt have been much greater than that of the other ſtraggler, not only as he had been loſt a longer time, but he was too delicate to drink turtle's blood.

There being ſome yams and cocoa-nuts on board, in a ſtate of vegetation, they were planted, by captain Cook's order, on the ſmall iſland where the aſtronomers had obſerved the late eclipſe; and ſome ſeeds of melons were ſown in another place. The captain alſo left on that little iſle a bottle, containing the following inſcription:

Georgius Tertius, Rex, 31 *Decembris*, 1777.
Naves { *Reſolution, Jac. Cook, Pr.*
{ *Deſcovery, Car. Clerke, Pr.*

CHAP. XXII.

THE SANDWICH ISLANDS.

A General Deſcription. Account of Atooi. Reception of the Engliſh there. A remarkable Morai there. Various Occurrences.

CAPTAIN COOK diſcovered theſe iſlands on his laſt voyage to the Pacific Ocean, in 1778, they were by him diſtinguiſhed by the name of the Sandwich-Iſlands, in honour of the Earl of Sandwich.

The firſt five which he ſaw were called by the natives Woahoo, Atooi, Oneeheow, Oreehoua, and Tahoora. He received ſome intelligence with reſpect to the exiſtence of a low uninhabited iſland in the neighbourhood, named Tammata-pappa, which was never viſited. Beſides, he was further informed, that there were other iſlands both to the eaſtward and weſtward. Owhyhee, the ſpot where our celebrated navigator fell a victim to the fury of the natives, with ſome others, was not diſcovered till ſome time after thoſe juſt mentioned, and will therefore be introduced, with every tranſaction relative to that memorable event, in its proper place. All theſe iſlands, he obſerved, were ſituated between the latitude of 21 deg. 30 min. and 22 deg. 15 min. north; and between the longitude of 199 deg. 20 min. and 201 deg. 30 min. eaſt. All the information that could be derived reſpecting Woahoo, the moſt eaſterly of the iſlands diſcovered, was, that it is high land, and inhabited.

The captain touched at Oneeheow, and was paid a degree of homage by the natives that came on board, as they crouched down upon the deck, nor would quit that humble poſture till they were requeſted to riſe. When he went on ſhore, he took with him three goats, a young boar and ſow of the Engliſh breed, and alſo the ſeeds of onions, pumpkins, and melons. Theſe he diſpoſed of in ſuch a manner, as he thought would beſt tend to promote

the propagation of the reſpective ſpecies. This iſland is chiefly low land, except one part, which riſes immediately from the ſea to a conſiderable height; as does alſo its ſouth-eaſt point, which terminates in a round hill. Its chief vegetable productions are yams, and the ſweet root called *tee*. Our people procured ſome ſalt here, called by the natives *patai*, which is produced in ſalt ponds. With it they cure both fiſh and pork; and ſome of the fiſh being purchaſed, proved good, and kept well. The anchoring place at this iſland was in latitude 21 deg. 50 min. north; and longitude 199 deg. 45 min. eaſt. Oreehoua and Tahoora, are two little iſlands in the vicinity of the former. Tahoora is uninhabited.

As the ſhips approached Atooi, many of the inhabitants put off in their canoes, and very readily came along-ſide. Our people were agreeably ſurpriſed to find that they ſpoke a dialect of the Otaheitean language. They could not at firſt be prevailed upon by any entreaties to come on board. Captain Cook tied ſome braſs medals to a rope, which he gave to thoſe who were in one of the canoes; and they faſtened ſome mackerel to the rope, by way of equivalent. This was repeated, and ſome ſmall nails, or pieces of iron, were given them; for which they gave in exchange ſome more fiſh, and a ſweet potato; a ſure indication of having ſome notion of bartering. One of them even offered for ſale the piece of ſtuff which he wore about his waiſt.

The natives of this iſland were of the middling ſtature, and of a robuſt form. Their complexion was brown; and though there appeared to be little difference in the caſts of their colour, there was a conſiderable variation in their features. Moſt of them had their hair cropped rather ſhort; a few had it tied in a bunch at the top of the head; and others ſuffered it to flow looſe. It ſeemed to be naturally black; but the generality of them had ſtained it with ſome ſtuff, which changed it to a browniſh colour. Moſt of them had pretty long beards. They had no ornaments about their perſons; nor was it obſerved that they had their ears perforated. Some of them were tatooed on the hands, or near the hips: and the pieces of cloth which were worn by them round their middle were curiouſly coloured with white, black, and red. They ſeemed to be mild and good-natured; and were furniſhed with no arms of any kind, except ſome ſmall ſtones, which they had manifeſtly brought for their own defence; and theſe they threw into the ſea when they found there was no occaſion for them.

As the ſhips ſailed along the coaſt, in queſt of a convenient ſpot for anchorage, ſome of the natives ventured to come on board; and none of the inhabitants they ever met with before, in any other iſland or country, were ſo aſtoniſhed as theſe people were, upon entering a ſhip. Their eyes were inceſſantly roving from one object to another, while the wildneſs of their looks and geſtures fully indicated their perfect ignorance with reſpect to every thing they ſaw; and ſtrongly pointed out, that they had never, till the preſent time, been viſited by Europeans, nor been acquainted with any of their commodities, except iron. This metal, however, they had in all probability only heard of, or at moſt known it in ſome inconſiderable quantity, brought to them at a remote period. They aſked for it by the appellation of *hamaite*, referring probably to ſome inſtrument, in making which iron could be ſerviceably employed: for they applied that name to the blade of a knife, though they had no idea of that particular inſtrument, which they could not even handle properly. They alſo frequently called iron by the name of *toe*, which ſignifies a hatchet or adze. On being ſhewn ſome beads, they firſt aſked what they were, and then whether they were to be eaten? But on their being informed, that they were to be hung in their ears they rejected them as uſeleſs. They were equally indifferent with regard to a looking-glaſs that was offered them, and returned it for a ſimilar reaſon. China cups, plates of earthen ware, and other things of that kind, were ſo new to them, that they aſked whether they were made of wood? They were, in many reſpects, naturally polite; or, at leaſt, cautious of giving offence. Some of them, juſt before their venturing on board, repeated a long prayer; and others afterwards ſung, and made various motions with their hands.

When the boats, with a proper officer, were diſpatched to look out for a convenient landing-place, the commodore gave peremptory orders, that none of the crew ſhould go on ſhore, to prevent, if poſſible, the importation of a dangerous diſeaſe into this iſland, which he knew ſome of them now laboured under, and which they unfortuately communicated to other iſlands in this ocean. From the ſame motive, he commanded that all female viſitants ſhould be excluded from both the ſhips. Many perſons of this ſex had come off in the canoes. Their complexion and ſtature were not very different from thoſe of the men: and though their countenances were extremely open and agreeable, few traces of delicacy were viſible, either in their faces or other proportions. The only difference in their dreſs, was their having a piece of cloth about their bodies, reaching from near the middle, almoſt down to the knees, inſtead of the *maro* worn by the male ſex.

The ſhips being brought to anchor, the captain went on ſhore, and was received in the moſt ſubmiſſive manner by the iſlanders, who fell proſtrate upon their faces, and continued in that poſture of humiliation till, by ſigns, he prevailed on them to riſe. They then preſented to him many ſmall pigs, with plantain trees, making uſe of nearly the ſame ceremonies, which had been practiſed on ſimilar occaſions at the Society and other iſles; and a long oration, or prayer, being pronounced by an individual, in which others of the aſſembly occaſionally joined. Captain Cook ſignified his acceptance of their proffered friendſhip, by beſtowing on them in return ſuch preſents as he had brought on ſhore. Having determined on an excurſion into the country, he was accompanied by two gentlemen, and followed by a numerous train of natives, one of whom, who had been very active in keeping the others in order, the captain made choice of as a guide. This man, from time to time, proclaiming the approach of the ſtrangers, every perſon who met them fell proſtrate on the ground, and remained in that humble poſition till they had paſſed. This they were afterwards informed is their method of ſhewing reſpect to their own great chiefs.

On their excurſion they ſaw a morai, which bore a ſtriking reſemblance, in ſeveral reſpects, to thoſe they had ſeen at Otaheite, and other iſlands in this ocean. It was an oblong ſpace, of conſiderable extent, environed by a ſtone-wall, four or five feet high. The encloſed ſpace was looſely paved; and at one end of it was placed the obeliſk or pyramid, called by the natives *henananoo*, which was an exact model of the larger one that they had diſcerned from the ſhips. It was about twenty feet in height, and four feet ſquare at the baſe. Its four ſides were formed of ſmall poles, interwoven with twigs and branches, thus compoſing an indifferent wicker-work, hollow within, from the top to the bottom. It appeared to be in a ruinous ſtate, and had been originally covered with a thin greyiſh cloth. On each ſide of it were long pieces of wicker-work, termed *hereanee*, in a condition equally ruinous; with two poles inclining towards each other at one corner, where ſome plantains were placed on a board, fixed at the height of about half a dozen feet. This was called by the iſlanders *herairemy*; and they ſaid, that the fruit was an offering to their deity. Before the *henananoo* were ſeveral pieces of wood, carved into ſome reſemblance

ſemblance of human figures. There was alſo a ſtone near two feet in height, covered with cloth. Adjoining to this, on the outſide of the morai, was a ſmall ſhed, which they denominated *hareepahoo ;* and before it there was a grave, where the remains of a woman had been depoſited. On the further ſide of the area of the morai, there was a houſe or ſhed, called *hemanaa ;* it was about forty feet in length, ten or eleven feet in height, and ten in breadth in the middle, but narrower at each end ; though conſiderably longer, it was lower than their common habitations. Oppoſite the entrance into this houſe ſtood two images, near three feet high, cut out of one piece of wood, with pedeſtals. They were ſaid to be *Eatooa no Veheina*, or repreſentations of goddeſſes, and were not very indifferent, either in point of execution or deſign. On the head of one of them was a cylindrical cap, not unlike the head-dreſs at Otaheite, called *tomou ;* and on that of the other, a carved helmet, ſomewhat reſembling thoſe of the ancient warriors ; and both of them had pieces of cloth faſtened about the loins, and hanging down a conſiderable way. There was alſo, at the ſide of each, a piece of carved wood, with cloth hung on it. Before the pedeſtals lay a quantity of fern, which had been placed there at different times. In the middle of the houſe, and before the images juſt deſcribed, was an oblong ſpace, encloſed by an edging of ſtone, and covered with the ſhreds of cloth. This was the grave of ſeven chiefs, and was called *heneene*.

From the ſimilarity between this morai, and thoſe of the iſlands they had lately quitted, little doubt was entertained, that a ſimilarity exiſted alſo in the rites here ſolemnized, and particularly in the horrid oblation of human victims. The conception was ſoon confirmed : for on the ſide of the entrance into the *hemaana*, they obſerved a ſmall ſquare place, and another ſtill ſmaller ; and on aſking what theſe were, they were informed by their conductor, that in one of them was interred a man who had been ſacrificed ; and in the other a hog, which had alſo been offered up to the deity. At no great diſtance from theſe were three other ſquare encloſed places, with two pieces of carved wood at each of them, and an heap of fern upon them. Theſe were the graves of three chiefs ; and before them was an encloſed ſpace, of an oblong figure, called *tangatataboo*, by the guide, who declared to them, that three human ſacrifices, one at the funeral of each chief, had been there buried. Indeed, there was not room to doubt of the univerſal prevalence of this practice in the iſland under deſcription.

Of all the various articles which the natives brought to exchange with the Engliſh, nothing ſo much attracted their notice, and, it might be added, their admiration, as a ſort of cloak and cap, which, even in more poliſhed countries, might be eſteemed elegant. Theſe cloaks are nearly of the ſhape and ſize of the ſhort ones worn by the men in Spain, and by the women in England, tied looſely before, and reaching to the middle of the back. The ground of them is a net work, with the moſt beautiful red and yellow feathers ſo cloſely fixed upon it, that the ſurface, both in point of ſmoothneſs and gloſſineſs, reſembles the richeſt velvet. The method of varying the mixture is very different ; ſome of them having triangular ſpaces of red and yellow alternately ; others, a ſort of creſcent ; while ſome were entirely red, except that they had a broad yellow border. The brilliant colours of the feathers, in thoſe cloaks that were new, had a very fine effect. The natives, at firſt, refuſed to part with one of theſe cloaks for any thing that was offered in exchange, demanding no leſs a price than one of the muſkets. They afterwards, however, received as the purchaſe of them ſome very large nails. Thoſe of the beſt ſort were ſcarce ; and it is probable, that they are uſed only on particular occaſions. The caps are made in the form of an helmet, with the middle part, or creſt, frequently of an hand's breadth. They ſit very cloſe upon the head, and have notches to admit the ears. They conſiſt of twigs and oſiers, covered with a network, into which the feathers are wrought, as upon the cloaks, but ſomewhat cloſer, and leſs diverſified ; the major part being red, with ſome yellow, green, or black ſtripes on the ſides. Theſe caps, in all probability, complete the dreſs with the cloaks ; for the iſlanders appeared ſometimes in both together.

At firſt it was not eaſy to conjecture by what means they procured ſuch a quantity of theſe beautiful feathers, but were ſoon made acquainted with that particular from the great number of ſkins of a ſmall red ſpecies of bird they brought for ſale. Thoſe that were firſt purchaſed conſiſted only of the ſkin from behind the ſhoulder of the wings ; but they afterwards got many with the hind part, including the feet and tail. The reaſon aſſigned by the inhabitants of Atooi, for the cuſtom of cutting off the feet of theſe birds is, that by this practice they can preſerve them the more eaſily, without loſing any part which they conſider as valuable. The red bird of this iſland was a ſpecies of merops, about as large as a ſparrow : its colour was a beautiful ſcarlet, with the tail and wings black ; and it had an arched bill, twice as long as the head, which, with the feet, was of a reddiſh hue. The contents of the head were taken out, as in the birds of paradiſe. But it was not obſerved, that they practiſed any other mode of preſerving them, than ſimple drying ; for the ſkins, though they were moiſt, had neither ſmell or taſte.

It appears that the inhabitants of this iſland feed upon human fleſh. One of them that came out in a canoe, bringing articles by way of barter, and amongſt the reſt ſome fiſh-hooks, was obſerved to have a very ſmall parcel faſtened to the ſtring of one of them, which he carefully ſeparated, and reſerved for himſelf, when he diſpoſed of the hook. Upon inquiry what it was, he pointed to his belly, and intimated ſomething of its being dead ; ſaying, at the ſame time, that it was bad. He was requeſted to open the parcel, which he did with great reluctance, and it was found that it contained a ſmall thin piece of fleſh, which had, to all appearance, been dried, but was then wet with ſalt water. Our people imagining it might be human fleſh, put the queſtion to the producer of it, who anſwered, that the fleſh was part of a man. Another of the iſlanders, who ſtood near him, was then aſked, whether it was a cuſtom among them to eat their enemies who had been ſlain in battle, on which he replied in the affirmative. Yet further inquiries on this ſubject were made. A ſmall inſtrument of wood, beſet with ſhark's teeth, had been purchaſed, which, as it reſembled the ſaw or knife made uſe of by the ſavages of New Zealand, to diſſect the bodies of their enemies, was ſuſpected to be employed here for the ſame purpoſe. One of the iſlanders being queſtioned on this point, acknowledged that the inſtrument before mentioned ſerved the purpoſe of cutting out the fleſhy-part of the belly, when any perſon was ſlain. This explained and confirmed the circumſtance before related, of the man's pointing to his belly. The native, however, from whom this intelligence was received, being aſked, whether his countrymen ever fed on the part thus cut out, ſtrongly denied it ; but, when the queſtion was repeated, he ſhewed ſome degree of apprehenſion, and ſwam off to his canoe. An elderly man, who ſat foremoſt in the canoe, was then aſked whether they eat the fleſh, and he anſwered in the affirmative. The queſtion being put a ſecond time, he again affirmed the fact, adding, that it was ſavory food. The inquiry, whether theſe iſlanders were cannibals, was renewed when the ſhips were off Oneeheow. The ſubject did not ariſe from any queſtions put by their viſitors, but from a circumſtance that ſeemed to remove all doubt. One of the

the natives, who wiſhed to get in at the gun-room port, was refuſed; and he then aſked, whether they would kill and eat him, if he ſhould come in; accompanying this queſtion with ſigns ſo expreſſive, that a doubt could not be entertained with reſpect to his meaning. Our people had now an opportunity of retorting the queſtion as to this practice; when a man behind the other in the canoe, inſtantly replied, that if they were killed on ſhore, they ſhould not ſcruple to eat them: not that he meant the natives would deſtroy them for that purpoſe, but that their devouring them would be the conſequence of creating enmity.

The following are ſome additional obſervations made by captain Cook on the iſland of which we are here treating.

Further Particulars relative to Atooi. Soil, Climate, Animal, and Vegetable Productions. Dreſs, Habitations, Muſic, Weapons, Agriculture, and Manners of the Inhabitants.

The iſland of Atooi is at leaſt ten leagues from eaſt to weſt, from whence its circumference may be nearly gueſſed.

The land does not in the leaſt reſemble, in its general appearance, any of the iſlands, which our late navigators had viſited within the tropic of Capricorn, except in its hills near the centre, which are high, but ſlope gradually towards the ſea, or lower lands. Though it preſents not to the view the delightful borders of Otaheite, nor the luxuriant plains of Tongataboo, covered with trees, which at once afford a ſhelter from the ſcorching rays of the ſun, a beautiful proſpect to the eye, and food for the natives, yet its poſſeſſing a greater portion of gently riſing land renders it, in ſome degree, ſuperior to the abovementioned favourite iſlands, as being more capable of improvement. The height of the land within, and the number of clouds hanging over it, ſeemed to indicate that there was a ſufficient ſupply of water, and that there were ſome running ſtreams, though our people had not an opportunity of ſeeing them. The ground, from the woody part to the ſea, was covered with an excellent kind of graſs, about two feet in height, which ſometimes grew in tufts, and appeared capable of being converted into abundant crops of fine hay. But on this extenſive ſpace not even a ſhrub grew naturally. In the narrow valley leading to the morai the ſoil is of a dark brown colour, rather looſe; but on the high ground it is of a reddiſh brown, more ſtiff and clayey. Its quality may be better eſtimated from its productions, than from its appearance. For the vale, or moiſt ground, produces taro, much larger than any ſeen before; and the more elevated ground ſweet potatoes, that ſeldom weigh leſs than two or three pounds, frequently ten, and ſometimes a dozen or fourteen.

The temperature of the climate may be eaſily gueſſed from the ſituation of the iſland. It was remarked, however, by thoſe who were moſt capable of judging, that, from what they experienced, it might be ſaid to be very variable; for, according to the general opinion, it was, at this time, the ſeaſon of the year when the weather is ſuppoſed to be the moſt ſettled, the ſun being at its greateſt annual diſtance. The heat was now very moderate; and few of thoſe inconveniences to which many countries lying within the tropics are ſubject, either from heat or moiſture, ſeemed to be experienced here. Nor were there any dews of conſequence; a circumſtance which may partly be accounted for by the lower part of the country being deſtitute of trees. The rock that conſtitutes the ſides of the valley is a dark grey ponderous ſtone, but honey-combed, with ſome ſpots of a ruſty colour, and ſome very minute ſhining particles interſperſed. It is of an immenſe depth, and ſeems to be divided into ſtrata, though nothing is interpoſed; for the large pieces always broke off to a determined thickneſs, and did not appear to have adhered to thoſe that were below them. Other ſtones are, in all probability, much more various than in the ſouthern iſlands. For during the ſhort time the ſhips remained here, beſides the *lapis lydius*, was found a ſpecies of cream-coloured whetſtone, ſometimes variegated with whiter or blacker veins, like marble; and alſo common writing ſlate.

The only tame or domeſtic animals found here were hogs, dogs, and fowls, which were all of the ſame kind as thoſe met with in the South-Sea iſlands in general. There were ſome ſmall lizards and ſome rats, reſembling thoſe of the other iſlands.

The voyagers did not meet with ſcarlet birds alive that were brought for ſale; but ſaw one ſmall one, about the ſize of a canary bird, of a deep crimſon colour. They alſo ſaw a large owl, two brown hawks or kites, and a wild duck; and heard from the natives the names of ſome other birds, among which were the *otoo*, or bluiſh bird, and the *tarata*, a ſort of whimbrel. It is probable that the ſpecies of birds are numerous, if a judgment may be formed from the quantity of fine yellow, green, and ſmall, velvet-like, blackiſh feathers uſed upon the cloaks, and other ornaments, worn by theſe people. The iſland did not appear to produce fiſh either in quantity or variety, as the only fiſh ſeen by our people, beſides the ſmall mackerel, were common mullets; a ſpecies of a chalky colour; a ſmall browniſh rock fiſh, adorned with blue ſpots; a turtle, which was penned up in a pond; and three or four ſorts of fiſh ſalted. The few ſhell-fiſh ſeen were converted into ornaments, though they were deſtitute of the recommendation either of beauty or novelty.

There are ſix different kinds of plantains, bread-fruit, a few cocoa-palms, ſome yams, the kappee of the Friendly-Iſlands, or Virginian arum; the etooa tree, and odoriferous gardenia, or cape jeſmine. There were ſeveral trees of the dooe dooe, that bear the oily nuts, which are ſtuck upon a kind of ſkewer, and made uſe of as candles. The iſlanders wear theſe nuts, hung on ſtrings, round their necks. There is a ſpecies of ſida, or Indian mallow; alſo the *morinda citrifolia*, which is here called *none*; a ſpecies of convolvulus, the ava, or intoxicating pepper, beſides a great quantity of gourds. Theſe laſt grow to a very large ſize, and are of a remarkable variety of ſhapes, which are, perhaps, the effect of art. Upon the dry ſand, about the village, grew a plant, that had never been ſeen by our people in this ocean, of the ſize of a common thiſtle and prickly, but bearing a fine flower, greatly reſembling a white poppy.

The natives of Atooi appear to be of a frank, cheerful diſpoſition; equally free from the fickle levity that characterizes the inhabitants of Otaheite, and the ſedate caſt which is obſervable among many of thoſe of Tongataboo. They ſeem to cultivate a ſocial intercourſe with each other, and except the propenſity to thieving, which is, as it were, innate in moſt of the people of theſe ſeas, they were exceeding friendly. When they ſaw the different articles of European manufacture, they could not refrain from expreſſing their aſtoniſhment, by a mixture of joy and concern, that ſeemed to apply the caſe as a leſſon of humility to themſelves; and, on every occaſion, appeared to have a proper conſciouſneſs of their own inferiority. It was pleaſing to obſerve with what affection the women managed their infants, and with what alacrity the men contributed their aſſiſtance in ſuch a tender office. They are active, vigorous, and expert ſwimmers; leaving their canoes upon the moſt frivolous occaſion, diving under them, and ſwimming to others, though at a conſiderable diſtance. Women were frequently ſeen with infants at their breaſts, when the ſurf was ſo high as to pre-

vent

vent their landing in their canoes, to leap overboard, and ſwim on ſhore.

If judgment might be formed from the number ſeen by our people as they ranged along the coaſt, the inhabitants of this iſland are pretty numerous. Including the ſtraggling houſes, there might, perhaps, be in the whole iſland ſixty ſuch villages as that near which the ſhips anchored; and, if allowance is made of five perſons to each houſe, there would be, in every village, five hundred; or thirty thouſand upon the iſland. This number is by no means exaggerated, for there were ſometimes three thouſand people, at leaſt, collected on the beach, when it could not be ſuppoſed that above a tenth part of the natives were preſent.

Having already deſcribed the ordinary dreſs of the natives of both ſexes; we ſhall now attend to particulars. The women have often much larger pieces of cloth wrapped about them, extending from juſt below the breaſts to the hams, and ſometimes lower; and ſeveral were obſerved with pieces thrown looſely over their ſhoulders, which covered the greateſt part of the body; but the children, when very young, go entirely naked. They do not wear any thing on the head; but the hair, both of men and women, is cut in various forms, and the general faſhion, particularly among the latter, is to have it ſhort behind and long before. The men frequently had it cut on each ſide in ſuch a manner, that the remaining part ſomewhat reſembled the creſt of their caps or helmets. Both ſexes, however, ſeemed to be very careleſs about their hair, and had no combs, or any thing of the kind, to dreſs it. The men ſometimes twiſt it into a number of ſeparate parcels, like the tails of a wig, each about as thick as a finger; though moſt of theſe, which are ſo long as to reach far down the back, are artificially fixed upon the head, over their own hair. The people of the Sandwich-Iſles have not their ears perforated, nor do they wear any ornaments in them. Both men and women, however, adorn themſelves with necklaces compoſed of bunches of ſmall black cord, like our hat-ſtring, often above an hundred-fold. They have alſo necklaces of many ſtrings of very ſmall ſhells, or of the dried flowers of the Indian mallow; and they ſometimes hang round their necks a ſmall human figure of bone, about the length of three inches. The women likewiſe wear bracelets of a ſingle ſhell, pieces of black wood, with bits of ivory interſperſed, and neatly poliſhed, faſtened together by a ſtring drawn cloſely through them; or others of hogs teeth placed parallel to each other, with the concave part outward, and the points cut off; ſome of which, formed only of large boars' tuſks, appeared very elegant. The men ſometimes fix on their heads plumes of feathers of the tropic bird, or thoſe of cocks, faſtened round neat poliſhed ſticks two feet in length; and, for the ſame purpoſe, they ſew the ſkin of a white dog's tail over a ſtick, with its tuft at the end. They alſo frequently wear on the head a kind of ornament about the thickneſs of a finger, covered with yellow and red feathers, curiouſly varied, and tied behind; and, on that part of the arm which is above the elbow, a ſort of broad ſhell-work grounded upon net-work. The men ſometimes puncture themſelves upon the hands or arms, but frequently no marks at all were ſeen; though a few individuals had more of this ſpecies of ornament than had been uſually noticed at other places, and curiouſly executed in a great variety of lines and figures, on the arms and fore-part of the body.

Their habitations are ſcattered about without the leaſt order; ſome are large and commodious, from 40 to 50 feet in length, and 20 or 30 in breadth; while others are the moſt contemptible hovels. Their figure reſembles that of hay-ſtacks; or, perhaps, a better idea may be conceived of them, by ſuppoſing the roof of a barn placed on the ground in ſuch a manner as to form an high ſharp ridge with two low ſides. The gable at each end, correſponding to the ſides, makes theſe dwelling-places cloſe all round; and they are well covered with long graſs, which is laid on ſlender poles. The entrance is made either in the end or ſide, and is an oblong hole extremely low: it is often ſhut up by a board of planks faſtened together, which ſerves as a door; but, as it has no hinges, may be removed occaſionally. No light enters the houſe except by this opening: and though ſuch cloſe habitations may be comfortable places of retreat in bad weather, they ſeem but ill adapted to the warm climate of this country.

They are kept remarkably clean, however, and the floors are ſtrewed with dried graſs, over which mats are ſpread to ſit, or to ſleep on. At one end ſtands a bench about three feet high, on which the domeſtic utenſils are placed. Theſe conſiſt of gourd-ſhells, which the natives convert into veſſels that ſerve as bottles to hold water, and as baſkets to contain their food and other things; they have alſo a few wooden bowls and trenchers of various ſizes. Sweet potatoes and plantains conſtitute the principal part of their vegetable diet; ſo that yams and bread-fruit are rather to be conſidered as rarities. Of animal food they appear to be in no want, as they have great numbers of hogs, which run without reſtraint about the houſes; and, if they eat dogs, which is not altogether improbable, their ſtock of theſe ſeemed very conſiderable. The quantities of fiſhing-hooks found among them indicated that they procure ſome ſupply of food from the ſea. They have a cuſtom of ſalting fiſh, and likewiſe pork, which they preſerve in gourd-ſhells. The ſalt which they uſe for this purpoſe is of a reddiſh colour, but not very coarſe.

Their vegetable articles of food they bake with heated ſtones; and from the great quantity which was ſeen dreſſed at one time, it was ſuppoſed that all the inhabitants of a village, or at leaſt a conſiderable number of people, joined in the uſe of a common oven. They eat out of a ſort of wooden trenchers, and, as far as our people could judge from one inſtance, the women, if reſtrained from feeding at the ſame diſh, as is the cuſtom at Otaheite, are at leaſt allowed to eat at the ſame place near them.

The diverſions of theſe iſlanders are various. The Engliſh did not ſee the dances in which they uſe the feathered cloaks and caps; but, from the motions which they made with their hands, on other occaſions, when they ſung, they judged that they were ſomewhat ſimilar to thoſe they had met with at the ſouthern iſlands, though not ſo ſkilfully performed. They had not among them either flutes or reeds, and the only two muſical inſtruments ſeen were of a very rude kind. One of them does not produce a ſound ſuperior to that of a child's rattle. It conſiſts of what may be denominated a conic cap inverted, but very little hollowed at the baſe, made of a ſedge-like plant, the upper part of which, and likewiſe the edges, are embelliſhed with beautiful red feathers, and to the point, or lower part, is fixed a gourd-ſhell. Into this they put ſomething to rattle, which is done by holding the inſtrument by the ſmall part, and ſhaking it briſkly before the face, at the ſame time ſtriking the breaſt with the other hand. The other inſtrument was a hollow veſſel of wood not unlike a platter, combined with the uſe of two ſticks, on which one of the natives was obſerved performing. He held one of the ſticks, about two feet in length, with one hand, in the ſame manner as the Europeans hold a violin, and ſtruck it with the other, which was ſmaller, and reſembled a drum-ſtick, in a quicker or ſlower meaſure; beating with his foot at the ſame time upon the hollow veſſel that lay upon the ground inverted, and thus producing a tune that was not diſagreeable. This muſic was accompanied by the vocal performance of ſome women, whoſe ſong had a pleaſing effect.

Much ingenuity is diſplayed in their different manufactures. Their cloth is made from the *morus papyrifera*, and, doubtleſs, in the ſame manner as at Tongataboo and Otaheite; as ſome of the grooved ſticks were bought with which they beat it. Its texture, however, though thicker, is inferior to that of the cloth of either of the places juſt mentioned; but in colouring or ſtaining it, the inhabitants of Atooi diſplay a ſuperiority of taſte, by the infinite variety of figures which they execute. Their colours, indeed, are not very bright, except the red; but the regularity of the figures and ſtripes is amazing; for, as far as was known, they have nothing like ſtamps or prints, to make the impreſſions. Beſides the variegated ſorts, they have ſome pieces of plain white cloth, and others of a ſingle colour, particularly light blue, and dark brown. In general, the pieces brought for exchange, were about the breadth of two feet, and four or five yards in length, being the form and quantity made uſe of by them for their common dreſs, or *maro;* and even ſome of theſe were compoſed of pieces ſewed together. They have alſo a particular ſort that is thin, and greatly reſembles oil-cloth; and which is either oiled or ſoaked in ſome kind of varniſh. They fabricate numbers of white mats, which are ſtrong, with many red ſtripes, quadrangular and other figures interwoven on one ſide. Theſe, in all probablity, make a part of their dreſs: for when they offered them to ſale, they put them on their backs. They manufacture others of a coaſer ſort, plain and ſtrong, which they ſpread over their floors to ſleep upon.

Their gourd-ſhells they ſtain neatly with undulated lines, triangles, and other figures of a black colour. They alſo ſeem to be acquainted with the art of varniſhing; for ſome of their ſtained gourd-ſhells are covered with a ſort of lacker; and, on other occaſions, they make uſe of a ſtrong ſize, or glutinous ſubſtance, to faſten things together. Their wooden diſhes and bowls, out of which they drink their ava, are of the etooa tree, or cordia, extremely neat, and well poliſhed. They likewiſe make ſmall ſquare fans of mat or wicker-work, with handles of the ſame, or of wood, tapering from them, which are curiouſly wrought with ſmall cords of hair and cocoa-nut fibres intermixed. Their fiſhing-hooks are ingeniouſly made; ſome of bone, many of pearl-ſhell, and others of wood, pointed with bone. The bones are for the moſt part ſmall, and conſiſt of two pieces; and the various ſorts have a barb, either on the inſide, or the outſide: but others have both, the exterior one being furtheſt from the point. Of the latter ſort, one was procured, nine inches in length, made of a ſingle piece of bone; the elegant form and poliſh of which could not be exceeded by any European artiſt. They poliſh their ſtones by conſtant friction, with pumice-ſtone in water; and ſuch of the tools as were ſeen reſembled thoſe of the ſouthern iſlanders. Their hatchets, or rather adzes, were exactly of the ſame pattern, and were either formed of a blackiſh ſtone, or of a clay-coloured one. They have alſo ſmall inſtruments, compoſed of a ſingle ſhark's tooth, ſome of which are fixed to the fore part of the jaw-bone of a dog, and others to a thin wooden handle of a ſimilar ſhape; and at the other end there is a bit of ſtring faſtened through a little hole. They ſerve occaſionally as knives, and are probably uſed in carving. The only iron tools ſeen among them, and which they poſſeſſed before the arrival of our ſhips, were a piece of iron hoop, about the length of two inches, fitted into a wooden handle; and another edge-tool, which was ſuppoſed to have been made of the point of a broad ſword. Their having the actual poſſeſſion of theſe, and their being acquainted with the uſe of this metal, inclined ſome of our people to imagine, that they were not the firſt European viſitors of theſe iſlands. But the very great ſurpriſe which they teſtified on ſeeing the ſhips, and their perfect ignorance of the uſe of fire-arms, cannot be reconciled with ſuch an opinion. However, ſome have thought that the natives of Atooi might have received this metal from intermediate iſlands, ſituated between them and the Ladrones, which the Spaniards have frequented almoſt ever ſince the period of Magellan's voyage in 1719.

Beſides their ſpears, formed of a fine browniſh wood, beautifully poliſhed, ſome of which are barbed at one end, and flattened to a point at the other, they have a kind of weapon which the voyagers had never met with before: it ſomewhat reſembles a dagger, and is, in general, about eighteen inches in length, ſharpened at one or both ends, and ſecured to the hand by a ſtring. Its uſe is to ſtab in cloſe combat, and ſeems well adapted for that purpoſe. Some of theſe may be denominated double daggers, having a handle in the middle, by which they are the better calculated to ſtrike different ways. They have likewiſe bows and arrows; but, both from their ſlender conſtruction, and their apparent ſcarcity, it is probable that they never make uſe of them in battle. The knife or ſaw, with which they diſſect the dead bodies of their enemies, may alſo be ranked among their weapons, as they both ſtrike and cut with it when engaged in cloſe fight. It is a ſmall flat wooden inſtrument, about a foot in length, of an oblong ſhape, rounded at the corners: its edges are ſurrounded with ſharks' teeth, ſtrongly fixed to it, and pointing outwards; and it has generally a hole in the handle, through which paſſes a long ſtring, which they wrap ſeveral times round the wriſt.

Their canoes are commonly about four and twenty feet in length, and have the bottom, in general, formed of a ſingle piece of wood, hollowed out to the thickneſs of an inch, or more, and brought to a point at each end. The ſides are compoſed of three boards, each about an inch thick, neatly fitted, and laſhed to the bottom. The extremities, both at the head and ſtern, are a little elevated, and both are made ſharp, ſomewhat reſembling a wedge, but they flatten more abruptly, ſo that the two ſide-boards join each other, ſide by ſide, for upwards of a foot. As they ſeldom exceed a foot and a half in breadth, thoſe that go ſingle (for they ſometimes join them) have out-riggers, which are ſhaped and fitted with more judgment than any before ſeen. They are rowed by paddles, ſuch as had been generally obſerved at other iſlands: and ſome of them have a light triangular ſail, extended to a maſt or boom. The ropes which they uſe for their boats, and the ſmaller cords for their fiſhing-tackle, are ſtrong, and neatly made.

The natives ſeem to poſſeſs a knowledge of agriculture. The vale-ground is one continued plantation of taro, and ſome other articles, which have all the appearance of being carefully attended to. The potato-fields, and ſpots of ſugar-cane, or plantains, on the higher grounds, are planted with great regularity; but neither theſe, or the others, are encloſed with any fence, unleſs the ditches in the low grounds may be conſidered as ſuch: which, it is more probable, are deſigned to convey water to the taro. The great quantity and excellence of theſe articles may, perhaps, be as much owing to ſkilful culture, as natural fertility of ſoil, which ſeems better adapted to them, than to bread-fruit and cocoa-nut trees; the few of theſe latter which were ſeen, not being in a thriving ſtate. Notwithſtanding this ſkill in agriculture, the iſland, from its general appearance, ſeemed to be capable of more extenſive improvement, and of maintaining thrice as many inhabitants as are now upon it; for the greater part of it, that now lies waſte, was apparently as good a ſoil as thoſe parts that were cultivated. It muſt therefore be inferred, that theſe people do increaſe in that proportion, which would render it neceſſary for them to take advantage of the extent of their iſland, towards

raiſing

raiſing a greater quantity of its vegetable productions for their maintenance.

There was not an opportunity of forming an accurate judgment of the mode of government eſtabliſhed amongſt theſe people; but, from our general obſervation, it ſeemed reaſonable to imagine, that it is of the ſame nature with that which prevails in all the iſlands they had hitherto viſited; and, in all probability, their wars among themſelves are equally frequent. This indeed might be inferred from the number of weapons which were found in their poſſeſſion, and from the excellent order in which they kept them. But they had proofs of the fact from their own confeſſion; being informed, theſe wars are carried on between the different diſtricts of their own iſland, as well as between it and the inhabitants of the neighbouring iſlands. No other cauſe than this need be aſſigned, to account for the apperance before-mentioned, or their population not being proportioned to the extent of their ground that is capable of cultivation.

Beſides obſerving in general that there is an affinity between the manners of theſe people, and the natives of the Friendly and Society-Iſlands, here follow a few particulars, that will ſerve to place this in a ſtriking point of view.

As to religious inſtitutions, and the manner of diſpoſing of the dead, the inhabitants of Tongataboo bury the dead with great decency, and they alſo inter their human ſacrifices; but they do not offer any other animal, or even a vegetable to their deities. The Otaheiteans do not inter their dead, but expoſe them to waſte by time and putrefaction, though they afterward bury the bones; and this being the caſe, it is remarkable that they ſhould inter the entire bodies of their human ſacrifices. They alſo offer up to their gods other animals and vegetables; but are far from being attentive to the condition of the places where they celebrate thoſe ſolemn rites; moſt of their morais being in a ruinous ſtate, and ſhewing manifeſt tokens of neglect. The people of Atooi, again, bury both their common dead, and their human ſacrifices, as at Tongataboo; but they reſemble thoſe of Otaheite, in offering vegetables and animals to their gods, and in the neglected ſtate of their religious places. It may be obſerved, alſo, that the taboo alſo prevails in Atooi, in its full extent, and apparently with greater ſtrictneſs than even at Tangataboo: for the natives here always aſked with great eagerneſs, and with indications of a fear of offending, whether any particular thing which they deſired to ſee, or their viſitors were willing to ſhew, was taboo, or (as they pronounced the word) tafoo? meaning, forbidden. The language uſed in both places may be ſaid to be almoſt entirely the ſame.

Diſcovery of Mowee and Owhyhee. Character of the Natives of the latter. Karakakooa-Bay deſcribed. Ceremonies and Cuſtoms of the Natives. Captain Cook's Reception there.

Before our navigators had ſufficient refreſhments, they were obliged to quit theſe iſlands. The anchor of the Reſolution having ſtarted, ſhe drove off the bank a conſiderable way to the leeward of the ſhip's laſt ſtation; ſo that the commodore foreſeeing it would require more time to regain it than he choſe to employ, he made the ſignal for the Diſcovery to weigh anchor, and both ſhips directed their courſe to the northward, in proſecution of diſcoveries; which was in February 1778.

Captain Cook, after having explored the dreary regions of the north, for the courſe of ſeveral ſucceeding months, determined to reviſit the Sandwich-Iſlands, in order to paſs a few of the winter months, provided he ſhould meet with the neceſſary refreſhments.

From a more extenſive view of the ſpot on the ſecond viſit, which was November 26, 1771, it appeared that the former diſcovery made by theſe, of the group of iſlands, had been imperfect; thoſe which they had viſited in their progreſs nothward, all lying to the leeward of their preſent ſtation.

An elevated hill appeared in the country, whoſe ſummit aroſe above the clouds. The land, from this hill, fell in a gradual ſlope, terminating in a ſteep rocky coaſt; the ſea breaking againſt it in a moſt dreadful manner. Unable to weather the iſland, they bore up, and ranged to the weſtward. They now perceived people on many parts of the ſhore, and ſeveral houſes and plantations. The country appeared to be well ſupplied with wood and water, and ſtreams were ſeen, in various places, falling into the ſea.

The chief deſign of reviſiting theſe iſlands, being to procure a competent ſupply of proviſions, muſt have been fruſtrated, if a free trade with the natives was permitted; captain Cook therefore publiſhed an order, prohibiting all perſons on board the ſhips from trading, except thoſe appointed by himſelf and captain Clerke; and theſe were under limitations of trading only for proviſions and refreſhments. Injunctions were alſo laid againſt the admittance of women into the ſhips, but under certain reſtrictions: but the evil which was intended to have been prevented by this regulation had already got amongſt them. While the ſhips were ranging along the coaſt, ſome canoes came off, and, when they got along-ſide, many of the conductors of them came on board without heſitation. It was perceived that they were of the ſame nation as thoſe iſlanders more to the leeward, which they had already viſited; and, as they underſtood, were no ſtrangers to their having been there. Theſe viſitors ſupplied them with a quantity of cuttle fiſh, in exchange for nails and iron. They brought but little fruit or roots, but ſaid they had plenty of them on their iſland, as well as hogs and fowls. Many of them afterwards brought divers commodities, which were bartered for ſuch articles as our people had to diſpoſe of. This iſland was called by the natives Mowee. The chief, who is named Terreeoboo, viſited the commodore on board, and made him a preſent in the uſual form.

Another iſland was ſoon after ſeen to the windward, called by the natives Owhyhee. Standing on and off during the night, the Engliſh were greatly ſurpriſed in the morning, at ſeeing the ſummits of the mountains covered with ſnow. Though they were not of an extraordinary height, the ſnow, in ſome places, appeared to be of a conſiderable depth, and to have remained there ſome time. Drawing near the ſhore, the natives approached, and appeared a little ſhy at firſt; but ſome were prevailed on to come on board, and, at length, induced to return to the iſland, to bring a ſupply of what was wanted. Numbers followed, and brought a tolerable ſupply of pigs, fruit, and roots.

The commodore having procured a great quantity of ſugar-cane, and, upon trial, diſcovering that a decoction of it made very palatable beer, he ordered ſome of it to be brewed for general uſe; but, on broaching the caſks, not one of the crew would even taſte the liquor. Having no other motive in preparing this beverage, than that of preſerving the ſpirits for a colder climate, he neither exerted his authority, nor had recourſe to perſuaſion, to induce them to drink it; well knowing, that ſo long as they could be plentifully ſupplied with vegetables, there was no danger of the ſcurvy: but, that he might not be diſappointed in his views, he ordered that no grog ſhould be ſerved in either of the ſhips. The officers continued to drink this ſugar-cane beer, whenever materials could be procured for brewing it. Some hops, which were on board, improved it much; and it was, doubtleſs, extremely wholeſome; though

the

the inconſiderate crew thought it injurious to their health.

The voyagers met with leſs reſerve and ſuſpicion, in their intercourſe with the people of this iſland, than they had ever experienced among any tribe of ſavages. They frequently ſent up into the ſhip, the articles they meant to barter, and afterwards came in themſelves to traffick on the quarter-deck. The inhabitants of Otaheite, whom they had often viſited, had not that confidence in their integrity; whence it may be inferred, that thoſe of Owhyhee are more faithful in their dealings with each other, than thoſe of Otaheite.

At firſt, they never attempted to over-reach in exchanges, or to commit a ſingle theft. They perfectly underſtood trading, and clearly comprehended the reaſon of the ſhips plying upon the coaſt. For though they brought off plenty of pigs, and other proviſions, they were particular in keeping up their price; and, rather than diſpoſe of them at an undervalue, would carry them aſhore again. Canoes however, coming off from all quarters, there were at leaſt a thouſand about the two ſhips, crowded with people, and laden with hogs and other proviſions. Our people were perfectly convinced of their having no hoſtile intentions; not a ſingle perſon having a weapon with him of any ſort. Trade and curioſity were their only inducements to make the viſit. From the numbers frequently on board, it might be expected that ſome of them would betray a thieviſh diſpoſition. One of them took a boat's rudder from the ſhip, and was not detected, till it was too late to recover it. Captain Cook imagined this to be a proper opportunity to ſhew theſe iſlanders the uſe of fire-arms. Two or three muſkets, and as many four-pounders, were, by his orders, fired over the canoe which went away with the rudder: but as the ſhot was not intended to take the effect, the ſurrounding multitude were only ſurpriſed and frightened.

The ſhips anchoring in the bay, called by the natives Karakakooa-Bay, they continued much crowded with the natives, and ſurrounded by a vaſt multitude of canoes. In the courſe of their voyage, ſuch vaſt numbers of people had not been ſeen aſſembled at one place. Beſides thoſe who came in canoes, all the ſhore was covered with ſpectators; and hundreds were ſwimming about the ſhips, like ſhoals of fiſh. They were ſtruck with the ſingularity of this ſcene; and few on board lamented their having failed in their late endeavours, to find a northern paſſage homeward the laſt ſummer; ſince to this diſappointment they were indebted for reviſiting the Sandwich-Iſlands, and for enriching their voyage with a diſcovery, in many reſpects, the moſt important that has been made by Europeans in the Pacific-Ocean.

This bay is ſituated in the diſtrict of Akona, on the weſt ſide of the iſland of Owhyhee. It extends about a mile in depth, and is bounded by two points of land, bearing ſouth-eaſt, and north-weſt from each other, at the diſtance of half a league. The north point is flat and barren, on which is ſituated the village of Kowrowa. A more conſiderable village, called Kakooa, ſtands in the bottom of the bay, near a grove of ſtately cocoa-trees. An high rocky cliff, inacceſſible from the ſea-ſhore, runs between them. Near the coaſt, on the ſouth-ſide, the land has a rugged appearance; beyond which the country gradually riſes, and abounds with cultivated encloſures, and groves of cocoa-trees. The habitations of the people are ſcattered about in great numbers. Round the bay the ſhore is covered with a black coral rock, except at Kakooa, where there is an excellent ſandy beach, with a morai at one extremity, and a ſpring of freſh water at the other.

As ſoon as the ſhips were brought to anchor, the natives came off in aſtoniſhing, numbers, expreſſing their joy by ſinging, ſhouting, and the moſt extravagant geſtures. The decks, ſides, and rigging, of the ſhips, were covered with them. Women and boys, who were unable to procure canoes, came ſwimming round in great multitudes; ſome of whom, not finding room to get on board, amuſed themſelves the whole day by playing in the water.

A chief called Pareea was amongſt thoſe of the natives who came on board the Reſolution. Though a young man, he was ſoon diſcovered to be a perſon of great authority. He told captain Cook that he was *Jakane* to the ſovereign of the iſland, who was then on a military expedition at Mowee, from whence he was expected to return in a few days. It was not known whether the word *Jakane* was a name of office, or expreſſive of affinity. Some preſents from the commodore attached him to their intereſts, and they found him exceedingly uſeful. Before they had been long at anchor, the Diſcovery had ſo many people hanging on one ſide, that ſhe was obſerved to heel conſiderably; and it appeared impoſſible to prevent the crowds from preſſing into her. Captain Cook, apprehenſive that ſhe might receive ſome injury, communicated his apprehenſions to Pareea, who inſtantly cleared the ſhip of its incumbrances, and diſperſed the canoes that ſurrounded her. From this circumſtance, it is plain that the chiefs have a moſt deſpotic authority over the inferior people. An inſtance ſimilar to this happened on board the Reſolution, where the croud ſo far impeded the ordinary buſineſs of the ſhip, that it was found neceſſary to apply to Kaneena, another chief, who had alſo attached himſelf particularly to captain Cook. The inconvenience ſuffered was no ſooner mentioned, than he ordered the natives immediately to quit the veſſel, when, without a moment's heſitation, they all jumped overboard, except one perſon, who loitering behind, and, by his manner, expreſſing ſome degree of unwillingneſs to obey, Kaneena took hold of him immediately, and threw him into the ſea. Theſe two chiefs were exceedingly well proportioned, and had countenances remarkably pleaſing. Kaneena was a fine figure. His height was about ſix feet; his features were regular and expreſſive; his deportment was eaſy, firm, and graceful; and he had dark lively eyes.

The two chiefs, Pareea and Kaneena, afterwards introduced a third on board, whoſe name was Koah. He was repreſented as a prieſt, and one who, in his early days, had diſtinguiſhed himſelf as a warrior. He was a little, old, emaciated figure, having ſore red eyes, and his body covered with a leprous ſcurf, occaſioned by the immoderate uſe of the ava. Being conducted to the cabin, he approached the commodore with the greateſt deference, threw a piece of red cloth over his ſhoulders, and retreating a few paces, made an offering of a ſmall pig, at the ſame time pronouncing a diſcourſe of a conſiderable length.

During their continuance at Owhyhee, this ceremony was repeated often, and, from a variety of circumſtances, it ſeemed to be a kind of religious adoration. Red cloth is an article with which their idols are arrayed: and a pig is a common offering to the Eatooas. Their ſpeeches were delivered with a volubility that indicated them to be conformable to ſome ritual.

At the concluſion of this ceremony, Koah dined with the commodore, and ate plentifully of the viands before him; but, like moſt of the iſlanders in thoſe ſeas, he could hardly be induced to taſte wine or ſpirits a ſecond time. In the evening, the commodore went on ſhore. As ſoon as they landed on the beach, they were preceded by four men, bearing each a wand tipt with dog's hair, and pronouncing, with a loud voice, a ſhort ſentence, in which the word Orono was very diſtinguiſhable. The crowd aſſembled on the ſhore, retired at their approach; and not an individual was to be ſeen, except a few who had

proſtrated

proſtrated themſelves on the ground, near the habitations of the adjacent village. Here it may be proper to obſerve, that Orono, which was captain Cook's general appellation among the natives of Owhyhee, was ſometimes applied by them to an inviſible being inhabiting heaven. It was alſo a title of great rank in the iſland.

Though we have already mentioned ſeveral morais appertaining to different iſlands of the South-Seas, that of Owhyhee is ſo ſingular in its conſtruction, and ſo peculiar in its ceremonies, that we ſhall here deſcribe it.

This morai conſiſted of a ſquare ſolid pile of ſtones, of the length of forty yards, the breadth of twenty, and the height of fourteen. The top of it was flat, and a wooden rail ſurrounded it, on which were diſplayed the ſkulls of thoſe natives who had been ſacrificed on the deaths of their chiefs. A ruinous wooden building was ſituated in the centre of the area, connected with the rail by a ſtone wall, dividing the whole ſpace into two parts. Five poles, of about twenty feet in height, ſupported an irregular kind of ſcaffold, on the ſide next the country; and, on the ſide towards the ſea, were two ſmall houſes, with a covered communication.

Captain Cook, accompanied by a party of gentlemen, was conducted to the ſummit of this pile by Koah, one of the chiefs before-mentioned. They beheld, at their entrance, two large wooden images, with moſt diſtorted features, having a long piece of wood proceeding from the top of their heads, of a conical form inverted: the other parts were covered with red cloth. Here captain Cook was received by a tall young man, having a long beard, who preſented him to the images, and chanted a kind of hymn, in which he was aſſiſted by Koah. The party were then led to that ſide of the morai where the poles were erected, at the foot of which twelve images were ranged in the form of a ſemicircle; the middle figure having a high table before it, on which was a putrid hog, and under it ſome cocoa-nuts, plantains, potatoes, bread-fruit, and pieces of ſugar-cane. The commodore was conducted under this ſtand by Koah, who, taking down the hog, held it towards him, when, having again addreſſed him in a long and vehement ſpeech, he ſuffered it to fall upon the ground, and aſcended the ſcaffolding with him, though at the peril of their falling. Ten men now advanced in ſolemn proceſſion, and entered the top of the morai, bearing a live hog, and a piece of large red cloth of conſiderable dimenſions. Advancing a few paces, they ſtopped, and proſtrated themſelves; and a young man approaching them, received the cloth, and carried it to Koah, who wrapped it round captain Cook, and made him an offering of the hog. The ſituation of their viſitor was truly whimſical. He was aloft, ſwathed in red cloth, and hardly able to keep his hold in the rotten ſcaffolding. He was entertained, however, with the chanting of Koah and Kaireekeea, ſometimes in concert, and ſometimes alternately.

After this office was performed, which was of conſiderable duration, Koah let the hog drop, and he and his gueſt immediately deſcended. He then conducted him to the images, to each of which he expreſſed himſelf in a ſneering tone, ſnapping his fingers at them as he paſſed. He then preſented him to that in the centre, which, from its being habited in red cloth, appeared to be in the higheſt eſtimation. He fell proſtrate before this figure, and kiſſed it, requeſting captain Cook would do the ſame; which he readily ſubmitted to; being determined to follow Koah's directions throughout the whole of this ceremony. The party were now conveyed into the other diviſion of the morai, where a ſpace, of about twelve feet ſquare, was ſunk three feet below the level of the area. They deſcended into this, and captain Cook was immediately ſeated between two idols, one of his arms being ſupported by Koah, and an officer was requeſted to ſupport the other. A ſecond proceſſion of natives at this time arrived with a baked hog, a pudding, ſome cocoa-nuts, bread-fruit, and other vegetables. As they drew near, Kaireekeea placed himſelf before them, and preſented the hog to the commodore, in the uſual manner, chanting as before, and his companions making regular reſponſes. Their ſpeeches and reſponſes grew gradually ſhorter and ſhorter; and, towards the concluſion, Kaireekeea's did not exceed three or four words, which was anſwered by the word Orono.

The natives, having concluded this offering, ſeated themſelves fronting our people, and began to cut up the baked hog, to break the cocoa-nuts, and to peel the vegetables. Others were employed in brewing the ava, by chewing it in the ſame manner as at the Friendly-Iſlands. Kaireekeea then chewed part of the kernel of a cocoa-nut, and wrapped it in a piece of cloth, with which he rubbed the captain's head, face, hands, arms, and ſhoulders. The ava was afterwards handed round, and when they had all taſted it, Koah and Pareea pulled the fleſh of the hog in pieces, and proceeded to put ſome of it into the mouths of the Engliſh. An officer had no particular objection to being fed by Pareea, who was remarkably cleanly in his perſon; but captain Cook, to whom a piece was preſented by Koah, could not ſwallow a morſel, the putrid hog being ſtrong in his recollection; and the old man having, from motives of civility, chewed it for him, his reluctance was much increaſed by that circumſtance.

When the ceremony was finiſhed, the party quitted the morai, after diſtributing among the populace ſome pieces of iron, and other articles, with which they were much delighted. They were then conducted in proceſſion to the boats, the men attending with wands, and pronouncing ſentences as before. Moſt of the natives again retired, and the remaining few proſtrated themſelves as they paſſed along the ſhore.

Some curioſity being excited by the regular attendance of the prieſts at the morai, the party determined to viſit the habitations of a ſociety of them which they had lately diſcovered. Their huts were erected round a pond encloſed with a grove of cocoa-trees, by which they were ſeparated from the beach and the village, and which gave the ſituation an air of religious retirement. When captain Cook arrived at the beach, he was conducted to Harre-no-Orono, or the houſe of Orono. On his approaching this ſacred place, he was ſeated at the foot of a wooden idol, reſembling thoſe which he had ſeen at the morai.—Here an officer again ſupported one of his arms. He was then arrayed in red cloth, and Kaireekeea, aſſiſted by twelve prieſts, preſented a pig with the uſual ſolemnities. After this ceremony, the pig was ſtrangled, and thrown into the embers of a fire prepared for that purpoſe. When the hair was ſinged off, a ſecond offering was made, and the chanting repeated as before; after which the dead pig was held, for ſome time, under the Captain's noſe, and then laid, with a cocoa-nut, at his feet. This part of the ceremony being concluded, the performers ſat down, and the ava brewed and handed about; a baked hog was brought in, and the party were fed as in the former ceremony. Whenever he went on ſhore, during the continuance of the ſhips in the bay, he was preceded by one of theſe prieſts, who proclaimed the landing of the Orono, and ordered the inhabitants to proſtrate themſelves. He was conſtantly attended by the ſame perſon on the water, where he was ſtationed in the bow of the boat, having a wand in his hand to give notice of his approach to the natives, who were in canoes; on which they inſtantly ceaſed paddling, and fell on their faces till he had paſſed.

That the aſtronomical gentlemen might not be incommoded at the obſervatory on ſhore, by the intru-

ſion of the natives, the place was conſecrated by the prieſts, by placing their wands round the wall by which it was encloſed.

This interdiction was the *taboo* already mentioned. No canoes attempted to land near the ſpot; the natives only ſat on the wall, not daring to come within the tabooed ſpace without obtaining permiſſion. The men, indeed, would bring proviſions into the field, but all endeavours were ineffectual to induce the women to approach. Preſents were tried, but without ſucceſs. Attempts were made to prevail on Pareea and Koah to bring them, but to no purpoſe: the Eatooa and Terreeoboo, they ſaid, would kill them if they did.

This circumſtance afforded great amuſement to the people on board, whither multitudes (particularly women) continually flocked; inſomuch that they were frequently obliged to clear the veſſel, in order to have room to perform their neceſſary duties. Two or three hundred women were ſometimes obliged to jump at once into the water, where they continued to ſwim and play about till they could come on board again.

Not confining themſelves to ſuch civilities, the people of Owhyhee ſupplied their viſitors with hogs and other proviſions, more than ſufficient for ſubſiſtence; and canoes, laden with proviſions, were as regularly ſent off to the ſhips. Nothing was demanded in return, nor was the moſt diſtant hint ever given that any compenſation was expected. Their manner of conferring favours appeared more like the diſcharge of a religious duty than the reſult of mere liberality. All this munificence was at the expence of Kaoo, the chief prieſt, and grandfather to Kaireekeea, who was then in the ſuit of the ſovereign of the iſland.

Some time after the commander's reception at the habitations of the prieſts, the king in a large canoe, with ſome attendants in two others, was ſeen paddling from the village, in great ſtate, towards the ſhips. Their appearance was noble. Terreeoboo and his chiefs were in the firſt canoe, arrayed in feathered cloaks and helmets, and armed with ſpears and daggers. In the ſecond came Kaoo, the chief prieſt, together with his brethren, having their idols diſplayed on red cloth. Theſe idols were figures of an enormous ſize, made of wicker work, and curiouſly ornamented with ſmall feathers of a variety of colours. Their eyes were large pearl-oyſters, with a black nut placed in the centre; a double row of the fangs of dogs was fixed in each of their mouths, which, as well as the reſt of their features, appeared diſtorted. The third canoe was laden with hogs and vegetables. As they advanced, the prieſts, in the ſecond canoe, chanted their hymns with great ſolemnity. After paddling round the veſſels, they did not come on board as was expected, but made immediately towards the ſhore at the beach, where an Engliſh party was ſtationed.

On their approach, the officers of the party ordered the guard to be drawn up in form to receive the king; and captain Cook, ſeeing that he intended to go on ſhore, went thither alſo, and landed almoſt at the ſame inſtant. They were uſhered into the tent, and the king was hardly ſeated, when he roſe up, and gracefully threw over the captain's ſhoulders the rich feathered cloak himſelf had wore, placed an helmet on his head, and preſented him with a curious fan. Five or ſix other cloaks, of great beauty and value, were ſpread at his feet.

Then four hogs were brought forward by the king's attendants, together with bread-fruit, cocoa-nuts, and ſugar-canes. Afterwards followed the ceremony of Terreeoboo's changing names with captain Cook, the ſtrongeſt pledge of friendſhip among all the iſlanders of the Pacific-Ocean. A ſolemn proceſſion now advanced, conſiſting of prieſts, preceded by a venerable perſonage, followed by a train of people leading large hogs; others being laden with potatoes, plantains, &c. It was eaſily perceived, by the countenance and geſtures of Kaireekeea, that the old man who headed the proceſſion was the chief prieſt, on whoſe bounty the Engliſh had ſo long ſubſiſted. He wrapped a piece of red cloth round the ſhoulders of captain Cook, as a mark of peculiar reſpect. The officers were not a little ſurpriſed to recognize, in the perſon of the king, an emaciated old man, who had come on board the Reſolution, from the north-eaſt ſide of the iſland of Mowee; and perceived that ſeveral of his attendants were the ſame perſons as before accompanied him.

When the uſual ceremonies of interview had paſſed, captain Cook conducted Terreeoboo, and ſeveral of his chiefs, on board the Reſolution. They were received with every poſſible attention and reſpect; and the commodore put a linen ſhirt upon the ſovereign, and girt his own hanger round him. Kaoo, and about half a dozen other ancient chiefs, remained on ſhore.

During all this time, not a canoe was permitted to appear in the bay, and thoſe natives who did not confine themſelves to their huts, lay proſtrate on the ground. Before the king quitted the Reſolution, he granted leave for the natives to trade with the ſhips as uſual, except the women, who were prohibited from this privilege.

CHAP. XXIII.

Friendly Behaviour of the People of Owhyhee. Their Prieſts and Ceremonies. Their Opinion of ther Viſitors. Preſents from their King Terreeboo. Ships depart, but are obliged to return.

SUCH confidence was placed in the natives here by our people, that the officers, &c. frequently made excurſions up the country, either ſingly, or in ſmall parties, and even ventured to continue out the whole night. Indeed, it would be endleſs to relate all the inſtances of generoſity they received upon theſe occaſions.

The people flocked about them every where, anxious to afford every aſſiſtance in their power, and appeared highly gratified, if they condeſcended to accept of their ſervices. Variety of innocent arts were practiſed to attract their notice, or to delay their departure. The boys and girls ran through their villages before them, ſtopping at every opening, where there was a commodious place to form a group for dancing. They were at one time ſolicited to take a draught of the milk of cocoa-nuts, or accept of ſuch other refreſhment as their huts afforded: at another, they were encircled by a company of young women, who exerted their ſkill and agility in amuſing them with ſongs and dances. The more agreeable the natives rendered themſelves to our people, by their inſtances of hoſpitality, the greater was their diſguſt and concern, at finding them prone to theft, the general vice of the iſlanders of theſe ſeas. This was a diſtreſſing circumſtance, and ſometimes obliged them to exerciſe ſeverity, which they would have been happy to have avoided, if it had not been eſſentially neceſſary. Some expert ſwimmers were one day detetected under the ſhip, drawing out the nails from the ſheathing, which they ingeniouſly performed with a flint ſtone, faſtened to the end of a ſhort ſtick. This practice was ſo injurious to the veſſels, that our people fired ſmall ſhot at the offenders: but that they eaſily evaded, by diving to the bottoms of the ſhips. It therefore became highly neceſſary to make an example of one of them, by flogging him on board the ſhip.

At this time an excurſion into the country, by a large party from both ſhips, afforded Kaoo a freſh

opportunity

opportunity of exerciſing his civility and generoſity. No ſooner was he informed of their departure, than he ſent after them a large quantity of proviſions, with orders, that every attention and aſſiſtance ſhould be granted them by the inhabitants of thoſe diſtricts through which they were to paſs. His conduct, on this occaſion, was ſo delicate and diſintereſted, that even the people he employed were not permitted to accept of the ſmalleſt preſent. At the end of ſix days the party returned, without having penetrated more than twenty miles into the iſland.

The natives preſented their viſitors with the exhibition of a boxing-match. Though theſe games were inferior, in every reſpect, to thoſe they had ſeen exhibited at the Friendly-Iſlands, yet, as they were ſomewhat different, we ſhall here give a ſhort account of them.

A vaſt concourſe of people aſſembled on an even ſpot of ground, not far diſtant from the tents. A long vacant ſpace was left in the centre of them, at the upper end of which the judges preſided, under three ſtandards. Slips of cloth, of various colours, were pendent from them; as were the ſkins of two wild geeſe, ſome ſmall birds, and a few bunches of feathers.

The neceſſary preparations being made, the judges gave the ſignal, and two combatants appeared in view. They advanced ſlowly, drawing up their feet very high behind, and, rubbing their hands upon the ſoles. As they came forward, they frequently ſurveyed each other from head to foot, with an air of contempt, looking archly at the ſpectators, diſtorting their features, and practiſing a variety of unnatural geſtures. When they were advanced within the reach of each other, they held both arms ſtraight out before their faces, at which part they always aimed their blows. They ſtruck with a full ſwing of the arm: did not attempt to parry, but endeavoured to elude their adverſary's attack, be ſtooping or retreating. The battle was expeditiouſly decided; for if either of them fell, whether by accident, or a blow, he was deemed vanquiſhed; and the victor expreſſed his triumph by a variety of ſtrange geſtures, which uſually excited a loud laugh among the ſpectators, for which purpoſe it ſeemed to be calculated. The ſucceſsful combatant waited for a ſecond antagoniſt; and, if again victorious, for a third; and ſo on, till he was at laſt defeated.

When any two of theſe champions were preparing to attack each other, a third might advance, and make choice of either of them for his antagoniſt, when the other was under the neceſſity of withdrawing. If the combat proved long and tedious, or appeared unequal, a chief generally interfered, and concluded it by putting a ſtick between the combatants. As this exhibition was at the deſire of our people, it was expected that ſome of them would have engaged with the natives; but though they received preſſing invitations to bear a part, they did not hearken to the challenges, not having forgot ſome blows they received at the Friendly-Iſlands.

At this time, the death of William Whatman, a ſeaman of the gunner's crew, is particularly mentioned. He was a man in years, and much reſpected for his attachment to captain Cook. He had ſerved twenty-one years as a marine, and then entered as a ſeaman in 1772, on board the Reſolution, and ſerved with the commodore in his voyage towards the ſouth pole. On their return, he got admittance into Greenwich-Hoſpital, through the intereſt of captain Cook, at the ſame time with himſelf; and, anxious to follow the fortunes of his benefactor, he alſo quitted it with him, on his appointment to the command of the preſent expedition. He had been often ſubject to ſlight fevers in the courſe of the voyage, and was infirm when the ſhips arrived in the bay; where having been ſent a few days on ſhore, he thought himſelf perfectly reſtored, and requeſted to return on board. His requeſt was complied with; but the day following he had a ſtroke of the palſy, which, in two days afterwards, put a period to his life.

As an additional inſtance of reſpect to his viſitors, Terreeoboo cauſed the remains of this honeſt ſeaman to be buried in the morai, with great ſolemnity. Kaoo and his brethren were preſent at the funeral; they behaved with great decorum, and paid due attention while the ſervice was performing. On our people beginning to fill up the grave, they approached it with great awe, and threw in a dead pig, together with ſome cocoa-nuts and plantains. For three ſucceſſive nights they ſurrounded it, ſacrificing hogs, and reciting hymns and prayers till morning. A poſt was erected at the head of the grave, and a piece of board nailed thereon, on which was inſcribed the name and age of the deceaſed, and the day of his departure from this life. Theſe the natives aſſured them they would not remove; and they will probably he permitted to remain, ſo long as ſuch frail materials can endure.

The ſhips being in want of fuel, captain Cook deſired lieutenant King to treat with the prieſts for the purchaſe of the rail on the morai. Mr. King had his doubts about the decency of this overture, and apprehended that the bare mention of it might be deemed impious; but in this he was exceedingly miſtaken. They expreſſed no kind of ſurpriſe at the application, and the wood was delivered without the leaſt ſtipulation. They were indeed ſo little affected by the circumſtance, that they even aſſiſted in the removal. When the particulars were mentioned to Kaoo, he ſeemed indifferent about the matter, deſiring only the reſtoration of the centre image, which being immediately complied with, it was conveyed to one of the prieſt's houſes.

As the chiefs of the iſland had frequently expreſſed an importunate deſire to know the preciſe time fixed for the departure of the Engliſh, a curioſity was excited in the minds of the ſpeculative part of them, to learn the opinion entertained by the iſlanders, relative to them and the objects of their viſit. The only information that could be obtained was, that they ſuppoſed our people had left their native country on account of the ſcantineſs of proviſions, and had viſited them for the ſole purpoſe of filling their bellies. This concluſion was natural enough, conſidering the meagre appearance of ſome of the crew, the voracity with which they devoured their freſh proviſions, and their anxiety to purchaſe as much of it as poſſible. One circumſtance may be added to theſe, which puzzled them exceedingly, namely, that of our people having no women with them. The natives would often pat the bellies of the ſailors (who were much improved in ſleekneſs after their arrival at the bay) and telling them, in the beſt manner they could, that it was time for them to depart; but if they would return the next bread-fruit ſeaſon, they ſhould be better able to ſupply them. They had now continued ſixteen days in the bay, during which time the conſumption of hogs and vegetables had been ſo enormous, that our people could not be ſurpriſed at their wiſhing to ſee them take their leave. However, it appeared that Terreeoboo had no other view in his inquiries, than a deſire of having ſufficient notice, to prepare ſuitable preſents for them at their departure: for when he was informed of their intention to quit the iſland in two days, a kind of proclamation was immediately made, requiring the natives to bring in their hogs and vegetables, for the king to preſent to the Orono.

A droll genius among them exhibited a variety of tricks for the entertainment of our people on ſhore. In his hand he held an inſtrument of muſic; bits of ſea-weed were faſtened round his neck; and, round each leg, ſome ſtrong netting; on which were fixed ſome rows of dogs teeth, hanging looſe. His dancing was accompanied with ſtrange grimaces, and unnatural

unnatural diſtortions of the features. which, though ſometimes highly ridiculous, were, upon the whole, without meaning or expreſſion. This diverſion was cloſed with wreſtling and boxing matches: and our people, in return, exhibited the few fire-works they had remaining. Nothing could more effectually excite the admiration of theſe iſlanders, or ſtrike them with more exalted ideas of the ſuperiority of their viſitors, than ſuch a repreſentation. Though this was, in every reſpect, much inferior to that at Hapaee, yet the aſtoniſhment of the people was equally great.

Before the departure of the ſhips from the iſland, the time of which was now fixed on, Terreeoboo invited the commodore, principal officers, &c. to attend him to Kaoo's reſidence. On their arrival there, they ſaw large quantities of cloth lie ſcattered on the ground; abundance of red and yellow feathers faſtened to the fibres of cocoa-nut huſks; and plenty of hatchets and iron ware, which had been received in barter. Not far from theſe was depoſited an immenſe quantity of various kinds of vegetables; and, at a little diſtance, a large herd of hogs. It was ſuppoſed, at firſt, that the whole was intended as a preſent for them, till they were informed by Kaireekea, that it was a tribute to the king, from the inhabitants of that diſtrict. The gueſts were no ſooner ſeated, than the bundles were brought, and laid ſeverally at Terreeoboo's feet; and the cloth, feathers, and iron, were diſplayed before him.

The king expreſſed the higheſt degree of ſatisfaction at this mark of duty and affection from his ſubjects; and having cauſed about a third of the iron utenſils, and ſome pieces of cloth to be ſelected, ordered theſe to be ſet aſide by themſelves; and the remainder of the cloth, hogs, vegetables, &c. were afterwards preſented to captain Cook. The whole of this welcome preſent was immediately conveyed on board. The large hogs were ſelected, in order to be ſalted for ſea ſtore; but the ſmaller pigs, and the vegetables, were divided between the crews. Lieutenant King being the laſt on ſhore, and waiting for the return of the boat, the inhabitants crowded about him, and having prevailed on him to ſit down among them, expreſſed their regret at his ſeparation from them. It was even with difficulty that they would ſuffer him to depart. He was, indeed, highly eſteemed among them, as will appear from the following relation. Having had, while the ſhips were in the bay, the command of the party on ſhore, he became more acquainted with the natives, and they with him, than thoſe who were required to be on board. He experienced great kindneſs and civility from the inhabitants in general; but the friendſhip ſhewn by the prieſts was conſtant and unbounded.

Being anxious to conciliate their eſteem, he ſo happily ſucceeded, that when they were acquainted with the time of his departure, he was urged to remain behind, and received overtures of the moſt flattering kind. When he endeavoured to excuſe himſelf, by alleging, that captain Cook would not permit it, they propoſed to conduct him to the mountains, and there conceal him till the departure of the ſhips. On further aſſurance that the captain would not ſail without him, the king and Kaoo repaired to captain Cook (whom they ſuppoſed to be his father) formally requeſting that he might be ſuffered to remain behind. The commodore, unwilling to give an abſolute refuſal to a propoſal ſo generouſly intended, he aſſured them, that he could not then part with him; but he ſhould return thither the next year, when he would endeavour to oblige them. The ſhips at length unmoored and ſailed out of the bay, attended by a vaſt number of canoes. It was captain Cook's intention to finiſh the ſurvey of Owhyhee, before he went to the other iſlands, hoping to meet with a road more ſheltered than Karakakooa-Bay; and if he ſhould not ſucceed here, he meant to examine the ſouth-eaſt part of Mowee, where he had been informed, there was an excellent harbour.

The people on board, in their progreſs to the north-ward, obſerved two men in a canoe paddling towards them. They naturally conjectured that they had been driven off the ſhore by ſtreſs of weather, and ſtopped the ſhip's way, in order to take them in. They were ſo exhauſted with fatigue, that had not one of the natives on board jumped into the canoe to their aſſiſtance, they would hardly have been able to fix it to the rope thrown out for that purpoſe. With difficulty, however, they were got up the ſhip's ſide, together with a child about four years of age, which had been laſhed under the thwarts of the canoe, with only its head above the water. They informed their deliverers, that they had quitted the land the morning before, ſince which time they had no food or water. Proviſion was given them with proper precautions, and the child intruſted to the care of one of the women on board; and the next morning they were all perfectly recovered.

The Reſolution having received very eſſential damage in a gale of wind, inſomuch as totally to obſtruct her further progreſs, captain Cook for ſome time heſitated whether he ſhould return to Karakakooa, or take the chance of finding a harbour in the iſlands to leeward. The bay was not ſo commodious, but that a better might probably be met with, either for repairing the maſts, or procuring refreſhments; the latter of which, it was imagined, the neighbourhood of Karakakooa had lately been pretty well drained of. It was, on the other hand, conſidered as an imprudent ſtep, to leave a tolerable good harbour, which, once loſt, could not be regained, for the mere poſſibility of meeting with a better; eſpecially as the failure of ſuch a contingency might have deprived them of any reſource. Therefore concluding at length to return, the ſhips ſtood in for the bay, and, upon arrival, came to anchor in their former ſtation.

Alteration in the Behaviour of the Iſlanders. A Theft and its Conſequences. The Engliſh attacked. Freſh Jealouſies and Animoſity. Attempt to ſecure the Perſon of the King. Failure. An inſolent Chief ſhot by Captain Cook. General Attack, which ends with the Death of that gallant Commander.

THE Engliſh were beyond meaſure aſtoniſhed at their reception, on coming to anchor in Karakakooa-Bay a ſecond time. No ſhouts, buſtle, or confuſion, but a ſolitary bay, with hardly a canoe ſtirring was obſerved. The curioſity of the natives, indeed, might be ſuppoſed to be diminiſhed by this time: but the hoſpitable treatment the Engliſh had continually been favoured with, and the friendly footing on which they parted, induced them to expect that, on their return, they would have received them with the greateſt demonſtrations of joy.

The cauſe of this ſtrange appearance was thus explained by the return of a boat, which had been ſent on ſhore. That Terreeoboo was abſent, and that the bay was *tabooed*. This account appeared very ſatisfactory to many; but others were of opinion that there was, at this time, ſomething very dubious in the behaviour of the natives; and that the *taboo*, or interdiction, on pretence of Terreeoboo's abſence, was artfully contrived, to give him time to conſult his chiefs in what manner they ſhould be treated. They never could aſcertain whether theſe ſuſpicions were well founded, or whether the natives had given a true account. A cauſe of ſuſpicion might alſo ariſe from the following circumſtance. A native having ſold a hog on board the Reſolution, and received the price agreed on, Pareea, who ſaw the tranſaction, adviſed the ſeller not to part with his hog, without an advanced price. For his interfer-

ence

ence in this buſineſs, he was harſhly ſpoken to, and puſhed away: and as the *taboo* was ſoon laid on the bay, it was at firſt ſuppoſed to be in conſequence of the affront offered to the chief. Theſe two cauſes conſidered, it was extremely difficult to draw any certain concluſions. Lieutenant King alſo received information that ſeveral chiefs were aſſembled near the beach, and were driving away the natives, who aſſiſted the ſailors in rolling the caſks to the ſhore; that their behaviour ſeemed exceedingly ſuſpicious, and liable to raiſe further diſturbance. The lieutenant ſent a marine with the officer who brought the intelligence, agreeable to his requeſt, but permitted him to take only his ſide-arms. The officer in a ſhort time returned, and informed Mr. King that the inhabitants had armed themſelves with ſtones, and were become tumultuous. He therefore went himſelf to the ſpot, attended by a marine with his muſket. At their approach the iſlanders threw away their ſtones; and on Mr. King's application to ſome of the chiefs, the mob was diſperſed. Every thing being now quiet, Mr. King went to meet captain Cook, who was then coming on ſhore in the pinnace. He related to him what had recently happened; and received orders to fire a ball at the offenders, if they again behaved inſolently, and began to throw ſtones. In conſequence of theſe directions, Mr. King gave orders to the corporal, that the centinels pieces ſhould be loaded with ball, inſtead of ſhot. A continued fire of muſkets being heard from the Diſcovery, and perceived to be directed at a canoe which was haſtening towards the ſhore, with one of the ſmall boats in purſuit of it, this firing, it was concluded, was in conſequence of a theft. Captain Cook, therefore, ordered Mr. King to follow him with a marine armed, and to endeavour to ſeize the people as they landed. They accordingly ran to the place where the canoe was expected to come aſhore, but did not arrive in time; the people having quitted it, and fled into the country before they came up. Being wholly ignorant, at this time, that the goods had been already reſtored, and thinking it probable, from what they had obſerved, that they might be of importance, they did not chooſe to relinquiſh their endeavours to recover them; and having inquired of the natives what courſe the people had taken, they purſued them till it was almoſt dark, when they ſuppoſed themſelves to be about three miles from the tents; and thinking the iſlanders amuſed them with falſe information in their purſuit, gave up the ſearch, and returned. An incident occurred during their abſence, that occaſioned a difference of a very ſerious nature. The officer who had been diſpatched in the ſmall boat after the thieves, and who was returning on board with the booty that had been reſtored, ſeeing captain Cook and Mr. King engaged in the purſuit of the offenders, ſeized a canoe which was drawn up on the ſhore. This canoe unfortunately belonged to Pareea, who, at that inſtant arriving from on board the Diſcovery, claimed his property, and proteſted his innocence. The officer perſiſted in detaining it, in which he was encouraged by the crew of the pinnace, then waiting for captain Cook; in conſequence of which a ſcuffle enſued, and Pareea was knocked down by a violent blow on the head with an oar. Several of the natives, who had hitherto been peaceable ſpectators, began now to attack our people with a ſhower of ſtones, ſo that they were forced to a precipitate retreat, and ſwam off to a rock at a conſiderable diſtance from the ſhore. The pinnace was plundered immediately by the natives, and would have been entirely demoliſhed, if Pareea had not interpoſed.

On hearing theſe circumſtances, captain Cook expreſſed the greateſt concern, and diſcovered ſome apprehenſions, that the iſlanders would oblige him to purſue violent meaſures; adding, they muſt not be permitted to ſuppoſe that they had gained an advantage. It was, however, too late to take any ſteps that evening: he therefore only gave orders that every iſlander ſhould be immediately turned out of the ſhip. This order being executed, lieutenant King returned on ſhore; and the events of the day having much abated former confidence in the natives, a double guard was poſted on the morai, with orders to let Mr. King know, if any men were lurking about the beach. At eleven o'clock, five of the natives were ſeen creeping round the bottom of the morai: they approached with great caution, and, at laſt, perceiving they were diſcovered, immediately retired out of ſight. About midnight one of them ventured himſelf near the obſervatory, when a centinel fired over him, on which they all fled; and there was no further diſturbance during the remainder of the night. Next morning Mr. King received information that the Diſcovery's cutter had, ſome time in the night, been ſtolen from the buoy where it had been moored.

Going on board the Reſolution, he found the marines were arming themſelves, and captain Cook buſied in loading his double-barrelled gun. Whilſt he was acquainting him with what had happened in the night at the morai, he eagerly interrupted him, informing him that he had received intelligence of the loſs, and was making preparations to recover it.

It was his uſual practice, in all the iſlands of this ocean, when any thing of conſequence had been ſtolen from him, by ſome ſtratagem, to get the king, or ſome of the principal Erees, on board, where he detained them as hoſtages, till the property was reſtored. This method having hitherto proved ſucceſsful, he meant to adopt it on the preſent occaſion; and gave orders to ſtop every canoe that ſhould attempt to leave the bay; reſolving to ſeize and deſtroy them, if the cutter could not be recovered by peaceable means. Purſuant to this order, the boats of the ſhips, properly manned and armed, were ſtationed acroſs the bay; and, before Mr. King quitted the ſhip, ſome great guns were fired at two canoes, that were attempting to eſcape.

Captain Cook and Mr. King quitted the ſhip together: the former in the pinnace, with Mr. Phillips, lieutenant of marines, and nine privates; and the latter in the ſmall boat. The laſt orders Mr. King received from captain Cook were, to quiet the minds of the natives on that ſide the bay where our people were ſtationed, by the ſtrongeſt aſſurances that they ſhould not be injured; to keep his people together, and to be continually on his guard. Captain Cook and Mr. King then ſeparated; the captain going towards Kowrowa, where Terreeoboo reſided, while Mr. King proceeded to the beach. His firſt buſineſs, when he arived on ſhore, was, to iſſue ſtrict orders to the marines to continue within the tent, to charge their muſkets with ball, and not, on any conſideration, to quit their arms. He then attended old Kaoo and the prieſts at their reſpective huts, and explained to them, as well as he was able, the reaſon of the hoſtile preparations which had ſo exceedingly alarmed them. He found they were no ſtrangers to the circumſtance of the cutter's being ſtolen, and aſſured them, that though the commodore was not only reſolved to recover it, but alſo to puniſh, in the moſt exemplary manner, the authors of the theft, yet that they, and all the inhabitants of the village, on that ſide, had not the leaſt occaſion to be alarmed, or to apprehend the leaſt danger. He importuned the prieſts to communicate this to the people, and entreat them not to entertain an idea of fear, but to continue peaceable and quiet. Kaoo demanded of Mr. King, with great emotion, if any harm was to happen to Terreeoboo? He aſſured him there was not; and both he and his brethren appeared much ſatisfied with this aſſurance.

Captain Cook, having landed at Kowrowa, with the lieutenant and nine marines, he proceeded immediately into the village, where he was reſpectfully received; the people, as uſual, proſtrating themſelves before him, and making their accuſtomed offerings of ſmall hogs. Perceiving that his deſign was not ſuſpected, his next ſtep was to inquire for the king and the two boys, his ſons, who had been almoſt continually his gueſts on board the Reſolution. The boys preſently returned with the natives, who had been ſearching for them, and immediately conducted captain Cook to the habitation where Terreeoboo had ſlept. The old man had juſt awoke; and after ſome converſation reſpecting the loſs of the cutter, from which the commodore was convinced that he was not in any wiſe privy to it, he invited him to accompany him, and ſpend the day on board the Reſolution. The king accepted the invitation, and aroſe immediately to accompany him. The two boys were already in the pinnace, and the reſt of the party approaching the water-ſide, when a woman, named Kanee-Karabeea, the mother of the boys, and one of Terreeoboo's favourite wives, followed him, beſeeching him, with tears and entreaties, not to go on board. Two chiefs, who came with her, took hold of him, and, inſiſting he ſhould proceed no further, obliged him to ſit down. The iſlanders, now collecting in vaſt numbers along the ſhore, who had probably been alarmed by the diſcharging of the great guns, and the hoſtile appearances in the bay, gathered together round captain Cook and Terreeoboo. Thus ſituated, the lieutenant of marines, perceiving that his men were huddled together in the crowd, and conſequently unable to uſe their arms, if there ſhould appear to be a neceſſity for it, propoſed to captain Cook, to draw them up along the rocks, cloſe to the edge of the water. The populace making way for them to paſs, the lieutenant drew them up in a line, within about thirty yards of the place where Terreeoboo was ſitting.

The old king continued, all this time, on the ground, bearing the moſt viſible marks of terror and dejection in his countenance. Captain Cook, unwilling to abandon the object which occaſioned him to come on ſhore, urged him moſt earneſtly to proceed; whilſt, on the other hand, whenever the king expreſſed any inclination to follow him, the chiefs who ſurrounded him interpoſed: at firſt they had recourſe to prayers and entreaties, but afterwards to force and violence, and even inſiſted on his remaining on ſhore. Captain Cook, at length, perceiving the alarm had ſpread too generally, and that there was not a probability of getting him off without bloodſhed, gave up the point, obſerving, that to compel him to go on board would probably occaſion the loſs of many of the lives of the inhabitants.

Though this enterpriſe had now failed, and was abandoned by captain Cook, yet it did not appear that his perſon was in the leaſt degree of danger, till an accident happened, which occaſioned a fatal turn to the affair. The boats, ſtationed acroſs the bay, having fired at ſome canoes for attempting to get out, unfortunately had killed one of their principal chiefs. Intelligence of his death arrived at the village where captain Cook then was, juſt as he had parted from the king, and was proceeding with great deliberation towards the ſhore. The ferment it immediately occaſioned was but too conſpicuous; the women and children were inſtantly ſent away, and the men were ſoon clad in their war-mats, and armed with ſpears and ſtones.

One of the natives having provided himſelf with a ſtone, and a long iron ſpike (called by the natives a *pahooa)* advanced towards the captain, flouriſhing his weapon in defiance, and threatening to throw the ſtone. The captain requeſted him to deſiſt; but the iſlander repeating his menaces, he was highly provoked and fired a load of ſmall ſhot at him. The man was defended by his war-mat, which the ſhot could not penetrate; his firing, therefore, ſerved only to irritate and encourage them. Vollies of ſtones were thrown at the marines; and one of the natives attempted the life of one of our people with his pahooa, but not ſucceeding in the attempt, he received from him a blow with the butt-end of his piece. Captain Cook immediately diſcharged his ſecond barrel loaded with ball, and killed one of the aſſailants. A general attack with ſtones ſucceeded, which was followed on the part of our people by a diſcharge of muſquetry, not only from the marines, but thoſe in the boats. The natives received the fire with great firmneſs; and without giving time for the marines to charge again, they ruſhed in upon them with dreadful ſhouts and yells. What followed was a ſcene of horror and confuſion.

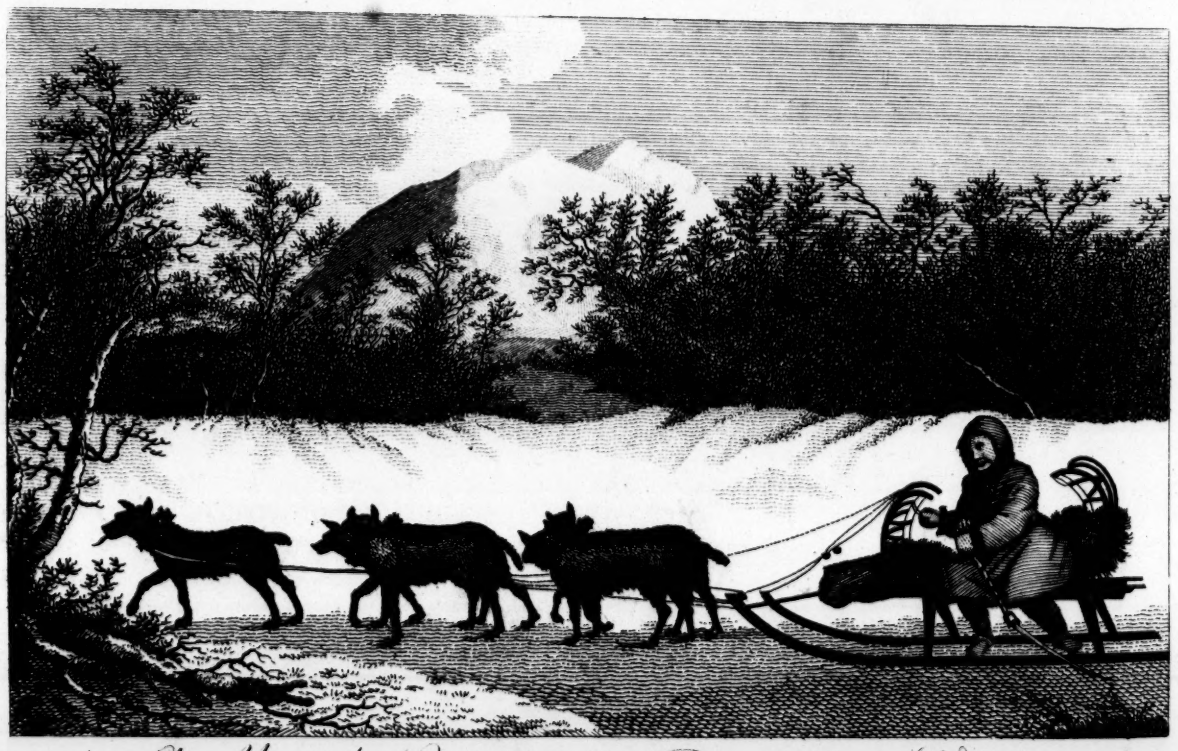
Four of the marines retreated among the rocks, and fell a ſacrifice to the fury of the enemy; three others were dangerouſly wounded; and the lieutenant ſtabbed between the ſhoulders, but having reſerved his fire, he ſhot the man from whom he had received the wound at the inſtant he was preparing to repeat the blow. The laſt time the unfortunate commander was diſtinctly ſeen, he was ſtanding at the water's edge, ordering the boats to ceaſe firing and pull in. Such as were preſent ſuppoſed that the marines, and thoſe who were in the boats, fired without captain Cook's orders, and that he was anxious to prevent the further effuſion of blood: it is therefore probable, that on this occaſion his humanity proved fatal to him; for it was obſerved, that while he faced the natives he was not endangered, but when he turned about to give directions to the boats, he was ſtabbed in the back, and fell with his face into the water. A general ſhout was ſet up by the iſlanders on ſeeing him fall, and his body was dragged inhumanly on ſhore, where he was ſurrounded by the enemy, who, ſnatching the dagger from each others hands, diſplayed a ſavage eagerneſs to join in his deſtruction.

Thus ended the life of the greateſt navigator that this or any other nation ever could boaſt, after having ſucceſsfully led his crews of gallant Britiſh ſeamen thrice round the world; reduced to a certainty the non-exiſtence of a ſouthern continent, concerning which the learned of all nations were in doubt; ſettled the boundaries of the earth and ſea, and ſhewn impracticability of a north-weſt paſſage from the Atlantic to the Great Southern-Ocean, for which our ableſt navigators had contended, and in purſuit of which vaſt ſums had been expended in vain, and many valuable mariners had unfortunately periſhed.

Captain Cook raiſed himſelf ſolely by his merit from a very obſcure birth to the rank of poſt-captain in the Royal-Navy. He poſſeſſed, in an eminent degree, all the qualifications requiſite for his profeſſion and great undertakings. Deliberate in judging; ſagacious in determining; active in executing; unſubdued by labour, difficulties, and diſappointments; fertile in expedients, never wanting preſence of mind, but ever poſſeſſing the full uſe of a ſound underſtanding. In diſcipline, though mild and juſt, he was exact: he was a father to his people, who were attached to him from affection, and obedient from confidence. By his benevolent and unabated attention to the welfare of his ſhip's company, he diſcovered and introduced a ſyſtem for the preſervation of the healths of ſeamen, which has proved wonderfully efficacious. With a company of 118 perſons he performed his ſecond voyage, and but one of theſe died of a diſeaſe. That ſpirit of humanity and juſtice with which he treated the ſavages wherever he found them, when oppoſed to the ferocious and inhuman conduct of the firſt conquerors in the New World, does honour to his age and country, and will hand him down with reverence to poſterity. Nor was his humanity leſs conſpicuous in his endeavours to civilize the natives of thoſe remote regions,

and

Death of Captain Cooke.



A Man of Kamtschatka Travelling in Winter.

and to introduce ſome of our moſt uſeful animals, vegetables, and grain among them.

CHAP. XXIV.

Further Tranſactions after Captain Cook's Death. Peace reſtored. His Remains interred. The Ships depart from Owhyhee. Supplementary Obſervations on the Country, &c.

FOUR of the marines, as we have already mentioned, being killed on the ſpot, the reſt, with the lieutenant, threw themſelves into the water, and made their eſcape under cover of a ſmart fire from the boats. On this occaſion a ſtriking inſtance of gallant behaviour, and of affection for his men, was diſplayed by the lieutenant; for he had ſcarcely got into the boat, when, ſeeing one of the marines, who was a bad ſwimmer, ſtruggling in the water, and in danger of being taken by the iſlanders, he inſtantly leaped into the ſea to his aſſiſtance, though conſiderably wounded himſelf; and after receiving a blow on his head from a ſtone, which had almoſt ſent him to the bottom, he caught the man by the hair, and brought him off in ſafety.

For ſome time the Engliſh kept up a conſtant fire from the boats (which, during the whole tranſaction, were at no greater diſtance from the land than twenty yards) in order to afford their unfortunate companions, if any of them ſhould ſtill remain alive, an opportunity of effecting their eſcape. Theſe continued efforts, ſeconded by a few guns, that were at the ſame time fired from the Reſolution, having at length compelled the enemy to retire, a ſmall boat, manned by five midſhipmen, pulled towards the ſhore, where they perceived the bodies lying on the ground without any ſigns of life. However, they judged it dangerous to attempt to bring them off with ſo inconſiderable a force, and therefore returned to the ſhips, leaving the bodies, together with ten ſtands of arms, in the natives poſſeſſion.

When the general conſternation, conſequent on the news of the late melancholy event, had, in ſome degree, ſubſided, the grand object of attention was the party of our people at the morai, whoſe ſituation was highly critical and important. Beſides the lives of the men, the iſſue of the expedition, and the return of at leaſt one of the ſhips, were involved in the ſame common danger, as the maſt of the Reſolution, and the principal part of the ſails, were on ſhore guarded by only ſix marines.

Lieutenant King ſtationed the whole body of marines on the top of the morai, which formed a ſtrong and advantageous poſt; and having intruſted it to the command of an officer, he went on board the Diſcovery, in order to confer with captain Clerke on the critical ſituation of affairs. The natives at firſt attacked the Engliſh with ſtones from behind the walls of their enclоſures, and meeting with no reſiſtance, they ſoon became more daring. A few courageous fellows, having crept along the beach, under cover of the rocks, ſuddenly preſented themſelves at the foot of the morai, with an intention of ſtorming it on the ſide next the ſea, which was its only acceſſible part; and they were not diſlodged before they had ſtood a conſiderable quantity of ſhot, and had ſeen one of their number fall. The courage of one of theſe aſſailants deſerves to be recorded. Having returned with a view of carrying off his companion, amidſt the fire of our whole party, he received a wound, which obliged him to quit the body, and retire; but a few minutes after he again made his appearance, and receiving another wound, was under the neceſſity of retreating a ſecond time. At that moment Mr. King arrived at the morai, and ſaw this man return a third time, faint with the loſs of blood and fatigue. Being informed of what had happened, he forbad the ſoldiers to fire, and the iſlander was ſuffered to carry off his friend, which he was juſt able to accompliſh, and then fell down himſelf, and died by his ſide. A ſtrong reinforcement having landed from both ſhips, the natives retreated behind the wall, which afforded lieutenant King an opportunity of obtaining a truce, and thereby bringing off with his party, the very eſſential articles that were left on ſhore.

A conſultation having been held on board, reſpecting future meaſures, the recovery of captain Cook's body, and the reſtitution of the boat, were objects univerſally inſiſted on, but different opinions were given as to the mode of effecting the ſame, ſome being for rigorous, and others for lenient meaſures; the latter, however, were at length agreed upon to be adopted.

The chief command of the expedition now devolving on captain Clerke, he went on board the Reſolution, and Mr. Gore took the command of the Diſcovery.

According to meaſures agreed upon at the late conſultation, lieutenant King proceeded towards the ſhore with the boats of both ſhips, well manned and armed, with a view of bringing the iſlanders to a parley, and of obtaining, if poſſible, a conference with ſome of the Erees. If he ſhould ſucceed in this attempt, he was to demand the dead bodies, and particularly that of captain Cook; to threaten them, in caſe of a refuſal, with reſentment; but by no means to fire, unleſs attacked; and not to go on ſhore on any account whatever.

He left the ſhips with his detachment about four o'clock in the afternoon, and, as they approached the ſhore, they perceived every indication of a hoſtile reception. The natives were all in motion; the women aud children retiring; the men arming themſelves with long ſpears and daggers, and putting on their war mats. It alſo appeared, that ſince the morning they had thrown up breaſt-works of ſtone along the beach, where captain Cook had landed, in expectation, perhaps, of an attack at that place.

As ſoon as the party came within reach, the iſlanders began to throw ſtones at them with ſlings, though without doing any miſchief. Mr. King concluded, from theſe appearances, that all attempts to bring them to a parley would be ineffectual, unleſs he gave them ſome ground for mutual confidence. He therefore ordered the armed boats to ſtop, and advanced alone in the ſmall boat, holding in his hand a white flag: the meaning of which, from an univerſal ſhout of joy from the natives, he had the ſatisfaction to find was immediately underſtood. The women inſtantly returned from the ſide of the hill, whither they had retired; the men threw off their mats, and all ſeated themſelves together by the ſea-ſide, extending their arms, and inviting him to land.

Though ſuch behaviour ſeemed expreſſive of a friendly diſpoſition, he could not avoid entertaining ſuſpicions of its ſincerity. But when he ſaw Koah, with extraordinary boldneſs and aſſurance ſwimming off towards the boat, with a white flag in his hand, he thought proper to return this mark of confidence, and accordingly received him into the boat, though he was armed; a circumſtance which did not contribute to leſſen Mr. King's ſuſpicions. He had, indeed, long harboured an unfavourable opinion of Koah; and therefore without ceremony informed him, that he had come to demand the body of captain Cook, and to declare war againſt the natives, unleſs it was reſtored without delay. Koah aſſured him that this ſhould be done as ſoon as poſſible, and that he would go himſelf for that purpoſe; and after requeſting a piece of iron of Mr. King, with marks of great aſſurance, he leaped into the water, and ſwam aſhore, calling out to his countrymen, that all were friends again. Mr. King waited with great anxiety

near

near an hour for his return. During this interval, the other boats had approached ſo near the ſhore, that the men who were in them entered into a converſation with a party of the iſlanders, at a little dinance, by whom they were informed that the captain's body had been cut to pieces and carried up the country.

For ſome time after, there appeared a degree of ambiguity in the conduct of the natives, which raiſed doubts in the minds of our people, as to the event of their preſent operations; till at length one night, it being exceedingly dark, a canoe was heard paddling towards the ſhip, and it was no ſooner perceived, than both the centinels on deck fired into it. There were two of the natives in this canoe, who immediately roared out "*Timæe*" (which was their method of pronouncing Mr. King's name) ſaid they were friends, and had ſomething with them which belonged to captain Cook. When they came on board, they threw themſelves at the feet of the officers, and ſeemed to be extremely terrified. It fortunately happened, that neither of them were hurt, notwithſtanding the balls of both pieces had gone through the canoe.

One of them was the perſon who conſtantly attended captain Cook, with the particular ceremonies before deſcribed. After bewailing, with many tears, the loſs of the Orono, as he called him, he informed the officers that he had brought a part of his body. He then produced a ſmall bundle, which he brought under his arm; and it is impoſſible to deſcribe the horror with which our people were ſeized, upon finding in it a piece of human fleſh, of the weight of about nine or ten pounds. This, he ſaid, was all that now remained of the body; that the reſt had been cut in pieces and burnt; but that the head, and all the bones, except thoſe which belonged to the trunk, were in the poſſeſſion of Terreeoboo, and the other chiefs; that what they had brought had been allotted to Kaoo, the chief of the prieſts, for the purpoſe of being uſed in ſome religious ceremony; and that he had ſent it as a teſtimony of his innocence, and of his attachment to them. Though theſe two friendly viſitants were preſſed by the officers to continue on board till the next morning, they could not be prevailed upon; declaring, that if this tranſaction ſhould come to the knowledge of the king, or any of the Erees, it might be attended with the moſt fatal conſequences to their whole ſociety; to prevent which, they had been under the neceſſity of coming in the dark; and the ſame precaution, they ſaid, would be requiſite in returning on ſhore. They added, that the chiefs were eager to take revenge for the death of their countrymen; and particularly cautioned our people againſt truſting Koah, who, he aſſured them, was their implacable enemy, and ardently longed for an opportunity of fighting. The two natives then took their leave, it being about eleven o'clock at night.

The ſituation of the Engliſh was now extremely unpromiſing; none of the purpoſes for which this pacific plan of proceedings had been adopted, having hitherto been, in any reſpect, promoted by it. No ſatisfactory anſwer had been given to their demands. They did not ſeem to have made any progreſs towards a reconciliation with the natives, who ſtill remained on the ſhore in hoſtile poſtures, as if determined to oppoſe any endeavours that might be made to land; and yet it was become abſolutely neceſſary to attempt landing, as the completing the ſtock of water would not admit of any longer delay. The iſlanders behaved in a manner the moſt daring and preſumptuous. One of them had the inſolence to come within muſket-ſhot ahead of the Reſolution, and, after throwing ſeveral ſtones, waved over his head the hat which had belonged to captain Cook, while his countrymen on ſhore were exulting and encouraging his audacity.

The ſeamen were highly enraged at this inſult, and coming in a body on the quarter deck, begged they might no longer be obliged to put up with ſuch reiterated provocations, and requeſted Mr. King to endeavour to obtain permiſſion for them, from captain Clerke, to take advantage of the firſt fair occaſion of avenging the death of their much-lamented commander. On Mr. King's acquainting the captain with what was paſſing, he ordered ſome great guns to be fired at the iſlanders on ſhore; and promiſed the crew, that, if they ſhould be moleſted at the watering-place, the next day, they ſhould then be permited to chaſtiſe them.

Before they could bring the guns to bear, the natives ſuſpecting their intentions, from the buſtle and agitation they obſerved in the ſhip, had retired behind their houſes and walls. They were conſequently obliged to fire, in ſome degree, at random; notwithſtanding which the ſhot produced all the effects that could be deſired. For, in a ſhort time afterwards, they perceived Koah paddling towards them with the greateſt haſte; and when he arrived, they learned, that ſome people had loſt their lives, and, among the reſt, a principal Eree, nearly related to Terreeoboo.

Soon after Koah's arrival, two boys ſwam off from the morai towards the veſſel, each armed with a long ſpear; and after they had approached pretty near, they began, in a very ſolemn manner, to chant a ſong; the ſubject of which, from their frequently mentioning the word Orono, and pointing to the village where captain Cook had been ſlain, was concluded to be the late calamitous occurrence. Having ſung for near a quarter of an hour in a plaintive ſtrain, during all which time they continued in the water, they repaired on board the Diſcovery, and delivered up their ſpears; and, after remaining there a ſhort time, returned on ſhore. It could not be learned who ſent them, or what was the object of this ceremony. The two natives who had viſited them before, came off again in the night, and aſſured them, that, though the effects of the great guns had much alarmed the chiefs, they had by no means relinquiſhed their hoſtile intentions, and adviſed them to be on their guard.

When the boats of both ſhips were diſpatched aſhore to procure water, the Diſcovery was warped cloſe to the beach, in order to protect the perſons employed in that ſervice. It was ſoon found, that the intelligence ſent by the prieſts was not deſtitute of foundation, and that the iſlanders were determined to neglect no opportunity of annoying them, when it could be done without much hazard. It was now deemed abſolutely neceſſary to burn down ſome ſtraggling huts, near the wall behind which they had ſheltered themſelves. In executing the orders that were given for that purpoſe, ſome were hurried into acts of devaſtation and cruelty.

In eſcaping from the flames, ſeveral of the inhabitants were ſhot; and the party cut off the heads of two of them, and brought them on board. The fate of one unhappy native was much lamented by them all. As he was repairing to the well for water, he was ſhot at by one of the marines. The ball happened to ſtrike his calabaſh, which he inſtantly threw from him, and ran off. He was purſued into one of the caves, and no lion could have defended his den with greater bravery and fierceneſs; till, at length, after he had found means to keep two of his purſuers at bay for a conſiderable time, he expired, covered with wounds. This accident firſt brought the Engliſh acquainted with the uſe to which theſe caverns were applied.

A man, much advanced in years, was taken priſoner, bound, and conveyed on board the Reſolution, in the ſame boat with the heads of his two countrymen. Horror could not be more ſtrongly pourtrayed than in the face of this perſon; nor ſo violent a

tranſition

tranſition to immoderate joy, as when he was untied, and given to underſtand, that he might depart in ſafety. He ſhewed that he was not deficient in gratitude, as he returned afterwards with a preſent of proviſions.

Yet, amidſt all theſe diſturbances, the female natives who were on board did not offer to depart, or diſcover any apprehenſions, either for themſelves, or their friends on ſhore. They appeared, indeed, ſo perfectly unconcerned for the latter, that ſome of them who were on deck when the village was in flames, ſeemed to admire the ſpectacle, and frequently exclaimed, that it was *maitai*, or very fine.

At length a chief, named Eappo, a man of the firſt diſtinction, came with preſents from Terreeoboo, to ſue for peace. Theſe preſents were accepted; and the chief was diſmiſſed with the following anſwer: That no peace would be granted, till the remains of captain Cook ſhould be reſtored.

Information was received from Eappo, that the fleſh of all the bones of our people who had been ſlain, as well as the bones of the trunks, had been burnt; that the limb-bones of the marines had been diſtributed among the inferior chiefs; and that the remains of captain Cook had been diſpoſed of as follows: the head to a great Eree, called Kahoopeou; the hair to Maiha-Maiha; and the arms, legs, and thighs, to Terreeoboo. Eappo was very urgent that one of our officers ſhould go on ſhore, and offered to remain on board, in the mean time, as an hoſtage. This requeſt, however, was not complied with; and he departed with a promiſe of bringing the bones the following day.

A numerous body of the natives was ſeen in the morning deſcending the hill, which is over the beach, in a ſort of proceſſion, each man carrying on his ſhoulders two or three ſugar-canes, and ſome bread-fruit, plantains, and taro, in his hand. They were preceded by two drummers, who, when they reached the water-ſide, ſeated themſelves by a white flag, and began beating their drums, while thoſe who had followed them advanced, one by one, and depoſited the preſents they had brought with them; after which they retired in the ſame order. Soon afterwards, Eappo appeared in his long feathered cloak, bearing ſomething with great ſolemnity in his hands; and having ſtationed himſelf on a rock, he made ſigns that a boat ſhould be ſent him.

Captain Clerke went himſelf in the pinnace to receive them, and ordered Mr. King to attend him in the cutter. When they arrived at the beach, Eappoo, entering the pinnace, delivered the bones to captain Clerke, wrapped up in a great quantity of fine new cloth, and covered with a ſpotted cloak of black and white feathers. In this bundle were found both the hands of captain Cook entire, which were well known from a ſcar on one of them, that divided the fore-finger from the thumb, the whole length of the metacarpal-bone; the ſkull, but with the ſcalp ſeparated from it, and the bones of the face wanting; the ſcalp, with the ears adhering to it, and the hair upon it cut ſhort; the bones of both the arms, with the ſkin of the fore-arms hanging to them; the bones of the thighs and legs joined together, but without the feet. The ligaments of the joints were obſerved to be entire: and the whole ſhewed ſufficient marks of having been in the fire, except the hands, which had the fleſh remaining upon them, and were cut in ſeveral places, and crammed with ſalt, moſt probably with a view of preſerving them. The ſkull was free from any fracture, but the ſcalp had a cut in the back part of it. The lower jaw and feet, which were wanting, had been ſeized, as Eappo ſaid, by different Erees; and he added, that Terreeoboo was uſing every means to recover them.

Eappo, and the king's ſon, came afterwards on board, and brought with them not only the remaining bones of captain Cook, but likewiſe the barrels of his gun, his ſhoes, and ſome other trifles which had belonged to him. Eappo declared that Terreeoboo, Maiha-Maiha, and himſelf, were extremely deſirous of peace; that they had given the moſt convincing proofs of it; and that they had been prevented from giving it ſooner by the other chiefs, many of whom were ſtill diſaffected. He lamented, with the moſt lively ſorrow, the deaths of ſix chiefs, who had been killed by our people, ſome of whom, he ſaid, were among their beſt friends. He ſaid that the cutter had been taken away by Pareea's people, probably in revenge for the blow that he had received, and that it had been broken up the following day. The arms of the marines, which were now demanded, had been carried off by the populace, and were irrecoverable.

It now only remained, on the part of our people, to perform the laſt ſolemn offices to their excellent commander. Eappo was diſmiſſed with orders to *taboo* all the bay; and in the afternoon, the bones having been depoſited in a coffin, the funeral ſervice was read over them, and they were committed to the deep with the uſual military honours.

Matters being now amicably ſettled, captain Clerke gave orders for the ſhip to unmoor, and for all the natives to be diſmiſſed. The chiefs took a friendly leave of their viſitors; and the anchor being weighed, they ſtood out of Karakakooa-Bay; but not without many ſighs from the crews, for the loſs of their great commander.

On leaving Karakakooa-Bay, in the iſland of Owhyhee, the ſhips paſſed Tahoora, and touched at Woahoo; and, in conſequence of diſappointment in attempting to water, proceeded to Atooi, and came to anchor in their former ſtation. Our people immediately obſerved, on the natives coming on board, that there was not that complacency in their countenances, or cordiality in their manner, as when they firſt viſited them. Indeed, they gave evident tokens of a diſpoſition totally reverſe from that which they had diſcovered before, and ſeemed much inclined to hoſtility. The main deſign, in touching at this iſland, was to procure water, in which the people were much annoyed, and obſtructed by the natives. At length, however, after great difficulty, and ſome encounters, it was completed.

When the officers, whoſe preſence was required on ſhore, returned to the ſhips, they were informed, that ſeveral chiefs had been on board, and apologized for the conduct of their countrymen. Preſents were afterwards exchanged between captain Clerke and Toneoneo, who held the ſupreme power, and apparent amity ſubſiſted till the ſhips left the iſland, and proceeded to Oneeheow, from which they ſailed, in proſecution of their voyage to the northward, in March 1779.

The group of iſlands called by the general appellation of the Sandwich-Iſlands, were found, at length, to be eleven in number; and as our navigators could never learn that the natives had knowledge of any other iſlands, it is moſt probable that there are no others in their vicinity. Of theſe we have mentioned ſix, viz. Woahoo, Atooi, Oneeheow, Oreehoua, Tahoora, and Owhyhee, the grand and principal ſcene of action. The others are called Morotoi, Morotinnee, Ranai, Kahowrowhee, and Moodoo-Papapa. Theſe agree, in general, with the deſcription given of the former: and Morotinnee, as well as Tahoora, is uninhabited.

There are two mountains in the iſland of Owhyhee deſerving of notice. The firſt, called Mouna-Kaah (or the mountain Kaah) riſes in three peaks, continually covered with ſnow, and may be diſcerned at the diſtance of forty leagues. The coaſt to the northward of this mountain is compoſed of high and abrupt cliffs, from which fall many beautiful caſcades of water. The mountain is very ſteep, and its lower part abounds with wood.

On the ſhips doubling the eaſt part of the iſland, they had ſight of another ſnowy mountain, called by the natives Mouna-Roa (or the extenſive mountain) which, during the whole time they were ſailing along the ſouth-eaſtern ſide, continued to be a very conſpicuous object. It was flat at the ſummit, which was perpetually involved in ſnow; and they once obſerved its ſides alſo ſlightly covered with it for a conſiderable way down. This mountain is ſuppoſed to be at leaſt 16,020 feet; and therefore exceeds the height of the peak of Teneriffe by 3680 feet. The peaks of Mouna-Kaah ſeemed to be of the height of about half a mile; and, as they are wholly covered with ſnow, the altitude of their ſummits muſt at leaſt be 18,400 feet.

One of the Engliſh who ſet out on an expedition up the country, principally with an intention of reaching the ſnowy mountains, under the guidance of two natives, ſtopped, for the night, at a hut they obſerved among the plantations, where they ſuppoſed themſelves to be ſix or ſeven miles diſtant from the ſhips. The proſpect from this ſpot was very delightful. They had a view of the veſſels in the bay before them. To the left, they ſaw a continued range of villages, interſperſed with groves of cocoa-nut trees ſpreading along the ſhore; a thick wood extending itſelf behind them: and to the right, a very conſiderable extent of ground, laid out with great regularity in well-cultivated plantations, diſplayed itſelf to their view. Near to this ſpot, the natives pointed out to them, at a diſtance from every other dwelling, the reſidence of a hermit, who, they ſaid, had, in the former part of his life, been a great chief and warrior, but had long ago retired from the ſea coaſt of the iſland, and now never quitted the environs of his cottage. As they approached him, they proſtrated themſelves, and afterwards preſented him with ſome proviſions. His behaviour was eaſy, frank, and cheerful. He teſtified little aſtoniſhment at the ſight of the Engliſh; but though preſſed to accept ſome European curioſities, he thought proper to decline the offer, and ſoon withdrew to his cottage. The party repreſented him as by far the moſt aged perſon they had ever ſeen, judging him to be, at a moderate computation, upwards of an hundred years of age.

As they had ſuppoſed that the mountain was not more than ten or a dozen miles diſtant from the bay, and conſequently expected to reach it with eaſe early the following morning, they were now greatly ſurpriſed to find the diſtance ſcarce perceiveably diminiſhed. This circumſtance, with the uninhabited ſtate of the country, which they were on the point of entering, rendering it neceſſary to provide a ſupply of proviſions, they diſpatched one of their conductors back to the village for that purpoſe. Whilſt they waited his return, they were joined by ſeveral of Kaoo's ſervants, whom that generous old man had ſent after them, loaded with refreſhments, and fully authoriſed, as their route lay through his grounds, to demand, and take away with them, whatever they might want.

Their ſurpriſe was great, to find the cold here ſo intenſe; but as they had no thermometer with them, they could only form their judgment of it from their feelings, which, from the warm atmoſphere they had quitted, muſt have been a very fallacious method of judging. They found it, however, ſo cold, that they could hardly get any ſleep; and the iſlanders could not ſleep at all; both parties being diſturbed, during the whole night, by continual coughing. As they, at this time, could not be at any very great height, their diſtance from the ſea being no more than ſix or ſeven miles, and part of the road on a very moderate aſcent, this uncommon degree of cold muſt be attributed to the eaſterly wind blowing freſh over the ſnowy mountains. They proceeded on their journey early the next morning, and filled their calabaſhes at a well of excellent water, ſituate about half a mile from their hut. After they had paſſed the plantations, they arrived at a thick wood, which they entered by a path that had been made for the convenience of the iſlanders, who frequently repaired thither for the purpoſe of catching birds, as well as procuring the wild or horſe-plantain. Their progreſs now became extremely ſlow, and was attended with great labour; for the ground was either ſwampy, or covered with large ſtones; the path narrow, and often interrupted by trees lying acroſs it, which they were obliged to climb over, as the thickneſs of the underwood on each ſide rendered it impracticable to paſs round them. They ſaw, in theſe woods, pieces of white cloth fixed on poles, at ſmall diſtances, which they imagined were land-marks for the diviſion of property, as they only obſerved them where the wild plantains grew. The trees were of the ſame kind with the ſpice-tree of New Holland; they were ſtraight and lofty, and their circumference was, on an average one with another, from two to four feet.

Many other diſagreeable circumſtances, beſides the cold, and particularly the averſion their conductors diſcovered to going on, induced this party to come to a determination of returning to the ſhips, after taking a ſurvey of the country from the higheſt trees they could find. They were ſurpriſed at ſeeing ſeveral fields of hay; and upon inquiry to what particular uſe it was applied, were informed, that it was intended to cover the grounds where the young taro grew, in order to preſerve them from being ſcorched by the rays of the ſun. They obſerved among the plantations a few huts ſcattered about, which afforded occaſional ſhelter to the labourers; but they did not ſee any villages at a greater diſtance from the ſea than four or five miles. Near one of them, which was ſituated about four miles from the bay, they diſcovered a cave, forty fathoms long, three broad, and of the ſame height. It was open at each end; its ſides were fluted, as if wrought with a chiſſel; and the ſurface was glazed over, perhaps by the action of fire. The birds of theſe iſlands are numerous, though the variety is not great. Some of them may vie with thoſe of any country in point of beauty. Their vegetable productions are not very different from thoſe of the other iſlands of the Pacific-Ocean. The coaſts abound with variety of fiſh.

The natives of the Sandwich-Iſlands are, doubtleſs, of the ſame extraction with the inhabitants of the Society and Friendly-Iſlands. This is not only evinced by the general reſemblance of their perſons, and the great ſimilarity of their manners and cuſtoms, but ſeems to be eſtabliſhed, beyond all controverſy, by the identity of their language. It may not, perhaps, be very difficult to conjecture from what continent they originally emigrated, and by what ſteps they have diffuſed themſelves over ſo immenſe a ſpace. They bear ſtrong marks of affinity to ſome of the Indian tribes, who inhabit the Ladrones and Caroline-Iſles; and the ſame affinity and reſemblance may alſo be traced among the Malays and the Battas. At what particular time theſe migrations happened, is leſs eaſy to aſcertain. They are indeed very populous, and have no tradition reſpecting their own origin, but what is wholly fabulous; though, on the other hand, the ſimplicity which is ſtill prevalent in their manners and habits of life, and the unadulterated ſtate of their general language, ſeem to demonſtrate, that it could not have been at any very remote period.

The ſuperiority generally obſerved at other iſlands in the perſons of the Erees, is likewiſe found here. Thoſe that were ſeen were perfectly well formed; whereas the lower claſs of people, beſides their general inferiority, are ſubject to all the variety of figure and make that is met with in the populace of other parts of the world. There were more frequent inſtances of deformity obſerved here than in any of the other iſlands viſited. While the ſhips were cruiſing

off

off Owhyhee, two dwarfs came on board, one of whom was an old man of the height of four feet two inches, but very well proportioned; and the other was a woman nearly of the ſame ſtature. Our people afterwards ſaw among the natives three who were hump-backed, and a young man who had been deſtitute of hands and feet, from the very moment of his birth. Squinting is common among them, and a man who had been born blind, was brought on board for the purpoſe of being cured. Beſides theſe particular defects, they are, in general, exceeding ſubject to biles and ulcers, which was aſcribed to the great quantity of ſalt they uſually ate with their fiſh and fleſh. Though the Erees are free from theſe complaints, many of them experience ſtill more dreadful effects from the too frequent uſe of the ava. Thoſe who were the moſt affected by it had their eyes red and inflamed, their limbs emaciated, their bodies covered with a whitiſh ſcurf, and their whole frame trembling and paralytic, attended with a diſability of raiſing their heads.

The excellence of their manufactures, and their improvements in agriculture, are, doubtleſs, adequate to their ſituation and natural advantages. The eagerneſs of curioſity with which they uſed to attend the armourer's forge, and the various expedients which they had invented, even before our departure from theſe iſlands, for working the iron obtained from us into ſuch forms as were beſt calculated for their purpoſes, were ſtrong indications of docility and ingenuity.

Tatooing, or puncturing the body, prevails among theſe people; and of all the iſlands in this ocean, it is only at New Zealand, and the Sandwich-Iſles, that the face is tatooed. There is this difference between the two nations, that the New Zealanders perform this operation in elegant ſpiral volutes, and the Sandwich-Iſlanders in ſtraight lines, that interſect each other at right angles. Some of the natives have half their bodies, from head to foot, tatooed, which gives them a moſt ſtriking appearance. It is generally done with great neatneſs and regularity; but ſeveral of them have only an arm thus marked, others a leg; ſome, again, tatoo both an arm and a leg; and others only the hand. The hands and arms of the women are punctured in a very neat manner; and they have a remarkable cuſtom of tatooing the tip of the tongues of ſome of the females. There was ſome reaſon to imagine, that the practice of puncturing was often intended as a ſign of mourning, on the deceaſe of a chief, or any other calamitous occurrence; for they were frequently informed, that ſuch a mark was in memory of ſuch a chief, and ſo of the others. The people of the loweſt order are tatooed with a particular mark, which diſtinguiſhes them as the property of the chiefs to whom they are reſpectively ſubject.

The natives live together in ſmall towns or villages, which contain from about one hundred or two hundred houſes, built pretty cloſe to each other, without order or regularity, and have a winding path that leads through them. They are frequently flanked, towards the ſeaſide, with looſe detached walls, which appear to be intended for ſhelter and defence. They are of various dimenſions, from forty-five feet by twenty-four, to eighteen by twelve. Some are of a larger ſize, being fifty feet in length, and thirty in breadth, and entirely open at one end. They are very cleanly at their meals, and their method of dreſſing both their vegetable and animal food was univerſally acknowledged to be ſuperior to ours. The Erees conſtantly begin their meals with a doſe of the extract of pepper-root, or ava, prepared in the uſual mode. The women eat apart from the other ſex, and are prohibited from feeding on pork, turtle, and ſome particular ſpecies of plantains.

They generally riſe with the ſun; and, after having enjoyed the cool of the evening, retire to their repoſe a few hours after ſun-ſet. The Erees are occupied in making canoes and mats: the Towtows are chiefly employed in the plantations, and alſo in fiſhing; and the women are engaged in the manufactory of cloth. They amuſe themſelves at their leiſure hours with various diverſions. Their young perſons, of both ſexes, are fond of dancing; and, on more ſolemn occaſions, they entertain themſelves with wreſtling, and boxing-matches, as has been obſerved, performed after the ſame manner of the natives of the Friendly-Iſlands; to whom, however, they are greatly inferior in all theſe reſpects.

The muſic of theſe people is of a rude kind; for the only muſical inſtruments that were obſerved among them, were drums of various ſizes. Their ſongs, however, which they are ſaid to ſing in parts, and which they accompany with a gentle motion of their arms, like the inhabitants of the Friendly-Iſlands, have a very pleaſing effect.

They are generally addicted to gambling. One of their games reſembles our game of drafts; but, from the number of ſquares, it ſeems to be much more intricate. The board is of the length of about two feet, and is divided into two hundred and thirty-eight ſquares, fourteen in a row. In this game they uſe black and white pebbles, which they move from one ſquare to another. Another of their games conſiſts in concealing a ſtone under ſome cloth, which is ſpread out by one of the parties, and rumpled in ſuch a manner, that it is difficult to diſtinguiſh where the ſtone lies. The antagoniſt then ſtrikes with a ſtick, that part of the cloth where he ſuppoſes it to be; and the chances being, upon the whole, againſt his hitting it, odds of all degrees are laid, varying with the opinion of the dexterity of the antagoniſt. They often entertain themſelves with races between boys and girls, on which occaſions they lay wagers with great ſpirit. Our people ſaw a man beating his breaſt, and tearing his hair, in the violence of rage, for having loſt three hatchets at one of theſe races, which he had purchaſed from them with near half his property, a very little time before. Among the various diverſions of the children, was one frequently played at, and which ſhewed a conſiderable ſhare of dexterity. They take a ſhort ſtick, through one extremity of which runs a peg ſharpened at both ends, extending about an inch on each ſide; then throwing up a ball formed of green leaves moulded together, and faſtened with twine, they catch it on one of the points of the peg; immediately after which, they throw it up again from the peg, then turn the ſtick round, and catch the ball on the other point of the peg. Thus, for ſome time, they continue catching it on each point of the peg alternately, without miſſing it. They are equally expert at another diverſion of a ſimilar nature, throwing up in the air, and catching, in their turns, many of theſe balls: and our people have often ſeen little children thus keep five balls in motion at once.

Their method of agriculture reſembles that of the other iſlands of the Pacific-Ocean.

The inhabitants of the Sandwich-Iſlands are divided into three claſſes. The Erees, or chiefs of each diſtrict, are the firſt; and one of theſe is ſuperior to the reſt, who was called, at Owhyhee, *Eree-Taboo*, and *Eree-Moee*; the firſt name expreſſing his authority, and the latter ſignifying that, in his preſence, all muſt proſtrate themſelves. Thoſe of the ſecoud claſs appear to enjoy a right of property, but have no authority. Thoſe who compoſe the third claſs, are called *Towtows*, or ſervants, and have neither rank or property.

The Erees appear to have unlimited power over the inferior claſſes of people; many inſtances of which occurred daily, whilſt our people continued among them, and the people are implicitly obedient. It is remarkable, however, that the chiefs were never ſeen to exerciſe any acts of cruelty, injuſtice, or

or inſolence towards them; though they put in practice their power over each other, in a moſt tyrannical degree, as appears from the following inſtances. One of the lower order of chiefs having ſhewn great civility to the maſter of the ſhip, on his examination of Karakakooa-Bay, Mr. King, ſome time afterwards, took him on board the Reſolution, and introduced him to captain Cook, who engaged him to dine. While the company remained at table, Pareea entered, whoſe countenance manifeſted the higheſt indignation at ſeeing their gueſt ſo honourably entertained. He ſeized him by the hair of his head, and would have dragged him out of the cabin, if the captain had not interfered. After much altercation, no other indulgence could be obtained (without quarrelling with Pareea) than that the gueſt ſhould be permitted to remain in the cabin, on condition that he ſeated himſelf on the floor, while Pareea occupied his place at the table. An inſtance, ſomewhat ſimilar happened when Terreeoboo came firſt on board the Reſolution, when Maiha-Maiha, who attended him, ſeeing Pareea upon deck, turned him moſt ignominiouſly out of the ſhip; even though the officers knew Pareea to be a man of the firſt conſequence.

Little information could be obtained reſpecting their adminiſtering of juſtice. If a quarrel aroſe among the lower claſs of people, the matter was referred to the deciſion of ſome chief. If an inferior chief had offended one of ſuperior rank, his puniſhment was dictated by the feelings of the ſuperior at that moment. If he ſhould fortunately eſcape the firſt tranſports of his rage, he perhaps found means, through the mediation of others, to compound for his offence, by all or part of his effects.

As to their religion, it reſembles that of the Society and Friendly-Iſles. In common with each other, they have all their morais, their whattas, their ſacred ſongs, and their ſacrifices. The ceremonies here, are, indeed, longer and more numerous than in the iſlands above mentioned.

The Society and Friendly iſlanders pay adoration to particular birds; and it ſeems to be a cuſtom extremely prevalent in theſe iſlands. Ravens are, perhaps, the chief objects of it here; for Mr. King ſaw two of theſe birds perfectly tame, at the village of Kakooa, and was told they were Eatooas. He offered ſeveral articles for them, which were all refuſed; and he was particularly cautioned not to hurt or offend them. The prayers and offerings made by the prieſts before their meals, may be claſſed among their religious ceremonies. We have already obſerved, that human ſacrifices are common here. They have one moſt extraordinary religious cuſtom, which is that of knocking out their fore teeth. Moſt of the common people, and many of the chiefs, had loſt one or more of them; and this, it ſeems, was conſidered as a propitiatory ſacrifice to the Eatooa, to avert his anger on particular occaſions.

The Engliſh could derive but very imperfect information of their opinions reſpecting a future ſtate. On inquiring of them whither the dead were gone, they were told that the breath, which they ſeemed to conſider as the immortal part, was fled to the Eatooa. They ſeemed alſo to give a deſcription of ſome place, which they ſuppoſe to be the abode of the dead; but they could not learn that they had any idea of rewards or puniſhments.

Of their marriages it can only be ſaid, that ſuch a compact ſeems to exiſt among them. Whether polygamy is allowed, or whether it is mixed with concubinage, could not be aſcertained.

From the following inſtance, it appears, that among married women of rank, not only fidelity, but even a degree of reſerve is required.

Omeah, a chief of the higheſt dignity, roſe two or three times from his place, at one of their boxing matches, and approached his wife with ſtrong marks of diſpleaſure, commanding her, as was ſuppoſed, to withdraw. Whether he thought her beauty engaged too much of the attention of his viſitors, or whatever might be his motives, there certainly exiſted no real cauſe of jealouſy. She, however, continued in her place, and at the concluſion of the entertainment joined the party of officers, and even ſolicited ſome trifling preſents. She was informed that they had not any about them; but that if ſhe would accompany them to the tent, ſhe ſhould be welcome to make choice of what ſhe liked. She accordingly proceeded with them, which being obſerved by Omeah, he followed in a great rage, ſeized her by the hair, and, with his fiſts, began to inflict ſevere corporal puniſhment. Having been the innocent cauſe of this treatment, the officers were exceedingly concerned at it; though they underſtood it would be highly improper for them to interfere between huſband and wife of ſuch ſuperior rank. The natives, however, at length interpoſed; and the next day they had the ſatisfaction of meeting them together, perfectly ſatisfied with each other: and, what was extremely ſingular, the wife would not permit them to rally the huſband on his behaviour, which they had an inclination to do; plainly telling them, that he acted very properly.

The Engliſh had twice an opportunity, while the ſhips lay at Karakakooa-Bay, of ſeeing a part of their funeral rites. Hearing of the death of an old chief, not far from the obſervatories, ſome of them repaired to the place, where they beheld a number of people aſſembled. They were ſeated round an area, fronting the houſe where the deceaſed lay; and a man, having on a red feathered cap, came to the door, conſtantly putting out his head, and making a moſt lamentable howl, accompanied with horrid grimaces, and violent diſtortions of the face. A large mat was afterwards ſpread upon the area, and thirteen women and two men, who came out of the houſe, ſat dawn upon it in three equal rows; three of the women, and the two men, being in front. The women had feathered ruffs on their necks and hands; and their ſhoulders were decorated with broad green leaves, curiouſly ſcolloped. Near a ſmall hut, at one corner of this area, half a dozen boys were placed, waving ſmall white banners, and taboo ſticks, who would not ſuffer our people to approach them. Hence they imagined that the dead body was depoſited in the hut; but were afterwards informed, that it remained in the houſe where the tricks were playing at the door by the man in the red cap. The company ſeated on the mat ſung a melancholy ſtrain, accompanied with a gentle motion of the arms and body. This having continued for ſome time, they threw themſelves in a poſture between kneeling and ſitting, and put their arms and bodies into a moſt rapid motion, keeping pace, at the ſame time, with the muſic. Theſe laſt exertions being too violent to continue, at intervals they had ſlower motions. An hour having paſſed in theſe ceremonies, more mats were ſpread upon the area, when the dead chief's widow, and three or four other elderly women, came out of the houſe with ſlow and ſolemn pace, and, ſeating themſelves before the company, began to wail moſt bitterly, in which they were joined by the three rows of women behind them; the two men appearing melancholy and penſive. They continued thus, with little variation, till late in the evening, and, at day-light in the morning, the people diſperſed, and every thing was quiet. It was ſaid the body was removed, but it was not known how it was diſpoſed of. As they were making inquiry of ſome of the natives, they were approached by three women of rank, who ſignified to them, that their preſence interrupted the performance of ſome neceſſary rites. Soon after they had left them, they heard their cries and lamentations; and when they met them a few hours after, the lower parts of their faces were painted perfectly black, in token of mourning. They had

had likewiſe an opportunity of obſerving the ceremonies at the funeral of one of the ordinary claſs. Hearing ſome mournful cries iſſuing from a miſerable hut, they entered it, and diſcovered two women, whom they ſuppoſed to be the mother and daughter, weeping over the body of a man, who had that moment expired. They firſt covered the body with a cloth, then lying down by it, they ſpread the cloth over themſelves, beginning a melancholy kind of ſong, often repeating *Aweh me doaah! Aweh tanne!* "Oh, my father? Oh, my huſband!" In one corner a younger daughter lay proſtrate on the ground, having ſome black cloth ſpread over her, and repeating the ſame expreſſions. On inquiry afterwards, how the body had been diſpoſed of, they pointed towards the ſea, perhaps indicating thereby, that it had been depoſited in the deep, or that it had been conveyed to ſome place of burial beyond the bay, which was all the information that could be got on the occaſion.

CHAP. XXV.

THE PALOS OR PELEW-ISLANDS.

Situation and Deſcription of theſe Iſlands. Various Particulars reſpecting the friendly Intercourſe between the Engliſh and the Natives. Great Hoſpitality of the King, who preſents the Captain with an Iſland.

THAT chain of iſlands called the Palos, or Pelew-Iſlands, were probably firſt noticed by ſome of the Spaniards of the Philippines, and by them named the Palos-Iſlands; the tall palm trees, which grow there in great abundance, having at a diſtance the appearance of (*palos*, i. e.) maſts of ſhips. That this was the origin of their name, is rendered ſtill more probable, as the Spaniards gave the ſame appellation to all the numerous iſlands of this archipelago, moſt of which are now known by the name of the New Carolines. The Pelew-Iſlands are ſituated in the weſt part of the Pacific-Ocean, between the 5th and 9th degrees of north latitude, and between 130 and 136 degrees of eaſt longitude; and, though heretofore imperfectly noticed by ſome ſhips making the eaſtern paſſage from China, were never viſited by any Europeans, till the crew of the Antelope, captain Wilſon, a packet belonging to the Eaſt-India Company, which was wrecked in Auguſt 1783, landed there, and were the means of diſcovering to us a new world, or ſet of human beings, who, though of an uncultivated nature, appeared to be greatly different from thoſe commonly termed ſavages, and evince principles of humanity and generoſity that would reflect the higheſt honour on the moſt exalted of our race. Theſe iſlands are long but narrow, of a moderate height, well covered with wood, at leaſt ſuch of the iſlands as captain Wilſon's people had an opportunity of ſeeing. They are circled on the weſt ſide by a reef of coral, of which no end could be ſeen from any eminences they were on; this reef in ſome places extends five or ſix leagues from the ſhore, and not leſs than two or three in any parts that were viſited.

As the Antelope, which ſailed from Macao the 20th of June 1783, was proceeding on her voyage from China, ſhe unfortunately ſtruck on a rock in the night of the 9th of the following Auguſt.

The crew, waiting with anxious ſuſpence the approach of morning, in order to diſcover whether any land was near, deſcried, at the dawn of day, a ſmall iſland to the ſouthward, about three or four leagues diſtant; and ſoon after ſome other iſlands were ſeen to the eaſtward, which proved to be thoſe under conſideration.

As the iſland (properly called Coorooraa, of which Pelew is the capital) came in ſight, the jolly-boat hoiſted Engliſh colours, and fired three muſquets; which were anſwered, as they apprehended, nearer the ſhore, by a white flag ſtuck on a pole; this was conceived to have been ſuggeſted by the Malay on the iſland (whom we ſhall have occaſion hereafter to mention) and proved to be ſome of the white cloth that had been given to the king. Raa Kook, the king's brother, and commander in chief of his forces, having quitted his canoe, came into the jolly-boat; and our people, on landing, fired three muſquets more, after having hoiſted their colours, and fixed them in the ground oppoſite a houſe cloſe to the water-ſide, at the end of the cauſe-way where they came on ſhore; to which houſe the Engliſh were conducted by Raa Kook to wait the king's coming, he having diſpatched a meſſenger to notify the captain's arrival. Before the king appeared, ſome of the natives were ſent down with refreſhments: they firſt brought a large tureen made of wood, in the ſhape of a bird, and inlaid with ſhell, this was full of ſweet drink; they alſo brought a painted ſtand, about two feet in height, inlaid in the ſame manner as the tureen, upon which were ſweetmeats garniſhed with Seville oranges; next came a baſket of boiled yams, followed by another of young cocoa-nuts; theſe were all placed in a kind of order, preparatory to the king's coming.

Apprehenſions were naturally felt on account of the natives. Boats, however, were manned, loaded with ſuch articles as were deemed moſt neceſſary, and diſpatched from the ſhip under the direction of a principal officer, whoſe deſign was to obtain, if poſſible, a friendly intercourſe with the inhabitants, in caſe they ſhould find any. As the ſhip was expected every moment to go to pieces, thoſe who remained went immediately to work to make a raft, on which, when completed, with the aſſiſtance of two boats, they all, except one man, who fell overboard before they ſet out, reached the ſhore, after encountering many difficulties.

In the courſe of two days from their landing, the crew obſerved ſome natives approaching, in canoes, from the points of the bay. This ſpread ſo great a conſternation, that all ran to their arms: but as there were only two canoes, the captain ordered the people out of ſight till further notice.

A very ſingular circumſtance much facilitated the intercourſe between our countrymen and the natives. A Malay, who ſome time before was caſt away upon this iſland, had acquired the language; and it happened that one of the Antelope's men was a native of Bengal, and ſpoke the Malay tongue, by which means a ready communication was maintained on both ſides, and all thoſe impediments were removed at once, which would have ariſen among people who had no means of conveying their thoughts to one another by language, but muſt have truſted to ſigns and geſtures, which might have given riſe to a thouſand miſconceptions.

When the canoes, which advanced ſlowly towards the ſhore, got within hearing, the native of Bengal ſpoke to them in the Malay tongue; on which, though they did not ſeem to underſtand him, they ſtopped their canoes. Soon after, however, one of them ſpoke in the above language, aſking our people "Who they were? whether they were friends or enemies?" The native of Bengal, by the captain's direction, replied, "That they were diſtreſſed Engliſhmen, who had loſt their ſhip on the reef, and that they were friends." On this they ſeemed to commune together; and ſoon after came out of their canoes, which captain Wilſon obſerving, he waded into the water to meet them; and after embracing them in a friendly manner, conducted them to his officers, and the others who had retired.

Theſe people were entirely naked. They were of a deep copper colour, and their ſkins ſoft and gloſſy, owing to the external uſe of cocoa-nut oil. Each chief had a baſket of beetle nut, and a bamboo, finely poliſhed, and inlaid at each end, in which they carried a kind of coral, burnt to a lime, called *chinam*. It was obſerved that all their teeth were black, and that the beetle nut, of which they had always a quid in their mouths, rendered the ſaliva red, which, together with their black teeth, gave their mouths a very diſguſting appearance. They were of a middling ſtature, ſtraight, and muſcular, their limbs well formed, and they had a majeſtic gait. Their hair was black, long, and rolled up behind cloſe to their heads, which appeared neat and becoming. They tatooed their legs a little above the ancles to the middle of their thighs, which gave them a deeper colour than the other parts of their bodies. None of them had any beards, except the youngeſt of the king's brothers; and it was, in courſe of time, obſerved, that they plucked out the hairs by the roots, and that very few only, who had ſtrong thick beards, cheriſhed and let them grow.

Whatever ſurpriſe the ſingularity of theſe natives might excite in the minds of our people, the natives were no leſs wrapt in admiration at their appearance. The whiteneſs of colour attracted them ſo much, that it was evident they had never before ſeen any Europeans. They were continually exclaiming, *Weel! weel!* and *weel-a-trecoy!* words which implied that they were perfectly pleaſed with their viſitors. They ſtroked their bodies and arms outſide the garments, ſeeming to doubt whether their coverings were not a part of their real body, being totally ignorant of the uſe of clothes. However, the Malay informed them, that the Engliſh lived in a much colder climate than theirs; were obliged to have recourſe to artificial warmth, to ſhield them from the inclemency of the weather, and that, from cuſtom, they could not diſpenſe with it, in a degree, even in the warmeſt regions.

The hands of the Europeans next engaged their attention, and particularly the black veins of the wriſts. They probably imagined the whiteneſs of the hands and face to be artificial; and the blackneſs of the veins cauſed them to think, that it was a mode of tatooing; for they deſired to look at the top parts of the arms, to ſee if the whiteneſs was continued. After this they requeſted a further view of the body, when ſome of the crew opened their boſoms, and told them that the other parts were nearly the ſame as that. The hair on the breaſts of the Europeans excited their aſtoniſhment, as they conſider ſuch incumbrance highly indelicate, and pluck it out wherever it is found. The natives having in ſome degree ſatisfied their curioſity, began to expreſs apprehenſions that they had intruded too much; but the captain convinced them, by means of the Malay, that their fears were groundleſs.

As the natives expreſſed a deſire that captain Wilſon would ſend one of his people to Pelew, that the king might ſee what kind of beings white men were, the captain complied, and appointed his brother for that purpoſe, giving him a ſmall remnant of blue cloth, a caniſter of tea, another of ſugar-candy, and a jar of preſerved fruit, as a preſent for the king, of whom we ſhall here introduce the following account.

Abba Thulle, as king, was the firſt perſon in the government at Pelew, and in him the chief authority was lodged. He appeared to be conſidered as the father of his people; and, though diveſted of all external decorations of royalty, had every mark of diſtinction paid to his perſon.

His rupacks or chiefs approached him with the greateſt reſpect, and his common ſubjects, whenever they paſſed near him, or had occaſion to addreſs him, put their hands behind them, and crouched towards the ground: even if they were paſſing any houſe or place where the king was ſuppoſed to be, they humiliated themſelves in the ſame manner, till they had got beyond his probable preſence, when they reſumed their uſual mode of walking. On all occaſions, however, the behaviour of Abba Thulle appeared gentle and gracious, yet always full of dignity; he heard whatever his ſubjects had to ſay to him, and, by his affability and condeſcenſion, never ſuffered them to go away diſſatisfied.

This perſonage, how great ſoever he was held at Pelew, was not underſtood by the Engliſh, when there, to poſſeſs a ſovereignty over all the iſlands which came within their knowledge. The rupacks of Eonungs, Emillegue, and Artingall, and the rupack Meath, were independent in their own territories: yet Abba Thulle had ſeveral iſlands over which he ruled.

Upon all occurrences of moment, he convened the rupacks and officers of ſtate; their councils were always held in the open air, upon ſquare pavements; where the king firſt ſtated the buſineſs upon which he had aſſembled them, and ſubmitted it to their conſideration. Each rupack preſent delivered his opinion, but without riſing from his ſeat: when the matter before them was ſettled, the king, ſtanding up, put an end to the council.—After which they often entered into familiar converſation, and ſometimes chatted together for an hour after their buſineſs was diſpatched.

When any meſſage was brought to the king, whether in council or elſewhere, if it came by one of the common people, it was delivered at ſome diſtance, in a low voice, to one of the inferior rupacks; who, bending in an humble manner at the king's ſide, delivered the meſſage in a low tone of voice, with his face turned aſide. His commands appeared to be abſolute, though he acted in no important buſineſs without the advice of his chiefs. In council there was a particular ſtone on which the king ſat; the other rupacks did not always take the ſame place, ſeating themſelves ſometimes on his right-hand, and ſometimes on his left.

Every day in the afternoon, the king, whether he was at Pelew, or with the Engliſh at Oroolong (the iſland he had given them) went to ſit in public, for the purpoſe of hearing any requeſts, or of adjuſting any difference or diſpute which might have ariſen among his ſubjects.

Captain Wilſon obſerves, with reſpect to the character and diſpoſition of "this excellent man, who ruled over theſe ſons of nature, that he certainly, in every part of his conduct, ſhewed himſelf firm, noble, gracious, and benevolent; there was a dignity in all his deportment, a gentleneſs in all his manners, and a warmth and ſenſibility about his heart that won the love of all who approached him. Nature had beſtowed on him a contemplative mind, which he had himſelf improved by thoſe reflections that good ſenſe dictated, and obſervation confirmed."

Raa Koo, the king's brother, and general of all his forces, was the next in power. It was his duty to ſummon the rupacks to attend the king, on whatever expedition or purpoſe they were called upon: but though Raa Kook acted as commander in chief, yet all the executive orders came from the king, whenever he attended in perſon. The general, as the king's next brother, was his preſumptive heir; the ſucceſſion of Pelew not going to the king's children, till it had paſſed through the king's brothers: ſo that after the demiſe of Abba Thulle, the ſovereignty would have deſcendend to Raa Kook; on his demiſe, to Arra Kooker; and, at the death of this laſt brother, it would have reverted to the eldeſt ſon of Abba Thulle; on which contingency, Qui Bill, being the preſumptive heir, would, during the reign of his laſt ſurviving uncle, have become of courſe the hereditary general; as Lee Boo would when the ſovereignty had fallen to his elder brother.

A particular

A particular chief, or rupack, always attended the king, and, being always near his perſon, was firſt conſulted: but whether his office was religious or civil, or both could not be learned with any certainty. He was not conſidered as a warrior, nor ever bore arms; and has only one wife, whereas the other rupacks had two. But to reſume our narrative:

The natives behaved in the moſt friendly manner to the Engliſh; and their monarch ſoon after paid them a viſit, with his ſon and brother. His majeſty was perfectly naked, and had no kind of ornament or mark of diſtinction, like his principal officers, who wore a bracelet of bone at their wriſts. He bore a hatchet on his ſhoulder, the head of which was made of iron, a circumſtance which ſurpriſed our people much, as all the other hatchets they had ſeen were of ſhell. The handle of it, which formed a ſharp angle, ſtuck cloſe to his ſhoulder, lying before and behind, and wanting no tying to keep it ſteady in walking.

His majeſty would not go into the tents. A ſail was therefore ſpread for him, on which he ſat down, with his chief miniſter oppoſite, and his two brothers on each ſide; and the whole was encompaſſed by his attendants, who were numerous. He drank a cup of tea, but did not approve of the taſte. Captain Wilſon availed himſelf of this opportunity to obtain permiſſion from the king to build a veſſel, in order to convey the crew to ſome European-ſettlement; and highly gratified him by cauſing a party of men to be drawn up, and fire three vollies. This occaſioned ſuch hooting and chattering, as equalled in noiſe the report of the pieces.

Captain Wilſon dreſſed the king's ſon in a ſilk coat and blue trowſers. He was a young man extremely well made, but had loſt his noſe, whether in battle, or from a ſcrophulous diſeaſe, which is prevalent there, was not known.

Arra Kooker, one of the king's brothers, requeſted a white ſhirt, and as ſoon as it was given him, he put it on, in tranſports of joy, which he indicated by dancing and jumping, and in forming a humorous contraſt between his ſhirt and his ſkin. This prince had a great propenſity to mimicry, and often amuſed our people by taking off their manners, but with ſo much good nature, that no one could feel the leaſt offence. He entertained a great partiality for their Newfoundland dog, which he often fed; till at length the creature felt a partiality for him, and, at his appearance, would jump, bark, leap, and play a variety of tricks. Arra Kooker would often imitate him in the ſame mode of ſalutation, by barking, jumping, &c. which could not fail of exciting the riſible faculties. This prince was ſeemingly about forty years of age, ſhort in ſtature, but ſo plump and fat, that he was almoſt as broad as he was long.

After various ceremonies had paſſed, the captain preſented his majeſty with a ſcarlet coat; who then making ſigns to go on ſhore, jumped into the water, and ſwam to land.

When the captain, and ſeveral officers, reached Pelew, on a viſit to the king, they came into a large ſquare pavement, round which were ſeveral houſes, and was conducted into one that ſtood in the centre of one of the ſides. Out of this houſe iſſued a number of women, who were waiting to ſee thoſe new beings the Engliſh. Thoſe our people were given to underſtand were the wives of ſome of the rupacks, or great officers of ſtate. They were rather fairer than the reſt of the women, had ſome little ornaments about them, and their faces and breaſts were rubbed over with turmeric.

The king, and one of his brothers, led his gueſts into this houſe; the women then returned, and received them with much joy, preſenting their company with cocoa-nuts and ſweet drink, which all ſat down and partook of. The ladies alſo ſeated themſelves, and taking a parcel of leaves, began to make nets, an employment in which they paſs great part of their time. The king informed his gueſts that his houſe was to be their abode as long as they remained at Pelew, and that there they were to ſleep. After this he roſe up, previouſly apologizing to the captain for retiring, ſaying he was going to bathe.

Soon after a meſſage came to Raa Hook from the queen, requeſting that ſhe might ſee the Engliſh at her dwelling. They attended him thither, and obſerved immediately before it a rail, on which were ſome tame pigeons tied by the leg. This is a bird held in ſuch eſtimation in thoſe iſlands, that none but rupacks and their families are allowed to eat them.

As they approached, the queen opened her window, and ſpoke to Raa Hook, to deſire the Engliſh would ſit down on the pavement before her, which being complied with, a number of attendants brought out yams, cocoa-nuts, and ſweet drink. While they were partaking of theſe, the queen aſked Raa Hook many queſtions about our people, of whom ſhe took very great notice, and wiſhed ſome of them would come cloſe to the window, and draw up their coat ſleeves, that ſhe might ſee the colour of their ſkins. After ſhe had viewed them attentively, and aſked, through Raa Hook, as many circumſtances reſpecting them as ſhe thought ſhe could with propriety obtrude, ſhe ſignified that ſhe would not longer treſpaſs on their time, by detaining them; ſo they roſe and took their leave.

Raa Hook now took them to his own houſe, where they were welcomed without any parade. His wife, among other things, gave them a broiled pigeon, a delicacy that, as before obſerved, only falls to the ſhare of the dignified.

There the character of the prince appeared in a new and intereſting light: his children encompaſſed him, and climbing to his knees, fondly careſſed their father, while his ſupreme pleaſure appeared to be in rolling and toſſing them about. This domeſtic ſcene, however, ſo much occupied the minds of the captain and officers, that it was dark before they thought of retiring. Raa Hook begged they would diſpenſe with his attendance, and ordered the Malay to conduct them to their deſtined habitation, where they found ſome fiſh for ſupper, ſent by the king. Though the night proved tempeſtuous, their houſe was ſo well thatched that the rain could not penetrate.

The king having ſignified to captain Wilſon his pleaſure of tendering to him the iſland where the Engliſh reſided, as a preſent, and informed him that they diſtinguiſhed it by the name of Oroolong, in order to announce poſſeſſion of it, the Britiſh pendant was hoiſted, and three vollies of ſmall arms fired. On the eaſt-ſide is the bay and harbour, which lies eaſt and weſt: it was judged the whole circumference of iſland did not exceed three miles. To this iſland the captain would have returned the day following (the night he paſſed with the officers under the roof of the hoſpitable Prince Raa Hook) if the weather had not turned unfavourable. They therefore took a ramble further into the country, where the lands appeared to be pretty well cultivated, and the villages full of inhabitants. They obſerved that the lower orders of the women were buſied in looking after the yam plantations, which were moſtly in ſwampy ground. Others they found employed in making baſkets and mats, and in nurſing their children. Among the women whom Raa Hook conducted about the cove, there was one who ſtruck all our countrymen, as being ſuperior in elegance and beauty, as well as in her graceful manner of walking, to any female they had noticed at Pelew; ſhe was very young, and they could not help making ſome enquiries about her of the general; who informed them, that ſhe was one of the king's wives, and was called Ludee. This lady, as well as all her female companions, teſtified that degree of ſurpriſe which the firſt ſight of our different works had excited in all the other natives.

The

The employment of the men ſeemed to be that of gathering cocoa-nuts, felling trees, and making ſpears and darts, the chief warlike inſtruments of the Pelewans. In the uſe of theſe they were remarkably expert, as they afforded abundant proof in divers engagements with the ſubjects of a neighbouring prince; in which they were aided by a ſelect party of the Engliſh at the requeſt of Abba Thulle, and obtained a complete victory by dint of the ſuperior force of our fire-arms.

As the Engliſh had been uſeful in their aſſiſtance againſt the enemy, the king was deliberating what preſent or compenſation he ſhould make to the Engliſh leader. After a while he ſent him, as a particular mark of his gratitude and eſteem, two lovely young women. Captain Wilſon, who was a grave ſober man, and had his ſon with him, a youth about ſeventeen, was particularly embarraſſed. He, however, thought proper to ſend them back again. The king of Pelew was exceedingly unhappy that his preſent was not accepted, and concluded, in his own mind, that their being rejected was owing to their not being ſufficiently young. To obviate this objection, after ſome ſtrong parental ſtruggles, he actually ſent captain Wilſon his own daughter, a ſweet little girl, who was no more than twelve years old. She was of courſe returned alſo: but it was extremely difficult to ſatisfy the king that in this rejection of his preſents no inſult was intended.

The death of Raa Hook's valiant ſon afforded our people an opportunity of being acquainted with their funeral ceremonies. Having been invited to an entertainment by one of the rupacks, they were ſurpriſed, when the repaſt was ended, at hearing the doleful lamentations of women at ſome diſtance; and going to the place from whence the ſound proceeded, they obſerved a concourſe of females following a dead body, held up in a mat, and laid on a ſort of bier, made of bamboos, carried by four men on their ſhoulders. Theſe were the only males in company. Our people followed to the place of interment, where the body was depoſited without any religious ceremony, the bearers filling up the grave with their hands and feet, while the women knelt down, and again vented the moſt piercing cries, at times indicating as if their phrenzy would lead them to tear up the corpſe.

The marriages of theſe people are ſimply a mutual contract between the ſexes, which is held inviolate. A plurality of wives is allowed; but they have ſeldom more than two. They had no eſtabliſhed religion, but ſeemed to poſſeſs an innate confidence of the efficacy of virtue, and the temporal advantages ariſing from moral rectitude.

CHAP. XXVI.

General Remarks on the Diſpoſition, Character, and Religion of the Natives. The Order of the Bone deſcribed. Intereſting Account of Lee Boo, one of the King's Sons, intruſted by his Father to the Care of Captain Wilſon, who ſails with him firſt to China, and afterwards arrives with him in England. Becoming Behaviour of the young Prince there; and affecting Particulars of his Death by the Small-Pox.

THE conduct of theſe people to the Engliſh, was from the firſt to the laſt uniformly courteous and attentive, accompanied with a politeneſs that ſurpriſed thoſe on whom it was beſtowed. At all times they ſeemed ſo cautious of intruding, that on many occaſions they ſacrificed their natural curioſity to that reſpect which decent good-manners appeared to them to exact. Their liberality to the Engliſh, at their departure, when individuals poured in all the beſt they had to give, and that of articles too, of which they had far from plenty themſelves, ſtrongly demonſtrated, that theſe teſtimonies of friendſhip were the effuſion of hearts that glowed with the flame of philanthropy; and when our countrymen, from want of ſtowage, were compelled to refuſe the further marks of kindneſs which were offered them, the entreating eyes, and ſupplicating geſtures with which they ſolicited their acceptance of what they had brought, moſt forcibly expreſſed how much their minds were wounded, to think they had not arrived early enough, to have their little tributes of affection received. Nor was this conduct of theirs an oſtentatious civility exerciſed towards ſtrangers; ſeparated as they were from the reſt of the world, the character of a ſtranger had never entered their imagination. They felt our people were diſtreſſed, and in conſequence wiſhed they ſhould ſhare what they had to give. It was not that worldly munificence, which beſtows and ſpreads its favours with a diſtant eye to retribution; their boſoms had never harboured ſo contaminating a thought—no; it was the pure emotions of native benevolence! it was the love of man! it was a ſcene that pictured human nature in triumphant colouring; and whilſt their liberality gratified the ſenſe, their virtue ſtruck the heart!

Having given a ſketch of the character of theſe people, it may not be amiſs to inquire concerning their religion; which we ſhall do in the words of Mr. Keate.

"There are few people, I believe, among the race of men, whom navigation hath brought to our knowledge, who have not ſhewn, in ſome inſtance or other, a ſenſe of ſomething like religion, how much ſoever it might be mixed with idolatry or ſuperſtition; and yet our people, during their continuance with the natives of Pelew, never ſaw any particular ceremonies, or obſerved any thing that had the appearance of public worſhip. Indeed, circumſtanced as the Engliſh were, they had not enough of the language to enter on topics of this nature; and it would alſo have been indiſcreet to have done it, as ſuch inquiries might have been miſconceived, or miſconſtrued by the natives: added to this, their thoughts were naturally bent on getting away, and preſerving, while they remained here, the happy intercourſe which ſubſiſted between them and the inhabitants.

"Though there was not found, on any of the iſlands they viſited, any place appropriated for religious rites, it would perhaps be going too far to declare, that the people of Pelew had abſolutely no idea of religion. Independent of external ceremony, there may be ſuch a thing as the religion of the heart, by which the mind may, in awful ſilence, be turned to contemplate the God of nature; and though unbleſſed with thoſe lights, which have pointed to the Chriſtian world an unerring path to happineſs and peace, yet they might, from the light of reaſon only, have diſcovered the efficacy of virtue, and the temporal advantages ariſing from moral rectitude.

"The reader will, by this time, have met with ſufficient occurrences to convince him, that the inhabitants of theſe new-diſcovered regions had a fixed and rooted ſenſe of the great moral duties: this appeared to govern their conduct, glow in all their actions, and grace their lives. Actuated by ſuch principles, we ſee them laborious, induſtrious, and benevolent: in moments of danger firm, and prodigal of life; in misfortunes patient, in death reſigned. And if, under all theſe circumſtances, he can conceive, that the natives of Pelew paſſed their lives without ſome degree of *confidence*, ſome degree of *hope*, I have only to ſay, his idea of mankind muſt widely differ from my own.

"Superſtition is a word of great latitude, and vaguely defined; though it hath, in enlightened eyes, been called the offſpring of ignorance; yet in no

times hath it exiſted without having ſome connection with religion. Now that the people of Pelew had, beyond all doubt, ſome portion of it, appears from the wiſh expreſſed by the king, when he ſaw the ſhip (Oroolong) building, 'That the Engliſh would take out of it ſome particular wood, which he perceived they had made uſe of, and which, he obſerved to them, was deemed to be of *ill omen*, or *unpropitious*.'

"They had alſo an idea of an evil ſpirit, that often counteracted human affairs; a very particular inſtance of this was ſeen, when Mr. Barker (a moſt valuable member in the Engliſh Society) fell backward from the ſide of the veſſel, then on the ſtocks; Raa Hook, who happened to be preſent, obſerved thereupon, that it was owing to the *unlucky wood* our people had ſuffered to remain in the veſſel, that the evil ſpirit had occaſioned this miſchief to Mr. Barker.

"In the paſſage from Pelew to China, ſomewhat was diſcovered in Prince Le Boo, pretty ſimilar to what is called *ſecond-ſight*. At the time he was very ſea-ſick, he ſaid, how much he was concerned at the diſtreſs his father and friends were feeling, who *knew* what he was then ſuffering. [His expreſſion at the time was, *that he was ſenſible his father and family had been very unhappy from knowing that he had been ſick*.] The ſame anxiety operated on him on their account, when he perceived his diſſolution drawing near.

"They certainly entertained ſo ſtrong an idea of divination, that whenever any matter of moment was going to be undertaken, they conceived they could, by ſplitting the leaves of a particular plant, that was not unlike our bulruſh, and meaſuring the ſtripes of this long narrow leaf on the back of their middle-finger, form a judgment whether it would or would not turn out proſperous. This was obſerved by Mr. M. Wilſon, in his firſt viſit to the king at Pelew; and, on inquiry, was afterwards explained to the Engliſh by the linguiſt, as being done to diſcover if their arrival foreboded good or ill-fortune. It was noticed by ſeveral of our people, that the king recurred to this ſuppoſed oracle on different occaſions, particularly at the time when they went on the ſecond expedition againſt Artingall, a neighbouring iſland, when he appeared to be very unwilling to go aboard his canoe, and kept all his attendants waiting, till he had tumbled and twiſted his leaves into a form that ſatisfied his mind, and predicted ſucceſs. Our people never obſerved any perſon but the king apply to this divination.

"It is hardly poſſible but the fond anxiety of a parent, on giving up a ſon into the hands of ſtrangers, who were to convey him to remote regions, of which he could form to himſelf but very imperfect notions, would, on ſo intereſting a point, induce him to examine his oracle with uncommon attention; and it is as little to be doubted, but that every thing wore, to his imagination, a proſperous appearance: yet, to evince the fallacy of his prophetic leaves, they certainly augured not the truth, nor preſented to the father's mind even a ſuſpicion, that the ſon he parted with, he ſhould ſee no more!

"On this ſubject, I would further wiſh to bring back to the reader's recollection a few occurrences:—As Raa Hook, and others of the natives, were two or three times preſent, when captain Wilſon, on a Sunday evening, aſſembled his people to read prayers to them, they expreſſed no ſurpriſe at what was doing, but appeared clearly to underſtand, that it was the mode in which the Engliſh addreſſed the inviſible God, whom they looked up to for protection; and how different ſoever their own notions might be, they attended the Engliſh on theſe occaſions with great reſpect, ſeeming deſirous to join it, and conſtantly preſerving the moſt profound ſilence, the general never allowing the natives to ſpeak a ſingle word, and refuſing even to receive a meſſage from the king, which arrived at the tents during divine ſervice.

"The ceremony uſed by Raa Hook, after the funeral of his ſon, when he repeated ſomething to himſelf whilſt he was marking the cocoa-nuts, and the bundle of beetle-leaves which the old woman was to place on the young man's grave, had every appearance of a pious office; and when he planted the cocoa-nuts, and ſome other fruit trees on the iſland of Oroolong, what he uttered in a low voice, as each ſeed was depoſited in the earth, impreſſed thoſe preſent as the giving a benediction to the future tree that was to ſpring from it. The king alſo, when he took leave of his ſon, ſaid a few words, which, by the ſolemnity they were delivered with, and the reſpectful manner in which Lee Boo received them, induced all our countrymen to conceive it was a kind of bleſſing.

"I muſt, in this place, add a circumſtance that paſſed in converſation with captain Wilſon and Lee Boo, after he had been ſome time in England: the former telling him, that ſaying prayers at church was to make men good, that when they died, and were buried, they might live again above (pointing to the ſky) Lee Boo, with great earneſtneſs, replied, *All ſame Pelew; bad men ſtay on earth; good men go into ſky, become very beautiful*—holding his hand in the air, and giving a fluttering motion to his fingers. This ſurely conveyed a ſtrong idea, that they believed the ſpirit exiſted, when the body was no more.

"After combining all theſe facts, and uniting them with the moral characters of the people, the reader is left in a ſituation to judge for himſelf; independent of Lee Boo's declaration, whether it is probable that their lives could be conducted with that decency we have ſeen, and their minds trained to ſo ſtrong a ſenſe of juſtice, propriety, and decency, without having ſome guiding principle of religion; thus much, at leaſt, I think, we may be authoriſed to aſſert—If all this was effected without it, it proves, that the natives of Pelew had been happy enough, not only to diſcover, but to be perfectly convinced, that VIRTUE IS ITS OWN REWARD."

After three months ſtay on the iſland, our countrymen were enabled, by the moſt perſevering toil, but ſtill more by the beneficence and integrity of the natives, to build a veſſel out of the fragments of their wreck. In this, after leaving one of the crew, named Madan Blanchard, who requeſted permiſſion to remain on the iſland, they departed on the 12th of November, and arrived at Macao on the 30th of the ſame month, whence they afterwards proceeded to England.

The king finding the Engliſh were preparing for their departure in their new veſſel, the Oroolong, ſent in the morning a meſſage to captain Wilſon, deſiring him to come to him at the watering-place; and on his arrival, acquainted him, that it was his intention to inveſt him with the Order of the BONE, and make him in form a rupack of the firſt rank. The captain expreſſed his acknowledgment for the honour his majeſty purpoſed to confer on him, and the pleaſure he felt at being admitted a Chief of Pelew.

The king and all the rupacks then went and ſat down under the ſhade of ſome large trees, and captain Wilſon was deſired to ſit at a little diſtance; when Raa Kook receiving the bone, preſented it as from his brother, Abba Thulle, and wanted to know which hand he uſed in common. This the general wiſhed to aſcertain, by putting a ſtone in his hand, which he deſired him to throw at a diſtance from him. Finding it was the right-hand he naturally uſed, he was again requeſted to ſit down, and the bone applied to his left-hand, to ſee if it was large enough for his hand to ſlip through: being not found ſufficiently ſo, it was raſped away, till judged to be wide enough: when Raa Kook, the chief miniſter, and

all the rupacks, proceeded to the inveſtment, in the following manner:

The general made a ſtring faſt to each of the fingers of the captain's left-hand, and then lubricating the hand with oil, the chief miniſter placed himſelf behind the captain, holding him faſt by the ſhoulders: Raa Kook then paſſed the different ſtrings through the bone, and giving them to another rupack, they endeavoured to draw his hand through; Raa Kook, at the ſame time, with his own hand, compreſſing that of the captain into the ſmalleſt compaſs he poſſibly could, ſo that the bone might paſs over the joints. During this, the moſt profound ſilence was preſerved, both by the rupacks who aſſiſted, and the people who attended as ſpectators, except by the king, who occaſionally ſuggeſted in what manner they might facilitate the operation. The point being at laſt obtained, and the hand fairly paſſed through, the whole aſſembly expreſſed great joy. Abba Thulle then addreſſing the captain, told him, *That the bone ſhould be rubbed bright every day, and preſerved as a teſtimony of the rank he held amongſt them; that this mark of dignity muſt, on every occaſion, be defended valiantly, nor ſuffered to be torn from his arm, but with the loſs of life.*

The ceremony ended, all the rupacks congratulated captain Wilſon on his being one of their order; and the inferior natives flocked round to look at the bone, and appeared highly pleaſed to ſee his arm adorned with it, calling him Englees Rupack.

This mark of diſtinction is given and received in thoſe regions, as a reward of valour and fidelity, and held out as the prize of merit. The decoration indeed derives all its ſplendor from the combined ideas of the mind whilſt viewing it; and the imagination is equally impreſſed with the ſame ſentiment, whether the badge of honour be a ſtrip of velvet tied round the knee, a tuft of ribband and croſs dangling at the button-hole, a ſtar embroidered on the coat, or a bone upon the arm.

Anecdotes of Lee Boo, ſecond Son of Abba Thulle.

The king, his father, from a predilection to our people, reſolved to intruſt this his ſecond ſon to the care of captain Wilſon, that he might have the advantage of improving himſelf, by accompanying the Engliſh, and of learning many things, that might, at his return, greatly benefit his own country. He added, that one of the Malays, from Pelelew, a neighbouring iſland, ſhould alſo go to attend on him.—He deſcribed his ſon as a young man of an amiable and gentle diſpoſition; that he was ſenſible, and of a mild temper, and ſpoke much in his commendation.

Captain Wilſon expreſſed himſelf exceedingly obliged and honoured by this ſingular mark of the king's confidence and eſteem; and aſſured him, that he ſhould endeavour to merit the high truſt repoſed in him, by treating the young prince with the ſame tenderneſs and affection as his own ſon.

Lee Boo, we are told, gave our people an early opportunity of ſeeing the natural benevolence of his mind; for when at Canton, ſeeing ſome of the Chineſe boats, that are rowed by poor Tartar women, with their little children tied to their backs (and who live in families on the water) ſurround the veſſel, to petition for fragments of victuals; the young prince, on noticing their ſupplications, gave them oranges, and ſuch other things as he had, being particularly attentive to offer them thoſe things which he liked beſt himſelf.

Amongſt ſeveral other things which ſolicited his notice, when at the houſe of Mr. M'Intyre, at Macao, there was a large mirror at the upper end of the hall, which reflected almoſt his whole perſon. Here Lee Boo ſtood in perfect amazement at ſeeing himſelf;—he laughed—he drew back—and returned to look again, quite abſorbed in wonder—he made an effort to look behind, as if conceiving ſomebody was there, but found the glaſs fixed cloſe to the wall. Mr. M'Intyre obſerving the idea that had croſſed him, ordered a ſmall glaſs to be brought into the room, wherein having viewed his face, he looked behind, to diſcover the perſon who looked at him, totally unable to make out how all this was produced.

As he drew near the Britiſh Channel, the number of veſſels that he obſerved purſuing their different courſes, increaſing ſo much, he was obliged to give up the keeping of his journal. When the Morſe got to the Iſle of Wight, captain Wilſon, his brother, the prince, with ſeveral other paſſengers, quitted her, and coming in a boat between the Needles, arrived ſafe at Portſmouth the 14th day of July, 1784. On landing, the number and ſize of the men of war, then in harbour, the variety of houſes, and the ramparts, were all objects of attraction: he ſeemed ſo totally abſorbed in ſilent ſurpriſe, that he had no leiſure to aſk any queſtions.

Mr. Keate, the writer of captain Wilſon's account of the Pelew-Iſlands, obſerves, that going to Rotherhithe to ſee the captain, Lee Boo was reading at a window; that he recollected him inſtantly, and flew with eagerneſs to the door to meet him, looked on him as a friend, ever after attached himſelf to him, appearing to be happy whenever they met together. That he ſeemed to be pleaſed with every thing about him, and ſaid, *All fine country, fine ſtreet, fine coach, and houſe upon houſe up to ſky*, putting alternately one hand above another, by which it was found (their own habitations being all on the ground) that every ſeparate ſtory of our buildings, he, at that time, conſidered as a diſtinct houſe.

He was introduced to ſeveral of the directors of the India-Company, taken to viſit many of the captain's friends, and gradually ſhewn moſt of the public buildings, in the different quarters of the town; but his prudent conductor had the caution to avoid taking him to any places of public entertainment, leſt he might, in thoſe heated reſorts, catch the ſmall-pox, a diſeaſe which he purpoſed to inoculate the young prince with, as ſoon as he had acquired enough of our language, to be reaſoned into the neceſſity of ſubmitting to the operation; judging, and ſurely not without good reaſon, that by giving him ſo offenſive and troubleſome a diſtemper, without firſt explaining its nature, and preparing his mind to yield to it, might weaken that unbounded confidence which this youth placed in his adopted father.

After he had been a while ſettled, and a little habituated to the manners of this country, he was ſent every day to an academy at Rotherhithe, to be inſtructed in reading and writing, which he himſelf was eager to attain, and moſt aſſiduous in learning. His whole deportment, while there, was ſo engaging, that it not only gained him the eſteem of the gentleman under whoſe tuition he was placed, but alſo the affection of his young companions. In the hours of receſs, when he returned to the captain's houſe, he amuſed the whole family by his vivacity, noticing every particularity he ſaw in any of his ſchoolfellows, with great good-humour mimicking their different manners, ſometimes ſaying he would have a ſchool of his own when he returned to Pelew, and ſhould be thought very wiſe, when he taught the great people their letters.

Captain Wilſon, and the young prince, dining with Mr. Keate early after his arrival, the latter was aſking how he was affected by painting: on mentioning the ſubject, Dr. Carmichael Smyth, whom Dr. Keate had requeſted to meet this ſtranger, wiſhed the laſt-mentioned perſon to bring a miniature of himſelf, that thereby all might obſerve if it ſtruck him. He took it in his hand, and inſtantly darting his eyes towards Mr. Keate, called out, *Miſſer Keate, very nice, very good.* The captain then aſking him, if he

underſtood

underſtood what it ſignified, he replied, *Lee Boo underſtand well*, that *Miſſer Keate die*—this *Miſſer Keate live*. The writer remarks, that a treatiſe on the utility and intent of portrait-painting, could not have better defined the art than this little ſentence. Mrs. Wilſon deſiring Lee Boo, who was on the oppoſite ſide of the table, to ſend her ſome cherries, perceiving that he was going to take them up with his fingers, jocoſely noticed it to him; when he inſtantly reſorted to a ſpoon; but ſenſible that he had diſcovered a little unpoliteneſs, his countenance was in a moment covered with a bluſh, that viſibly forced itſelf through his dark complexion.

Whenever he had opportunities of ſeeing gardens, he was an attentive obſerver of the plants and fruit-trees, would aſk many queſtions about them, and ſay, when he returned home, he would take ſeeds of ſuch as would live and flouriſh in Pelew; talked frequently of the things he ſhould then perſuade the king to alter, or adopt; and appeared, in viewing moſt objects, to conſider how far they might be rendered uſeful to his own country.

He was now proceeding with haſty ſtrides in gaining the Engliſh language, and advancing ſo rapidly with his pen, that he would, probably, in a very ſhort time, have written a very fine hand, when he was overtaken by that very diſeaſe, which with ſo much caution had been guarded againſt. On the 16th of December, 1784, he felt himſelf much indiſpoſed, and in a day or two after an eruption appeared all over him. Dr. Smyth told the family, that there was not a doubt with reſpect to the diſeaſe; and was ſorry to add (what he thought it right to prepare them for) that the appearances were ſuch as almoſt totally precluded the hope of a favourable termination.

Mrs. Wilſon happening to have ſome indiſpoſition at this time, which confined her to her bed, Lee Boo, on hearing of it, became impatient, ſaying, *What, mother ill! Lee Boo get up to ſee her;* which he did, and would go to her apartment, to be ſatisfied how ſhe really was.

On the Thurſday before his death, walking acroſs the room, he looked at himſelf in the glaſs (his face being then much ſwelled and diſfigured) he ſhook his head, and turned away, as if diſguſted at his own appearance, and told Mr. Sharp, *that his father and mother much grieve, for they knew he was very ſick;* this he repeated ſeveral times. At night, growing worſe, he began to think himſelf in danger: he took Mr. Sharp by the hand, and fixing his eyes ſtedfaſtly on him, with earneſtneſs ſaid, *Good friend, when you go to Pelew, tell Abba Thulle, that Lee Boo take much drink, to make ſmall-pox go away, but he die: that the captain and mother* (meaning Mrs. Wilſon) *very kind;—all Engliſh very good men—was much ſorry he could not ſpeak to the king the number of fine things the Engliſh had got.* Then he reckoned what had been given him as preſents, which he wiſhed Mr. Sharp would diſtribute, when he went back, among the chiefs; and requeſted that very particular care might be taken of the blue glaſs barrels, or pedeſtals, which he directed ſhould be given to the king. Poor Tom Roſe, who ſtood at the foot of his young maſter's bed, was ſhedding tears at hearing all this, which Lee Boo obſerving, rebuked him for his weakneſs, aſking, *Why ſhould he be crying ſo becauſe Lee Boo die?*

Whatever he felt, his ſpirit was above complaining; and Mrs. Wilſon's chamber being adjoining to his own, he often called out to inquire if ſhe was better, always adding (leſt ſhe might ſuffer any diſquietude on his account) *Lee Boo do well, mother.* The ſmall-pox, which had been out eight or nine days, not riſing, he began to feel himſelf ſink; and told Mr. Sharp, *he was going away.* His mind, however, remained perfectly clear and calm to the laſt, though what he ſuffered in the latter part of his exiſtence, was ſevere, indeed! The ſtrength of his conſtitution ſtruggled long and hard againſt the venom of his diſtemper, till exhauſted nature yielded in the conteſt.

Mr. Keate proceeds with his affecting narrative, as follows:

"Dr. Smyth had the goodneſs, every day, on his return from Rotherhithe, to inform me (captain Wilſon) of the ſtate of his patient, but never gave me any hope of his recovery. Being under an engagement with my family to paſs a week at the houſe of my friend, Mr. Brook Watſon, at Sheen, who was equally anxious and alarmed as ourſelves for this amiable young man, I requeſted the doctor would have the goodneſs to continue to me his information. The ſecond day after I left town, I received the intelligence of his death, which deeply affected us all. I cannot give an account of this malancholy event ſo well as by tranſcribing Dr. Smyth's letter, by which it was conveyed to me.

"*Monday, Dec.* 27, 1784.

"MY DEAR SIR,

"It is an unpleaſant taſk for me to be the herald of bad news; yet, according to my promiſe, I muſt inform you of the fate of poor Lee Boo, who died this morning without a groan, the vigour of his mind and body reſiſting to the very laſt. Yeſterday, the ſecondary fever coming on, he was ſeized with a ſhivering fit, ſucceeded by a head-ache, violent palpitation of the heart, anxiety, and difficult breathing; he again uſed the warm bath, which, as formerly, afforded him a temporary relief. He had a bliſter put on his back, which was as ineffectual as thoſe applied to his legs. He expreſſed all his feelings to me, in the moſt forcible and pathetic manner, put my hand upon his heart, leaned his head on my arm, and explained his uneaſineſs in breathing; but when I was gone, he complained no more, ſhewing that he complained with a view to be relieved, not to be pitied.—In ſhort, living or dying, he has given me a leſſon which I ſhall never forget; and ſurely, for patience and fortitude, he was an example worthy of the imitation of a ſtoic! I did not ſee captain Wilſon when I called this morning, but the maid-ſervant was in tears, and every perſon in the family wore the face of grief: poor Lee Boo's affectionate temper made every one look upon him as a brother or a child. Compliments to the ladies, and to Mr. Watſon, who, I make no doubt, will all join in regretting the untimely end of our poor prince; from you, my friend, ſomething more will be expected; and though you cannot bring him back to life, you are called upon (particularly conſidering his great attachment to you) not to let the memory of ſo much virtue paſs away unrecorded. But I am interrupted in theſe melancholy reflections, and have only time to aſſure you of (what will never paſs away but with myſelf) the ſincere friendſhip of

"Your affectionate, &c.

"JAMES CARMICHAEL SMYTH."

Captain Wilſon notified to the India-Houſe the unfortunate death of this young man; and received orders to conduct every thing with proper decency reſpecting his funeral. He was interred in Rotherhithe church-yard, the captain and his brother attending. All the young people of the academy joined in this teſtimony of regard; and the concourſe of people at the church was ſo great, that it appeared as if the whole pariſh had aſſembled, to join in ſeeing the laſt ceremonies paid to one, who was ſo much beloved by all who had known him in it.

The India-Company, ſoon after, ordered a tomb to be erected over his grave, with the following inſcription:

TO

TO THE MEMORY
Of Prince LEE BOO,
A Native of the Pelew, or Palos-Iſlands,
And Son to ABBA THULLE, Rupack, or King
Of the Iſland COOROORAA;
Who departed this Life on the 17th of December 1784,
Aged 20 Years.
This Stone is inſcribed
By the Honourable United Eaſt-India-Company,
As a Teſtimony of Eſteem for the humane and
Kind Treatment
Afforded by his Father to the Crew of their Ship,
The Antelope, Captain Wilſon,
Which was wrecked off that Iſland,
On the Night of the 9th of Auguſt, 1783.

Stop, Reader, ſtop!—let NATURE claim a tear;
A Prince of *mine*—LEE BOO lies bury'd here.

From the above recited anecdotes of this amiable youth, cut off in the moment that his character began to bloſſom, what hopes might not have been entertained of the future fruit ſuch a plant would have produced! He had both ardour and talents for improvement, and every gentle quality of the heart to make himſelf beloved; ſo that, as far as the dim ſight of mortals is permitted to penetrate, he might, had his days been lengthened, have carried back to his own country, not the vices of a new world, but thoſe ſolid advantages which his own good ſenſe would have ſuggeſted, as likely to become moſt uſeful to it.

The evening before the Oroolong ſailed, the king aſked captain Wilſon, how long it might be before his return to Pelew? And being told, that it would probably be about thirty moons, or might chance to extend to ſix more. Abba Thulle drew from his baſket a piece of line, and, after making thirty knots on it, a little diſtance from each other, left a long ſpace, and then adding ſix others, carefully put it by.

As the ſlow but ſure ſteps of time have been moving onward, the reader's imagination will figure the anxious parent reſorting to this cheriſhed remembrancer, and with joy untying the earlier records of each elapſing period:—as he ſees him advancing on his line, he will conceive that joy redoubled; and when nearly approaching to the thirtieth knot, almoſt accuſing the planet of the night for paſſing ſo tardily away.

When verging towards the termination of his lateſt reckoning, he will then picture the mind of the good old king, glowing with parental affection, occaſionally alarmed by doubt, yet ſtill buoyed up by hope; he will then fancy him pacing inquiſitively the ſeaſhore, and often commanding his people to aſcend every rocky height, and glance their eyes along the level line of the horizon which bounds the ſurrounding ocean, to ſee if haply it might not in ſome part be broken by the diſtant appearance of a returning ſail.

Laſtly, he will view the good Abba Thulle, wearied out by that expectation which ſo many returning moons, ſince his reckoning ceaſed, have by this time taught him he had nouriſhed in vain. But the reader will bring him back to his remembrance, as armed with that unſhaken fortitude, which was equal to the trials of varying life. He will not in him, as in leſs manly ſpirits, ſee the paſſions ruſhing into oppoſite extremes:—hope turned into deſpair—affection converted to hatred. No—after ſome allowance for their natural fermentation, he will ſuppoſe them all placidly ſubſiding into the calm of reſignation. In proof of the truth of theſe remarks, we doubt not, it will afford peculiar ſatisfaction to our readers, to be informed, that in the beginning of September, 1791, advices were received by the Lord Thurlow Eaſt-Indiaman, that the Panther, of 200 tons, commanded by lieutenant M'Cluer, with the Endeavour, of 60 tons, had ſailed from Bombay on the 23d of Auguſt, 1790, and arrived ſafely at the Pelew-Iſlands.

On their arrival, they obſerved two canoes, which made towards the ſhore, inſtead of coming to the ſhips, as had been expected. Theſe, they ſuppoſed, were going to give an account to Abba Thulle of their arrival; and in this conjecture they were not miſtaken; for ſoon after, they ſaw a number of canoes coming after them, in one of which was the good old king.

Immediately on his coming on board, he went up to the captain, taking him, by his dreſs, to be his former friend, captain Wilſon, and immediately felt on his arm for the *bone* (a mark of honour he had conferred on the captain) and inquired what was become of it. Finding his miſtake in the perſon, and being told that captain Wilſon was alive and well in England, he expreſſed great ſatisfaction.

Captain M'Cluer then communicated to him the death of Lee Boo, and the diſorder of which he died; for which event, the good old man ſaid, that he had prepared his mind; that he had counted up to ſome ſcore moons, but the time being paſſed, he had deſpaired of ever ſeeing the Engliſh more, judging that they had either periſhed in their voyage to China, or did not intend to return again to viſit his iſlands: he was, however, perfectly confident in the goodneſs of the Engliſh, and that captain Wilſon would take care of his ſon.

In relating the death of Blanchard (the ſeaman who had been left there by his deſire) he was full of grief, and could hardly expreſs himſelf, ſo much did he feel his loſs. Blanchard was mortally wounded in an engagement with the people of Pelelew, and died ſoon after; as did the great and good friends of captain Wilſon and his crew, Raa Hook, and Arra Kooker. During the time of captain M'Cluer's ſtay at the iſlands, which was near a month, the utmoſt harmony and friendſhip prevailed; and the good old king liberally ſupplied them with fiſh and yams, when the canoes came in, as he uſed to do to his former friends.

We have now given a circumſtantial review of regions firſt explored in the vaſt Pacific-Ocean, by the lateſt, moſt ingenious, and enterpriſing navigators; in which the inquiſitive mind has been preſented with a diſplay of human nature, in its rude and uncultivated ſtate, and have therein pictured ſcenes tending to excite equal horror and amazement; but are happy to obſerve, that we have been enabled to cloſe this part of the New Diſcoveries, with a copious deſcription of the Pelew-Iſlands, the character and virtues of whoſe inhabitants appear in the moſt amiable light, and cannot fail to affect the intelligent and philanthropic reader with the moſt pleaſing ſenſations in the peruſal.

†

APPENDIX.

Additional Information reſpecting the late Prince Le Boo, relating to the Diverſions of the Engliſh, and ſent to his Father, the King of the Pelew Iſlands.

"WHAT I have ſaid to you, beloved ſire, on the politics of this people, has been ſhort and ſuperficial; becauſe you have taught me to ſpeak with diffidence and reſerve on matters of this high nature; and becauſe the laws, by which this country is governed, are too numerous and profound to be haſtily learned. Their cuſtoms and manners alſo require a longer reſidence than I have yet made among them, to be clearly comprehended, and fairly judged. Our prejudices do not ſuffer us to reflect, that theſe ought always to be conſidered with a reference to the climate, wants, and civil condition, of the country. As experience ripens my judgment, expect from me better remarks on all theſe particulars: at preſent, accept, with your uſual indulgence ſuch obſervations as have occurred to me; they will at leaſt ſerve to mark the ſtages of my improvement, as you compare thoſe of different dates together.

"I ſhall firſt of all preſent you with a ſketch of their amuſements, in which you told me, in our laſt converſation, before I mounted into the large floating-caſtle, I ſhould ſee a vaſt deal of the temper and natural character of the people I was about to viſit. You will ſcarcely credit it, but I aſſure you, I make continual miſtakes between their amuſements and their buſineſs; and ſometimes imagine they are purſuing ſome ſport, when, in reality, they are occupied about objects of a ſerious and ſolemn nature: for, notwithſtanding this people are capable of ſuch ſtupendous efforts of art and ſcience, they have a way of mixing a littleneſs of character with their grandeur of ſpirit, qualities that are held incompatible with us; and thus is produced a ſort of farcical and ridiculous diſproportion. This equivocal appearance of many of their proceedings will, doubtleſs, fill my letters with numerous errors; but I ſhall take care to rectify them as I advance in my acquaintance with the ſubject, ſo as in the end to communicate ſome advantage to yourſelf, and conſequently to my dear country, from theſe opportunities which I owe to your indulgence.

"To begin, then, you muſt know that the other day I was carried to a very large room, in which they told me was aſſembled the great council of the nation: but I preſently ſaw through it, and perceived clearly that it was a kind of game, in imitation of a ſenate; and, indeed, it was performed ſo well, that had it not been for a great deal of laughing, coughing, ſcraping, and hallooing, it might have been impoſed upon me for a real aſſembly of the great men of the nation, met to debate on its moſt important intereſts; for here and there, there was a vaſt deal of animation aſſumed, and eloquence diſplayed, and even moments of gravity, ſuch as characterize all our meetings for the good of our country. My ignorance of the language diſqualified me from participating in the joke; but, from the eagerneſs and perſeverance with which it was purſued, I could plainly perceive that it was very entertaining to thoſe engaged.

"The following night I was taken to an exhibition, called a maſquerade, which I only mention here as a contraſt to the humorous ſcene I was preſent at the day before, ſince it ſeems to be more properly a ceremony than an amuſement; I mention it, too, as one inſtance, among a very few, in which this generous people have uſed a reſerve toward me in reſpect of the explanation of their manners and cuſtoms; for they fain would have perſuaded me, that this maſquerade, as it is called, was a mere diverſion among the young men and women of quality, while nothing could be more clear than that it was a religious celebration. I can conceive it ſo natural to laugh at the practices of other countries, eſpecially thoſe which appertain to their religion, that I muſt own, I think them entirely excuſable for veiling thoſe rites and myſteries, for the preſent, from my eyes, until I ſhall have worn off my firſt prejudices. There was ſomething ſplendidly ſolemn in this whole ceremony; and, if there was any interruption to the gravity of the ſcene, it was occaſioned by ſome ſtrange cries and whimſical contortions, which, however ridiculous they appear to the inhabitants of other countries, I have no doubt, make a very ſerious impreſſion on the boſoms of the natives, as being in honour of the different deities they adore. There was a vaſt variety of dreſſes, which I conceived to be repreſentative of particular orders and deſcriptions, who then, through the medium of one of theſe fraternity, offered their reſpective adorations; while the prieſts wore all the ſame clothing, called by the natives a domino. I ſay I conceived all this, becauſe a certain awe and timidity with which I felt myſelf inſpired, made me forbear any queſtion that might ſeem to reſult from impertinent curioſity.

"There is one circumſtance reſpecting this country, which, to my ideas, is altogether unaccountable; and that is, the great leaſure they have for idleneſs, in the midſt of ſuch proofs of their labour and ingenuity as overpower the imagination. It ſurpriſes me the more, my beloved father, becauſe you know I have been accuſtomed to ſee every individual uſefully employed in my own country; it being one of your favourite maxims, that the happineſs of your people requires it. Thou, who art a mighty prince, art likewiſe the beſt workman in thy dominions; for who can make hatchets to equal thine? But here the great men can bear to ſit whole days unemployed, and will eat their food with inſtruments which other hands have formed, and live in houſes with the very principle of whoſe conſtruction they are little acquainted. From all this muſt reſult a vaſt deal of idle time to be filled up with mere amuſements; and it is aſtoniſhing how many theſe people have imagined, of which we have no conception. They are extremely fond of dancing; a paſtime which implies much leſs exertion with them than with us, and conſiſts chiefly in eating, drinking, and wearing fine ornaments. They extend this accompliſhment even to the brute creation; for I obſerve, that their dogs are taught to dance in the ſtreets of the capital: ſo much leiſure time have Engliſhmen to beſtow upon theſe diverſions.

"Their hunting is of various kinds; but the principal object of it is a poor little timid animal they call a hare: I have not yet ſeen it, but I ſhall hope to be enabled to ſend you a deſcription of it, together with an account of the birds and beaſts of the country. I cannot, however, forbear mentioning one remarkable property aſcribed to it, that of loving to be hunted, although its entertainment conſiſts ſolely in being torn to pieces by dogs; I was aſſured, however, of this by a perſon who is very fond of the chace. Another ſpecies of hunting, in which apparently they take great delight, is that of a huge, animal called in their language an ox; and this takes place often in the ſtreets of the city, to the great terror of all who do not mix in the ſport. There are no dogs uſed in this kind of hunting; at leaſt I could perceive none: indeed I was hurried away, by my kind protectors, ſo quick when the beaſt approached, that I could ſee but little of their mode of proceeding; though I beheld enough to make me wonder at ſuch a predilection in a people, who are, in a thouſand reſpects, ſo civilized and ſo humane.

"In my future account of the beaſts of this country, I ſhall ſay a great deal to you, by and by, about a

beautiful animal called the horſe, which will, with great eaſe and celerity, bear a man from place to place upon his back. They make this animal conducive to their ſport in an amuſement they term racing, in which two or more of them are made to run one againſt the other, with men on their backs, and wounded all the way with ſharp ſpikes. I cannot help wondering how good men can be pleaſed with ſuch fights; for it ſeems an unnatural and ungenerous conteſt, when two animals are urged beyond their ſtrength, and forced on by violent treatment. I am ſorry to find fault with a people to whom we have all, and myſelf particularly, been ſo greatly obliged; ſo that I am drawn oppoſite ways by truth and gratitude: but then again I conſider that nothing is ſo ſacred as truth; and that, after all, my greateſt gratitude is due to my father and my king, who requires that I ſhould always tell him the truth.

The other day I obſerved two men in a field, ſtripped as naked as it is the cuſtom with us, and beating one another till they were covered with blood, for the diverſion of an infinite number of ſpectators, who ſeemed to be delighted with the ſcene. Though our enemies taken in war have often been ſlaughtered before my eyes, yet I could ſo ill bear to ſee this fury between countrymen, and, as I was told, between men who had never quarrelled, and all to amuſe their fellow-creatures, that I turned away my eyes, and was ſorrowful all the reſt of the day. It added a good deal to my chagrin, to obſerve, in my way home, two dogs very furiouſly engaged; and, while they were miſerably tearing one another to pieces, a vaſt number of people gathering round them, and provoking their fury by clapping their hands, and a thouſand ſavage geſticulations.

They have alſo another ſport here, of a piece with ſome which I have already-mentioned, termed by the natives cock-fighting; though I am told that this amuſement is a little on the decline. The entertainment conſiſts in contemplating a very fierce combat between two large birds of great beauty, and ſingular uſe to mankind, which they arm with inſtruments that enable them to inflict dreadful wounds on each other, till one of them expires in conſiderable torture. I am ſorry to add, that I have ſeen ſome poltroons amuſe themſelves with throwing ſticks at this noble bird, which, for that purpoſe, they had confined by the leg. Their diverſions within doors are in ſuch great variety, that it would rob more important objects of all my time, if I were to think of deſcribing them to you; beſide which, I have only glanced at the greater part of them: for, my dear friend, here I am more profitably employed when I am improving myſelf in the language, or am acquiring knowledge, which may turn to the future benefit of your majeſty's people.

Their principal amuſement, in their own houſes, appears to be derived from a certain number of thin ſubſtances, ſpotted in a certain manner with different colours, and which, though they allow that they gain no ideas from them, will entertain them during the time that your majeſty would take to repel an invaſion of your dominions. I am prejudiced againſt this amuſement; becauſe I have obſerved it operate very unpleaſantly on the countenances of thoſe who are engaged in it; and I have ſeen ſome very handſome perſons, while playing at cards, entirely ſtripped of what rendered them before ſo amiable in my eyes. They have not yet made me comprehend how it can be; but they tell it to me as an undoubted truth, that ſometimes men loſe every thing that is valuable to them in this amuſement, if it deſerve that name, after we are told of this its deſtructive tendency; ſo that be aſſured, beloved father, I will not attempt to acquire ſo pernicious a talent. But the paſtime of which this great people ſeems moſt enamoured, is what their language denominates a play. I have not yet been preſent at one, ſo that I cannot pretend to give you any account of it; but as far as I can underſtand ſuch deſcriptions as have been given me of it, it is a powerful engine, whether it be uſed on the ſide of vice or virtue. I will ſend you a full account of the firſt which I ſhall be permitted to attend; but I fear that the ſilence obſerved about this amuſement, by my deareſt friends, is on the occount of the neglect into which this its moral efficacy may have ſunk in the preſent times.

The other day I was preſent at a diverſion, which at firſt wore a formidable appearance, but ſoon turned out to be a very inſignificant ſpectacle.—A number of perſons, armed with weapons, which they call bows and arrows, and which ſerve to the ſame purpoſe pretty nearly as our ſlings and ſpears, met together on a ſpacious plain. The profeſſed object of their meeting is to ſend their arrows into a painted piece of wood, which they denominate a target; but not more than a ſmall number of thoſe that came with that pretence, partook at all in the diverſion; ſo that, to make a diſplay before a great number of the women of the country, of their perſons and decorations, looks to be, with the major part, the real object which aſſembles them. I could not eaſily be convinced, that all this noiſe and parade was to anſwer no political end: at one time it occured to me, that it was a ſort of divination, by which heaven was conſulted in the appointment to certain poſts of eminence, and that the generals of armies, and captains of expeditions, were choſen in this kind of lottery; at another, that ſome ſecret terrors of an invaſion had begun to ſpread in the country, and that this martial exerciſe was meant as preparative to a vigorous defence. I was at length, however, perſuaded, that they were a very peaceable ſet of people, and that all this uproar proceeded only from an outrageous love of flouriſh and ſhow, and, in fact, was nothing more than an apology for a feather in their hats. I was a little afraid at firſt of coming near them; but, upon trial, I found them ſo familiarly and tamely diſpoſed, that one of them ſuffered me to take his hat off his head, and ſtrutted to and fro, apparently in high good humour, while I admired his feather. There is always a great gathering from all parts to ſee this ſpectacle; and the ladies, for whoſe amuſement the whole is deſigned, appear extravagantly pleaſed with beholding their huſbands and relatives ſo cheaply metamorphoſed into champions and warriors.

Extracts from Mr. Bruce's Travels in Abyſſinia.

ON the 27th of January, ſays Mr. Bruce, we paſſed among ruined villages, the monuments of Ras Michael's cruelty or juſtice; for it is hard to ſay whether the cruelty, robberies, and violence of the former inhabitants did not deſerve the ſevereſt chaſtiſement. We ſaw many people feeding cattle on the plain, and we again opened a market for flour and other proviſions, which we procured in barter for cohol, incenſe, and beads. They were of a lighter colour, and taller than thoſe at Kella. Their noſes ſeemed flatter than thoſe of the Abyſſinians we had yet ſeen. Perhaps the climate here was beginning that feature ſo conſpicuous in the negroes in general, and particularly of thoſe called Shangalla, from whoſe country theſe people are not diſtant above two days journey. The 29th, we continued our journey through thick woods of ſmall trees, quite overgrown, and covered with wild oats, reeds, and long graſs, ſo that it was very difficult to find a path through them. Hauza was ſix miles ſouth, pleaſantly ſituated among a variety of mountains, all of different and extraordinary ſhapes; ſome are ſtraight like columns, and ſome ſharp in the point,

and

and broad in the baſe, like pyramids and obeliſks, and ſome like cones. All theſe, for the moſt part inacceſſible, unleſs with pain and danger to thoſe that know the paths, but they are places of refuge and ſafety in time of war, and are agreeably ſeparated from each other by ſmall plains producing grain. Some of theſe mountains, however, have at the top water and ſmall flats that can be ſown, ſufficient to maintain a number of men, independent of what is doing below them.

The 30th, we encamped at Addergey. The hyænas devoured one of the beſt of our mules. They are here in great plenty, and ſo are lions; the roaring and grumbling of the lions, in the part of the wood neareſt our tent, greatly diſturbed our beaſts, and prevented them from eating their provender. I lengthened the ſtrings of my tent, and placed the beaſts between them. The white ropes and the tremulous motion made by the impreſſion of the wind, frightened the lions from coming near us. I had procured two ſmall braſs bells, ſuch as the mules carry; theſe I tied to the ſtorm-ſtrings of the tent, where their noiſe, no doubt, greatly contributed to our beaſts ſafety from theſe ravenous, yet cautious animals, ſo that we never ſaw them; but the noiſe they made, and, perhaps, their ſmell, ſo terrified the mules, that, in the morning, they were drenched in ſweat as if they had been a long journey. But the bruti ſh hyæna was not ſo to be deterred. I ſhot one of them dead, and, I fired at another ſo near, that I was confident of killing him. Whether the balls had fallen out, or that I had really miſſed him with the firſt barrel, I know not, but he gave a ſnarl and a kind of bark upon the firſt ſhot, advancing directly upon me as if unhurt. The ſecond ſhot, however, took place, and laid him without motion on the ground. Yaſine and his men killed another with a pike; and ſuch was their determined coolneſs, that they ſtalked round about us with the familiarity of a dog, or any other domeſtic animal brought up with man. But we were ſtill more incommoded by a leſſer animal, a large black ant, about an inch long, which coming out from under the ground, demoliſhed our carpets, which they cut all into ſhreds, and part of the lining of our tent likewiſe, and every bag or ſack they could find. We had firſt ſeen them in great numbers at Angari, but here they were intolerable. Their bite cauſes a conſiderable inflammation, and the pain is greater than that which ariſes from the bite of a ſcorpion.

February 1ſt, the Shum, (or governor of the place) ſent his people to value our merchandiſe, that we might pay cuſtom. I humoured them ſo far as to open the caſes where were the teleſcopes and quadrant. They could only wonder at things they had never before ſeen.

Next day the Shum came himſelf, and a violent altercation enſued. At length he ſoftened his tone, and ſaid, he would diſpatch us on the morrow, and would ſend us that evening ſome proviſions. And, indeed, we now began to be in need, having only flour barely ſufficient to make bread for one meal next day. The miſerable village had nothing to barter with us; and none from the villages about the Shum had come near us, probably by his order. I gave him a ſmall preſent, and he went away repeating his promiſes. But all that evening paſſed without proviſion, and all next day without his coming, ſo we got every thing ready for our departure. Our ſupper did not prevent our ſleeping, as all our proviſion was gone, and we had taſted nothing all that day ſince our breakfaſt.

On the 4th, we left Addergey: hunger preſſing us. While employed in making ready for our departure, which was juſt in the dawn of day, a hyæna, unſeen by any of us, faſtened upon one of the aſſes. I was buſied in gathering the tent-pins into a ſack, and had placed my muſket and bayonet ready againſt a tree, as it is at that hour, and the cloſe of the evening, you are always to be on guard againſt banditti. A boy ſaw the hyæna firſt, and flew to my muſket. Yaſine was disjoining the poles of the tent, and, having one half of the largeſt in his hand, he ran to the aſſiſtance of the aſs, and in that moment the muſket went off, luckily charged with only one ball, which gave Yaſine a fleſh wound between the thumb and forefinger of his left-hand. The boy inſtantly threw down the muſket, which had terrified the hyæna, but he ſtood ready to fight Yaſine, who, not amuſing himſelf with the choice of weapons, gave him ſo rude a blow with the tent-pole upon his head, that it felled him to the ground; others, with pikes, put an end to his life. What ſufficiently marked the voracity of theſe beaſts, the hyænas, was, that the bodies of their dead companions, which we hauled a long way from us, and left there, were almoſt entirely eaten by the ſurvivors the next morning; and I then obſerved, for the firſt time, that the hyæna of this country was a different ſpecies from thoſe I had ſeen in Europe, which had been brought from Aſia or America.

At one o'clock we alighted at the foot of a mountain called Debra Toon. The mountains of Waldubba, reſembling thoſe of Adebarea, lay north of us about four or five miles. Waldubba, which ſignifies the *Valley of the Hyæna*, is a territory inhabited by the monks, who, for mortification's ſake, have retired to this unwholeſome, hot, and dangerous country, voluntarily to ſpend their lives in penitence, meditation, and prayer. This, too, is the only retreat of great men in diſgrace or in diſguſt. They firſt ſhave their hair, and put on a cowl like the monks, renouncing the world for ſolitude, and taking vows which they reſolve to keep no longer than exigencies require; after which they return to the world again, leaving their cowl and ſanctity in Waldubba. Theſe monks are held in great veneration; are believed by many to have the gift of prophecy, and ſome of them to work miracles, and are very active inſtruments to ſtir up the people in time of trouble. Violent fevers perpetually reign there. The inhabitants are all of the colour of a corpſe; and their neighbours, the Shangalla, by conſtant inroads, deſtroy many of them.

The 5th we encamped at the foot of the mountain Adama. On the other ſide of this valley are the broken hills which conſtitute the rugged banks of the Anzo. Behind theſe, the irregular and broken mountains of Salent appear in forms which European mountains never wear; and ſtill higher, above theſe, is the long ridge of Samen, which run along in an even ſtretch till they are interrupted by the high conical top of Lamalmon, reaching above the clouds, and reckoned to be the higheſt hill in Abyſſinia, over the ſteepeſt part of which, the road of all caravans to Gondar muſt lie. In this territory are ſeveral conſiderable villages; the people are much addicted to robbery, and rebellion, in which they were engaged at this time.

On the 8th, we began to aſcend Lamalmon, through a very narrow road, or rather path, for it ſcarcely was two feet wide any where. It was a ſpiral winding up the ſide of the mountain, always on the very brink of a precipice. Torrents of water, which in winter carry prodigious ſtones down the ſide of this mountain, had divided this path into ſeveral places, and opened to us a view of that dreadful abyſs below, which few heads can (mine at leaſt could not) bear to look down upon. We were here obliged to unload our baggage, and, by ſlow degrees, crawl up the hill, carrying them little by little upon our ſhoulders round theſe chaſms where the road was interſected. The mountains grow ſteeper, the paths narrower, and the breaches more frequent as we aſcend. Scarce were our mules, though unloaded, able to ſcramble up, but were perpetually

perpetually falling; and, to increaſe our difficulties, which, in ſuch caſes, ſeldom come ſingle, a large number of cattle was deſcending, and ſeemed to threaten to puſh us all into the gulph below. After two hours of conſtant toil, we alighted in a ſmall plain, neither beaſt nor man being able to go a ſtep further.——The air on Lamalmon is pleaſant and temperate. We found here our appetite return, with a cheerfulneſs, lightneſs of ſpirits, and agility of body, which indicated that our nerves had again reſumed their wonted tone, which they had loſt in the low, poiſonous, and ſultry air on the coaſt of the Red Sea. The ſun here is indeed hot, but in the morning a cool breeze never fails, which increaſes as the ſun riſes high. In the ſhade it is always cool.

Lamalmon is the paſs through which the road of all caravans to Gondar lies. It is here they take an account of all baggage and merchandiſe, which they tranſmit to the chief officer of the cuſtoms at Gondar. There is alſo a preſent due to the private proprietor of the ground; and this is levied with great rigour and violence, and, for the moſt part, with injuſtice; ſo that this ſtation is always the place where the firſt robberies and murders are committed in unſettled times. Though we had nothing with us which could be conſidered as ſubject to duty, we ſubmitted every thing to the will of the robber of the place, and gave him his preſent. If he was not ſatisfied, he ſeemed to be ſo, which was all we wanted. We had obtained leave to depart early in the morning of the 9th, but it was with great regret we were obliged to abandon our Mahometan friends into hands that ſeemed diſpoſed to ſhew them no favour. The king was far from Gondar, and various reports were ſpread abroad about the ſucceſs of the campaign; and theſe people only waited for an unfavourable event to make a pretence for robbing our fellow-travellers of every thing they had.

The perſons whoſe right it was to levy theſe contributions were two, a father and ſon; the old man was dreſſed very decently, ſpoke little, but ſmoothly, and had a very good carriage. He profeſſed a violent hatred to all Mahometans, on account of their religion, a ſentiment which ſeemed to promiſe nothing favourable to our friend Yaſine and his companions; but, in the evening, the ſon, who ſeemed to be the active man, came to our tent, and brought us a a quantity of bread and bouza, which his father had ordered before. He ſeemed to be much taken with our fire-arms, and I gave him every ſort of ſatisfaction. He brought his gun, and inſiſted on ſhooting at marks. I humoured him in this; but as I uſed a rifle, which he did not underſtand, he found himſelf overmatched, eſpecially by the greatneſs of the range, for he ſhot ſtraight enough. I then ſhewed him the manner we ſhot flying, there being quails in abundance, and wild pigeons, of which I killed ſeveral on wing, which left him in the utmoſt aſtoniſhment. Having got on horſeback, I next went through the exerciſe of the Arabs, with a long ſpear and a ſhort javelin. This was more within his comprehenſion, as he had ſeen ſomething like it; but he was wonderfully taken with the fierce and fiery appearance of my horſe, and, at the ſame time, with his docility, the form of his ſaddle, bridle, and accoutrements. He threw at laſt the ſandals off his feet, twiſted his upper garment into his girdle, and ſet off at ſo furious a rate, that I could not help doubting whether he was in his ſober underſtanding. It was not long till he came back, and with him ſervants carrying a ſheep and a goat, and a jar of honey-wine. I had not yet quitted the horſe; and when I ſaw what his intention was, I put the horſe to a gallop, and, with one of the barrels of the gun, ſhot a pigeon, and imediately fired the other into the ground. There was nothing after this that could have ſurprized him, and it was repeated ſeveral times at his deſire; after which he went into the tent, where he invited himſelf to my houſe at Gondar. There I was to teach him every thing he had ſeen. We now ſwore perpetual friendſhip; and I introduced the caſe of our fellow-travellers, and obtained a promiſe that we ſhould have leave to ſet out together.

On the 9th, we took leave of the friends whom we had ſo newly acquired at Lamalmon. We began to aſcend what ſtill remained of the mountain, which, though ſteep and full of buſhes, was much leſs difficult than that which we had paſſed. When we arrived at the top of Lamalmon, which has, from below, the appearance of being ſharp-pointed, we were much ſurpriſed to find there a large plain, part in paſture, but more bearing grain. It is full of ſprings, and ſeems to be the great reſervoir from whence ariſe moſt of the rivers that water this part of Abyſſinia. A multitude of ſtreams iſſue from the very ſummit in all directions; the ſprings boil out from the earth in large quantities, capable of turning a mill. They plow, ſow, and reap here at all ſeaſons; and the huſbandman muſt blame his own indolence, and not the ſoil, if he has not three harveſts. We ſaw, in one place, people buſy cutting down wheat; immediately next to it, others at the plough; and the adjoining field had green corn in the ear; a little further, it was not an inch above the ground.

On the 10th, we continued along the plain on the top of Lamalmon; and encamped at ſome villages called Macara. The ground was every where burnt up; and, though the nights were very cold, we had not obſerved the ſmalleſt dew ſince our firſt aſcending the mountain.

On the 12th we travelled through the plain of Woggora. The country now grows inconceivably populous; vaſt flocks of cattle of all kinds feed on every ſide. having large and beautiful horns, exceedingly wide, and boſſes upon their backs like camels; their colour is moſtly black.

After having ſuffered, with infinite patience and perſeverance, the hardſhips and danger of this long and painful journey, we were gratified, at laſt, with the ſight of Gondar, about ten miles diſtant. The king's palace is diſtinctly ſeen, but none of the other houſes, which are covered by the multitude of trees, growing in the town, ſo that it appears one thick, black wood. Behind it is Azazo, likewiſe covered with trees. On a hill is the large church of Tecla Haimanout, and the river below it makes it diſtinguiſhable; ſtill further on is the great lake Tzana, which terminates our horizon. We paſſed ſeveral plantations of ſugar-canes, which grow here *from the ſeed*. On the 15th reſted on the river Angrab, about half a mile from Gondar. This country is full of large ants, and grodigious ſwarms of rats and mice, which conſume immenſe quantities of grain; to theſe plagues may be added ſtill one, the greateſt of them all, bad government, which ſpeedily deſtroys all the advantages they reap from nature, climate, and ſituation.

We were much ſurpriſed at arriving on the Angrab, that no perſon had come to us from Petros, Janni's brother. We found afterwards, indeed, that he had taken fright upon ſome menacing words from the prieſts, at hearing a Frank was on his way to Gondar, and that he had, ſoon after, ſet out for Ibaba, where Ras Michael was, to receive his directions concerning us. This was the moſt diſagreeable accident could have happened to me. I had not a ſingle perſon to whom I could addreſs myſelf for any thing. My letters were for the king and Ras Michael, and could be of no uſe, as both were abſent; and though I had others for Petros and the Greeks, they, too, were out of town.

Many Mahometans came to the Angrab to meet the caravan. They all knew of my coming, and I ſoon explained my ſituation. I had Janni's letters to Negade Ras Mahomet, the chief of the Moors at Gondar,

Gondar, and principal merchant in Abyſſinia, who was abſent likewiſe with the army. But one of his brethren, a ſagacious, open-hearted man, deſired me not to be diſcouraged; that as I had not put off my Mooriſh dreſs, I ſhould continue it; that a houſe was provided for Mahomet Gibberti, and thoſe that were with him, and that he would put me immediately into poſſeſſion of it, where I might ſtay, free from any intercourſe with the prieſts, till Petros or the Ras ſhould return to Gondar. This advice I embraced with great readineſs, as there was nothing I was ſo much afraid of as an encounter with fanatical prieſts before I had obtained ſome protection from government, or the great people in the country. After having concerted theſe meaſures, I reſigned myſelf to the direction of my Mooriſh friend Haggi Saleh.

The Mooriſh town at Gondar conſiſts of about 3000 houſes, ſome of them ſpacious and good. I was put in poſſeſſion of a very neat one, deſtined for Mahomet Gibberti. Flour, honey, and ſuch-like food, Mahometans and Chriſtians eat promiſcuouſly, and ſo far I was well ſituated. As for fleſh, although there was abundance of it, I could not touch a bit of it, being killed by Mahometans, as that communion would have been looked upon as equal to a renunciation of Chriſtianity.

When Mr. Bruce arrived at Gondar, the king, and Ras Michael, (his Prime Miniſter) were at a conſiderable diſtance from the capital with the army; which had been employed in attempting to ſuppreſs a dangerous rebellion which had broke out in the kingdom. In the mean time the Integhe, or queen (mother to the reigning king) being informed that Mr. Bruce was a phyſician, ſent for him to the palace of Koſcam, the place of her reſidence, where he had the care of ſome of the royal family, who were ill of the ſmall-pox. The attention he ſhewed to his patients, and his ſuperior ſkill in treating that diſorder, attracted the regard of the queen, and her daughter Ozora Eſther, wife to Ras Michael. Mr. Bruce being thus honourably employed for ſome days, till the return of the army to Gondar, where he was introduced to the Ras and the king, which he relates in the following terms:

"On the 9th of March I met Ras Michael at Azazo. He was dreſſed in a coarſe dirty cloth, wrapt about him like a blanket, and another like a table-cloth folded about his head: He was lean, old, and apparently much fatigued; ſat ſtooping upon an excellent mule, that carried him ſpeedily without ſhaking him; he had alſo ſore eyes. As we ſaw the place where he was to light by four croſs lances, and a cloth thrown over them like a temporary tent, upon an eminence, we did not ſpeak to him till he alighted. We alighted at the ſame time he did, and afterwards, with anxiety enough we deputed a Greek prieſt, who was a friend of Michael, to tell him who I was, and that I was come to meet him. The ſoldiers made way, and I came up, took him by the hand and kiſſed it. He looked me broad in the face for a ſecond, repeated the ordinary ſalutation, "How do you do? I hope you are well;" and pointed to a place where I was to ſit down. A thouſand complaints, and a thouſand orders came immediately before him, from a thouſand mouths, and we were nearly ſmothered; but he took no notice of me, nor did he aſk for one of his family. In ſome minutes after came the king, who paſſed at ſome diſtance to the left of him; and Michael was then led out of the ſhelter of his tent to the door, where he was ſupported on foot till the king paſſed by, having firſt pulled off the towel that was upon his head, after which he returned to his ſeat in the tent again. I returned to Koſcam, very little pleaſed with the reception I had met with. All the town was in a hurry and confuſion; 30,000 men were encamped upon the Kahha; and the firſt horrid ſcene Michael exhibited there, was cauſing the eyes of twelve of the chiefs of the rebel Calla, whom he had taken priſoners, to be pulled out, and the unfortunate ſufferers turned out to the fields, to be devoured at night by the hyæna. Two of theſe I took under my care, who both recovered, and from them I learned many particulars of their country and manners.

The next day, which was the 10th, the army marched into the town in triumph, and the Ras at the head of the troops of Tigre. He was bareheaded; over his ſhoulders, and down to his back, hung a pallium, or cloak, of black velvet, with a ſilver fringe. A boy, by his right ſtirrup, held a ſilver wand of about five feet and a half long, much like the ſtaves of our great officers at court. Behind him all the ſoldiers, who had ſlain an enemy and taken the ſpoils from them, had their lances and firelocks ornamented with ſmall ſhreds of ſcarlet cloth, one piece for every man he had ſlain. One thing remarkable in this cavalcade, which I obſerved, was the head-dreſs of the governors of provinces. A large broad fillet was bound upon their forehead, and tied behind their head. In the middle of this was a horn, or a conical piece of ſilver, gilt, about four inches long, much in the ſhape of our common candle extinguiſhers. This is called *kirn*, or horn, and is only worn in reviews or parades after victory. This I apprehend, like all other of their uſages, is taken from the Hebrews, and the ſeveral alluſions made in ſcripture to it ariſe from this practice:—"I ſaid unto fools, Deal not fooliſhly; and to the wicked, Lift not up the horn—"Lift not up your horn on high; ſpeak not with a ſtiff neck—"For promotion cometh," &c. —"But my horn ſhalt thou exalt like the horn of an unicorn."—"And the horn of the righteous ſhall be exalted with honour." And ſo in many other places throughout the Pſalms. [See 1 Sam. ii. 1, 10, 16. Job xvi. 15. Jer. xlviii. 25. Pſm. lxxv. 4.—lxxxix. 17.—xci. 10, &c.

Next to theſe came the king, with a fillet of white muſlin about three inches broad, binding his forehead, tied with a large double knot behind, and hanging down about two feet on his back. About him were the great officers of ſtate, ſuch of the young nobility as were without command; and after theſe, the houſhold troops. Then followed the executioner of the camp, and his attendants; and laſt of all, amidſt the King's and the Ras's baggage, came a man bearing the ſtuffed ſkin of Wooſheka (one of the rebel chiefs) upon a pole, which he hung upon a branch of the tree before the king's palace appropriated for public executions. It was now the 13th of March, and I had heard no word from Ozora Eſther, or the Ras, though removed to a houſe in Gondar. I had gone once every day to ſee the children at Koſcam; at all which times I had been received with the greateſt cordiality and marks of kindneſs by the queen, and orders given for my free admittance upon all occaſions like an officer of her houſhold. In the evening, Mahomet Gibberti came to my houſe, and told me, that, beſides the letter I carried to Ras Michael from Metical Aga his maſter, he had been charged with a particular one, out of the ordinary form, dictated by the Engliſh at Jidda, who, all of them, had agreed to make a point with Metical Aga, devoted to them for his own profit, that his utmoſt exertion of friendſhip and intereſt, ſhould be ſo employed in my recommendation, as to engage the attention of Ras Michael to provide in earneſt for my ſafety and ſatisfaction in every point. This letter I had myſelf read at Jidda; it informed Michael of the power and riches of our nation, and that they were abſolute maſters of the trade on the Red Sea, and ſtrictly connected with the Sherriffe, and in a very particular manner with him, Metical Aga; that any accident happening to me would be an infamy and diſgrace to him, and worſe than death itſelf, becauſe, that knowing Michael's power and relying on his

friendſhip, he had become ſecurity for my ſafety, after I arrived in his hands; that I was a man of conſideration in my own country, ſervant to the king of it, who, though himſelf a Chriſtian, governed his ſubjects Muſſulmen and Pagans, with the ſame impartiality and juſtice as he did Chriſtians. That all my deſire was to examine ſprings and rivers, trees and flowers, and the ſtars in the heavens, from which I drew knowledge very uſeful to preſerve man's health and life: that I was no merchant, and had no dealings whatever in any ſort of mercantile matters; and that I had no need of any man's money, as he had told Mahomet Gibberti to provide for any call I might have in that country, and for which he would anſwer, let the ſum be what it would, as he had the word of my countrymen to repay it, which he conſidered better than the written ſecurity of any other people in the world, &c.

Upon reading this letter, Michael exclaimed, "Metical Aga does not know the ſituation of this country. Safety! where is that to be found? I am obliged to fight for my own life every day. Will Metical call this ſafety! Who knows at this moment, if the king is in ſafety, or how long I ſhall be ſo? All I can do is to keep him with me. If I loſe my own life, and the king's, Metical Aga can never think it was in my power to preſerve that of his ſtranger." It was finally agreed, that the letters the Greeks had received ſhould be read to the king; that the letters I had from Metical Aga to the Ras ſhould be given to Mahomet Gibberti, and that I ſhould be introduced to the King and the Ras immediately after they were ready. On the 14th theſe letters were to be all ready; five in the evening was fixed as the hour, and I came a little before the time, and met Ayto Aylo (principal counſellor to the queen) at the door. He ſqueezed me by the hand, and ſaid, "Refuſe nothing, it can be all altered afterwards; but it is very neceſſary, on account of the prieſts and the populace, you have a place of ſome authority, otherwiſe you will be robbed and murdered the firſt time you go half a mile from home.

We went in and ſaw the old man ſitting upon a ſofa; his white hair was dreſſed in many ſhort curls. He appeared to be thoughtful, but not diſpleaſed; his face was lean, his eyes quick and vivid, but ſeemed to be a little ſore from expoſure to the weather. He ſeemed to be about ſix feet high, though his lameneſs made it difficult to gueſs with accuracy. His air was perfectly free from conſtraint, what the French call *degagee*. In face and perſon he was liker my learned and worthy friend, the Count de Buffon, than any two men I ever ſaw in the world. They muſt have been bad phyſiognomiſts that did not diſcern his capacity and underſtanding by his very countenance. Every look conveyed a ſentiment with it: he ſeemed to have no occaſion for other language, and indeed he ſpoke little. I offered, as uſual, to kiſs the ground before him: and of this he ſeemed to take little notice, ſtretching out his hand and ſhaking mine upon my riſing.

I ſat down with Aylo, three or four of the judges, the queen's chamberlain, and other officers, one of whom whiſpered ſomething in his ear, and went out; which interruption prevented me from ſpeaking as I was prepared to do, or give him my preſent, which a man held behind me. He began gravely, "Yagoube, I think that is your name, hear what I ſay to you, and mark what I recommend to you. You are a man, I am told, who make it your buſineſs to wander in the fields in ſearch after trees and graſs in ſolitary places, and to ſit up all night alone looking at the ſtars of the heavens: Other countries are not like this, though this was never ſo bad as it is now. Theſe wretches here are enemies to ſtrangers; if they ſaw you alone in your own parlour, their firſt thought would be how to murder you; though they knew they were to get nothing by it, they would murder you for mere miſchief. I have thought that ſituation beſt which leaves you at liberty to follow your own deſigns, at the ſame time that it puts your perſon in ſafety; that you will not be troubled with monks about their religious matters, or in danger from theſe raſcals that may ſeek to murder you for money. Therefore the king has appointed you Baalomaal, (one of the gentlemen of the king's bed-chamber,) and to command the Koccob-horſe. Go then to the king, and kiſs the ground upon your appointment. I ſee you have already learned this ceremony of our's; Aylo and Heikel are very proper perſons to go with you. The king expreſſed his ſurpriſe to me laſt night he had not ſeen you; and there too is Tecla Mariam, the king's ſecretary, who came with your appointment from the palace to-day." I then gave him a preſent, which he ſcarce looked at, as a number of people were preſſing in at the door from curioſity or buſineſs.

I went afterwards to the king's palace, and met Aylo and Heikel at the door of the preſence-chamber. Tecla Mariam walked before us to the foot of the throne; after which I advanced and proſtrated myſelf upon the ground. "I have brought you a ſervant," ſays he to the king, "from ſo diſtant a country, that if you ever let him eſcape, we ſhall never be able to follow him, or know where to ſeek him." This was ſaid facetiouſly by an old familiar ſervant; but the king made no reply, as far as we could gueſs, for his mouth was covered, nor did he ſhew any alteration of countenance. Five people were ſtanding on each ſide of the throne, all young men, three on his left. and two on his right. One of theſe, the ſon of Tecla Mariam, (afterwards my great friend) who ſtood uppermoſt on the left-hand, came up, and taking hold of me by the hand, placed me immediately above him; when ſeeing I had no knife in my girdle, he pulled out his own and gave it to me. Upon being placed, I again kiſſed the ground.

The king was in an alcove; the reſt went out of ſight from where the throne was, and ſat down. The uſual queſtions now began about Jeruſalem and the holy places—where my country was? which it was impoſſible to deſcribe, as they knew the ſituation of no country but their own—why I came ſo far?—whether the moon and the ſtars, but eſpecially the moon, was the ſame in my country as in theirs?—and a great many ſuch idle and tireſome queſtions. I had ſeveral times offered to take my preſent from the man who held it, that I might offer it to his Majeſty and go away; but the king always made a ſign to put it off, till, being tired with ſtanding, I leaned againſt the wall. Aylo was faſt aſleep, and Ayto Heikel and the Greeks curſing their maſter in their heart for ſpoiling the good ſupper that Anthule his treaſurer had prepared for us. This, as we afterwards found out, the king very well knew, and reſolved to try our patience to the utmoſt. At laſt, Ayto Aylo ſtole away to bed, and every body elſe after him, except thoſe who had accompanied me, who were ready to die with thirſt, and drop down with wearineſs. It was agreed by thoſe that were out of ſight, to ſend Tecla Marian to whiſper in the king's ear, that I had not been well, which he did, but no notice was taken of it. It was now paſt ten o'clock, and he ſhewed no inclination to go to bed.

Hitherto, while there were ſtrangers in the room, he had ſpoken to us by an officer called Kal Harze, *the voice or word of the king*; but now, when there were nine or ten of us, his menial ſervants, only preſent, he uncovered his face and mouth, and ſpoke himſelf. Sometimes it was about Jeruſalem, ſometimes about horſes, at other times about ſhooting; again about the Indies; how far I could look into the heavens with my teleſcopes: and all theſe were deliberately and circumſtantially repeated, if they were not pointedly anſwered. I was ſcarcely able to ſpeak a word, inwardly mourning the hardneſs of

my lot in this my firſt preferment, and ſincerely praying it might be my laſt promotion in this court. At laſt all the Greeks began to be impatient, and got out of the corner of the room behind the alcove, and ſtood immediately before the throne. The king ſeemed to be aſtoniſhed at ſeeing them, and told them he thought they had all been at home long ago. They ſaid, however, they would not go without me; which the king ſaid could not be, for one of the duties of my employment was to be charged with the door of his bed-chamber that night. At laſt Ayto Heikel, taking courage, came forward to him, pretending a meſſage from the queen, and whiſpered him ſomething in the ear, probably that the Ras would take it ill. He then laughed, ſaid he thought we had ſupped, and diſmiſſed us.

Mr. Bruce relates the following ridiculous cuſtom in the Court of Abyſſinia. "It is the conſtant practice in Abyſſinia to beſet the king's doors and windows within his hearing, and there, from early morning to night, to cry for juſtice as loud as poſſible, in a diſtreſſed and complaining tone, and in all the different languages they are maſters of, in order to their being admitted to have their ſuppoſed grievances heard. In a country ſo ill governed as Abyſſinia is, and ſo perpetually involved in war, it may be eaſily ſuppoſed there is no want of people, who have real injuries and violence to complain of: But if it were not ſo, this is ſo much the conſtant uſage, that when it happens (as in the midſt of the rainy ſeaſon) that few people can approach the capital, or ſtand without in ſuch bad weather, a ſet of vagrants are provided, maintained and paid, whoſe ſole buſineſs it is to cry and lament, as if they had been really very much injured and oppreſſed; and this they tell you for the king's honour, that he may not be lonely by the palace being too quiet. This, of all their abſurd cuſtoms, was the moſt grievous and troubleſome to me; and, from a knowledge that it was ſo, the king, when he was private, often permitted himſelf a piece of rather odd diverſion to be a royal one. There would ſometimes, while I was buſy in my room in the rainy ſeaſon, be four or five hundred people, who all at once would begin, ſome roaring and crying, as if they were in pain, others demanding juſtice, as if they were that moment ſuffering, or if in the inſtant to be put to death; and ſome groaning and ſobbing as if juſt expiring; and this horrid ſymphony was ſo artfully performed that no ear could diſtinguiſh but that it proceeded from real diſtreſs. I was often ſo ſurpriſed as to ſend the ſoldiers at the door to bring in one of them, thinking him come from the country, to examine who had injured him; many a time he was a ſervant of my own, or ſome other equally known; or, if he was a ſtranger, upon aſking him what misfortune had befallen him, he would anſwer very compoſedly, Nothing was the matter with him: that he had been ſleeping all day with the horſes: that hearing from the ſoldiers at the door I was retired to my apartment, he and his companions had come to cry and make a noiſe under my window, to do me *honour* before the people, for fear I ſhould be melancholy, by being too quiet when alone; and therefore hoped that I would order them drink, that they might continue with a little more ſpirit. The violent anger which this did often put me into did not fail to be punctually reported to the king, at which he would laugh heartily; and he himſelf was often hid not far off, for the ſake of being a ſpectator of my heavy diſpleaſure."

During Mr. Bruce's reſidence at Gondor, he made an excurſion, with proper guides, to the Nile, in order to view the great Cataract of Alata, on that river, which he thus deſcribes: "The firſt thing they carried us to was the bridge, which conſiſts of one arch of about twenty-five feet broad, the extremities of which were ſtrongly let into, and reſted on the ſolid rock on both ſides; but fragments of the parapets remained, and the bridge itſelf ſeemed to bear the appearance of frequent repairs, and many attempts to ruin it; otherwiſe, in its conſtruction, it was exceedingly commodious. The Nile here is confined between two rocks, and runs in a deep trough, with great roaring and impetuous velocity. We were told no crocodiles were ever ſeen ſo high, and were obliged to remount the ſtream above half a mile before we came to the Cataract, through trees and buſhes of a beautiful and delightful appearance.

The Cataract itſelf was the moſt magnificent ſight that ever I beheld. The height has been rather exaggerated. The Miſſionaries ſay the fall is about ſixteen ells, or fifty feet. The meaſuring is, indeed, very difficult, but, by the poſition of long ſticks, and poles of different lengths, at different heights of the rock, from the water's edge, I may venture to ſay that it is nearer forty feet than any other meaſure. The river had been conſiderably increaſed by rains, and fell in one ſheet of water, without any interval, above half an Engliſh mile in breadth, with a force and noiſe that was truly terrible, and which ſtunned and made me, for a time, perfectly dizzy. A thick fume, or haze, covered the fall all round, and hung over the courſe of the ſtream both above and below, marking its track, though the water was not ſeen. The river, though ſwelled with rain, preſerved its natural clearneſs, and fell, as far as I could diſcern, into a deep pool, or baſon, in the ſolid rock, which was full, and in twenty different eddies to the very foot of the precipice, the ſtream, when it fell, ſeeming part of it to run back with great fury upon the rock, as well as forward in the line of its courſe, raiſing a wave, or violent ebullition, by chaffing againſt each other.

It was a moſt magnificent ſight, that ages, added to the greateſt length of human life, would not deface or eradicate from my memory; it ſtruck me with a kind of ſtupor, and a total oblivion of where I was, and of every other ſublunary concern. It was one of the moſt magnificent, ſtupendous ſights in the creation.

I was awakened from one of the moſt profound reveries that ever I fell into, by my companions, who now put to me a thouſand impertinent queſtions. It was after this I meaſured the fall, and believe, within a few feet, it was the height I have mentioned; but I confeſs I could at no time in my life leſs promiſe upon preciſion; my reflection was ſuſpended, or ſubdued, and while in ſight of the fall I think I was under a temporary alienation of mind; it ſeemed to me as if one element had broke looſe from, and become ſuperior to all laws of ſubordination; that the fountains of the great deep were extraordinarily opened, and the deſtruction of a world was again begun by the agency of water."

A NEW

A NEW

GENEALOGICAL AND CHRONOLOGICAL ACCOUNT

OF THE

SOVEREIGNS OF THE WHOLE WORLD.

ASIA.

TURKEY, Selim II. grand ſignior, born in 1761; enthroned April 7, 1789.

TARTARY. The emperor of Ruſſia is ſupreme ſovereign of the weſtern part; and the Chineſe are maſters of the ſouth and eaſt parts.

CHINA. Kien-long, emperor.

INDIA. Ahmed-Abdallah, emperor, or great mogul.

ARABIA is annexed to the Turkiſh empire.

PERSIA. Kerim Khan, ſhah or emperor, crowned in 1763.

JAPAN. Tſinajor, emperor, being the laſt of whom we have any account.

When this monarch appears abroad, he is attended by 5 or 6000 of his guards; and he maintains an army of 20,000 horſe, and 100,000 foot, probably with a view to keep his tributary princes or vaſſals in awe.

AFRICA.

MONEMOTAPA. The ſovereign is ſtyled emperor.

SOFALA is ſubject to a king.

ZANGUEBAR is governed by a king.

BRAVA is under the dominion of a Mahometan ſovereign.

WHIDAH, in Guinea, ſubject to an idolatrous king.

GOLD-COAST is divided into petty ſovereignties, under their reſpective kings.

AGONNA, governed by a king.

GRAIN-COAST, ſubject to a king.

CONGO, in Lower Guinea, has a king.

ANGOLA, is ſubject to a king.

LOANGO is under kingly government.

JAGGAS country. Their ſovereign is ſtyled the Great Jagga.

ETHIOPIA, or NEGROLAND, is divided into petty kingdoms and ſtates.

BURRE, near Sierra Leone, governed by a king.

ZAARA, or the DESERT. Chiefly occupied by illiterate and ſavage Arabs. The country is flat and barren, and the inhabitants Mahometans.

ABYSSINIA. Subject to a deſpotic and powerful emperor: a late ſovereign was named David.

GALLAS. Theſe people are diſtinguiſhed into tribes, each governed by a chief.

ABEX. Is ſubject to a king.

NUBIA. Governed by a deſpotic monarch.

EGYPT. Partly monarchical, being ſubject to the grand ſignior, whoſe viceroy is a pacha; and partly republican, and governed by the Mamlukes and Sangiacs.

ALGIERS. Subject to a dey.

TUNIS. Governed by a bey.

TRIPOLI. Subject to a bey.

MOROCCO. Under the dominion of an emperor.

AMERICA.

SOUTH-AMERICA. Almoſt all its nations are governed by kings; under whom are appointed chiefs or caciques, as viceroys.

UNITED STATES of North America, being thirteen, are a ſovereign and independent republic, of whom John Adams is preſident. They are under the government of Congreſs, compoſed of delegates from each ſtate.

EUROPE.

DENMARK AND NORWAY. CHRISTIAN VII. king of Denmark, born Jan. 29, 1749: hath iſſue by his late queen, Caroline-Matilda of England,

Prince Frederic, born Jan. 27, 1768.

HOLLAND.

HOLLAND. Prince WILLIAM, of Orange-Naſſau, Stadtholder, born March 19, 1748; aſſumed the government, March 8, 1766; married Oct. 4, 1767, to Frederica-Sophia-Wilhelmina, ſiſter to the king of Pruſſia, born Aug. 7, 1751. Their iſſue, William Frederic, born Aug. 2, 1771; married to the ſecond daughter of the king of Pruſſia. William George-Frederic, born Feb. 15, 1774. Frederica-Louiſa-Wilhelmina, born Nov. 28, 1770.

GERMANY. LEOPOLD II. Emperor of Germany, born May 5, 1747; crowned Aug. 9, 1790; married Aug. 5, 1766, to Mary Louiſa, infanta of Spain, born Nov. 24, 1745; and have iſſue, Francis, married Aug. 14, 1790, to Maria-Thereſa, eldeſt daughter of the king of Naples; Ferdinand (ſee TUSCANY) Charles, Alexander, Joſeph, Antony, John, Ren-Joſeph, Louis-Joſeph, Rodolpus; Maria, Maria-Anne, Maria-Clementina, and Maria-Amelia.

The Emperor has living two ſiſters, and one brother, unmarried. Thoſe married are, the Princeſs of Parma, the Queen of the Two Sicilies, the late Queen of France, the wife of the uncle of the elector of Saxony, and Prince Ferdinand, born June 1, 1754.

Archduke of Auſtria, married, 1774, the only daughter and heireſs of the Duke of Modena, by whom he has iſſue two ſons and two daughters.

Adolphus-Frederic IV. Duke of Mecklenburgh-Strelitz, born May 5, 1738, brother to the Queen of Great-Britain.

Charles-William-Ferdinand, Duke of Brunſwick-Lunenburg, and late General in the king of Pruſſia's army, born Oct. 9, 1735; married Jan. 16, 1764, to the Princeſs Auguſta of England, born Aug. 12, 1737.

PRUSSIA. FREDERIC-WILLIAM, king of Pruſſia, and elector of Brandenburgh. born Sept. 25, 1744; proclaimed king, Aug. 19, 1786. Hath iſſue, by his firſt conſort, Elizabeth-Ulrica, of Brunſwick-Wolfenbuttle, Charlotte, born May 7, 1767; married to the Duke of York. He was married July 14, 1769, to his ſecond conſort, Frederica-Louiſa, of Heſſe-Darmſtadt. Hath iſſue by her,

Frederic-William, born Aug. 3, 1770. Frederic-Charles-Louis, born Aug. 3, 1773.

Frederica-Sophia-Wilhelmina, born Nov. 11, 1774; married Aug. 1, 1791, to the hereditary Prince of Orange.

Frederic-Chriſtian-Auguſtus, born May 1, 1780.

Another Prince, born Dec. 20, 1781; and another in July, 1783.

Queen-Dowager, Elizabeth-Chriſtina of Brunſwic-Wolfenbuttle, aunt to the preſent Duke, and ſiſter of his preſent Pruſſian Majeſty, as well as of the Queen-Dowager of Denmark, born Nov. 8, 1715.

Louiſa-Amelia, of Brunſwic-Wolfenbuttle, born Jan. 29, 1722; married Jan. 6, 1742, to William-Auguſtus-Prince-Royal, who died June 12, 1758. Their iſſue, the preſent King.

Frederica Sophia-Wilhelmina, married to the preſent Prince of Orange.

SWITZERLAND. Every canton is abſolute in its own juriſdiction; but thoſe of Berne, Zurich, and Lucerne, with other dependencies, are ariſtocratical, or under the ſovereignty of the nobles, with a certain mixture of democracy, where the ſovereignty is lodged in the people, Berne only excepted. Thoſe of Uri, Schweitz, Underwald, Zug, Glaris, and Appenzel, are democratical. Baſil, though it has the appearance of an ariſtocracy, rather inclines to a democracy, or popular government.

SPAIN. CHARLES IV. King of Spain, born Nov. 11, 1748; ſucceeded his father Charles III. in Dec. 1788; married Sept. 4, 1765, to Princeſs Louiſa of Parma, born Dec. 9. 1751, and has had iſſue, ſix children. The ſurviving iſſue are,

Ferdinand-Antony, preſent king of Naples. Antony Paſcal, born Dec. 31, 1755. The other ſurviving iſſue of the late king is, Maria-Louiſa (ſee TUSCANY)

PORTUGAL. MARIA-FRANCES-ISABELLA, Queen of Portugal, born Dec. 17, 1734; married June 6, 1760, to the late king, her uncle, by whom ſhe has iſſue,

John-Maria-Joſeph-Louis, Prince of Braſil, born May 13, 1767; married to Charlotta-Joaquina, daughter of the Prince of Aſturias, born April 25, 1775.

Marianna-Victoria, born Dec. 15, 1768; married to Gabriel-Antony, third ſon to the king of Spain.

Iſſue of king Joſeph. Her preſent majeſty, and two other daughters.

ITALY. Pope PIUS VI. born Dec. 17, 1717; elected pope Feb. 15, 1775.

FERDINAND IV. king of Naples and both Sicilies, born Jan. 11, 1751; aſcended the throne Oct. 4, 1759, on his father's becoming king of Spain; married April 7, 1768, to the Princeſs Mary-Caroline, a ſiſter of the Emperor, born Aug. 13, 1752, by whom he has had iſſue eight children, of whom ſeven are living.

TUSCANY. ARCHDUKE-FERDINAND, ſon of the emperor, born May 6, 1769; married Aug. 14, 1790, Maria-Louiſa, ſecond daughter of the king of Naples.

MODENA. HERCULES RENAUD, born Nov. 22, 1727; married April 16, 1741, to the Princeſs of Maſſa-Catara. Their iſſue, Mary Beatrix, born April 25, 1750; married to the archduke of Auſtria, 1771.

FERDINAND-MARIE-LOUIS, duke of Parma, born Jan. 29, 1751; married to the archduchеſs Maria-Amelia, June 27, 1760. Their iſſue, a Prince and three Princeſſes.

SARDINIA AND SAVOY. VICTOR-AMADEUS-MARIE, born June 26, 1726; married in 1750, the late Maria-Antoinetta-Frederica, ſiſter to the emperor Leopold, by whom he has living iſſue, four daughters: Maria-Joſepha-Louiſa; married in 1771, the Count of Provence, brother to the late king of France: Maria-Theraſa, married in 1773, the Count of Artois, another brother of the late king of France, and has iſſue two ſons and a daughter; the eldeſt, Charles-Emanuel, Prince of Piedmont, born May 14, 1751; married in 1775, Maria-Adelaide, ſiſter of the late king of France.

FRANCE. LOUIS XVI. late king of France and Navarre; born Aug. 23, 1754; married April 19, 1770, to Marie-Antoinetta, the emperor's ſiſter, born Nov. 2, 1755. Their iſſue, a Princeſs, Maria-Thereſa-Charlotta, born Dec. 19, 1778; and the Dauphin, born March 27, 1785.

Note. Royalty was aboliſhed in this kingdom by the National Convention, the king and queen beheaded, and a republican government ſet up.
